### BOOKS - NCERT MATHS (ENGLISH)

### LINEAR PROGRAMMING

#### Short Answer

1. Determine the maximum value of  $Z=11x+7y$  subject to the constraints  $2x + y \leq 6, x \leq 2, x \geq 0, y \geq 0$

[Watch Video Solution](#)

2. Maximise  $Z=3x+4y$ , Subjected to the constraints  
 $x + y \leq 1, x \geq 0, y \geq 0$

 [Watch Video Solution](#)

3. Maximise the function  $Z = 11x + 7y$ , subject to the  
constraints  $x \leq 3, y \leq 2, x \geq 0, y \geq 0$

 [Watch Video Solution](#)

4. Minimise  $Z=13x-15y$  subject to the constraints  
 $x + y \leq 7, 2x - 3y + 6 \geq 0, x \geq 0, x \geq 0,$  and  $y \geq 0$

 [Watch Video Solution](#)

5. Determine the maximum value of  $Z=3x+4y$ , if the feasible region (shaded) for a LPP is shown in following figure

[Watch Video Solution](#)

6. Feasible region (shaded) for a LPP is shown in following figure. Maximise  $Z=5x+7y$ .

[Watch Video Solution](#)

7. The feasible region for an LPP is shown in following figure. Find the minimum value of  $Z=11x+7y$ .

[Watch Video Solution](#)

8. Refer to question 7 above. Find the maximum value of  $Z$ .

[Watch Video Solution](#)

9. The feasible region for a LPP is shown in the following figure. Evaluate  $Z=4x+y$  at each of the corner points of the region. Find the minimum value of  $Z$ , if it exists

[Watch Video Solution](#)

10. In the following the feasible region (shaded) for a LPP is shown Determine the maximum and minimum value

of  $Z=x+2y$

[Watch Video Solution](#)

11. In the manufacturer of electronic circuits has a stock of 200 resistors, 120 transistors and 150 capacitors and is required to produce two types of circuits A and B. Type A requires 20 resistors, 10 transistors and 10

capacitors. Type B requires 10 resistors, 20 transistors and 30 capacitors, If the profit on type A circuit is 50 and that on type B circuit is 60 formulate this problem as LPP, so that the manufacturer can maximise his profit.

**12.** A firm has to transport 1200 packages using large vans which can carry 200 packages each and small vans which can take 80 packages each. The cost for engaging each large van is 400 and each small van is 200. Not more than 3000 is to be spent on the job and the number of large vans cannot exceed the number of small vans. Formulate this problem, a LPP given that the objective is to minimise cost.

[Watch Video Solution](#)

**13.** A company manufactures two types of screws A and B. All the screws have to pass through a threading machine and a slotting machine. A box of type A screw requires 2min on the threading machine and 3 min on the slotting machine. A box of type B screw requires 8 min on the threading machine and 2 min on the slotting machine. In a week each machine is available for 60h. On selling these screws, the company gets a profit of 100 per box on type A screw and 170 per box on type B screws. Formulate this problem as a LPP given that the objective is to maximise profit.

[Watch Video Solution](#)

**14.** A company manufactures two types of sweaters type A and type B. It costs 360 to make type A sweater and 120 to make a type B sweater. The company can make at most 300 sweaters and spend at most 72000 a day. The number of sweaters of type B cannot exceed the number of sweaters of type A by more than 100. The company makes a profit of 200 for each sweater of type A and 120 for every sweater of type B. Formulate this problem as a LPP to maximise the profit to the company.

[Watch Video Solution](#)

**15.** A man rides his motorcycle to the speed 50 km/h. He has to spend 2 per km on petrol. If he rides it at a faster speed of 80 km/h, the petrol cost increases to 3 per km. He wishes to find the maximum distance that he can travel. Express this problem as a linear programming problem.

**Watch Video Solution**

**16.** Refers to question 11. How many of circuit of type A and of type B, should be produced by the manufacture, so as to maximise his profit? Determine the profit.

**View Text Solution**

17. Refers to question 12. What will be the minimum cost?

[View Text Solution](#)

18. Refers to question 13. Solve the linear programming problem and determine profit to the manufacturer.

[View Text Solution](#)

19. Refers to question 14. How many sweaters of each type of should the company make in an day to get a maximum profit? What is the maximum profit?

 [View Text Solution](#)

20. Refers to question 15. Determine the maximum distance that the man can travel.

 [View Text Solution](#)

21. Maximise  $Z=x+y$  subject to  
 $x + 4y \leq 8$ ,  $2x + 3y \leq 12$ ,  $3x + y \leq 9$ ,  $x \geq 0$ , and  $y \geq 0$

 [View Text Solution](#)

22. A manufacture produces two models of bike model X and model Y. Model X takes a 6 man hours to make per

unit, while model Y takes 10 man hours per unit. There is a total of 450 man hour available per week. Handling and marketing costs are 2000 and 1000 per unit of model X and Y, respectively. The total funds available for these purposes are 8000 per week. Profits per unit for models X and Y are 1000 and manufacturer produce, so, as to yield a maximum profit? Find the maximum profit.

[Watch Video Solution](#)

**23.** In order to supplement daily diet, a person wishes to take some X and some wishes Y tablets. The contents of iron, calcium and vitamins in X and Y (in mg/tablet) are given as below

Tablets	Iron	Calcium	Vitamin
X	6	3	2
Y	2	3	4

The person need atleast 18 mg of iron of calcium 16 mg of vitamines. The price of each talet of X and Y is 2 and 1, respectively. How many tablets of each should the person take in order to satisfy the above requirements at the minimum cost?

[View Text Solution](#)

**24.** A company makes 3 model of calculators, A, B and C at factory I and factory II. The company has orders for atleast 6400 calculators of model A, 4000 calculators of model B and 4800 calculators of model C. At factory I, 50 calculators of model A, 50 of model B and 30 of

model C are made everyday, at factory II, 40 calculators of model A, 20 of model B and 40 of model C are made everyday. It costs ? 12000 and 1 15000 each day to operate factory I and II, respectively. Find the number of days each factory should operate to minimise the operating costs and still meet the demand.

25. Minimise and minimise  $Z = 3x - 4y$  subject to  $x - 2y \leq 0$ ,  $-3x + y \leq 4$ ,  $x - y \leq 6$  and  $x, y \geq 0$

[View Text Solution](#)

26. The corner points of the feasible region determined by the system of linear constraints are  $(0,0)$ ,  $(0,40)$ ,  $(20,40)$ ,  $(60,20)$ ,  $(60,0)$ . The objective function is  $Z=4x+3y$ .

Compare the quantity in Column A and Column B.

<b>Column A</b>	<b>Column B</b>
Maximum of $Z$	325

- A. The quantity in Column A is greater
- B. The quantity in column B is greater
- C. The two quantities are equal.
- D. The relationship cannot be determined on the basis of the information supplied.

**Answer: B**

## Objective

1. The feasible solution for a LPP is shown in following figure. Let  $Z=3x-4y$  be the objective function, Minimum of  $Z$  occurs at

A.  $(0,0)$

B. (0,8)

C. (5,0)

D. (4,10)

**Answer: B**

**Watch Video Solution**

2. Refers to question 27. Maximum of Z occurs at

A. (5,0)

B. (6,5)

C. (6,8)

D. (4,10)

**Answer: A**

**View Text Solution**

3. Refers to question 7, maximum value of  $Z$ +minimum value of  $Z$  is equal to

A. 12

B. 1

C.  $-13$

D.  $-17$

**Answer: D**

**Watch Video Solution**

4. The feasible region for an LPP is shown in the following figure. Let  $F = 3x - 4y$  be the objective function. Maximum value of  $F$  is

A. 0

B. 8

C. 12

D.  $-18$

**Answer: C**

**Watch Video Solution**

5. Refers to question 30. Minimum value of  $F$  is

A. 0

B.  $-16$

C. 12

D. Does not exist

**Answer: B**

**View Text Solution**

6. Corner points of the feasible region for an LPP are  $(0,2), (3,0), (6,0), (6,8)$ , and  $(0,5)$ . Let  $F=4x+6y$  be the objective function. Determine the minimum value of  $F$  occurs at

A. only  $(0,2)$

B. only  $(3,0)$

C. the mid point of the line segment joining the points  $(0,2)$  and  $(3,0)$

D. any point of the line segment joining the points  $(0,2)$  and  $(3,0)$

**Answer: D**

**Watch Video Solution**

7. Refers to question 32, maximum of  $F$ -minimum of  $F$  is equal to

A. 60

B. 48

C. 42

D. 18

**Answer: A**

**View Text Solution**

8. Corner points of the feasible region determined by the system of linear constraints are  $(0,3)$ ,  $(1,1)$ , and  $(3,0)$ . Let  $Z=px+qy$ . Where  $p, q < 0$  Condition on  $p$  and  $q$ , so that the minimum of  $Z$  occurs at  $(3,0)$  and  $(1,1)$  is

A.  $p=2q$

B.  $p = \frac{q}{2}$

C.  $p=3q$

D.  $p=q$

**Answer: B**

**Watch Video Solution**

1. In a LPP, the linear inequalities or restrictions on the variables called.

[Watch Video Solution](#)

2. In a LPP, the objective function is always.

[Watch Video Solution](#)

3. In the feasible region for a LPP is ..., then the optimal value of the objective function  $Z = ax + by$  may or may not exist.

[Watch Video Solution](#)

4. In a LPP, if the objective function  $Z=ax+by$  has the same maximum value of two corner points of the feasible region, then every point of the line segment joining these two points give the same ..value.

[Watch Video Solution](#)

5. A feasible region of a system of linear inequalities is said to be ..., if it can be enclosed within a circle.

[Watch Video Solution](#)

6. A corner point of a feasible region is a point in the region which is the of two boundary lines.

[Watch Video Solution](#)

7. The feasible region for an LPP is always a..polygon

[Watch Video Solution](#)

**True False**

1. If the feasible region for a LPP is unbounded, maximum or minimum of the objective function  $Z = ax + by$  may or may not exist.

[Watch Video Solution](#)

2. In a LPP, the maximum value of the objective function

$Z = ax + by$  is always finite.
