## CHEMISTRY

# BOOKS - VK JAISWAL CHEMISTRY (HINGLISH) 

## PERIODIC PROPERTIES

Level 1

1. Which is not similar characteristics(s) about the electronic configuration of $\mathrm{Be}, \mathrm{Mg}, \mathrm{Ca}$ ?
A. All the atojms have a pair of s-electrons in their outermost energy
level
B. all the atoms contain a pair of p-electrons in their outermost energy level
C. All are alkaline earth metals
D. All are of secon group of the periodic table

## Answer: B

## - Watch Video Solution

2. The elements $Z=117$ and 120 have not yet have been discovered, In which family/group would you place these elements and also give the electronic configuration in each case.
A. 17, 2
B. 17,4
C. 15,3
D. 18,2

## Answer: A

## D Watch Video Solution

3. Which one of the following represents the electronic configuration of the most electropositive element?
A. $[H e] 2 s^{1}$
B. $[N e] 3 s^{2}$
C. $[X e] 6 s^{1}$
D. $[X e] 6 s^{2}$

## Answer: C

## - Watch Video Solution

4. Which one of the following elements shows both positive and negative oxidation states?
A. Cesium
B. Fluorine
C. lodine

## D. Xenon

## Answer: C

## - Watch Video Solution

5. The number of element present in the fifth period is
A. 18
B. 32
C. 8
D. 24

## Answer: A

## - Watch Video Solution

6. Which of the following arrangements shows the correct order of decreasing paramagnetism?
A. NgtAlgtOgtCa
B. NgtOgtAlgtCa
C. OgtNgtAlgtCa
D. OgtNgtCagtAl

## Answer: B

## - Watch Video Solution

7. Thr outer electronic configuration of lawrencium is
A. $R n 5 f^{13} 7 s^{2} 7 p^{2}$
B. $R n f^{13} 6 d^{1} 7 s^{1} 7 p^{2}$
C. $R n 5 f^{14} 7 s^{1} 7 p^{1}$
D. $R n 5 f^{14} 6 d^{1} 7 s^{2}$

## Answer: D

## - Watch Video Solution

8. The element having the lowest atomic number and a ground state electronic configuration of $(n-1) d^{6} n s^{2}$ is placed in:
A. fifth period
B. sixth period
C. fourth period
D. third period

## Answer: C

## D Watch Video Solution

9. Which of the following sets of atomic numbers corresponds to elements of group 16 ?
A. $8,16,32,54$
B. $16,34,54,86$
C. $8,16,34,52$
D. $10,16,32,50$

## Answer: C

## - Watch Video Solution

10. The atomic numbers of the metallic and non-metallic elements which are liquid at room temperature respectively are:
A. 55,87
B. 33,87
C. 35,80
D. 80,35

## Answer: D

11. In the periodic table, the metallic character of elements
A. Decreases downn the group and increases across the period
B. Increases down the group and decreases across the period
C. Increases across the period and also down the group
D. Decreases across the period and also down the group

## Answer: B

## - Watch Video Solution

12. Nucleus of an element contains 9 protons lts valency would be :
A. 1
B. 2
C. 3
D. 5

## Answer: A

## - Watch Video Solution

13. Transition metals are characterised by which of the following properties ?
A. Fixed valency
B. coloured compound
C. high melting and boiling points
D. tendency to form coomplexes

## Answer: A

## - Watch Video Solution

14. Sodium ordinarily does not show an oxidation state of +2 , because of its
A. High first ionisation potential
B. High second ionization potential
C. large ionic radius
D. high electronegativity

## Answer: B

## - Watch Video Solution

15. Which of the following pairs of molecules have the almost identical bond dissociation energy?
A. $F_{2}$ and $H_{2}$
B. $\mathrm{N}_{2}$ and CO
C. $F_{2}$ and $I_{2}$
D. $H F$ and $O_{2}$

## Answer: C

## - Watch Video Solution

16. According to modern periodic law the elements with similar chemical and physical properties repeat at regular intervals when the elements are arranged in order of :
A. decreasing atomic number
B. increasing atomic weight
C. increasing atomic number
D. decreasing atomic weights

## Answer: C

## - Watch Video Solution

17. Give the symbol of the elements of lowest atomic number that has three $2 p$ electrons:
A. Mg
B. P
C. N
D. Si

## Answer: C

## - Watch Video Solution

18. In the fourth period of the periodic table, how many elements have one or more 4d electrons:
A. 2
B. 18
C. 0
D. 6

## Answer: C

## - Watch Video Solution

19. Assuming that elements are formed to complete the seventh period, what would be the atomic number of the alkaline earth metal of the eighth period?
A. 113
B. 120
C. 119
D. 106

## Answer: B

## - Watch Video Solution

20. Which of the following represents an excited state of an atom?
A. $[N e] 3 s^{2} 3 p^{6} 4 s^{2} 3 d^{8}$
B. $[N e] 3 s^{2} 3 p^{6} 4 s^{1} 3 d^{5}$
C. $[N e] 3 s^{2} 3 p^{6} 4 s^{2} 3 d^{1}$
D. $1 s^{2} 2 s^{2} 2 p^{5} 3 s^{1}$

## Answer: D

## - Watch Video Solution

21. Choose the correct statement regarding transition elements?
A. Transition elements has low melting points
B. transition elements do not have catalytic activity
C. Transition elements exhibit variable states
D. Transition elements exhibit inert pair effect

## Answer: C

## - Watch Video Solution

22. Which one of the following is a different pair?
A. Li, Na
B. $\mathrm{Be}, \mathrm{Ba}$
C. O, At
D. $\mathrm{N}, \mathrm{As}$

## Answer: C

## Watch Video Solution

23. The element having electronic configuration
$[K r] 4 d^{10} 4 f^{14} 5 s^{2} 5 p^{6} 5 d^{2} 6 s^{2}$ belongs to
A. s-block
B. p-block
C. d-block
D. f-block

## Answer: D

## - Watch Video Solution

24. The elements which are radioactive and have been named after the name of planet are
A. Hg
B. Po
C. Pu
D. Ra

## Answer: C

25. Zn and Cd metals do not show varible valency because:
A. They have only two electrons in the outermost subshells
B. Their d-subshells are completely filled
C. Their d-subshells are partially filled
D. they are relatively soft metals

## Answer: B

## - Watch Video Solution

26. An element whose IUPAC name is ununtrium (UUT) belong to
A. s-block element
B. p-block element
C. d-block element
D. transition element

## Answer: B

## - Watch Video Solution

27. Which of the following is not representative element?
A. Tellurium
B. Tantalum
C. Thallium
D. Astatine

## Answer: B

## - Watch Video Solution

28. The period number and group number of "Tantalum" ( $\mathrm{Z}=73$ ) are respectively:
A. 5,7
B. 6,13
C. 6,5
D. none of these

## Answer: C

## - Watch Video Solution

29. Which of the following pair of elements belongs period of the periodic table?
A. Mg and Sb
B. Ca and Zn
C. Na and Ca
D. Ca and Cl

## Answer: B

## - Watch Video Solution

30. Consider the following electronic configuration of an element(P):
$[X e] 4 f^{14} 5 d^{1} 6 s^{2}$
Then correct statement about element ' P ' is
A. It belongs to 6th period and 1st group
B. It belongs to 6th period an 2nd group
C. it belongs to 6th period and 3rd group
D. none of these

## Answer: C

## - Watch Video Solution

31. Which of the following metal is highest electropositive (metallic) in nature?
A. Be
B. Rb
C. Mn
D. Tl

## Answer: B

## - Watch Video Solution

32. Which of the following species must have maximum number of electrons in ' $d_{x y}$ ' orbital?
A. Cr
B. $\mathrm{Fe}^{3+}$
C. $C u^{+}$
D. Both (a) and (b)

## Answer: C

## - Watch Video Solution

33. which of the following graph is correct representation between atomic number $(Z)$ and magnetic moment of d-block elements? [outer electronic configuration: $(n-1) d^{x} n s^{1 \text { or } 2]}$
(a)

A.
B.
(b)

(c)

C.

## Answer: D

## D Watch Video Solution

34. If IUPAC name of an element is "unununium" then correct statement regarding element is:
A. it is inner transition element
B. it belongs to 8th period in periodic table
C. it is a non-transition element
D. it is transition element

## Answer: D

35. Which property decreases from left to right across the periodic table and increases from top to bottom?
A. (i) only
B. (i) , (ii) and (iii)
C. (i), (iii) and (iv)
D. (i) and (iv)

## Answer: D

## - Watch Video Solution

36. Consider the following information about element P and Q :

Period number Group number

| $P$ | 2 | 15 |
| :--- | :--- | :--- |

Q 3 2
the formula of the compound formed by P and Q element is:
A. $P Q$
B. $P_{3} Q_{2}$
C. $P_{2} Q_{3}$
D. $P Q_{2}$

## Answer: C

## - Watch Video Solution

37. which must represent an atom in an excited state?
A. $1 s^{2}, 2 s^{2} 2 p^{1}$
B. $1 s^{2}, 2 s^{2} 2 p^{2}$
C. $1 s^{2}, 2 s^{2} 2 p^{2}, 3 s^{1}$
D. $1 s^{2}, 2 s^{2} 2 p^{5}$

## Answer: C

38. Which of the following anion has the smallest radius?
A. $H^{-}$
B. $F^{-}$
C. $\mathrm{Cl}^{-}$
D. $B r^{-}$

## Answer: B

## - Watch Video Solution

39. The ionic radii of $L i^{+}, B e^{2+}$ and $B^{3+}$ follow the order:
A. $\mathrm{Be}^{2+}>\mathrm{B}^{3+}>\mathrm{Li}^{+}$
B. $\mathrm{Li}^{+}>\mathrm{B}^{3+}>\mathrm{Be}^{2+}$
C. $\mathrm{B}^{3+}>\mathrm{Be}^{2+}>\mathrm{Li}^{+}$
D. $\mathrm{Li}^{+}>\mathrm{Be}^{2+}>\mathrm{B}^{3+}$

## - Watch Video Solution

40. Largest in size out of $N a^{+}, N e$ and $F^{-}$is:
A. $N a^{+}$
B. $N e$
C. $F^{-}$
D. all are equal

## Answer: B

41. Which of the following atom or ions has the smallest size?
A. F
B. $F^{-}$
C. $O$
D. N

## Answer: A

## - Watch Video Solution

42. The single covalent radius of $P$ is 0.11 nm . The single covalent radius of Cl will be:
A. smaller than $P$
B. greater than $P$
C. same as $P$
D. none of these

## Answer: A

43. Which of the following is arranged in decreasing order of size?
A. $\mathrm{Mg}^{2+}>\mathrm{Al}^{3+}>\mathrm{O}^{2-}$
B. $\mathrm{O}^{2-}>\mathrm{Mg}^{2+}>\mathrm{Al}^{3+}$
C. $\mathrm{Al}^{3+}>\mathrm{Mg}^{2+}>\mathrm{O}^{-}$
D. $\mathrm{Al}^{3+}>\mathrm{O}^{2-}>\mathrm{Mg}^{2+}$

## Answer: B

## Watch Video Solution

44. The correct order of increasing atomic radius of the following elements as:
A. $S<O<S e<C$
B. $O<C<S<S e$
C. $O<S<S e<C$
D. $C<O<S<S e$

## Answer: B

## - Watch Video Solution

45. The correct order of increasing radii of the elements $S i, A l, N a$ and $P$ is
A. $S i<A l<P<N a$
B. $P<S i<A l<N a$
C. $A l<S i<P<N a$
D. $A l<P<S i<N a$

## Answer: B

46. The size of the species, $\mathrm{Pb}, \mathrm{Pb}^{2+}, P b^{4+}$ decreases as -
A. $\mathrm{Pb}^{4+}>\mathrm{Pb}^{2+}>\mathrm{Pb}$
B. $\mathrm{Pb}>\mathrm{Pb}^{2+}>\mathrm{Pb}^{4+}$
C. $\mathrm{Pb}>\mathrm{Pb}^{4+}>\mathrm{Pb}^{2+}$
D. $\mathrm{Pb}^{4+}>\mathrm{Pb}>\mathrm{Pb}^{2+}$

## Answer: B

## - Watch Video Solution

47. Incorrect order of radius is:
A. $S r^{2+}<R b^{+}<B r^{-}<S e^{2-}$
B. $\mathrm{Nb}^{5+}<Z r^{4+}<Y^{3+}$
C. $\mathrm{Co}>\mathrm{Co}^{2+}>\mathrm{Co}^{3+}>\mathrm{Co}^{4+}$
D. $\mathrm{Ba}^{2+}<\mathrm{Cs}^{+}<\mathrm{Se}^{2-}<\mathrm{As}^{3-}$

## Answer: D

## - Watch Video Solution

48. The correct order of atomic/ionic radiii is:
A. $S c>T i>V>C r$
B. $C o>N i>C u>Z n$
C. $S^{2-}>C l^{-}>O^{2-}>N^{3-}$
D. none of these

## Answer: A

## Watch Video Solution

49. The radius of which is closest to that of the $L i^{+}$ions?
A. $N a^{+}$
B. $B e^{2+}$
C. $M g^{2+}$
D. $A l^{3+}$

## Answer: C

## - Watch Video Solution

50. The first, second and third ionization energies $\left(E_{1}, E_{2} \& E_{3}\right)$ for an element are 7 eV , 12.5 eV and 42.5 eV respectively. The most stable oxidation state of the element will be:
A. +1
B. +4
C. +3
D. +2

## Answer: D

51. Element having highest I.P. value is:
A. Ne
B. He
C. Be
D. N

## Answer: B

## - Watch Video Solution

52. The order of ionisation potential between $\mathrm{He}^{+}$io and H -atom (both species are in gaseous) is:
A. I.P. $\left(H e^{+}\right)=I . P .(H)$
B. I.P. $\left(\mathrm{He}^{+}\right)<$I.P. (H)
C.I. P. $\left(\mathrm{He}^{+}\right)>$I. P. $(H)$
D. cannot be compared

## Answer: C

## - Watch Video Solution

53. Which of the following metal is expected to have the highest third ionsation enthalpy?
A. $\operatorname{Cr}(Z=24)$
B. $V(Z=23)$
C. $\mathrm{Mn}(\mathrm{Z}=25)$
D. $\mathrm{Fe}(\mathrm{Z}=26)$

## Answer: C

54. Second ionisation potential of $L i, B e, B$ is in the order:
A. $L i>B e>B$
B. $L i>B>B e$
C. $B e>L i>B$
D. $B>B e>L i$

## Answer: B

## - Watch Video Solution

55. The ionization energy of boron is less than that of beryllium because:
A. Beryllium has a higher nuclear charge than boron
B. beryllium has a lower nuclear charge than boron
C. the outermost electron in borom occupies a $2 p$-orbital
D. the $2 s$ and $2 p$-orbitals of boron are degenerate

## Answer: C

## D Watch Video Solution

56. The first four I.E. values of an element are 284, 412, 656 and 3210 kJ $\mathrm{mol}^{-1}$. The number of valence electrons in the element are:
A. one
B. two
C. three
D. four

## Answer: C

## - Watch Video Solution

57. The first ionisation potential of $N a, M g, A l$ and $S i$ are in the order
A. $N a<M g<A l<S i$
B. $N a<A l<M g<S i$
C. $N a<A l<S i<M g$
D. $N a>M g>A l>S i$

## Answer: B

## - Watch Video Solution

58. The ionisation energy will be higher when the electron is removed from:
A. s-orbital
B. p-orbital
C. d-orbital
D. f-orbital
59. Which of the following isoelectronic ions has the lowest ionization energy?
A. $K^{+}$
B. $\mathrm{Cl}^{-}$
C. $\mathrm{Ca}^{2+}$
D. $S^{2-}$

## Answer: D

## - Watch Video Solution

60. In the following, the element with the highest ionization energy is
A. $[N e] 3 s^{2} 3 p^{1}$
B. $[N e] 3 s^{2} 3 p^{3}$
C. $[N e] 3 s^{2} 3 p^{2}$
D. $[A r] 3 d^{10} 4 s^{2} 4 p^{3}$

## Answer: B

## - Watch Video Solution

61. The ionisation potentials of Li and K are 5.4 and 4.3 eV respectively. The ionization potential of Na will be:
A. 9.7 eV
B. 1.1 eV
C. 4.9 eV
D. cannot be calculated

## Answer: C

62. Which of the following configuration is associated with biggest jump between 2nd and 3rd IE?
A. $1 s^{2} 2 s^{2} 2 p^{2}$
B. $1 s^{2} 2 s^{2} 2 p^{6} 3 s^{1}$
C. $1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2}$
D. $1 s^{2} 2 s^{2} 2 p^{1}$

## Answer: C

## - Watch Video Solution

63. The second ionization energy is maximum for:
A. Boron
B. beryllium has a lower nuclear charge than boron
C. magnesium
D. aluminium

## Answer: A

## - Watch Video Solution

64. A large difference between the fourth and fifth ionization energies indicates the presence of:
A. 5 valence electrons in an atom
B. 6 valence electrons in an atom
C. 4 valence electrons in an atom
D. 8 valence electrons in an atom

## Answer: C

## - Watch Video Solution

65. For which of the following reaction $\Delta H^{\circ}$ vlaue is equal to the first ionization energy of Ca is?
A. $C a^{+}(g) \rightarrow C a^{2+}(g)+e$
B. $C a(g) \rightarrow C a^{+}(g)+e$
C. $C a(s) \rightarrow C a^{+}(g)+e$
D. $C a(g) \rightarrow C a^{2+}(g)+2 e$

## Answer: B

## - Watch Video Solution

66. Ionization enthalpy of an atom is equal to
A. electron gain enthalpy of the cation
B. electronegativity of the ion
C. ionization enthalpy of the cation
D. none of these

## Answer: A

67. From the ground state, electronic configuration of the elements given below, pick up the one with highest value of second ionization energy:
A. $1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2}$
B. $1 s^{2} 2 s^{2} 2 p^{6} 3 s^{1}$
C. $1 s^{2} 2 s^{2} 2 p^{6}$
D. $1 s^{2} 2 s^{2} 2 p^{5}$

## Answer: B

## - Watch Video Solution

68. An element has successive ionization enthalpies as 940 (first),2080,3090,4140,7030,7870,16000 and $19500 \mathrm{~kJ} \mathrm{~mol}^{-1}$. To which group of the periodic table does this element belong?
A. 14
B. 15
C. 16
D. 17

## Answer: C

## - Watch Video Solution

69. The second ionization potential of elements is invariable higher than first ionization potential because:
A. The size of cation is smaller than its atom
B. it is easier to remove electron from cation
C. ionization is an endothermic process
D. none of these

## Answer: A

70. The first, second and third ionization energies $\left(E_{1}, E_{2} \& E_{3}\right)$ for an element are 7 eV , 12.5 eV and 42.5 eV respectively. The most stable oxidation state of the element will be:
A. +1
B. +4
C. +3
D. +2

## Answer: D

## - Watch Video Solution

71. Which of the following electronic configuration represents a sudden large gap between the values of second and third ionisation energies of an element?
A. $1 s^{2}, 2 s^{2} 2 p^{3}$
B. $1 s^{2}, 2 s^{2} 2 p^{6}, 3 s^{2} 3 p^{3}$
C. $1 s^{2}, 2 s^{2} 2 p^{6}, 3 s^{2} 3 p^{1}$
D. $1 s^{2}, 2 s^{2} 2 p^{6}, 3 s^{2}$

## Answer: D

## - Watch Video Solution

72. Element having highest I.P. value is:
A. Ne
B. He
C. Be
D. $N$

## Answer: B

73. Which of the following atomic species has mximum ionisation energy:
A. $O^{-}$
B. $S^{-}$
C. $S e^{-}$
D. $T e^{-}$

## Answer: B

## - Watch Video Solution

74. The correct order of I.E $E_{2}$. Is:
A. NegtFgtOgtN
B. OgtFgtNegtN
C. NegtOgtFgtN

## D. OgtNegtFgtN

Answer: C

## - Watch Video Solution

75. Which of the following transformation least energy is required?
A. $F_{(g)}^{-} \rightarrow F_{(g)}+e^{-}$
B. $P_{(g)}^{-} \rightarrow P_{(g)}+e^{-}$
C. $S_{(g)}^{-} \rightarrow S_{(g)}+e^{-}$
D. $C l_{(g)}^{-} \rightarrow C l_{(g)}+e^{-}$

## Answer: B

## - Watch Video Solution

76. The amount of energy which is released due to addition of ectra electron to the outermost orbit of gaseous atom is called
A. ionization enthalpy
B. Hydration enthalpy
C. Electronegativity
D. electron gain enthalpy

## Answer: D

## - Watch Video Solution

77. To which the following atom, the attachment of electron is most difficult?
A. Radon
B. Nitrogen
C. Oxygen
D. Radius

## Answer: A

## ( Watch Video Solution

78. Which of the following processes involves absorption of energy?
A. $S(g)+e^{-} \rightarrow S^{-}(g)$
B. $S^{-}+e^{-} \rightarrow S^{2-}(g)$
C. $C l(g)+e^{-} \rightarrow C l^{-}(g)$
D. none of these

## Answer: B

## - Watch Video Solution

79. Arrange $\mathrm{N}, \mathrm{O}$ and S in order of decreasing electron affinity:
A. SgtOgtN
B. OgtSgtN
C. NgtOgtS
D. SgtNgtO

## Answer: A

## - Watch Video Solution

80. Among the following configurations, the element which has the highest electron affinity is:
A. $[N e] 3 s^{1} 3 p^{2}$
B. $[N e] 3 s^{2} 3 p^{5}$
C. $[N e] 3 s^{2} 3 p^{4}$
D. $[N e] 3 s^{2} 3 p^{6} 3 d^{5} 4 s^{1}$
81. Which of the following electronic configurations has the lowest value of ionisation energy? Explain.
a. $1 s^{2} 2 s^{2} 2 p^{6}$
b. $1 s^{2} 2 s^{2} 2 p^{5}$
c. $1 s^{2} 2 s^{2} 2 p^{6} 3 s^{1}$
A. $I I<I V<I I I<I$
B. $I<I I<I I I<I V$
C. $I<I I I<I I<I V$
D. $I V<I I I<I I<I$

## Answer: A

## - Watch Video Solution

82. Why is the second electron gain enthalpy negative (i.e. energy is absorbed)?
A. is always negative
B. is always positive
C. can be positive or negative
D. is always zero

## Answer: B

## - Watch Video Solution

83. The element having very high ionization enthalpy but zero electron affinity is :-
A. H
B. F
C. He
D. Be

## Answer: C

## - Watch Video Solution

84. Which of the following represents correct order of electron affinity?
A. $C l>F>S>O$
B. $F>O>S>C l$
C. $F>C l>S>O$
D. $C l>S>O>F$

## Answer: A

## - Watch Video Solution

85. The process requiring absorption of energy is:
A. $N \rightarrow N^{-}$
B. $F \rightarrow F^{-}$
C. $\mathrm{Cl} \rightarrow \mathrm{Cl}^{-}$
D. $H \rightarrow H^{-}$

## Answer: A

## - Watch Video Solution

86. The electronegativity of the following elements increases in the order:
A. $C<N<S i<P$
B. $S i<P<C<N$
C. $N<C<P<S i$
D. $C<S i<N<P$

## Answer: B

87. Which of the following order is incorrect?
A. Electronegativity of central atom: $\mathrm{CF}_{4}>\mathrm{CH}_{4}>\mathrm{SiH}_{4}$
B. Hydration energy: $A l^{3+}>B e^{2+}>\mathrm{Mg}^{2+}>N a^{+}$
C. Electrical conductance: $F_{(a q)}^{-}>C l_{(a q)}^{-}>S_{(a q)}^{2-}$
D. Magnetic moment: $N i^{4+}>V^{3+}>S r^{2+}$

## Answer: C

## - Watch Video Solution

88. Correct expression of "allred and Rochow's " scale is :
A. electronegativity $=0.744 \frac{Z_{e f f}}{r^{2}}+0.359$
B. Electronegativity $=0.359 \frac{r^{2}}{Z_{\text {eff }}}+0.744$
C. Electronegativity $=0.359 \frac{Z_{\text {eff }}}{r}+0.744$
D. Electronegativity $=0.359 \frac{Z_{e f f}}{r^{2}}+0.744$

## Answer: D

## - Watch Video Solution

89. The hydration energy of $\mathrm{Mg}^{2+}$ ions is lesser than that of:
A. $A l^{3+}$
B. $B a^{2+}$
C. $N a$
D. none of these

## Answer: A

## - Watch Video Solution

90. Among the following, which the maximum hydration energy?
A. $\mathrm{OH}^{-}$
B. $\mathrm{NH}_{4}^{+}$
C. $F^{-}$
D. $H^{+}$

## Answer: D

## - Watch Video Solution

91. Which of the following is arranged in order of incresing radius?
A. $K^{+}(a q)<N a^{+}(a q)<L i^{+}(a q)$
B. $N a^{+}(a q)<K^{+}(a q)<L i^{+}(a q)$
C. $K^{+}(a q)<L i^{+}(a q)<N a^{+}(a q)$
D. $\mathrm{Li}^{+}(a q)<N a^{+}(a q)<K^{+}(a q)$

## Answer: A

92. Which of the following compounds has a negative enthalpy of solution?
A. KCl
B. KBr
C. KF
D. KI

## Answer: C

## - Watch Video Solution

93. Amongst sodium halides $\{\mathrm{NaF}, \mathrm{NaCl}, \mathrm{NaBr}$ and NaI$)$, NaF has the highest melting point because of:
A. High oxidising oxidising power
B. Lowest polarity
C. maximum lattice energy
D. Minimum ionic character

## Answer: C

## - Watch Video Solution

94. Among the following oxides, which has the maximum lattice energy?
A. MgO
B. CaO
C. SrO
D. BaO

## Answer: A

95. Which of the following compounds has a positive enthalpy of solution?
A. LiF
B. LiCl
C. LiBr
D. Lil

## Answer: A

## - Watch Video Solution

96. Born-Haber cycle is used to determine
A. lattice energy of ionic crystals
B. Electron gain enthalpy
C. Electronegativity
D. Boht (a) and (b)

## - Watch Video Solution

97. Which of the following is different from other three oxides?
A. MgO
B. SnO
C. ZnO
D. PbO

## Answer: A

Watch Video Solution
98. Select the amphoteric substance in the following:
A. $\mathrm{SO}_{3}$
B. NaOH
C. $\mathrm{CO}_{2}$
D. $\mathrm{Al}(\mathrm{OH})_{3}$

## Answer: D

## - Watch Video Solution

99. Which of the following compound is most acidic?
A. $\mathrm{Cl}_{2} \mathrm{O}_{7}$
B. $P_{4} O_{10}$
C. $\mathrm{SO}_{3}$
D. $\mathrm{B}_{2} \mathrm{O}_{3}$

## Answer: A

100. Which is not similar characteristics(s) about the electronic configuration of $\mathrm{Be}, \mathrm{Mg}, \mathrm{Ca}$ ?
A. All the atojms have a pair of s-electrons in their outermost energy level
B. all the atoms contain a pair of p-electrons in their outermost energy level
C. All are alkaline earth metals
D. All are of secon group of the periodic table

## Answer: B

## - Watch Video Solution

101. The elements with atomic number 117 and 120 are yet to be discovered. In which group would you plac these elements when discovered?
A. 17,2
B. 17,4
C. 15,3
D. 18,2

## Answer: A

## - View Text Solution

102. The most electropositive element possesses the electronic configuration:
A. $[H e] 2 s^{1}$
B. $[N e] 3 s^{2}$
C. $[X e] 6 s^{1}$
D. $[X e] 6 s^{2}$

## Answer: C

103. Which one of the following elements shows both positive and negative oxidation states?
A. Cesium
B. Fluorine
C. lodine
D. Xenon

## Answer: C

## - Watch Video Solution

104. Number of elements present in 5th period is
A. 18
B. 32
C. 8
D. 24

## Answer: A

## - Watch Video Solution

105. Which of the following arrangements shows the correct order of decreasing paramagnetism?
A. NgtAlgtOgtCa
B. NgtOgtAlgtCa
C. OgtNgtAlgtCa
D. OgtNgtCagtAl

## Answer: B

106. The outer electronic structure of lawrencium (atomic number 103) is:
A. $R n 5 f^{13} 7 s^{2} 7 p^{2}$
B. $R n f^{13} 6 d^{1} 7 s^{1} 7 p^{2}$
C. $R n 5 f^{14} 7 s^{1} 7 p^{1}$
D. $R n 5 f^{14} 6 d^{1} 7 s^{2}$

## Answer: D

## - View Text Solution

107. The element having the lowest atomic number and a ground state electronic configuration of $(n-1) d^{6} n s^{2}$ is placed in:
A. fifth period
B. sixth period
C. fourth period
D. third period

## Answer: C

## D Watch Video Solution

108. Which of the following sets of atomic numbers corresponds to elements of group 16?
A. $8,16,32,54$
B. 16,34,54,86
C. $8,16,34,52$
D. 10,16,32,50

## Answer: C

## D View Text Solution

109. The atomic numbers of the metallic and non-metallic elements which are liquid at room temperature respectively are:
A. 55,87
B. 33,87
C. 35,80
D. 80,35

## Answer: D

## - Watch Video Solution

110. In the periodic table, metallic chracter of the elements shows one of the following trend:
A. Decreases downn the group and increases across the period
B. Increases down the group and decreases across the period
C. Increases across the period and also down the group
D. Decreases across the period and also down the group

## Answer: B

111. Nucleus of an element contains 9 protons Its valency would be :
A. 1
B. 2
C. 3
D. 5

## Answer: A

## - Watch Video Solution

112. Transition metals are not characterized by:
A. Fixed valency
B. coloured compound
C. high melting and boiling points
D. tendency to form coomplexes

## Answer: A

## - View Text Solution

113. Sodium ordinarily does not show an oxidation state of +2 , because of its
A. High first ionisation potential
B. High second ionization potential
C. large ionic radius
D. high electronegativity

## Answer: B

## - Watch Video Solution

114. Which of the following pairs of molecules have the almost identical bond dissociation energy?
A. $F_{2}$ and $H_{2}$
B. $N_{2}$ and $C O$
C. $F_{2}$ and $I_{2}$
D. $H F$ and $O_{2}$

## Answer: C

## - Watch Video Solution

115. According to modern periodic law the elements with similar chemical and physical properties repeat at regular intervals when the elements are arranged in order of :
A. decreasing atomic number
B. increasing atomic weight
C. increasing atomic number
D. decreasing atomic weights

## Answer: C

## - Watch Video Solution

116. Give the symbol of the elements of lowest atomic number that has three $2 p$ electrons:
A. Mg
B. P
C. N
D. Si

## Answer: C

117. In the fourth period of the periodic table, how many elements have one or more 4d electrons:
A. 2
B. 18
C. 0
D. 6

## Answer: C

## - Watch Video Solution

118. Assuming that elements are formed to complete the seventh period, what would be the atomic number of the alkaline earth metal of the eighth period?
A. 113
B. 120
C. 119
D. 106

## Answer: B

## - Watch Video Solution

119. Which of the following represents an excited state of an atom?
A. $[N e] 3 s^{2} 3 p^{6} 4 s^{2} 3 d^{8}$
B. $[N e] 3 s^{2} 3 p^{6} 4 s^{1} 3 d^{5}$
C. $[N e] 3 s^{2} 3 p^{6} 4 s^{2} 3 d^{1}$
D. $1 s^{2} 2 s^{2} 2 p^{5} 3 s^{1}$

## Answer: D

## - Watch Video Solution

120. Choose the correct statement regarding transition elements?
A. Transition elements has low melting points
B. transition elements do not have catalytic activity
C. Transition elements exhibit variable states
D. Transition elements exhibit inert pair effect

## Answer: C

## D View Text Solution

121. Which one of the following is a different pair?
A. Li, Na
B. $\mathrm{Be}, \mathrm{Ba}$
C. $\mathrm{N}, \mathrm{As}$
D. O, At

## D Watch Video Solution

122. The element having electronic configuration $[K r] 4 d^{10} 4 f^{14} 5 s^{2} 5 p^{6} 5 d^{2} 6 s^{2}$ belongs to
A. s-block
B. p-block
C. d-block
D. f-block

## Answer: D

## D Watch Video Solution

123. Which elements is named after the name of a planet is
A. Hg
B. Po
C. Pu
D. Ra

## Answer: C

## - Watch Video Solution

124. Zn and Cd metals do not show varible valency because:
A. They have only two electrons in the outermost subshells
B. Their d-subshells are completely filled
C. Their d-subshells are partially filled
D. they are relatively soft metals

## Answer: B

125. An element whose IUPAC name is ununtrium (Uut) belongs to
A. s-block element
B. p-block element
C. d-block element
D. transition element

## Answer: B

## - Watch Video Solution

126. Which of the following is not representative element?
A. Tellurium
B. Tantalum
C. Thallium
D. Astatine

## Answer: B

## - Watch Video Solution

127. The period number and group number of "Tantalum" ( $Z=73$ ) are respectively:
A. 5,7
B. 6,13
C. 6,5
D. none of these

## Answer: C

128. Which of the following pair of elements belongs period of the periodic table?
A. Mg and Sb
B. Ca and Zn
C. Na and Ca
D. Ca and Cl

## Answer: B

## - Watch Video Solution

129. Consider the following electronic configuration of an element(P):
$[X e] 4 f^{14} 5 d^{1} 6 s^{2}$
Then correct statement about element ' P ' is
A. It belongs to 6th period and 1st group
B. It belongs to 6th period an 2nd group
C. it belongs to 6th period and 3rd group
D. none of these

## Answer: C

## - View Text Solution

130. Which of the following metal is highest electropositive (metallic) in nature?
A. Be
B. Rb
C. Mn
D. TI

## Answer: B

131. Which of the following species must have maximum number of electrons in ' $d_{x y}$ ' orbital?
A. Cr
B. $F e^{3+}$
C. $\mathrm{Cu}^{+}$
D. Both (a) and (b)

## Answer: C

## - Watch Video Solution

132. which of the following graph is correct representation between atomic number ( Z ) and magnetic moment of d-block elements? [outer electronic configuration: $(n-1) d^{x} n s^{1 \text { or }{ }^{2}}$ ]

A.
(b)

B.

C.
(d)

D.

## Answer: D

## - View Text Solution

133. If IUPAC name of an element is "unununium" then correct statement regarding element is:
A. it is inner transition element
B. it belongs to 8th period in periodic tablwit is transition element
C. it is a non-transition element
D.

## Answer: C

## - Watch Video Solution

134. Which property decreases from left to right across the periodic table and increases from top to bottom?
(i) Atomic radius
(ii) Electronegativity
(iii) Ionisation energy
(iv) Metallic character
A. (i) only
B. (i) , (ii) and (iii)
C. (i), (iii) and (iv)
D. (i) and (iv)

## Answer: D

135. Consider the following information about element $P$ and $Q$ :

## Period number Group number <br> P 2 <br> 15 <br> Q 3 <br> 2

the formula of the compound formed by $P$ and $Q$ element is:
A. $P Q$
B. $P_{3} Q_{2}$
C. $P_{2} Q_{3}$
D. $P Q_{2}$

## Answer: C

## - Watch Video Solution

136. which must represent an atom in an excited state?
A. $1 s^{2}, 2 s^{2} 2 p^{1}$
B. $1 s^{2}, 2 s^{2} 2 p^{2}$
C. $1 s^{2}, 2 s^{2} 2 p^{2}, 3 s^{1}$
D. $1 s^{2}, 2 s^{2} 2 p^{5}$

## Answer: C

## - Watch Video Solution

137. Which of the following anion has the smallest radius?
A. $H^{-}$
B. $F^{-}$
C. $C l^{-}$
D. $B r^{-}$

## Answer: B

138. The ionic radii of $\mathrm{Li}^{+}, \mathrm{Be}^{2+}$ and $\mathrm{B}^{3+}$ follow the order:
A. $\mathrm{Be}^{2+}>\mathrm{B}^{3+}>\mathrm{Li}^{+}$
B. $\mathrm{Li}^{+}>\mathrm{B}^{3+}>\mathrm{Be}^{2+}$
C. $\mathrm{B}^{3+}>\mathrm{Be}^{2+}>\mathrm{Li}^{+}$
D. $\mathrm{Li}^{+}>\mathrm{Be}^{2+}>\mathrm{B}^{3+}$

## Answer: D

## - Watch Video Solution

139. Largest in size out of $N a^{+}, N e$ and $F^{-}$is:
A. $N a^{+}$
B. $N e$
C. $F^{-}$
D. all are equal

## Answer: B

## - Watch Video Solution

140. Which of the following atom or ions has the smallest size?
A. F
B. $F^{-}$
C. $O$
D. N

## Answer: A

## - Watch Video Solution

141. The single covalent radius of $P$ is 0.11 nm . The single covalent radius of Cl will be:
A. smaller than $P$
B. greater than $P$
C. same as P
D. of $P$

## Answer: A

## - Watch Video Solution

142. Which of the following is arranged in decreasing order of size?
A. $M g^{2+}>A l^{3+}>O^{2-}$
B. $O^{2-}>M g^{2+}>A l^{3+}$
C. $A l^{3+}>M g^{2+}>O^{-}$
D. $\mathrm{Al}^{3+}>\mathrm{O}^{2-}>\mathrm{Mg}^{2+}$

## - Watch Video Solution

143. The correct order of increasing atomic radius of the following elements as:
A. $S<O<S e<C$
B. $O<C<S<S e$
c. $O<S<S e<C$
D. $C<O<S<S e$

## Answer: B

## - Watch Video Solution

144. The correct order of increasing radii of the elements $S i, A l, N a$ and $P$ is
A. $S i<A l<P<N a$
B. $P<S i<A l<N a$
C. $A l<S i<P<N a$
D. $A l<P<S i<N a$

## Answer: B

## - Watch Video Solution

145. The size of the species, $\mathrm{Pb}, \mathrm{Pb}^{2+}, \mathrm{Pb}^{4+}$ decreases as -
A. $\mathrm{Pb}^{4+}>\mathrm{Pb}^{2+}>\mathrm{Pb}$
B. $\mathrm{Pb}>\mathrm{Pb}^{2+}>\mathrm{Pb}^{4+}$
C. $\mathrm{Pb}>\mathrm{Pb}^{4+}>\mathrm{Pb}^{2+}$
D. $\mathrm{Pb}^{4+}>\mathrm{Pb}>\mathrm{Pb}^{2+}$

## Answer: B

146. Incorrect order of radius is:
A. $S r^{2+}<R b^{+}<B r^{-}<S e^{2-}$
B. $N b^{5+}<Z r^{4+}<Y^{3+}$
C. $\mathrm{Co}>\mathrm{Co}^{2+}>\mathrm{Co}^{3+}>\mathrm{Co}^{4+}$
D. $B a^{2+}<C s^{+}<S e^{2-}<A s^{3-}$

## Answer: D

## - Watch Video Solution

147. The correct order of atomic/ionic radiii is:
A. $S c>T i>V>C r$
B. $C o>N i>C u>Z n$
C. $S^{2-}>\mathrm{Cl}^{-}>\mathrm{O}^{2-}>\mathrm{N}^{3-}$
D. none of these

## Answer: A

## - Watch Video Solution

148. The radius of which is closest to that of the $L i^{+}$ions?
A. $N a^{+}$
B. $B e^{2+}$
C. $M g^{2+}$
D. $A l^{3+}$

## Answer: C

## - Watch Video Solution

149. The first, second and third ionization energies $\left(E_{1}, E_{2} \& E_{3}\right)$ for an element are 7 eV , 12.5 eV and 42.5 eV respectively. The most stable oxidation state of the element will be:
A. +1
B. +4
C. +3
D. +2

## Answer: D

## - Watch Video Solution

150. Element having highest I.P. value is:
A. Ne
B. He
C. Be
D. N

## Answer: B

## - Watch Video Solution

151. The order of ionisation potential between $\mathrm{He}^{+}$io and H -atom (both species are in gaseous) is:
A. I.P. $\left(H e^{+}\right)=I . P .(H)$
B. I.P. $\left(\mathrm{He}^{+}\right)<$I.P. (H)
C.I. P. $\left(\mathrm{He}^{+}\right)>$I. P. (H)
D. cannot be compared

## Answer: C

## - Watch Video Solution

152. Which of the following metal is expected to have the highest third ionsation enthalpy?
A. $\mathrm{Cr}(\mathrm{Z}=24)$
B. $\mathrm{V}(\mathrm{Z}=23)$
C. $\mathrm{Mn}(\mathrm{Z}=25)$
D. $\mathrm{Fe}(\mathrm{Z}=26)$

## Answer: C

## - Watch Video Solution

153. Second ionisation potential of $L i, B e, B$ is in the order:
A. $L i>B e>B$
B. $L i>B>B e$
C. $B e>L i>B$
D. $B>B e>L i$

## Answer: B

## - Watch Video Solution

154. The ionization energy of boron is less than that of beryllium because:
A. Beryllium has a higher nuclear charge than boron
B. beryllium has a lower nuclear charge than boron
C. the outermost electron in borom occupies a $2 p$-orbital
D. the $2 s$ and $2 p$-orbitals of boron are degenerate

## Answer: C

## - Watch Video Solution

155. The first four I.E. values of an element are 284, 412, 656 and 3210 kJ $\mathrm{mol}^{-1}$. The number of valence electrons in the element are:
A. one
B. two
C. three
D. four

## Answer: C

## - Watch Video Solution

156. The first ionisation potential of $N a, M g, A l$ and $S i$ are in the order
A. $N a<M g<A l<S i$
B. $N a<A l<M g<S i$
C. $N a<A l<S i<M g$
D. $N a>M g>A l>S i$

## Answer: B

157. The ionisation energy will be higher when the electron is removed from:
A. s-orbital
B. p-orbital
C. d-orbital
D. f-orbital

## Answer: A

## - Watch Video Solution

158. Which of the following isoelectronic ions has the lowest ionization energy?
A. $K^{+}$
B. $\mathrm{Cl}^{-}$
C. $\mathrm{Ca}^{2+}$
D. $S^{2-}$

## Answer: D

## - Watch Video Solution

159. Amongst the following elements, the highest ionization energy is
A. $[N e] 3 s^{2} 3 p^{1}$
B. $[N e] 3 s^{2} 3 p^{3}$
C. $[N e] 3 s^{2} 3 p^{2}$
D. $[A r] 3 d^{10} 4 s^{2} 4 p^{3}$

## Answer: B

160. The ionisation potentials of Li and K are 5.4 and 4.3 eV respectively. The ionization potential of Na will be:
A. 9.7 eV
B. 1.1 eV
C. 4.9 eV
D. cannot be calculated

## Answer: C

## - Watch Video Solution

161. Which of the following electronic configuration is associated with the biggest jump between the second and third ionization energies?
A. $1 s^{2} 2 s^{2} 2 p^{2}$
B. $1 s^{2} 2 s^{2} 2 p^{6} 3 s^{1}$
C. $1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2}$
D. $1 s^{2} 2 s^{2} 2 p^{1}$

## Answer: C

## - View Text Solution

162. The second ionization energy is maximum for:
A. Boron
B. beryllium has a lower nuclear charge than boron
C. magnesium
D. aluminium

## Answer: A

163. A large difference between the fourth and fifth ionization energies indicates the presence of:
A. 5 valence electrons in an atom
B. 6 valence electrons in an atom
C. 4 valence electrons in an atom
D. 8 valence electrons in an atom

## Answer: C

## - View Text Solution

164. For which of the following reaction $\Delta H^{\circ}$ vlaue is equal to the first ionization energy of Ca is?
A. $\mathrm{Ca}^{+}(\mathrm{g}) \rightarrow \mathrm{Ca}^{2+}(\mathrm{g})+e$
B. $\mathrm{Ca}(\mathrm{g}) \rightarrow \mathrm{Ca}^{+}(\mathrm{g})+e$
C. $\mathrm{Ca}(\mathrm{s}) \rightarrow \mathrm{Ca}^{+}(\mathrm{g})+e$
D. $\mathrm{Ca}(\mathrm{g}) \rightarrow \mathrm{Ca}^{2+}(\mathrm{g})+2 e$

## Answer: B

## - Watch Video Solution

165. Ionization enthalpy of an atom is equal to
A. electron gain enthalpy of the cation
B. electronegativity of the ion
C. ionization enthalpy of the cation
D. none of these

## Answer: A

## - Watch Video Solution

166. From the ground state, electronic configuration of the elements given below, pick up the one with highest value of second ionization energy:
A. $1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2}$
B. $1 s^{2} 2 s^{2} 2 p^{6} 3 s^{1}$
C. $1 s^{2} 2 s^{2} 2 p^{6}$
D. $1 s^{2} 2 s^{2} 2 p^{5}$

## Answer: B

## - Watch Video Solution

167. An element has successive ionization enthalpies as 940 (first),2080,3090,4140,7030,7870,16000 and $19500 \mathrm{~kJ} \mathrm{~mol}^{-1}$. To which group of the periodic table does this element belong?
A. 14
B. 15
C. 16
D. 17

## Answer: C

## - Watch Video Solution

168. The second ionization potential of elements is invariably higher than first ionization potential because:
A. The size of cation is smaller than its atom
B. it is easier to remove electron from cation
C. ionization is an endothermic process
D. none of these

## Answer: A

169. The first, second and third ionization energies $\left(E_{1}, E_{2} \& E_{3}\right)$ for an element are 7 eV , 12.5 eV and 42.5 eV respectively. The most stable oxidation state of the element will be:
A. +1
B. +4
C. +3
D. +2

## Answer: D

## - Watch Video Solution

170. Which of the following electronic configuration represents a sudden large gap between the values of second and third ionisation energies of an element?
A. $1 s^{2}, 2 s^{2} 2 p^{3}$
B. $1 s^{2}, 2 s^{2} 2 p^{6}, 3 s^{2} 3 p^{3}$
C. $1 s^{2}, 2 s^{2} 2 p^{6}, 3 s^{2} 3 p^{1}$
D. $1 s^{2}, 2 s^{2} 2 p^{6}, 3 s^{2}$

## Answer: D

## - Watch Video Solution

171. Element having highest I.P. value is:
A. Ne
B. He
C. Be
D. $N$

## Answer: B

172. Which of the following atomic species has mximum ionisation energy:
A. $O^{-}$
B. $S^{-}$
C. $S e^{-}$
D. $T e^{-}$

## Answer: B

## - Watch Video Solution

173. The correct order of I. $E_{2}$. Is:
A. NAgtFgtOgtN
B. OgtFgtNegtN
C. NegtOgtFgtN

## D. OgtNegtFgtN

Answer: C

## - Watch Video Solution

174. Which of the following transformation least energy is required?
A. $F_{(g)}^{-} \rightarrow F_{(g)}+e^{-}$
B. $P_{(g)}^{-} \rightarrow P_{(g)}+e^{-}$
C. $S_{(g)}^{-} \rightarrow S_{(g)}+e^{-}$
D. $C l_{(g)}^{-} \rightarrow C l_{(g)}+e^{-}$

## Answer: B

175. The amount of energy which is released due to addition of ectra electron to the outermost orbit of gaseous atom is called
A. ionization enthalpy
B. Hydration enthalpy
C. Electronegativity
D. electron gain enthalpy

## Answer: D

## - Watch Video Solution

176. To which the following atom, the attachment of electron is most difficult?
A. Radon
B. Nitrogen
C. Oxygen
D. Radius

## Answer: A

## D Watch Video Solution

177. Which of the following processes involves absorption of energy?
A. $S(g)+e^{-} \rightarrow S^{-}(g)$
B. $S^{-}+e^{-} \rightarrow S^{2-}(g)$
C. $C l(g)+e^{-} \rightarrow C l^{-}(g)$
D. none of these

## Answer: B

## - View Text Solution

178. Arrange N, O and S in order of decreasing electron affinity:
A. SgtOgtN
B. OgtSgtN
C. NgtOgtS
D. SgtNgtO

## Answer: A

## - View Text Solution

179. Among the following configurations, the element which has the highest electron affinity is:
A. $[N e] 3 s^{1} 3 p^{2}$
B. $[N e] 3 s^{2} 3 p^{5}$
C. $[N e] 3 s^{2} 3 p^{4}$
D. $[N e] 3 s^{2} 3 p^{6} 3 d^{5} 4 s^{1}$
180. The increasing order of electron affinity of the electronic configuration of element is :
(I) $1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2} 3 p^{5}$
(II) $1 s^{2} 2 s^{2} 2 p^{3}$
(III) $1 s^{2} 2 s^{2} 2 p^{5}$
(I) $1 s^{2} 2 s^{2} 2 p^{6} 3 s^{1}$
A. $I I<I V<I I I<I$
B. $I<I I<I I I<I V$
C. $I<I I I<I I<I V$
D. $I V<I I I<I I<I$

## Answer: A

## - View Text Solution

181. Second electron gain enthalpy:
A. is always negative
B. is always positive
C. can be positive or negative
D. is always zero

## Answer: B

## D View Text Solution

182. The element having very high ionization enthalpy but zero electron affinity is:
A. H
B. F
C. He
D. Be

## Answer: C

## D View Text Solution

183. Which of the following represents correct order of electron affinity?
A. $C l>F>S>O$
B. $F>O>S>C l$
C. $F>C l>S>O$
D. $C l>S>O>F$

## Answer: A

## - View Text Solution

184. The process requiring absorption of energy is:
A. $N \rightarrow N^{-}$
B. $F \rightarrow F^{-}$
C. $\mathrm{Cl} \rightarrow \mathrm{Cl}^{-}$
D. $H \rightarrow H^{-}$

## Answer: A

## - View Text Solution

185. The electronegativity of the following elements increases in the order:
A. $C<N<S i<P$
B. $S i<P<C<N$
C. $N<C<P<S i$
D. $C<S i<N<P$

## Answer: B

186. Which of the following order is incorrect?
A. Electronegativity of central atom: $\mathrm{CF}_{4}>\mathrm{CH}_{4}>\mathrm{SiH}_{4}$
B. Hydration energy: $\mathrm{Al}^{3+}>\mathrm{Be}^{2+}>\mathrm{Mg}^{2+}>\mathrm{Na}^{+}$
C. Electrical conductance: $F_{(a q)}^{-}>C l_{(a q)}^{-}>S_{(a q)}^{2-}$
D. Magnetic moment: $\mathrm{Ni}^{4+}>V^{3+}>\mathrm{Sr}^{2+}$

## Answer: C

## - View Text Solution

187. Correct expression of "allred and Rochow's " scale is :
A. electronegativity $=0.744 \frac{Z_{e f f}}{r^{2}}+0.359$
B. Electronegativity $=0.359 \frac{r^{2}}{Z_{\text {eff }}}+0.744$
C. Electronegativity $=0.359 \frac{Z_{\text {eff }}}{r}+0.744$
D. Electronegativity $=0.359 \frac{Z_{\text {eff }}}{r^{2}}+0.744$

## D View Text Solution

188. The hydration energy of $M g^{2+}$ ions is lesser than that of:
A. $A l^{3+}$
B. $B a^{2+}$
C. $N a$
D. none of these

## Answer: A

189. Among the following, which the maximum hydration energy?
B. $\mathrm{NH}_{4}^{+}$
C. $F^{-}$
D. $H^{+}$

## Answer: D

## - View Text Solution

190. Which of the following is arranged in order of incresing radius?
A. $K^{+}(a q)<N a^{+}(a q)<\operatorname{Li}^{+}(a q)$
B. $N a^{+}(a q)<K^{+}(a q)<\mathrm{Li}^{+}(a q)$
C. $K^{+}(a q)<L i^{+}(a q)<N a^{+}(a q)$
D. $\mathrm{Li}^{+}(a q)<\mathrm{Na}^{+}(a q)<\mathrm{K}^{+}(a q)$

## Answer: A

191. Which of the following compounds has a negative enthalpy of solution?
A. KCl
B. KBr
C. KF
D. KI

## Answer: C

## - View Text Solution

192. Amongst sodium halides $\{\mathrm{NaF}, \mathrm{NaCl}, \mathrm{NaBr}$ and NaI ), NaF has the highest melting point because of:
A. High oxidising oxidising power
B. Lowest polarity
C. maximum lattice energy
D. Minimum ionic character

## Answer: C

## - Watch Video Solution

193. Among the following oxides, which has the maximum lattice energy?
A. MgO
B. CaO
C. SrO
D. BaO

## Answer: A

194. Which of the following compounds has a positive enthalpy of solution?
A. LiF
B. LiCl
C. LiBr
D. Lil

## Answer: A

## - View Text Solution

195. Born-Haber cycle can be used to estimate:
A. lattice energy of ionic crystals
B. Electron gain enthalpy
C. Electronegativity
D. Boht (a) and (b)

## D View Text Solution

196. Which of the following is different from other three oxides?
A. MgO
B. SnO
C. ZnO
D. PbO

## Answer: A

## - View Text Solution

197. Select the amphoteric substance in the following:
A. $\mathrm{SO}_{3}$
B. NaOH
C. $\mathrm{CO}_{2}$
D. $\mathrm{Al}(\mathrm{OH})_{3}$

## Answer: D

## - View Text Solution

198. Which of the following compound is most acidic?
A. $\mathrm{Cl}_{2} \mathrm{O}_{7}$
B. $P_{4} O_{10}$
C. $\mathrm{SO}_{3}$
D. $\mathrm{B}_{2} \mathrm{O}_{3}$

## Answer: A

1. A compound contains three elements $A, B$ and $C$, if the oxidation number of $A=+2 B=+5$ and $C=-2$ then possible formula of the compound is
A. $A_{3}\left(B_{4} C\right)_{2}$
B. $A_{3}\left(B C_{4}\right)_{2}$
C. $A_{2}\left(B C_{3}\right)_{2}$
D. $A B C_{2}$

## Answer: B

## - Watch Video Solution

2. Consider the following four elements, which are represented according to long form of periodic table

Here $\mathrm{W}, \mathrm{Y}$ and Z left, up and right elements with respect to the element ' X ' and ' $X$ ' belongs to $16^{\text {th }}$ group and $3^{\text {rd }}$ period. Then according to given information the incorrect to given information the incorrect statement regarding given elements is
A. Maximum electronegativity: $Y$
B. Maximum catenation property:X
C. Maximum electron affinity: Z
D. Y exhibits variable covalency

## Answer: D

3. Which of the following sequence represents atomic number of only representative elements?
A. $55,12,48,53$
B. $13,33,54,83$
C. $3,33,53,87$
D. $22,33,55,66$

## Answer: C

## - Watch Video Solution

4. The ground state electronic configuration of the elements, $\mathrm{U}, \mathrm{V}, \mathrm{W}, \mathrm{X}$, and $Y$ (these symbols do not have any chemical significance) are as follows:

$$
U \quad 1 s^{2} 2 s^{2} 2 p^{3}
$$

$$
V \quad 1 s^{2} 2 s^{2} 2 p^{6} 3 s^{1}
$$

$$
W \quad 1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2} 3 p^{2}
$$

$X \quad 1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2} 3 p^{6} 3 d^{5} 4 s^{2}$
$Y \quad 1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2} 3 p^{6} 3 d^{10} 4 s^{2} 4 p^{6}$

Determine which sequence of elements satisfy the following statement:
(i) element forms a carbonate which is not decomposed by heating
(ii) Element is most likely to form coloured ionic compound
(iii) element has largest atomic radius
(iv) element forms only acidic oxide
A. $\mathrm{VW}_{\mathrm{W}} \mathrm{U}$
B. VXYW
C. VWYX
D. VXWU

## Answer: B

## - Watch Video Solution

5. When magnesium burns in air, compounds of magnesium formed are magnesium oxide and:
A. $M g_{3} N_{2}$
B. $\mathrm{MgCO}_{3}$
C. $\mathrm{Mg}\left(\mathrm{NO}_{3}\right)_{2}$
D. $\mathrm{MgSO}_{4}$

## Answer: A

## - Watch Video Solution

6. Which of the following ions is most unlikely to exist?
A. $L i^{-}$
B. $B e^{-}$
C. $B^{-}$
D. $F^{-}$

## Answer: B

7. $A, B$ and $C$ are oxides of elements $X, Y$ and $Z$ respectively. $X, Y$ and $Z$ are in the same period of the periodic table. A gives an aqueous solution which turns blue litmus red. B reacts with both strong acids and strong alkalies.

C gives an aqueous solution which is strongly alkaline. Which of the following statement is/are true ?
(P) All the three elements are metals.
(Q) The electronegativites decreases from X to Y to Z .
(R) The atomic radius increases in the order $X<Y<Z$.
(S) $X, Y$ and $Z$ could be phosphorus, aluminium and sodium respectively.
A. I, II, III only correct
B. I, III only correct
C. II, IV only correct
D. II, III, IV only correct

## Answer: C

8. Lanthanum is
A. s-block elements
B. p-block elements
C. d-block elements
D. f-block elements

## Answer: C

9. If the aufbau principle had not been followed, $\mathrm{Ca}(\mathrm{Z}=20)$ would have been placed in the:
A. s-block
B. p-block
C. d-block
D. f-block

## Answer: C

## - Watch Video Solution

10. What is the atomic number of the element with the maximum number of unpaired $4 p$ electron.
A. 33
B. 26
C. 23
D. 15

## Answer: A

11. The electronic configuration of four elements are:
(I) $[K r] 5 s^{1}$
(II) $[R n] 5 f^{14} 6 d^{1} 7 s^{2}$
(III) $[A r] 3 d^{10} 4 s^{2} 4 p^{5}$
(IV) $[A r] 3 d^{6} 4 s^{2}$

Consider the following statements:
(II shows variable oxidation state
(ii) II is a d-block element
(iii) The compound formed between I and III is covalent
(iv) IV shows single oxidation state
which statement is true $(\mathrm{T}$ ) or false ( F )?
A. FTFF
B. FTFT
C. FFTF
D. FFFF

## Answer: D

12. If period number and grou number of any representative element(s) are same then which of the following statement is incorrect regarding such type element(s) in their ground state? (period number and group number are according to modern form of periodic table)
A. The possible value of principan quantum number is 2
B. The possible value of azimuthal quantum number is zero
C. The possible value of magnetic quantum number is 1
D. the species could be paramagnetic

## Answer: C

## - Watch Video Solution

13. How do the energy gaps between successive electron energy levels in an atom very from low to high $n$ values ?
A. All energy gaps are the same
B. The energy gap decreases as n increases
C. The energ gap increases as $n$ increases
D. the energy gap changes unpredictable as n increases

## Answer: B

## - Watch Video Solution

14. Properties of the alkaline earth metals that increase from Be to Ba include which of the following?
( P ) Atomic radius ( Q ) Ionization energy
(R) Nuclear charge
A. (i) and (ii)
B. (i) and (iii)
C. (ii) and (iii)
D. (i), (ii) and (iii)

## Answer: B

## D Watch Video Solution

15. which of the following is the incorrect match for atom of element?
A. $[A r] 3 d^{5} 4 s^{2} \rightarrow 4^{t h}$ period, $6^{t h}$ group
B. $[K r] 4 d^{10} \rightarrow 5^{\text {th }}$ period, $12^{\text {th }}$ group
C. $[R n] 6 d^{1} 7 s^{2} \rightarrow 7^{t h}$ period, 3th group
D. $[X e] 4 f^{14} 5 d^{2} 6 s^{2} \rightarrow 6$ th period, 4 th group

## Answer: A::B

## - Watch Video Solution

16. The set representing the correct order of ionic radius is : a)

$$
\begin{align*}
& N a^{+}>M g^{2+}>A l^{3+}>B e^{2+}>\mathrm{Li}^{+} \\
& N a^{+}>\mathrm{Li}^{+}>M g^{2+}>A l^{3+}>B e^{2+}
\end{align*}
$$

$\mathrm{Na}^{+}>\mathrm{Mg}^{2+}>\mathrm{Al}^{3+}>\mathrm{Li}^{+}>\mathrm{Be}^{2+}$
$\mathrm{Na}^{+}>\mathrm{Mg}^{2+}>\mathrm{Li}^{+}>\mathrm{Be}^{2+}>\mathrm{Al}^{3+}$
A. $\mathrm{Na}^{+}>\mathrm{Mg}^{2+}>\mathrm{Al}^{3+}>\mathrm{Li}^{+}>\mathrm{Be}^{2+}$
B. $\mathrm{Na}^{+}>\mathrm{Li}^{+}>\mathrm{Mg}^{2+}>\mathrm{Al}^{3+}>\mathrm{Be}^{2+}$
C. $\mathrm{Na}^{+}>\mathrm{Mg}^{2+}>\mathrm{Li}^{+}>\mathrm{Al}^{3+}>\mathrm{Be}^{2+}$
D. $\mathrm{Na}^{+}>\mathrm{Mg}^{2+}>\mathrm{Li}^{+}>\mathrm{Be}^{2+}$

## Answer: B

## - Watch Video Solution

17. In which of the following pair, both the species are isoelectronic but the first one is large in size than the second?
A. $S^{2-}, O^{2-}$
B. $\mathrm{Cl}^{2-}, \mathrm{S}^{2-}$
C. $F^{-}, N a^{+}$
D. $N^{3-}, P^{3-}$

## Answer: C

## - Watch Video Solution

18. Increasing order of ionic size :
$\mathrm{N}^{3-}, \mathrm{Na}^{+}, \mathrm{F}^{-}, \mathrm{O}^{2-}, \mathrm{Mg}^{2+}$
A. $\mathrm{Mg}^{2+}>\mathrm{Na}^{+}>\mathrm{F}^{-}>\mathrm{O}^{2-}>\mathrm{N}^{3-}$
B. $\mathrm{N}^{3-}<\mathrm{F}^{-}>\mathrm{O}^{2-}>\mathrm{Na}^{+}>\mathrm{Mg}^{2+}$
C. $M g^{2+}<N a^{+}<F^{-}<O^{2-}<N^{3-}$
D. $\mathrm{N}^{3-}>\mathrm{O}^{2-}>\mathrm{F}^{-}>N \mathrm{a}^{+}<M g^{2+}$

## Answer: C

## - Watch Video Solution

19. The order of increasing ionic radius of the following is:
A. $\mathrm{K}^{+}<\mathrm{Li}^{+}<\mathrm{Mg}^{2+}<\mathrm{Al}^{3+}$
B. $\mathrm{K}^{+}<\mathrm{Mg}^{2+}<\mathrm{Li}^{+}<A l^{3+}$
C. $\mathrm{Li}^{+}<\mathrm{K}^{+} \mathrm{Mg}^{2+}<\mathrm{Al}^{3+}$
D. $\mathrm{Al}^{3+}<\mathrm{Mg}^{2+}<\mathrm{Li}^{+}<\mathrm{K}^{+}$

## Answer: D

## - Watch Video Solution

20. If the ionic radii of each $K^{+}$and $F^{-}$are $1.34 \AA$, then tha atomic radii of $K$ and $F$ will be respectively:
A. $1.34 \AA, 1.34 \AA$
B. $0.72 \AA, 1.96 \AA$
C. $1.96 \AA, 0.72 \AA$
D. $1.96 \AA, 1.34 \AA$

## - Watch Video Solution

21. Incorrect order of ionic size is:
A. $L a^{3+}>G d^{3+}>E u^{3+}>L u^{3+}$
B. $V^{2+}>V^{3+}>V^{4+}>V^{5+}$
C. $\mathrm{Tl}^{+}>\mathrm{In}^{+}>\mathrm{Sn}^{2+}>S b^{3+}$
D. $K^{+}>S c^{3+}>V^{5+}>M n^{7+}$

## Answer: A

## Watch Video Solution

22. $X_{(g)} \rightarrow X_{(g)}^{+}+e^{-}, \quad \Delta H=+720 \mathrm{~kJ} \mathrm{~mol}^{-1}$

Calculate the amoung of energy required to convert 110 mg ' X ' atom in gaseous state into $X^{+}$ion. (Atoic wt. for $\mathrm{X}=7 \mathrm{~g} / \mathrm{mol}$ )
A. 10.4 kJ
B. 12.3 kJ
C. 11.3 kJ
D. 14.5 kJ

## Answer: C

## - Watch Video Solution

23. Consider the following changes : -
$M_{(s) \rightarrow M_{(g)}}$
$M_{(s)} \rightarrow M_{(g)}^{+2}+2 e^{\ominus}$
$M_{(g)} \rightarrow M^{+}+e^{\ominus}$
$M_{(g)}^{+} \rightarrow M_{(g)}^{+2}+e^{\ominus}$
$M_{(g)} \rightarrow M_{(g)}^{+2}+2 e^{\theta}$
The second ionisation energy of $M_{(g)}$ could be calculated from which of the above given reactions:
B. 2-1+3
C. $1+5$
D. $5-3$

## Answer: D

## - Watch Video Solution

24. The correct order of second ionisation potential of $\mathrm{C}, \mathrm{N}, \mathrm{O}$ and F is:
A. FgtOgtNgtC
B. CgtNgtOgtF
C. OgtNgtFgtC
D. OgtFgtNgtC

## Answer: D

25. Which is the correct order of ionisation energies ?
A. $\mathrm{F}^{-}>\mathrm{F}^{-} \mathrm{Cl}^{-}>\mathrm{Cl}$
B. $\mathrm{F}>\mathrm{Cl}>\mathrm{Cl}^{-}>\mathrm{F}^{-}$
C. $\mathrm{F}^{-}>\mathrm{Cl}^{-}>\mathrm{Cl}>\mathrm{F}$
D. $\mathrm{F}^{-}>\mathrm{Cl}^{-}>\mathrm{F}>\mathrm{Cl}$

## Answer: B

## - Watch Video Solution

26. Which of the following statements is incorrect?
A. The second ionization energy of sulphur is greater than that of chlorine
B. The third ionization energy of phosphorus is greater than that of aluminium
C. The first ionization energy of aluminium is approximately the same as that of gallium
D. The second ionization energy of boron is greater than that of carbon

## Answer: B

- Watch Video Solution

27. First ionization energy is the lowest with:
A. Lead
B. Carbon
C. Silicon
D. Tin

## Answer: D

28. The incorrect among the following is:
A. The first ionization potential of Al is less than the first ionization potential of Mg
B. The second ionizaztion potential of Mg is greater than the second ionization potential of Na
C. The first ionization potential of Na is less than the first ionization potential of Mg
D. The third ionization potential of Mg is greater than the third ionization potential of Al

## Answer: B

## - Watch Video Solution

29. The correct values of ionization enthalpies(in $\mathrm{KJ} \mathrm{mol}^{-1}$ ) of $\mathrm{Si}, \mathrm{P}, \mathrm{Cl}$, and
S respectively are:
a) $786,1012,999,1256$
b) $1012,786,999,1256$
c)
$786,1012,1256,999$ d) $786,999,1012,1256$
A. $786,1012,999,1256$
B. $1012,786,999,1256$
C. $786,1012,1256,999$
D. $786,999,1012,1256$

## Answer: C

## - Watch Video Solution

30. The third ionisation energy will be maximum for:
A. nitrogen
B. phosphorus
C. aluminium
D. boron

## Answer: D

## - Watch Video Solution

31. Consider the following ionsisation reaction :
$I E\left(K_{J m o l}{ }^{-1}\right) \quad I E\left(K\right.$ Jmol $\left.^{-1}\right)$
$A_{(g)} \rightarrow A_{(g)}^{+}+e^{\Theta}, A_{1} \quad B_{(g)} \rightarrow B_{(g)}^{+}+e^{\Theta}, B_{1}$
$B_{(g)}^{+} \rightarrow B_{(g)}^{+2}+e^{\ominus}, B_{2} \quad C_{(g)} \rightarrow C_{(g)}^{+}+e^{\ominus}, C_{1}$
$C_{(g)}^{+} \rightarrow C_{(g)}^{+2}+e^{\theta}, C_{2} \quad C_{(g)}^{+2} \rightarrow C_{(g)}^{+3}+e^{\theta}, C_{3}$
If monovalent positive ion of $A$, divalent positive ion of $B$ and trivalent positive ion of $C$ have zero electron. Then incorrect order of corresponding I.P. is :
A. $C_{3}>B_{2}>A_{1}$
B. $B_{1}>A_{1}>C_{1}$
C. $C_{3}>C_{2}>B_{2}$
D. $B_{2}>C_{3}>A_{1}$

## Answer: D

## - Watch Video Solution

32. The incorrect statement is:
A. The second ionisation energy of Se is greater than that of second ionisation energy of As
B. The first ionisation energy of $C^{2+}$ ion is greater than that of rist ionisation energy of $N^{2+}$ ion
C. The third ionisation energy of, $F$ is greater than that of third ionisation energy of O
D. Helogens have highest I.E. in respectively period.

## Answer: D

## D Watch Video Solution

33. First three ionisation energies (in $\mathrm{kJ} / \mathrm{mol}$ ) of three representative elements are given below:
(Element, $\left.I E_{1}, I E_{2}, I E_{3}\right),(P, 495.8,4582,6910),(Q, 737.7,1451,7733),(R$ then incorrect option is:
A. Q: alkaline earth metal
B. P: alkali metals
C. R: s-block element
D. They belong to same period

## Answer: C

## - Watch Video Solution

34. Which of the following statement is correct regarding following process ?
$(i) \mathrm{Cl} \xrightarrow{E . A} \mathrm{Cl}^{-}$
$(\mathrm{ii}) \mathrm{Cl}^{-} \xrightarrow{I \cdot E} \mathrm{Cl}$
$(i i i) \mathrm{Cl} \xrightarrow{I . E} \mathrm{Cl}^{+}$
$(\mathrm{iv}) \mathrm{Cl}^{+} \xrightarrow{\text { I.E. }} \mathrm{Cl}^{2+}$
A. |I.E. of process (ii)|=|E.A. of process (i)|
B. |I.E. of process (iii)|=|I.E. of process (ii)|
C. |I.E. of process (iv)|=|E.A. of process (i)|
D. |I.E. of process (iv)|=|I.E. of process (iii)|

## Answer: A

## - Watch Video Solution

35. The correct order of increasing electron affinity of the following elements is:
A. $O<S<F<C l$
B. $O<S<C l<F$
C. $S<O<F<C l$
D. $S<O<C l<F$
36. The second electron gain enthalpies (in $\mathrm{kJ} \mathrm{mol}^{-1}$ ) of oxygen and sulphur respectively are:
A. $-780,+590$
B. $-590,+780$
C. $+590,+780$
D. $+780,+590$

## Answer: D

## - Watch Video Solution

37. Which of the following statement is correct?
A. The magnitude of the second electron ffinity of sulphur is greater than that of oxygen
B. The magnitude of the second electron affinity of sulphur is less than that of oxygen
C. the first electron affinities of bromine and iodine are approximately the same
D. The first electron affinity of fluorine is greater than that of chlorine

## Answer: B

## - Watch Video Solution

38. Which of the following statements is incorrect?
A. Greater is the nucler charge, greater is the electron gain enthalpy
B. Nitrogen has almost zero electron gain enthalpy
C. electron gain enthalpy decreases from fluorine to iodine in the group
D. Chlorine has highest electron gain enthalpy

## Answer: C

## - Watch Video Solution

39. The formation of the oxide ion $O_{g}^{2-}$ requires first an exothermic and then an endothermic step as shown below:
$O_{g}+e^{-} \rightarrow O_{g}^{-}, \Delta H=-142 \mathrm{kJmol}^{-1}$
$O(g)+e \rightarrow O_{g}^{2-}, \Delta H=844 \mathrm{kJmol}^{-1}$
This is because:
A. $O^{-}$ion has comparatively larger size than oxygen atom
B. oxygen has high electron affinity
C. $O^{-}$ion will tend to resist the addition of another electron
D. oxygen is more electronegative

## Answer: C

## - Watch Video Solution

40. In which of the following energy is abosrbed?
A. $\mathrm{Cl}+e^{-} \rightarrow \mathrm{Cl}^{-}$
B. $O^{-}+e^{-} \rightarrow O^{2-}$
C. $O+e^{-} \rightarrow O^{-}$
D. $\mathrm{Na}^{+}+\mathrm{e}^{-} \rightarrow \mathrm{Na}$

## Answer: B

## - Watch Video Solution

41. The electron affinity of the following elements can be arranged:
A. $C l>O>N>C$
B. ClgtOgtCgtN
C. ClgtNgtCgtO
D. ClgtCgtOgtN

## Answer: B

## - Watch Video Solution

42. In which of the following arrangements, the order is not correct according to the property indicated against it:
A. Increasing size: $A l^{3+}<M g^{2+}<N a^{+}<F^{-}$
B. Increasing I. $E_{1}: B<C<N<O$
C. Increasing $E$. $A_{1}: I<B r<F<C l$
D. Increasing metallic radius : $L i<N a<K<R b$

## Answer: B

## - Watch Video Solution

43. Which of the following statements is/are wrong?
A. Van der waals' radius of iodine is more than its covalent radius
B. all isoelectronic ions belong to same period of the peridic table
C. I. $E_{1}$ of N is higher than that of O while $I . E_{2}$ of O is higher than that of N
D. The electron affinity N is almost zero while that of P is 74.3 kJ $\mathrm{mol}^{-1}$

## Answer: B

## - Watch Video Solution

44. Consider the following conversions:
(i) $O_{(g)}+e^{-} \rightarrow O_{(g)}^{-}, \Delta H_{1}$
(ii) $F_{(g)}+e^{-} \rightarrow F_{(g)}^{-}, \Delta H_{2}$
(iii) $\mathrm{Cl}_{(g)}+e^{-} \rightarrow C l_{(g)}^{-}, \Delta H_{3}$
(iv) $O_{(g)}^{-}+e^{-} \rightarrow O_{(g)}^{2-}, \Delta H_{4}$ the according to given information the incorrect statement is :
A. $\Delta H_{3}$ is more negative than $\Delta H_{1}$ and $\Delta H_{2}$
B. $\Delta H_{1}$ is less negative than $\Delta H_{2}$
C. $\Delta H_{1}, \Delta H_{2}$ and $\Delta H_{3}$ are negative whereas $\Delta H_{4}$ is positive
D. $\Delta H_{1}$ and $\Delta H_{3}$ are negative whereas $\Delta H_{2}$ and $\Delta H_{4}$ positive

## Answer: D

## - Watch Video Solution

Element Electronegative value
$W \quad 2.7$
45. $X \quad 2.1$
$\begin{array}{ll}Y & 0.8\end{array}$
$\begin{array}{ll}Z & 3.4\end{array}$
Incorrect statement reagarding given information is:
A. WZ does not conduct electricity in solid and fused state
B. $Y Z$ conducts electricity in solid and fused state
C. XZ conducts electricity only in solution state
D. WX conducts electricity only in fused state

## Answer: D

## - Watch Video Solution

46. In the compound $\mathrm{M}-\mathrm{O}-\mathrm{H}$, the $\mathrm{M}-\mathrm{O}$ bond will be broken if:
A. $\Delta(E>N$.) of M and $\mathrm{O}<\Delta$ (E.N.) of O and H
B. $\Delta$ (E.N.) of M and $\mathrm{O}=\Delta$ (E.N.) of O and H
C. $\Delta$ (E.N.) of $M$ and $O>\Delta$ (E.N.) of O and H
D. Cannot be predicted according $\Delta(E . N$.$) data$

## Answer: C

## - Watch Video Solution

47. 

Aqueous solution
of
two
compounds
$M_{1}-O-H$ and $M_{2}-O-H$ are prepared in two different beakers .

If electronegativity of $M_{1}=3.4, M_{2}=1.2,0=3.5$ and $H=2.1$, then the nature of two solution will be respectively
A. acidic, basic
B. acidic, acidic
C. basic, acidic
D. basic, basic

## Answer: A

## - Watch Video Solution

48. The ionisation potential and electron affinity of an element " $X$ " are 275 and $86 \mathrm{kcal} / \mathrm{mole}$. Then the electronegativity of "X" according to Mulliken scale is
A. 2.8
B. 0
C. 4
D. 2.6

## Answer: A

## - Watch Video Solution

49. Consider the following statements :
(I) The radius of an anion is larger than that of the parent atom
(II) The ionization energy generally increases with increasing atomic number in a period.
(III) The electronegativity of an element is the tendency of an isolated atom to at tract an electron.

Which of the above statements is/are correct?
A. I alone
B. Il alone
C. I and II
D. II and III

## - Watch Video Solution

50. Which of the following order is correct for the property mentioned in brackets?
A. $\mathrm{S}^{2-}>\mathrm{Cl}^{-}>\mathrm{K}^{+}>\mathrm{Ca}^{2+}$ (Ionization energy)
B. $C<N<F<O$ (2nd ionisation energy)
C. $B>A l>G a>I n>T l$ (Electronegativity)
D. $\mathrm{Na}^{+}>\mathrm{Li}^{+}>\mathrm{Mg}^{2+}>\mathrm{Be}^{2+}>\mathrm{Al}^{3+}$ (lonic radius)

## Answer: B

## - Watch Video Solution

51. Which among the following factors is the most important in making fluorine oxidizing halongen?
A. Bond dissociation energy
B. Ionisation enthalpy
C. Hydration enthalpy
D. Electron affinity

## Answer: C

## - Watch Video Solution

52. A compound contains three elements $A, B$ and $C$, if the oxidation number of $a+2, B=+5$ and $C=-2$, the possible formula of the compound is
A. $A_{3}\left(B_{4} C\right)_{2}$
B. $A_{3}\left(B C_{4}\right)_{2}$
C. $A_{2}\left(B C_{3}\right)_{2}$
D. $A B C_{2}$

## Answer: B

53. Consider the following four elements, which are represented according to long form of periodic table.

Here $\mathrm{W}, \mathrm{Y}$ and Z are left, up and right elements with respect to the element ' $X$ ' and ' $X$ ' belongs to 16th group and 3rd period. then according to given information the incorrect statement regarding given elements is:
A. Maximum electronegativity: Y
B. Maximum catenation property:X
C. Maximum electron affinity: Z
D. Y exhibits variable covalency

## Answer: D

## - View Text Solution

54. Which of the following sequence represents atomic number of only representative elements?
A. $55,12,48,53$
B. $13,33,54,83$
C. 3,33,53,87
D. $22,33,55,66$

## Answer: C

## View Text Solution

55. The ground state electronic configuration of the elements, $\mathrm{U}, \mathrm{V}, \mathrm{W}, \mathrm{x}$, and $Y$ (these symbols do not have any chemical significance) are as follows:
$U \quad 1 s^{2} 2 s^{2} 2 p^{3}$
$V \quad 1 s^{2} 2 s^{2} 2 p^{6} 3 s^{1}$
$W \quad 1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2} 3 p^{2}$
$X \quad 1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2} 3 p^{6} 3 d^{5} 4 s^{2}$
$Y \quad 1 s^{2} 2 s^{2} 2 p^{6} 3 s^{2} 3 p^{6} 3 d^{10} 4 s^{2} 4 p^{6}$
Determine which sequence of elements satisfy the following statement:
(i) element forms a carbonate which is not decomposed by heating
(ii) Element is most likely to form coloured ionic compound
(iii) element has largest atomic radius
(iv) element forms only acidic oxide
A. $V W Y U$
B. VXYW
C. VWYX
D. VXWU

## Answer: B

## D View Text Solution

56. When magnesium burns in air, compounds of magnesium formed are magnesium oxide and:
A. $M g_{3} N_{2}$
B. $\mathrm{MgCO}_{3}$
C. $\mathrm{Mg}\left(\mathrm{NO}_{3}\right)_{2}$
D. $\mathrm{MgSO}_{4}$

## Answer: A

## D View Text Solution

57. Which of the following ions is most unlikely to exist?
A. $L i^{-}$
B. $B e^{-}$
C. $B^{-}$
D. $F^{-}$

## Answer: B

## - Watch Video Solution

58. A, B and C are hydroxy-compounds of the elements $X, Y$ and $Z$ respectively. $X, Y$ and $Z$ are in the same period of the periodic table. A Gives an aqueous solution of pH less than seven. B reacts with both strong acid and strong alkalis. C gives an aqueous solution which is srongly alkaline.
which of the following statements is/are true?
I: The three elements are metals.
II: The electronegativities decreases from X to Y to Z .

III: The atomic radius decreases in the order $\mathrm{X}, \mathrm{Y}$ and Z .
$\mathrm{IV}: \mathrm{X}, \mathrm{Y}$ and Z could be phosphorus, aluminium and sodium respectively.
A. I, II, III only correct
B. I, III only correct
C. II, IV only correct
D. II, III, IV only correct

## Answer: C

59. La (lanthanum) having atomic number 57 is a member of :
A. s-block elements
B. p-block elements
C. d-block elements
D. f-block elements

## Answer: C

## - Watch Video Solution

60. If the aufbau principle had not been followed, $\mathrm{Ca}(\mathrm{Z}=20)$ would have been placed in the:
A. s-block
B. p-block
C. d-block
D. f-block

## Answer: C

## - View Text Solution

61. What is the atomic number of the element with the maximujm numberj of unpaired $4 p$ electrons?
A. 33
B. 26
C. 23
D. 15

## Answer: A

## - View Text Solution

62. The electronic configuration of four elements are:
(I) $[K r] 5 s^{1}$
(II) $[R n] 5 f^{14} 6 d^{1} 7 s^{2}$
(III) $[A r] 3 d^{10} 4 s^{2} 4 p^{5}$
(IV) $[A r] 3 d^{6} 4 s^{2}$

Consider the following statements:
(II shows variable oxidation state
(ii) II is a d-block element
(iii) The compound formed between I and III is covalent
(iv) IV shows single oxidation state
which statement is true (T) or false (F)?
A. FTFF
B. FTFT
C. FFTF
D. FFFF

## Answer: D

## - View Text Solution

63. If period number and grou number of any representative element(s) are same then which of the following statement is incorrect regarding such type element(s) in their ground state? (period number and group number are according to modern form of periodic table)
A. The possible value of principan quantum number is 2
B. The possible value of azimuthal quantum number is zero
C. The possible value of magnetic quantum number is 1
D. the species could be paramagnetic

## Answer: C

## - View Text Solution

64. How does the energy gap between successive energy levels in an atom vary from low to high $n$ values?
A. All energy gaps are the same
B. The energy gap decreases as $n$ increases
C. The energ gap increases as n increases
D. the energy gap changes unpredictable as n increases

## Answer: B

## - View Text Solution

65. Which of the following properties of the alkaline earth metals increase from Be to Ba ?
(i) Atomic radius
(ii) Ionisation energy
(iii) Nuclear energy
A. (i) and (ii)
B. (i) and (iii)
C. (ii) and (iii)
D. (i), (ii) and (iii)

## Answer: B

## - View Text Solution

66. which of the following is the incorrect match for atom of element?
A. $[A r] 3 d^{5} 4 s^{2} \rightarrow 4^{\text {th }}$ period, $6^{\text {th }}$ group
B. $[K r] 4 d^{10} \rightarrow 5^{t h}$ period, $12^{\text {th }}$ group
C. $[R n] 6 d^{1} 7 s^{2} \rightarrow 7^{t h}$ period, 3th group
D. $[X e] 4 f^{14} 5 d^{2} 6 s^{2} \rightarrow 6$ th period, 4 th group

## Answer: D

## - View Text Solution

67. The set representing the correct order of ionic radius is
A. $\mathrm{Na}^{+}>\mathrm{Mg}^{2+}>\mathrm{Al}^{3+}>\mathrm{Li}^{+}>\mathrm{Be}^{2+}$
B. $\mathrm{Na}^{+}>\mathrm{Li}^{+}>\mathrm{Mg}^{2+}>\mathrm{Al}^{3+}>\mathrm{Be}^{2+}$
C. $\mathrm{Na}^{+}>\mathrm{Mg}^{2+}>\mathrm{Li}^{+}>\mathrm{Al}^{3+}>\mathrm{Be}^{2+}$
D. $\mathrm{Na}^{+}>\mathrm{Mg}^{2+}>\mathrm{Li}^{+}>\mathrm{Be}^{2+}$

## Answer: B

68. In which of the following pair, both the species are isoelectronic but the first one is large in size than the second?
A. $S^{2-}, O^{2-}$
B. $\mathrm{Cl}^{2-}, \mathrm{S}^{2-}$
C. $F^{-}, N a^{+}$
D. $N^{3-}, P^{3-}$

## Answer: C

## - View Text Solution

69. The correct order of ionic size of $\mathrm{N}^{3-}, \mathrm{Na}^{+}, \mathrm{F}^{-}, \mathrm{Mg}^{2+}$ and $\mathrm{O}^{-}$is:
A. $\mathrm{Mg}^{2+}>\mathrm{Na}^{+}>\mathrm{F}^{-}>\mathrm{O}^{2-}>\mathrm{N}^{3-}$
B. $\mathrm{N}^{3-}<\mathrm{F}^{-}>\mathrm{O}^{2-}>\mathrm{Na}^{+}>\mathrm{Mg}^{2+}$
C. $\mathrm{Mg}^{2+}<\mathrm{Na}^{+}<\mathrm{F}^{-}<\mathrm{O}^{2-}<\mathrm{N}^{3-}$
D. $\mathrm{N}^{3-}>\mathrm{O}^{2-}>\mathrm{F}^{-}>\mathrm{Na}^{+}<\mathrm{Mg}^{2+}$

## Answer: C

## D View Text Solution

70. The order of increasing ionic radius of the following is:
A. $\mathrm{K}^{+}<\mathrm{Li}^{+}<\mathrm{Mg}^{2+}<A l^{3+}$
B. $K^{+}<\mathrm{Mg}^{2+}<L i^{+}<A l^{3+}$
C. $\mathrm{Li}^{+}<\mathrm{K}^{+} \mathrm{Mg}^{2+}<A l^{3+}$
D. $A l^{3+}<M g^{2+}<L i^{+}<K^{+}$

## Answer: D

## - View Text Solution

71. If the ionic radii of $K^{+}$and $F^{-}$are nearly the same (i.e., $1.34 \AA$ ), then the atomic radii of $K$ and $F$ respectively are:
A. $1.34 \AA, 1.34 \AA$
B. $0.72 \AA, 1.96 \AA$
C. $1.96 \AA, 0.72 \AA$
D. $1.96 \AA, 1.34 \AA$

## Answer: C

## - View Text Solution

72. Incorrect order of ionic size is:
A. $\mathrm{La}^{3+}>\mathrm{Gd}^{3+}>\mathrm{Eu}^{3+}>\mathrm{Lu}^{3+}$
B. $V^{2+}>V^{3+}>V^{4+}>V^{5+}$
C. $\mathrm{Tl}^{+}>\mathrm{In}^{+}>\mathrm{Sn}^{2+}>\mathrm{Sb}^{3+}$
D. $\mathrm{K}^{+}>\mathrm{Sc}^{3+}>\mathrm{V}^{5+}>\mathrm{Mn}^{7+}$

## Answer: A

73. $X_{(g)} \rightarrow X_{(g)}^{+}+e^{-}, \quad \Delta H=+720 \mathrm{~kJ} \mathrm{~mol}^{-1}$

Calculate the amoung of energy required to convert 110 mg ' X ' atom in gaseous state into $X^{+}$ion. (Atoic wt. for $\mathrm{X}=7 \mathrm{~g} / \mathrm{mol}$ )
A. 10.4 kJ
B. 12.3 kJ
C. 11.3 kJ
D. 14.5 kJ

## Answer: C

## D View Text Solution

74. Consider the followng changes:
$M(s) \rightarrow M(g) \ldots(1)$
$M(s) \rightarrow M^{2+}(g)+2 e^{-} \ldots(2)$
$M(g) \rightarrow M^{+}(g)+e^{-} \ldots(3)$
$M^{+}(g) \rightarrow M^{2+}(g)+e^{-} \ldots(4)$
$M(g) \rightarrow M^{2+}(g)+2 e^{-} \ldots(5)$
The second ionization energy of $M$ could be calculated from the enrg values associated with:
A. $1+3+4$
B. 2-1+3
C. $1+5$
D. $5-3$

## Answer: D

## D View Text Solution

75. The correct order of second I.E. of C, N, O and F are in the order:
A. FgtOgtNgtC
B. CgtNgtOgtF
C. OgtNgtFgtC

## D. OgtFgtNgtC

Answer: D

## - View Text Solution

76. Which is the correct order of ionization energies?
A. $\mathrm{F}^{-}>\mathrm{F}^{-}>\mathrm{Cl}^{-}>\mathrm{Cl}$
B. $\mathrm{F}>\mathrm{Cl}>\mathrm{Cl}^{-}>\mathrm{F}^{-}$
C. $\mathrm{F}^{-}>\mathrm{Cl}^{-}>\mathrm{Cl}>\mathrm{F}$
D. $\mathrm{F}^{-}>\mathrm{Cl}^{-}>\mathrm{F}>\mathrm{Cl}$

## Answer: B

## - Watch Video Solution

77. Which of the following statements is incorrect?
A. The second ionization energy of sulphur is greater than that of chlorine
B. The third ionization energy of phosphorus is greater than that of aluminium
C. The first ionization energy of aluminium is approximately the same as that of gallium
D. The second ionization energy of boron is greater than that of carbon

## Answer: B

## - View Text Solution

78. First ionization energy is the lowest with:
A. Lead
B. Carbon
C. Silicon
D. Tin

## Answer: D

## - Watch Video Solution

79. The incorrect among the following is:
A. The first ionization potential of Al is less than the first ionization potential of Mg
B. The second ionizaztion potential of Mg is greater than the second ionization potential of Na
C. The first ionization potential of Na is less than the first ionization potential of Mg
D. The third ionization potential of Mg is greater than the third ionization potential of Al

## Answer: B

## - View Text Solution

80. The correct values of ionization enthalpies(in $\mathrm{KJ} \mathrm{mol}{ }^{-1}$ ) of $\mathrm{Si}, \mathrm{P}, \mathrm{Cl}$, and S respectively are: a) $786,1012,999,1256$ b) $1012,786,999,1256$ c) $786,1012,1256,999$ d) $786,999,1012,1256$
A. $786,1012,999,1256$
B. $1012,786,999,1256$
C. $786,1012,1256,999$
D. $786,999,1012,1256$

## Answer: C

## - Watch Video Solution

81. The third ionization enthalpy is maximum for
A. nitrogen
B. phosphorus
C. aluminium
D. boron

## Answer: D

## D Watch Video Solution

82. Consider the following ionisation reactions:

$$
\begin{aligned}
& \text { I.E. }\left(\mathrm{kJ} \mathrm{~mol}^{-1}\right) \\
& A_{(g)} \longrightarrow A_{(g)}^{+}+e^{-}, \quad A_{1} \\
& B_{(g)}^{+} \longrightarrow B_{(g)}^{2+}+e^{-}, \quad B_{2} \\
& C_{(g)}^{+} \longrightarrow C_{(g)}^{2+}+e^{-}, \quad C_{2} \\
& \text { I.E. ( } \mathrm{kJ} \mathrm{~mol}^{-1} \text { ) } \\
& B_{(g)} \longrightarrow B_{(g)}^{+}+e, \quad B_{1} \\
& C_{(g)} \longrightarrow C_{(\mathrm{g})}^{+}+e^{-}, \quad C_{1} \\
& C_{(g)}^{2+} \longrightarrow C_{(g)}^{3+}+e^{-}, \quad C_{3}
\end{aligned}
$$

If monovalent positive ion of $A$, divalent positive ion of $B$ and trivalent positive ion of C have zero electron. Then incorrect order of corresponding I.E. is:
A. $C_{3}>B_{2}>A_{1}$
B. $B_{1}>A_{1}>C_{1}$
C. $C_{3}>C_{2}>B_{2}$
D. $B_{2}>C_{3}>A_{1}$

## Answer: D

## - View Text Solution

83. The incorrect statement is:
A. The second ionisation energy of Se is greater than that of second ionisation energy of As
B. The first ionisation energy of $C^{2+}$ ion is greater than that of rist ionisation energy of $N^{2+}$ ion
C. The third ionisation energy of, F is greater than that of third ionisation energy of $O$
D. Helogens have highest I.E. in respectively period.

## Answer: D

## View Text Solution

84. First three ionisation energies (in $\mathrm{kJ} / \mathrm{mol}$ ) of three representative elements are given below:
(Element, $\left.I E_{1}, I E_{2}, I E_{3}\right),(P, 495.8,4582,6910),(Q, 737.7,1451,7733),(R$ then incorrect option is:
A. Q: alkaline earth metal
B. P: alkali metals
C. R: s-block element
D. They belong to same period

## Answer: C

## - View Text Solution

85. Which of the following statement is correct regarding following
(i) $\mathrm{Cl} \xrightarrow{E . A} \mathrm{Cl}^{-}$
(ii) $\mathrm{Cl}^{-} \xrightarrow{I \cdot E .} \mathrm{Cl}$
(iii) $\mathrm{Cl} \xrightarrow{\text { I.E. }} \mathrm{Cl}^{+}$
(iv) $\mathrm{Cl}^{+} \xrightarrow{I \cdot E} \mathrm{Cl}^{2+}$
A. |I.E. of process (ii)|=|E.A. of process (i)|
B. |I.E. of process (iii)|=|I.E. of process (ii)|
C. |I.E. of process (iv)|=|E.A. of process (i)|
D. |I.E. of process (iv)|=|I.E. of process (iii)|

## Answer: A

## - View Text Solution

86. The correct order of increasing electron affinity of the following elements is:
A. $O<S<F<C l$
B. $O<S<C l<F$
C. $S<O<F<C l$
D. $S<O<C l<F$

## Answer: A

## - Watch Video Solution

87. The second electron gain enthalpies (in $\mathrm{kJ} \mathrm{mol}^{-1}$ ) of oxygen and sulphur respectively are:
A. $-780,+590$
B. $-590,+780$
C. $+590,+780$
D. $+780,+590$

## Answer: D

88. Which of the following statement is correct?
A. The magnitude of the second electron ffinity of sulphur is greater than that of oxygen
B. The magnitude of the second electron affinity of sulphur is less than that of oxygen
C. the first electron affinities of bromine and iodine are approximately the same
D. The first electron affinity of fluorine is greater than that of chlorine

## Answer: B

## - View Text Solution

89. Which of the following statements is incorrect?
A. Greater is the nucler charge, greater is the electron gain enthalpy
B. Nitrogen has almost zero electron gain enthalpy
C. electron gain enthalpy decreases from fluorine to iodine in the group
D. Chlorine has highest electron gain enthalpy

## Answer: C

## - View Text Solution

90. The formation of the oxide ion $O_{g}^{2-}$ requires first an exothermic and then an endothermic step as shown below:
$O_{g}+e^{-} \rightarrow O_{g}^{-}, \Delta H=-142 \mathrm{kJmol}^{-1}$
$O(g)+e \rightarrow O_{g}^{2-}, \Delta H=844 \mathrm{kJmol}^{-1}$
This is because:
A. $O^{-}$ion has comparatively larger size than oxygen atom
B. oxygen has high electron affinity
C. $O^{-}$ion will tend to resist the addition of another electron
D. oxygen is more electronegative

## Answer: C

## - Watch Video Solution

91. In which of the following energy is abosrbed?
A. $C l+e^{-} \rightarrow C l^{-}$
B. $O^{-}+e^{-} \rightarrow O^{2-}$
C. $O^{-}-e^{-} \rightarrow O^{-}$
D. $N a^{+}+e^{-} \rightarrow N a$

## Answer: B

92. The electron affinity of the following elements can be arranged:
A. $C l>O>N>C$
B. ClgtOgtCgtN
C. ClgtNgtCgtO
D. ClgtCgtOgtN

## Answer: B

## - View Text Solution

93. In which of the following arrangements, the order is not correct according to the property indicated against it?
A. Increasing size: $\mathrm{Al}^{3+}<\mathrm{Mg}^{2+}<\mathrm{Na}^{+}<\mathrm{F}^{-}$
B. Increasing I. $E_{1}: B<C<N<O$
C. Increasing $E$. $A_{1}: I<B r<F<C l$
D. Increasing metallic radius : $L i<N a<K<R b$

## Answer: B

94. Which of the following statements is/are wrong?
A. Van der waals' radius of iodine is more than its covalent radius
B. all isoelectronic ions belong to same period of the peridic table
C. I. $E_{1}$ of N is higher than that of O while $I . E_{2}$ of O is higher than that of N
D. The electron affinity N is almost zero while that of P is 74.3 kJ $\mathrm{mol}^{-1}$

## Answer: B

## - View Text Solution

95. Consider the following conversions:
(i) $O_{(g)}+e^{-} \rightarrow O_{(g)}^{-}, \Delta H_{1}$
(ii) $F_{(g)}+e^{-} \rightarrow F_{(g)}^{-}, \Delta H_{2}$
(iii) $C l_{(g)}+e^{-} \rightarrow C l_{(g)}^{-}, \Delta H_{3}$
(iv) $O_{(g)}^{-}+e^{-} \rightarrow O_{(g)}^{2-}, \Delta H_{4}$
the according to given information the incorrect statement is :
A. $\Delta H_{3}$ is more negative than $\Delta H_{1}$ and $\Delta H_{2}$
B. $\Delta H_{1}$ is less negative than $\Delta H_{2}$
C. $\Delta H_{1}, \Delta H_{2}$ and $\Delta H_{3}$ are negative whereas $\Delta H_{4}$ is positive
D. $\Delta H_{1}$ and $\Delta H_{3}$ are negative whereas $\Delta H_{2}$ and $\Delta H_{4}$ positive

## Answer: D

97. In the compound $\mathrm{M}-\mathrm{O}-\mathrm{H}$, the $\mathrm{M}-\mathrm{O}$ bond will be broken if:
A. $\Delta(E>N$. ) of M and $\mathrm{O}<\Delta$ (E.N.) of O and H
B. $\Delta$ (E.N.) of M and $\mathrm{O}=\Delta$ (E.N.) of O and H
C. $\Delta$ (E.N.) of M and $O>\Delta$ (E.N.) of O and H
D. Cannot be predicted according $\Delta(E . N$. ) data

## Answer: C

98. Aqueous solutions of two compounds
$M_{1}-O-H$ and $M_{2}-O-H$ are prepared in two different beakers. If, the electronegativity of $M_{1}=3.4, M_{2}=1.2, O=3.5$ and $H=2.1$, then the nature of two solutions will be respectively:
A. acidic, basic
B. acidic, acidic
C. basic, acidic
D. basic, basic

## Answer: A

## - View Text Solution

99. If the ionisation enthalpy and electron gain enthalpy of an element are 275 and $86 \mathrm{kcal} \mathrm{mol}^{-1}$ respectively, then the electronegativity of the element on the pauling scale is:
A. 2.8
B. 0
C. 4
D. 2.6

## Answer: A

## - View Text Solution

100. Consider the following statement:
(I) The radius of an anion is larger than that of the parent atom.
(II) the ionization energy generally increases with increasing atomic number in a period.
(III) The electronegativity of an element is the tendency of an isolated atom to attract an electron.

Which of the above statement is/are correct?
A. I alone
B. Il alone
C. I and II
D. II and III

## Answer: C

## - View Text Solution

101. Which of the following order is correct for the property mentioned in brackets?
A. $\mathrm{S}^{2-}>\mathrm{Cl}^{-}>\mathrm{K}^{+}>\mathrm{Ca}^{2+}$ (Ionization energy)
B. $C<N<F<O$ (2nd ionisation energy)
C. $B>A l>G a>I n>T l$ (Electronegativity)
D. $\mathrm{Na}^{+}>\mathrm{Li}^{+}>\mathrm{Mg}^{2+}>\mathrm{Be}^{2+}>\mathrm{Al}^{3+}$ (lonic radius)

## Answer: B

102. Which among the following factors is the most important in making fluorine, the strongest oxidation halogen?
A. Bond dissociation energy
B. Ionisation enthalpy
C. Hydration enthalpy
D. Electron affinity

## Answer: C

## D View Text Solution

Level 3 (Passage Type)

1. The energy required to pull the most loosely bound electrons from an atom is known as ionization potential. It is expressed in electron volts. The value of ionization potential depends on three factors:(i) the charge
on the nucleus (ii) the atomic radius and (iii) the screening effect of inner electron shells.

Ionization potential of Na would be numerically the same as
A. electron affinity of $\mathrm{Na}^{+}$
B. electronegativity of $\mathrm{Na}^{+}$
C. electron affinity of Na
D. ionization potential of Mg

## Answer: A

## D Watch Video Solution

2. The energy required to pull the most loosely bound electron form an atom is known as ionizatino potential it is expressed in electron volts. The value of ionization potntial depends on three factors: (i) the charge on the nucleus (ii) the atomic radius and (iii) the screening effect of inner electron shells.
Q. Which of the following elements has the least ionization potential?
A. Lithium
B. Cesium
C. Magnesium
D. Calcium

## Answer: B

## - Watch Video Solution

3. The energy required to pull the most loosely bound electron form an atom is known as ionizatino potential it is expressed in electron volts. The value of ionization potntial depends on three factors: (i) the charge on the nucleus (ii) the atomic radius and (iii) the screening effect of inner electron shells.
Q. Incorrect order of ionisation energy is:
A. $\operatorname{Pb}($ I. E. $)>\operatorname{Sn}($ I. E. $)$
B. $N a^{+}($I. E. $)>M g^{+}($I. E. $)$
C. $\mathrm{Li}^{+}(I . E)<.O^{+}(I . E$.
D. $B e^{+}(I . E)<.C^{+}(I . E$.

## Answer: C

## - Watch Video Solution

4. All the elements, on the basis of long form of periodic table, can be divided into four blocks, s,p, d and f. the ionization energies, electron affinities, electronegativities, atomic and ionic radii and other physical properties usually shown a regular pattern of change within a group or along period with some irregularities.
Q. On moving from Li to $F$ in the second period, there would be a decrease in :
A. non-metallic property
B. atomic radius
C. ionization potential
D. electronegativity

## Answer: B

## - Watch Video Solution

5. All the elements, on the basis of long form of periodic table, can be divided into four blocks, s,p, d and f. the ionization energies, electron affinities, electronegativities, atomic and ionic radii and other physical properties usually shown a regular pattern of change within a group or along period with some irregularities.
Q. Which of the following element has the maximum value of electronegativity?
A. Aluminium
B. Silicon
C. Phosphorus
D. Sulphur

## Answer: D

## - Watch Video Solution

6. All the elements, on the basis of long form of periodic table, can be divided into four blocks, s,p, d and f. the ionization energies, electron affinities, electronegativities, atomic and ionic radii and other physical properties usually shown a regular pattern of change within a group or along period with some irregularities.
Q. Which of the following element has the maximum electron affinity?
A. Nitrogen
B. Oxygen
C. Fluorine
D. Chlorine

## Answer: D

7. The second ionisation energies are higher than the first ionisation energies. This is mainly due to the fact that after the removal of the first electrons, the atom changes inot mono valent position ion. In the ion, the number of electrons decreases but the nuclear charge remains the same. As a result of this, the remaining electrons are held more tightly by the nucleus and it becomes difficult to remove the second electron. Therefore, the value of second ionisation energy . $\left(I E_{2}\right)$, is greater than that of the first ionisation energy $\left(I E_{1}\right)$. Similarly third ionisation energy $\left(I E_{3}\right)$ is greater than that of second $I E_{2}$.

Successive ionisation energy of an atom is greater than previous one, because
A. $\frac{p}{e}$ ratio increases
B. $\frac{p}{e}$ ratio decreases
C. $\frac{p}{e}$ ratio remains constant
D. none of these

## Answer: A

## (D) Watch Video Solution

8. The second ionisation energies are higher than the first ionisation energies. This is mainly due to the fact that after the removal of the first electrons, the atom changes inot mono valent position ion. In the ion, the number of electrons decreases but the nuclear charge remains the same. As a result of this, the remaining electrons are held more tightly by the nucleus and it becomes difficult to remove the second electron . Therefore, the value of second ionisation energy . $\left(I E_{2}\right)$, is greater than that of the first ionisation energy $\left(I E_{1}\right)$. Similarly third ionisation energy $\left(I E_{3}\right)$ is greater than that of second $I E_{2}$.

Correct order of ionisation potential of coinage metals is :
A. $A u>A g>C u$
B. $C u>A g>A u$
C. $A u>C u>A g$
D. $A g>C u>A u$

## Answer: C

## D Watch Video Solution

9. The second ionisation energies are higher than the first ionisation energies. This is mainly due to the fact the after the removal of the first electron, the atom changes into monovalent positive ion. In the ion, the number of electrons decreases but the nuclear charge remains the same. as a result of this, the remaining electrons are held more tightly by the nucleus and it becomes difficult to remove the second electron. therefore, the value of second ionisation energy. $\left(I E_{2}\right)$, is greater than that of the first ionisatio energy $\left(I E_{1}\right)$. similarly third ionisation energy $\left(I E_{3}\right)$ is greater than that of second $I E_{2}$.
Q. $I E_{1}$ and $I E_{2}$ of Mg metal are 178 and $348 \mathrm{kcal} / \mathrm{mol}$ respectively. the energy required for the given reaction is:

$$
M g(s) \rightarrow M g^{+2}+2 e^{-}
$$

A. $+170 \mathrm{kcal} / \mathrm{mol}$
B. $+526 \mathrm{kcal} / \mathrm{mol}$
C. $-170 \mathrm{kcal} / \mathrm{mol}$
D. $-526 \mathrm{kcal} / \mathrm{mol}$

## Answer: B

## - Watch Video Solution

10. Nuclear charge actually experienced by an electron is termed as effective nuclear charge. The effective nuclear charge $Z^{*}$ actuall ydepends on type of shell and orbital in which electron is actually present. The relative extent to which the various orbitals penetrate the electron clouds of other orbitals is

$$
s>p>d>f \text { (for the same value of } \mathrm{n} \text { ) }
$$

The phenomenon in which penultimate shell electrons act as screen or sheild in between nucleus and valence shell electrons and thereby reducing nuclear charge is known as shielding effect. the penultimate shell electrons repel the valence shell electron to keep them loosely held with nucleus. it is thus evident that more is the shielding effect, lesser is the effective nuclear charge and lesser is the ionization energy.
Q. Which of the following valence electron experience maximum effective nuclear charge?
A. $4 s^{1}$
B. $4 p^{1}$
C. $3 d^{1}$
D. $2 p^{3}$

## Answer: D

## - Watch Video Solution

11. Nuclear charge actually experienced by an electron is termed as effective nuclear charge the effective nuclear $Z^{*}$ actually depends on type of shell and orbital in which electron is actually present. The relative extent to which the various orbitals penetrate is $s>p>d>f$ (for the same value of $n$ )

The phenomenon in which penulitmate shell electrons act as screen or shield in between nucleus adn valence shell electrons and there by
reducing nuclear charge is known as sheilding effect. The penultimate shell electrons repel the valence shell electron to keep them loosely held with nucleus. It is thus evident that more is the shielding effect, lesser is the effective nuclear charge and lesser is the ionizatio energy.

Which of the following is not concerned to effective nuclear charge?
A. Higher ionization potential of carbon than boron
B. Higher ionization potential of magnesium than aluminium
C. Higher values of successive ionization energy
D. Higher electronegativity of higher oxidation state

## Answer: B

## - Watch Video Solution

12. Nuclear charge actually experienced by an electron is termed as effective nuclear charge. The effective nuclear charge $Z^{*}$ actuall ydepends on type of shell and orbital in which electron is actually present. The relative extent to which the various orbitals penetrate the
electron clouds of other orbitals is
$s>p>d>f$ (for the same value of n )
The phenomenon in which penultimate shell electrons act as screen or sheild in between nucleus and valence shell electrons and thereby reducing nuclear charge is known as shielding effect. the penultimate shell electrons repel the valence shell electron to keep them loosely held with nucleus. it is thus evident that more is the shielding effect, lesser is the effective nuclear charge and lesser is the ionization energy.
Q. Ionzation enegy is not influenced by:
A. Size of atom
B. Effective nuclear charge
C. Electrons present in inner shell
D. Change in entropy

## Answer: D

13. Ionization energies of five elements in $\mathrm{kcal} / \mathrm{mol}$ are given below:

| Atom | 1 | It | mI |
| :---: | :---: | :---: | :---: |
| $P$ | 300 | 549 | 920 |
| $Q$ | 99 | 734 | 1100 |
| $R$ | 118 | 1091 | 1652 |
| $S$ | 176 | 347 | 1848 |
| $r$ | 497 | 947 | 1500 |

Q. Which element is a noble gas?
A. $P$
B. T
C. R
D. $S$

## Answer: B

14. Ionization energies of five elements in $\mathrm{kcal} / \mathrm{mol}$ are given below:

| $A . r o m$ | 1 | 11 | 111 |
| :---: | :---: | :---: | :---: |
| $P$ | 300 | 549 | 920 |
| $Q$ | 99 | 7.4 | 1100 |
| 8 | 118 | 1091 | 1652 |
| $S$ | 176 | 347 | 1848 |
| $T$ | 497 | 947 | 1500 |

Q. Which element form stable unipositve ion?
A. P
B. Q
C. R
D. T

## Answer: B

15. Ionization energies of five elements in $\mathrm{kcal} / \mathrm{mol}$ are given below:

| Atom | 1 | 11 | 111 |
| :---: | :---: | :---: | :---: |
| $P$ | 300 | $5-49$ | 920 |
| $Q$ | 99 | 734 | 1100 |
| $R$ | 118 | 1091 | 1652 |
| $S$ | 176 | 347 | 1848 |
| $T$ | 497 | 947 | 1500 |

Q. The element having most stable oxidation state +2 is?
A. Q
B. R
C. S
D. T

## Answer: C

Watch Video Solution
16. Ionization energies of five elements in $\mathrm{kcal} / \mathrm{mol}$ are given below:

| Atom | 1 | 11 | 111 |
| :---: | :---: | :---: | :---: |
| $P$ | 300 | 549 | 920 |
| $Q$ | 99 | 734 | 1100 |
| $R$ | 118 | 1091 | 1652 |
| $S$ | 176 | 347 | 1848 |
| $r$ | 497 | 947 | 1500 |

Q. Which is a non-metal (excluding noble gas)?
A. P
B. Q
C. R
D. $S$

## Answer: A

17. Ionization energies of five elements in $\mathrm{kcal} / \mathrm{mol}$ are given below:

| Atom | 1 | 11 | III |
| :---: | :---: | :---: | :---: |
| $P$ | 300 | 549 | 920 |
| $Q$ | 99 | 734 | 1100 |
| $R$ | 118 | 1091 | 1652 |
| $S$ | 176 | 347 | 1848 |
| $T$ | 497 | 947 | 1500 |

Q. If $Q$ reacts with fluorine and oxyge, the molecular formula of fluoride and oxide will be respectively:
A. $Q F_{3}, Q_{2} Q_{3}$
B. $Q F, Q_{2} O$
C. $Q F_{2}, Q O$
D. none of these

## Answer: B

IV $1 s^{2} 2 s^{2} 2 p^{3}$
$\mathrm{V}: 1 s^{2} 2 s^{2} 2 p^{5}$
Q. Which of the following is the correct order of increasing size?

$$
\text { A. } I<I I I<I V<V
$$

B. $V<I V<I I I<I$
C. $I<I V<V<I I I$
D. $V<I V<I<I I I$

## Answer: D

## - Watch Video Solution

27. J.C. Slater proposed an empirical constant that represents the cumulative extent to which the other electrons of an atom shield (or screen) any particular electron from the nuclear charge. Thus, slater's screening contant $\sigma$ is as : $Z^{*}=Z-\sigma$

Here, $Z$ is the atomic number of the atom, and hence is equal to the actual number of protons in the atom. the parameter $Z^{*}$ is the effective nuclear charge, which according to is smaller than Z , since the electron in question is screened (shielded) from Z by an amount $\sigma$. Conversely, an electron that is well shielded from the nuclear charge $Z$ experiences a small effective nuclear charge $Z^{*}$.

The value of $\sigma$ for any one electron in a given electron configuration (i.e., in the presence of the other electrons of the atom in question) is calculated using a set of empirical rules developed by slater. according to these rules, the value of $\sigma$ for the electron in question is the cumulative total provided by the various other electrons of the atom.
Q. The effective nuclear charge at the periphery of chromium atom [ $\mathrm{Z}=24]$ :
A. 4.25
B. 2.6
C. 3.6
D. 1.21

## Answer: B

## - Watch Video Solution

28. J.C. Slater proposed an empirical constant that represents the cumulative extent to which the other electrons of an atom shield (or screen) any particular electron from the nuclear charge. Thus, slater's
screening contant $\sigma$ is as : $Z^{*}=Z-\sigma$
Here, $Z$ is the atomic number of the atom, and hence is equal to the actual number of protons in the atom. the parameter $Z^{*}$ is the effective nuclear charge, which according to is smaller than Z , since the electron in question is screened (shielded) from Z by an amount $\sigma$. Conversely, an electron that is well shielded from the nuclear charge $Z$ experiences a small effective nuclear charge $Z^{*}$.

The value of $\sigma$ for any one electron in a given electron configuration (i.e., in the presence of the other electrons of the atom in question) is calculated using a set of empirical rules developed by slater. according to these rules, the value of $\sigma$ for the electron in question is the cumulative total provided by the various other electrons of the atom.
Q. Which of the following statement is correct?
A. A 4 s -orbital is filled earlier than a 3 d -orbital because, $Z^{*}$ for $3 d>Z^{*}$ for 4 s .
B. A 4 s -orbital is filled earlier than a 3 d -orbital because, $Z^{*}$ for $4 s>Z^{*}$ for 3d
C. The effective nuclear charge for 3 d -and 4 s -orbitals are same, but energy of 3d-orbital becomes higher.
D. The effective nuclear charge for 3 d and 4 s -orbitals are same but, energy of 4 s -orbital becomes higher.

## Answer: B

## - Watch Video Solution

29. J.C. Slater proposed an empirical constant that represents the cumulative extent to which the other electrons of an atom shield (or screen) any particular electron from the nuclear charge. Thus, slater's screening contant $\sigma$ is as: $Z^{*}=Z-\sigma$

Here, Z is the atomic number of the atom, and hence is equal to the actual number of protons in the atom. the parameter $Z^{*}$ is the effective nuclear charge, which according to is smaller than Z , since the electron in question is screened (shielded) from Z by an amount $\sigma$. Conversely, an electron that is well shielded from the nuclear charge $Z$ experiences a
small effective nuclear charge $Z^{*}$.
The value of $\sigma$ for any one electron in a given electron configuration (i.e., in the presence of the other electrons of the atom in question) is calculated using a set of empirical rules developed by slater. according to these rules, the value of $\sigma$ for the electron in question is the cumulative total provided by the various other electrons of the atom.
Q. According to Slater's rule, order of effective nuclear charge $\left(Z^{*}\right)$ for last electron in case of $\mathrm{Li}, \mathrm{Na}$ and K .
A. $L i>N a>K$
B. $K>N a>L i$
C. $N a>L i>K$
D. $K=N a>L i$

## Answer: D

## - Watch Video Solution

30. Metals have few electrons in their valence shell while non-metals generally have more electrons in their valence shell. Metallic character is closely related to atomic radius and ionisation enthalpy. Metallic character increases from top to bottom in a group and decreases from let to right in a period of periodic table. metallic character is inversely related to electronegativity of element.
Q. The electronegativity of the following elements increase in the order:
A. C, N, Si, P
B. N, Si, C, P
C. Si, P, C, N
D. P, SI, N, C

## Answer: C

## - Watch Video Solution

31. Considering the elements $B, A l, M g$ and $K$, the correct order of their metallic character is
A. $B>A l>M g>K$
B. $A l>K>B>M g$
C. $M g>A l>K>B$
D. $K>M g>A l>B$

## Answer: D

## - Watch Video Solution

32. Metals have few electrons in their valence shell while non-metals generally have more electrons in their valence shell. Metallic character is closely related to atomic radius and ionisation enthalpy. Metallic character increases from top to bottom in a group and decreases from let to right in a period of periodic table. metallic character is inversely related to electronegativity of element.
Q. $3 N_{0} / 2$ atoms of $X_{(g)}^{-}$by energy $E_{2}$. hence, ionisation potential and electron affinity of $X_{(g)}$ are: ( $N_{0}=$ Avogadro's number)
A. $\frac{2 E_{1}}{3 N_{0}}, \frac{2 E_{2}}{3 N_{0}}$
B. $\frac{2 E_{1}}{3 N_{0}}, \frac{3 E_{2}}{2 N_{0}}$
C. $\frac{3 E_{1}}{2 N_{0}}, \frac{3 E_{2}}{2 N_{0}}$
D. $\frac{3 E_{1}}{2 N_{0}}, \frac{2 E_{2}}{3 N_{0}}$

## Answer: B

33. The value of four quantum number for the last electron of atom of element ' X ' are $\mathrm{n}=7, \mathrm{l}=1, \mathrm{~m}=+1$ and $\mathrm{s}=+1 / 2$ or $-1 / 2$ and vlaue of spin magnetic momentum for element ' X ' is zero element ' X ' has two isotopes (I) ${ }_{Z}^{A} X$ and (II) ${ }_{Z}^{B} X$.
Q. The incorrect statement regarding element ' $X$ ' is:
A. Element ' $X$ ' belongs to 18 th group
B. Number of unpaired electrons in element ' X ' is zero
C. Atomic number of element ' X ' is 118
D. X ' is representative element

## Answer: D

## - Watch Video Solution

34. The value of four quantum number for the last electron of atom of element ' X ' are $\mathrm{n}=7, \mathrm{l}=1, \mathrm{~m}=+1$ and $\mathrm{s}=+1 / 2$ or $-1 / 2$ and value of spin magnetic momentum for element ' X ' is zero element ' X ' has two isotopes (I) ${ }_{Z}^{A} X$ and (II) ${ }_{Z}^{B} X$.
$Q$. The value of $A$ and $B$ respectively are:
A. 118 and 136
B. 218 and 236
C. 236 and 254
D. 226 and 244

## D Watch Video Solution

35. The value of four quantum number for the last electron of atom of element ' X ' are $\mathrm{n}=7, \mathrm{l}=1, \mathrm{~m}=+1$ and $\mathrm{s}=+1 / 2$ or $-1 / 2$ and vlaue of spin magnetic momentum for element ' X ' is zero element ' X ' has two isotopes ${ }_{Z}^{A} X$ and (II) ${ }_{Z}^{B} X$.
Q. The possible value of all four quantum numbers for 90th electron of atom of element ' $X$ ' is:
A. $\begin{array}{llll}n & l & m & s \\ 6 & 2 & 0 & \end{array}$
$\begin{array}{llll}6 & 2 & 0 & -1 / 2\end{array}$
B. $\begin{array}{llll}n & l & m & s \\ 5 & 2 & -1 & +1 / 2\end{array}$
C. $\begin{array}{llll}n & l & m & s \\ 6 & 0 & 0 & +1 / 2\end{array}$
D. $\begin{array}{llll}n & l & m & s \\ 5 & 3 & -2 & -1 / 2\end{array}$

## Answer: D

36.

There are nine elements A to I . these are belongs to p -block element other than halogen. If atomic number of $B$ is average of atomic number of $A$ and $C$ and atomic number of $E$ is average of atomic number of $D$ and $F$ and atomic number of H is average of atomic number of G and I . atomic numbers of $\mathrm{B}, \mathrm{E}$ and H are 7,15 and 83 respectively and atomic numbers of $\mathrm{C}, \mathrm{I}$ and F are greater than $\mathrm{A}, \mathrm{G}$ and D respectively.
Q. The incorrect order is:
A. $F>E$ : Second ionisation energy
B. $B>C: Z_{e f f}$ on valence shell
C. $I>H$ : First ionisation energy
D. $C>F>E$, Electronegativity

## Answer: C

43. Consider the following elements with their electronegativity value:

| Element | $A$ | $B$ | $C$ | $D$ |
| :--- | :--- | :--- | :--- | :--- |
| Electronegativity (Pauling scale) | 3.77 | 1.12 | 2.25 | 3.10 |
| Q. Select correct statement: |  |  |  |  |

A. Oxide of element $D$ is more acidic than that of $A$
B. Oxides of elements $C$ and $D$ are basic in nature
C. Oxide of element $B$ is acidic in nature
D. BOH is more basic than $\mathrm{H}_{2} \mathrm{O}$

## Answer: D

## - View Text Solution

44. In the modern period table, elements are arranged in order of increasing atomic number which is related to the electric configuration.

Depending upon the type of orbitals receving the last electron, the elements in the periodic table have been diviced into four blocks viz s,p,d and f . The modern periodic table consists of 7 periods and 18 groups. Each period being with the filling of a new energy shell. In according with the Aufbua principle, the seven periods (1 to 7 ) have $2,8,8,18,18,32$ and 32 elements respectively. The seventh period is still incomplete. To avoid the periodic table being too long, the two series of f-block elements, called lanthanodis and actionoids are placed at the bottom of the main body of the periodic table.

Which of the elements whose atomic numbers are given below, cannot be accommodated in the present set up of the long form of the pariodic table?
A. 107
B. 118
C. 126
D. 102

## Answer: C

## - Watch Video Solution

45. In the modern period table, elements are arranged in order of increasing atomic number which is related to the electric configuration. Depending upon the type of orbitals receving the last electron, the elements in the periodic table have been diviced into four blocks viz s,p,d and f. The modern periodic table consists of 7 periods and 18 groups. Each period being with the filling of a new energy shell. In according with the Aufbua principle, the seven periods ( 1 to 7 ) have $2,8,8,18,18,32$ and 32 elements respectively. The seventh period is still incomplete. To avoid the periodic table being too long, the two series of f-block elements,
called lanthanodis and actionoids are placed at the bottom of the main body of the periodic table.

The element with atomic number 57 belongs to:
A. s-block
B. p-block
C. d-block
D. f-block

## Answer: C

## - Watch Video Solution

46. The energy required to pull the most loosely bound electron form an atom is known as ionizatino potential it is expressed in electron volts. The value of ionization potntial depends on three factors: (i) the charge on the nucleus (ii) the atomic radius and (iii) the screening effect of inner electron shells.
Q. Ionization potential of Na would be numerically the same as:
A. electron affinity of $N a^{+}$
B. electronegativity of $\mathrm{Na}^{+}$
C. electron affinity of Na
D. ionization potential of Mg

## Answer: A

## - View Text Solution

47. The energy required to pull the most loosely bound electron form an atom is known as ionizatino potential it is expressed in electron volts. The value of ionization potntial depends on three factors: (i) the charge on the nucleus (ii) the atomic radius and (iii) the screening effect of inner electron shells.
Q. Which of the following elements has the least ionization potential?
A. Lithium
B. Cesium
C. Magnesium
D. Calcium

## Answer: B

## - View Text Solution

48. The energy required to pull the most loosely bound electron form an atom is known as ionizatino potential it is expressed in electron volts. The value of ionization potntial depends on three factors: (i) the charge on the nucleus (ii) the atomic radius and (iii) the screening effect of inner electron shells.
Q. Incorrect order of ionisation energy is:
A. $\operatorname{Pb}($ I. E. $)>\operatorname{Sn}($ I. E. $)$
B. $N a^{+}($I. E. $)>M g^{+}($I. E. $)$
C. $\mathrm{Li}^{+}(I . E)<.O^{+}(I . E$.
D. $B e^{+}(I . E)<.C^{+}(I . E$.

## Answer: C

## D View Text Solution

49. All the elements, on the basis of long form of periodic table, can be divided into four blocks, s,p, d and f. the ionization energies, electron affinities, electronegativities, atomic and ionic radii and other physical properties usually shown a regular pattern of change within a group or along period with some irregularities.
Q. On moving from Li to F in the second period, there would be a decrease in :
A. non-metallic property
B. atomic radius
C. ionization potential
D. electronegativity

## Answer: B

50. All the elements, on the basis of long form of periodic table, can be divided into four blocks, s,p, d and f. the ionization energies, electron affinities, electronegativities, atomic and ionic radii and other physical properties usually shown a regular pattern of change within a group or along period with some irregularities.
Q. Which of the following element has the maximum value of electronegativity?
A. Aluminium
B. Silicon
C. Phosphorus
D. Sulphur

## Answer: D

51. All the elements, on the basis of long form of periodic table, can be divided into four blocks, s,p, d and f. the ionization energies, electron affinities, electronegativities, atomic and ionic radii and other physical properties usually shown a regular pattern of change within a group or along period with some irregularities.
Q. Which of the following element has the maximum electron affinity?
A. Nitrogen
B. Oxygen
C. Fluorine
D. Chlorine

## Answer: D

## - View Text Solution

52. The second ionisation energies are higher than the first ionisation energies. This is mainly due to the fact the after the removal of the first electron, the atom changes into monovalent positive ion. In the ion, the
number of electrons decreases but the nuclear charge remains the same. as a result of this, the remaining electrons are held more tightly by the nucleus and it becomes difficult to remove the second electron. therefore, the value of second ionisation energy. $\left(I E_{2}\right)$, is greater than that of the first ionisatio energy $\left(I E_{1}\right)$. similarly third ionisation energy $\left(I E_{3}\right)$ is greater than that of second $I E_{2}$.
Q. Successive ionisation energy of an atom is greater than previous one, because:
A. $\frac{p}{e}$ ratio increases
B. $\frac{p}{e}$ ratio decreases
C. $\frac{p}{e}$ ratio remains constant
D. none of these

## Answer: A

## - View Text Solution

53. The second ionisation energies are higher than the first ionisation energies. This is mainly due to the fact the after the removal of the first electron, the atom changes into monovalent positive ion. In the ion, the number of electrons decreases but the nuclear charge remains the same. as a result of this, the remaining electrons are held more tightly by the nucleus and it becomes difficult to remove the second electron. therefore, the value of second ionisation energy. $\left(I E_{2}\right)$, is greater than that of the first ionisatio energy $\left(I E_{1}\right)$. similarly third ionisation energy $\left(I E_{3}\right)$ is greater than that of second $I E_{2}$.
Q. Correct order of ionisation potential of coinage metals is:
A. $A u>A g>C u$
B. $C u>A g>A u$
C. $A u>C u>A g$
D. $A g>C u>A u$

## Answer: C

54. The second ionisation energies are higher than the first ionisation energies. This is mainly due to the fact the after the removal of the first electron, the atom changes into monovalent positive ion. In the ion, the number of electrons decreases but the nuclear charge remains the same. as a result of this, the remaining electrons are held more tightly by the nucleus and it becomes difficult to remove the second electron. therefore, the value of second ionisation energy. $\left(I E_{2}\right)$, is greater than that of the first ionisatio energy $\left(I E_{1}\right)$. similarly third ionisation energy $\left(I E_{3}\right)$ is greater than that of second $I E_{2}$.
Q. $I E_{1}$ and $I E_{2}$ of Mg metal are 178 and $348 \mathrm{kcal} / \mathrm{mol}$ respectively. the energy required for the given reaction is:

$$
M g(s) \rightarrow M g^{+2}+2 e^{-}
$$

A. $+170 \mathrm{kcal} / \mathrm{mol}$
B. $+526 \mathrm{kcal} / \mathrm{mol}$
C. $-170 \mathrm{kcal} / \mathrm{mol}$
D. $-526 \mathrm{kcal} / \mathrm{mol}$

## Answer: B

## (D) View Text Solution

55. Nuclear charge actually experienced by an electron is termed as effective nuclear charge. The effective nuclear charge $Z^{*}$ actuall ydepends on type of shell and orbital in which electron is actually present. The relative extent to which the various orbitals penetrate the electron clouds of other orbitals is
$s>p>d>f$ (for the same value of n )
The phenomenon in which penultimate shell electrons act as screen or sheild in between nucleus and valence shell electrons and thereby reducing nuclear charge is known as shielding effect. the penultimate shell electrons repel the valence shell electron to keep them loosely held with nucleus. it is thus evident that more is the shielding effect, lesser is the effective nuclear charge and lesser is the ionization energy.
Q. Which of the following valence electron experience maximum effective nuclear charge?
A. $4 s^{1}$
B. $4 p^{1}$
C. $3 d^{1}$
D. $2 p^{3}$

## Answer: D

## - View Text Solution

56. Nuclear charge actually experienced by an electron is termed as effective nuclear charge. The effective nuclear charge $Z^{*}$ actuall ydepends on type of shell and orbital in which electron is actually present. The relative extent to which the various orbitals penetrate the electron clouds of other orbitals is
$s>p>d>f$ (for the same value of n )
The phenomenon in which penultimate shell electrons act as screen or sheild in between nucleus and valence shell electrons and thereby reducing nuclear charge is known as shielding effect. the penultimate
shell electrons repel the valence shell electron to keep them loosely held with nucleus. it is thus evident that more is the shielding effect, lesser is the effective nuclear charge and lesser is the ionization energy.
Q. Which of the following is not concerned to effective nuclear charge?
A. Higher ionization potential of carbon than boron
B. Higher ionization potential of magnesium than aluminium
C. Higher values of successive ionization energy
D. Higher electronegativity of higher oxidation state

## Answer: B

## - View Text Solution

57. Nuclear charge actually experienced by an electron is termed as effective nuclear charge. The effective nuclear charge $Z^{*}$ actuall ydepends on type of shell and orbital in which electron is actually present. The relative extent to which the various orbitals penetrate the electron clouds of other orbitals is
$s>p>d>f$ (for the same value of n )
The phenomenon in which penultimate shell electrons act as screen or sheild in between nucleus and valence shell electrons and thereby reducing nuclear charge is known as shielding effect. the penultimate shell electrons repel the valence shell electron to keep them loosely held with nucleus. it is thus evident that more is the shielding effect, lesser is the effective nuclear charge and lesser is the ionization energy.
Q. Ionzation enegy is not influenced by:
A. Size of atom
B. Effective nuclear charge
C. Electrons present in inner shell
D. Change in entropy

58. Ionization energies of five elements in $\mathrm{kcal} / \mathrm{mol}$ are given below:

| Atom | 1 | It | mI |
| :---: | :---: | :---: | :---: |
| $P$ | 300 | 549 | 920 |
| $Q$ | 99 | 734 | 1100 |
| $R$ | 118 | 1091 | 1652 |
| $S$ | 176 | 347 | 1848 |
| $r$ | 497 | 947 | 1500 |

Q. Which element is a noble gas?
A. P
B. $T$
C. R
D. $S$

## Answer: B

59. Ionization energies of five elements in $\mathrm{kcal} / \mathrm{mol}$ are given below:

| $A$ som | 1 | 11 | 111 |
| :---: | :---: | :---: | :---: |
| $P$ | 300 | 549 | 920 |
| $Q$ | 94 | 7.4 | 1100 |
| $R$ | 118 | 1091 | 1652 |
| $S$ | 176 | 347 | 1848 |
| $T$ | 497 | 947 | 1500 |

Q. Which element form stable unipositve ion?
A. P
B. Q
C. R
D. $T$

## Answer: B

60. Ionization energies of five elements in $\mathrm{kcal} / \mathrm{mol}$ are given below:

| Atom | 1 | 11 | 111 |
| :---: | :---: | :---: | :---: |
| $P$ | 300 | 549 | 920 |
| $Q$ | 99 | 734 | 1100 |

| $S$ | 176 | 347 | 1848 |
| $T$ | 497 | 947 | 1500 |

Q. The element having most stable oxidation state +2 is?
A. Q
B. R
C. S
D. $T$

## Answer: C

61. Ionization energies of five elements in $\mathrm{kcal} / \mathrm{mol}$ are given below:

| Atom | 1 | 11 | 111 |
| :---: | :---: | :---: | :---: |
| $P$ | 300 | 549 | 920 |
| $Q$ | 99 | 734 | 1100 |
| $R$ | 118 | 1091 | 1652 |
| $S$ | 176 | 347 | 1848 |
| $r$ | 497 | 947 | 1500 |

Q. Which is a non-metal (excluding noble gas)?
A. P
B. Q
C. R
D. $S$

## Answer: A

62. Ionization energies of five elements in $\mathrm{kcal} / \mathrm{mol}$ are given below:

| Atom | 1 | II | III |
| :---: | :---: | :---: | :---: |
| $P$ | 300 | 549 | 920 |
| $Q$ | 99 | 734 | 1100 |
| $R$ | 118 | 1091 | 1652 |
| $S$ | 176 | 347 | 1848 |
| $T$ | 497 | 947 | 1500 |

Q. If Q reacts with fluorine and oxyge, the molecular formula of fluoride and oxide will be respectively:
A. $Q F_{3}, Q_{2} Q_{3}$
B. $Q F, Q_{2} O$
C. $Q F_{2}, Q O$
D. none of these

## Answer: B

72. J.C. Slater proposed an empirical constant that represents the cumulative extent to which the other electrons of an atom shield (or screen) any particular electron from the nuclear charge. Thus, slater's screening contant $\sigma$ is as : $Z^{*}=Z-\sigma$

Here, $Z$ is the atomic number of the atom, and hence is equal to the actual number of protons in the atom. the parameter $Z^{*}$ is the effective nuclear charge, which according to is smaller than $Z$, since the electron in question is screened (shielded) from Z by an amount $\sigma$. Conversely, an electron that is well shielded from the nuclear charge $Z$ experiences a small effective nuclear charge $Z^{*}$.

The value of $\sigma$ for any one electron in a given electron configuration (i.e., in the presence of the other electrons of the atom in question) is
calculated using a set of empirical rules developed by slater. according to these rules, the value of $\sigma$ for the electron in question is the cumulative total provided by the various other electrons of the atom.
Q. The effective nuclear charge at the periphery of chromium atom $[\mathrm{Z}=24]$ :
A. 4.25
B. 2.6
C. 3.6
D. 1.21

## Answer: B

## - View Text Solution

73. J.C. Slater proposed an empirical constant that represents the cumulative extent to which the other electrons of an atom shield (or screen) any particular electron from the nuclear charge. Thus, slater's screening contant $\sigma$ is as : $Z^{*}=Z-\sigma$

Here, $Z$ is the atomic number of the atom, and hence is equal to the
actual number of protons in the atom. the parameter $Z^{*}$ is the effective nuclear charge, which according to is smaller than Z , since the electron in question is screened (shielded) from Z by an amount $\sigma$. Conversely, an electron that is well shielded from the nuclear charge $Z$ experiences a small effective nuclear charge $Z^{*}$.

The value of $\sigma$ for any one electron in a given electron configuration (i.e., in the presence of the other electrons of the atom in question) is calculated using a set of empirical rules developed by slater. according to these rules, the value of $\sigma$ for the electron in question is the cumulative total provided by the various other electrons of the atom.
Q. Which of the following statement is correct?
A.A 4 s -orbital is filled earlier than a 3 d -orbital because, $Z^{*}$ for $3 d>Z^{*}$ for 4s.
B. A 4 s -orbital is filled earlier than a 3 d -orbital because, $Z^{*}$ for $4 s>Z^{*}$ for 3d
C. The effective nuclear charge for 3 d -and 4 s -orbitals are same, but energy of 3d-orbital becomes higher.
D. The effective nuclear charge for 3 d and 4 s -orbitals are same but, energy of 4 s -orbital becomes higher.

## Answer: B

## - Watch Video Solution

74. J.C. Slater proposed an empirical constant that represents the cumulative extent to which the other electrons of an atom shield (or screen) any particular electron from the nuclear charge. Thus, slater's screening contant $\sigma$ is as : $Z^{*}=Z-\sigma$

Here, $Z$ is the atomic number of the atom, and hence is equal to the actual number of protons in the atom. the parameter $Z^{*}$ is the effective nuclear charge, which according to is smaller than $Z$, since the electron in question is screened (shielded) from Z by an amount $\sigma$. Conversely, an electron that is well shielded from the nuclear charge $Z$ experiences a small effective nuclear charge $Z^{*}$.

The value of $\sigma$ for any one electron in a given electron configuration (i.e., in the presence of the other electrons of the atom in question) is
calculated using a set of empirical rules developed by slater. according to these rules, the value of $\sigma$ for the electron in question is the cumulative total provided by the various other electrons of the atom.
Q. According to Slater's rule, order of effective nuclear charge $\left(Z^{*}\right)$ for last electron in case of $\mathrm{Li}, \mathrm{Na}$ and K .
A. $L i>N a>K$
B. $K>N a>L i$
C. $N a>L i>K$
D. $K=N a>L i$

## Answer: D

84. If $\mathrm{P}, \mathrm{Q}, \mathrm{R}$ and S are elements of 3rd period of p -block in modern periodic table, among these one element is metal and rest are non-metals and their order of electronegativity is given as:

$$
P<Q<R<S
$$

Q.

## - View Text Solution

85. If $\mathrm{P}, \mathrm{Q}, \mathrm{R}$ and S are elements of 3rd period of p -block in modern periodic table, among these one element is metal and rest are non-metals and their order of electronegativity is given as:
$P<Q<R<S$
Which element is expected to form amphoteric oxide?
A. $P$
B. $Q$
C. $R$
D. $S^{n}$

## Answer: A

## - Watch Video Solution

86. If $\mathrm{P}, \mathrm{Q}, \mathrm{R}$ and S are elements of 3rd period of p -block in modern periodic table, among these one element is metal and rest are non-metals and their order of electronegativity is given as:
$P<Q<R<S$
Q. Chloride compound of which element is hypovalent?
A. S
B. Q
C. R
D. $P$

## Answer: D

## - Watch Video Solution

87. Consider the following representation based on long form of periodic table.

Value of al four quantum number for last electron of element ' $X$ ' in their ground state is
$n=4, l=1, m=1$ and $s=-\frac{1}{2}$ and spin mutiplicity of element ' X ' in their ground state is 4 .
Q. Which of the following order is incorrect?
A. Magnetic moment $U>V>A$
B. Atomic radius: $E>X>T$
C. Ionisation energy : $R>X>B$
D. Stability: $F^{3+}<E^{3+}<X^{3+}$

Answer: D

## O <br> View Text Solution

88. Consider the following representation based on long form of periodic table.

Value of al four quantum number for last electron of element ' $X$ ' in their
ground state is
$n=4, l=1, m=1$ and $s=-\frac{1}{2}$ and spin mutiplicity of element ' X ' in their ground state is 4 .
Q. The correct order is:
A. Ionisation energy of Vgt ionisation energy of U
B. Electron affinity of X gt electron affinity of S
C. Electron affinity of $X$ gt ionisation energy of $D$
D. $\left|\Delta H_{E G}\right|$ of $T>\left|\Delta H_{E G}\right|$ of $U$

## Answer: D

## - View Text Solution

89. Consider the following representation based on long form of periodic table.

Value of al four quantum number for last electron of element ' $X$ ' in their ground state is
$n=4, l=1, m=1$ and $s=-\frac{1}{2}$ and spin mutiplicity of element ' X ' in their ground state is 4 .
Q. Which of the following statement is incorrect?
A. Element P is radioactive
B. Elements $B$ and $C$ have their almost similar size
C. Element G is more stable in +4 oxidation state
D. Element G has electron with $\mathrm{n}=4, \mathrm{l}=3, \mathrm{~m}=\mathrm{O}$ and $s=+\frac{1}{2}$ quantum numbers.

## Answer: C

## - View Text Solution

90. Consider the following elements with their electronegativity value:

| Element | $A$ | $B$ | $C$ | $D$ |
| :--- | :--- | :--- | :--- | :--- |
| Electronegativity (Pauling scale) | 3.77 | 1.12 | 2.25 | 3.10 |
| Q. Incorrect statements is: |  |  |  |  |

A. AOH is more acidic than DOH
B. BOH is more basic than COH
C. AB' molecule is predominantly ionic
D. D-OH' bond is more weaker than ' $\mathrm{B}-\mathrm{OH}$ ' bond in polar solvent

## Answer: D

91. Consider the following elements with their electronegativity value:

| Element | $A$ | $B$ | $C$ | $D$ |
| :--- | :--- | :--- | :--- | :--- |
| Electronegativity (Pauling scale) | 3.77 | 1.12 | 2.25 | 3.10 |
| Q. Select correct statement: |  |  |  |  |

A. Oxide of element $D$ is more acidic than that of $A$
B. Oxides of elements $C$ and $D$ are basic in nature
C. Oxide of element $B$ is acidic in nature
D. BOH is more basic than $\mathrm{H}_{2} \mathrm{O}$

## Answer: D

## - View Text Solution

92. In the modern periodic table, elements are arranged in order of increasing atomic numbers which is related to the electronic configuration. Depending uponthe type of orbitals receiving the last electron, the elements in the periodic table have been divided into four
blocks, viz, s,p,d, and f. the modern periodic table consists of 7 periods and 18 groups. each period begins with the filling of a new energy shell. in accordance with the aufbau principle, the seven periods (1 to 7 ) have $2,8,8,18,18,32$ and 32 elements respectively. the seventh period is still incomplete. to avoid the periodic table being too long, the two series of fblock elements, called lanthanoids and actinoids are placed at the bottom of the maini body of the periodic table.
Q. Which of the elements whose atomic numbers are given are given below, cannot be accomodated in the present set up of the long form of the periodic table?
A. 107
B. 118
C. 126
D. 102

## Answer: C

93. In the modern periodic table, elements are arranged in order of increasing atomic numbers which is related to the electronic configuration. Depending uponthe type of orbitals receiving the last electron, the elements in the periodic table have been divided into four blocks, viz, s,p,d, and f. the modern periodic table consists of 7 periods and 18 groups. each period begins with the filling of a new energy shell. in accordance with the aufbau principle, the seven periods (1 to 7) have 2,8,8,18,18,32 and 32 elements respectively. the seventh period is still incomplete. to avoid the periodic table being too long, the two series of fblock elements, called lanthanoids and actinoids are placed at the bottom of the maini body of the periodic table.
Q. The element with atomic number 57 belongs to:
A. s-block
B. p-block
C. d-block
D. f-block

## Answer: C

## - View Text Solution

## ONE OR MORE ANSWERS IN/ARE CORRECT

1. Assign the position of the element having outer electronic configuration,
(A) $n s^{2} n p^{2}(\mathrm{n}=6)$
(B) $(n-1) d^{2} n s^{2} \quad(n=4)$
(C) $(n-2) f^{7}(n-1) d^{-1} n s^{2}(\mathrm{n}=6)$

Which of the following statement(s) is/are correct?
A. The element ' $A$ ' belong to 3rd period and 16th group.
$B$. The element ' B ' belong to 4 th period and 4 th group
C. The element ' $C$ ' belong to 6th period and 3rd group and is lanthanide element.
D. All A, B , C elements are metals

## Answer: B::C::D

## D Watch Video Solution

2. Which of the following statement(s) regarding periodic properties is/are incorrect?
A. Alkali metals have highest I.E. in respective period.
B. Noble gas have highest I.E. in respective period
C. First electron affinity of nitrogen is less than oxygen
D. F atom has smallest radius in periodic table

## Answer: A::D

## D Watch Video Solution

3. Which of the following properties among halogens decreases from fluorine to iodine?
A. Electronegativity
B. Bond energy
C. Ionisation energy
D. Electron affinity

## Answer: A::C

## D Watch Video Solution

4. In halogens, which of the following decreases from fluorine to iodine?
A. Bond length
B. Electronegativity
C. The ionization energy of the element
D. Oxidizing power

## Answer: B::C::D

5. Mark the correct statements out of the following:
A. He and the highest $I . E_{1}$ in the periodic table
B. Cl has the highest E.A. out of all the elements in the periodic table
C. Hg and Br are liquid at room temperature
D. In anyperiod, the atomic radius of the noble gas is lowest

## Answer: A::B::C

## D Watch Video Solution

6. $S, T$ and $U$ are the aqueous chlorides of the elements $X, Y$ and $Z$ respectively. $X, Y$ and $Z$ are in the same period of the periodic table. $U$ gives a white precipitate with NaOH but this white precipitate dissolves as more NaOH is added. When NaOH is added to T , a white precipitate forms which does not dissolve when more base is added. S does not give
precipitate with NaOH .

Which of the following statements are correct?
A. The three elements are metals
B. The electronegativity decreases fro X to Y to Z .
C. $X, Y$ and $Z$ could be sodium, magnesium and aluminium respectively
D. The first ionization increases fro $X$ to $Y$ to $Z$.

## Answer: A::C

## - View Text Solution

7. Which of the following statements concerning elements with atomic number 10 is true?
A. it forms a covalent network solid
B. Element is monoatomic
C. It has a almost zero value of electron affinity
D. It has extremely high value of ionization energy

## Answer: B::C::D

## - Watch Video Solution

8. Which of the following pairs of elements have same number of electrons in their outermost shell?
A. $\mathrm{Mn}, \mathrm{Fe}$
B. $\mathrm{Na}, \mathrm{Sr}$
C. As, Bi
D. $\mathrm{Se}, \mathrm{Te}$

Answer: A::C::D
9. A change of Zn to $\mathrm{Zn}^{2+}$ is a accompanied by a decrease in:
A. Number of valence electrons
B. atomic mass
C. number of shells
D. none of these

## Answer: C

## - Watch Video Solution

10. The elements which are radioactive and have been named after the name of planet are
A. Hg
B. Np
C. Pu
D. Ra

## - Watch Video Solution

11. The properties which are common to both groups 1 and 17 elements in the periodic table are:
A. electropositive character incrases down the groups
B. Reactivity decrases from top to bottom in these grous
C. atomic radii incrases as the atomic number increases
D. Electronegativity decreases on moving down a group

## Answer: A::C::D

## - Watch Video Solution

12. There are three elements $\mathrm{A}, \mathrm{B}$ and C . their atomic number are $Z_{1}, Z_{2}$ and $Z_{3}$ respectively. If $Z_{1}-Z_{2}=2$ and $\frac{Z_{1}+Z_{2}}{2}=Z_{3}-2$ and the
electronic configuration of element A is $[A r] 3 d^{6} 4 s^{2}$, then correct order of magnetic momentum is/are:
A. $B^{+}>A^{2+}>C^{2+}$
B. $A^{3+}>B^{2+}>C$
C. $B>A>C^{2+}$
D. $B=A^{3+}>C^{3+}$

## Answer: A::B::C

## - Watch Video Solution

13. Which of the following match is/are correct regarding $\mathrm{B}, \mathrm{Al}, \mathrm{C}$ and Si elements?
A. The highest first ionisation ethalpy : C
B. The largest atomic size: Al
C. The most negative electron gain enthalpy : C
D. The most metallic character: Al

## Answer: A::B::C::D

14. Consider the value of all four quantum number for last electron and spin multiplicity ( $2 s+1$ ) for givenn two element ' $X$ ' and ' $Y$ ' in their ground state:
$(, n,, l, m, s,|2 s+1|),(X:, 2,0,0,+1 / 2,1),(Y:, 2,1,-1,-1 / 2,4)$
The according to given information the correct statement is:
A. The bond angle $(H-Y-H)$ of possible hydride of element Y is less than 19028'
B. The possible halide of ' X ' has two vacant p -orbitals on its central atom.
C. Magnetic moment of Y is greater than X
D. $X$ and $Y$ element exhibits only single oxidation are

## D Watch Video Solution

15. An element ' $X$ ' present in its ground state, the value of principal annd azimuthal quantum number for last electron of element ' X ' is $\mathrm{n}=3$ and $\mathrm{I}=1$ and spin multiplicity for given element is 4 . then according to given information correct statement(s) regarding givenn element ' $X$ ' is/are:
A. Element ' X ' is 3rd period and 15th group element
B. In valence shell of element ' $X$ ' electron density is symmetrically distributed
C. Element ' X ' has full filled valence shell.
D. none of these

## Answer: A: B

16. Which of the following pairs have approximately the same atomic radii?
A. Zr and Hf
B. Al and Mg
C. Al and Ga
D. Na and Ne

## Answer: A:C

## - Watch Video Solution

17. The correct order of radiii is/are:
A. $\mathrm{Pb}>\mathrm{Pb}^{2+}>\mathrm{Pb}^{4+}$
B. $\mathrm{In}^{+}>\mathrm{Sn}^{2+}>\mathrm{Sb}^{3+}>\mathrm{Te}^{4+}$
C. $\mathrm{Co}>\mathrm{Ni}>\mathrm{Cu}>\mathrm{Zn}$
D. $\mathrm{K}^{+}>\mathrm{Li}^{+}>\mathrm{Mg}^{2+}>\mathrm{Al}^{3+}$

## - Watch Video Solution

18. The first ionisation energy of first atom is greater than that of second atom, whereas reverse order is true for their second ionisation energy. Which set of elements is in accordance to above statement?
A. CgtB
B. PgtS
C. BegtB
D. MggtNa

## Answer: A::B::C::D

## - Watch Video Solution

19. Ionization energy of an element is:
A. Equal in magnitude but opposite in sig to the electron gain enthalpy of the cation of the element
B. Same as electron affinity of the element
C. Enegy required to remove one valence electron from an isolated gseous atom in its ground state
D. Equal in magnitude but opposite in sign to $t$ no gain enthalpy of the anion of the element

## Answer: A::C

## - Watch Video Solution

20. Consider the following ionization steps :
$M(g) \rightarrow M^{+}(g)+e^{-}, \Delta H=100 \mathrm{eV}$
$M(g) \rightarrow M^{2+}(g)+2 e^{-}, \Delta H=250 e V$
Select correct statement(s) a) $I . E \cdot{ }_{1}$ of $M(g)$ is 100 eV b)
$M^{+}(g) \rightarrow M^{2+}(g)+e^{-}, \Delta H=150 \mathrm{eV}$ c) $I . E \cdot{ }_{2}$ of $M(g)$ is 250 eV d)
I. $E .2$ of $M(\mathrm{~g})$ is $14=150 \mathrm{eV}$
A. I. $E_{1}$ of $\mathrm{M}(\mathrm{g})$ is 100 eV
B. I. $E_{1}$ of $\mathrm{Mg}^{+}(g)$ is 150 eV
C. I. $E_{2}$ of $\mathrm{M}(\mathrm{g})$ is 250 eV
D. I. $E_{2}$ of $\mathrm{M}(\mathrm{g})$ is 150 eV

## Answer: A: B::D

21. Select the correct order of periodic properties of species :
A. $\mathrm{Fe}^{2+}<\mathrm{Fe}^{3+}$ : lonic radii
B. $N<O$ : Second ionisation energy
C. $C u<Z n$ : Atomic radius
D. In $<T l$ : First ionisation energy

## - Watch Video Solution

22. Select the incorrect statement(s)/order (s):
A. d-orbital can accommodate 10 electrons
B. $\underset{2 s^{2} 2 p^{6} 3 s^{1} 2 s^{2} 2 p^{6}}{N a} \underset{2 s^{2} 2 p^{5}}{N \cdot E_{1}} \xrightarrow{\text { I.E } E_{2}} \underset{2 s^{2} 2 p^{4}}{N a^{2}} \xrightarrow{I \cdot E_{3}} \underset{2+}{N a^{3+}}$, order of successive I.E. is
I. $E_{1}<I . E_{2}<I . E_{3}$
C. Number of unpiared electrons in $\mathrm{Co}^{2+}$ cationgt Number of unpaired electrons in $\mathrm{Co}^{3+}$ cation
D. First ionisation energy of Pt is greater than that of Pd

## Answer: C

## - Watch Video Solution

23. Consider the following values of I.E.(eV) for elements W and X :

Element $\quad$ I. $E_{1} \quad$ I. $E_{2} \quad$ I. $E_{3} \quad$ I. $E_{4}$

| $W$ | 10.5 | 15.5 | 24.9 | 79.8 |
| :--- | :--- | :--- | :--- | :--- |

$\begin{array}{llllll}X & 8 & 14.8 & 78.9 & 105.8\end{array}$
Other two element Y and Z hav outer electronic configuration $n s^{2} n p^{4}$ and $n s^{2} n p^{5}$ respectively. then according to given information which of the following compound(s) is/are not possible?
A. $W_{2} Y_{3}$
B. $X_{2} Y_{3}$
C. $W Z_{2}$
D. $X Z_{2}$

## Answer: B::C

## - Watch Video Solution

24. The sum of $I E_{1}$ and $I E_{2}, I E_{3}$ and $I E_{4}$ for element P and Q are given below:
$I E_{1}+I E_{2} \quad I E_{2}+I E_{4}$
(P) 2.45
8.82
(Q) 2.85
6.11

Then according to the given information the correct statement (s) is/are
A. $P^{2+}$ is more stable than $Q^{2+}$
B. $P^{2+}$ is less stable than $Q^{2+}$
C. $P^{4+}$ is more stable than $Q^{4+}$
D. $P^{4+}$ is less stable than $Q^{4+}$

## Answer: A:D

## - Watch Video Solution

25. Consider the successive ionisation energy for an element ' $A$ '. $I E_{1}, I E_{2}, I E_{3}, I E_{4}, I E_{5}$ are $100 \mathrm{eV}, 150 \mathrm{eV}, 181 \mathrm{eV}, 2000 \mathrm{eV}, 2200 \mathrm{eV}$. Select correct statement (s) for element 'A' : a)Element 'A' may be metal b)Element ' $A$ ' may from trivalent cation c)Oxide of element ' $A$ ' may be amphoteric d)Element 'A' may be non-metal
A. Element 'A' may be metal
B. Element 'a' may form trivalent cation
C. Oxide of element ' $A$ ' may be amphoteric
D. Element 'A' may be non-metal

## Answer: A::B::C::D

## D Watch Video Solution

26. According to Slater's rule , correct order of $Z_{\text {eff }}$ on valence shell electron is:
A. $F e>F e^{2+}>F e^{3+}$
B. $N^{3-}<O^{2-}<F^{-}$
C. $\mathrm{Na}^{+}<\mathrm{Mg}^{2+}<A l^{3+}$
D. $T l^{2+}<V^{3+}<M n^{5+}$
27. Which of the following order is/are correct?
A. $M g^{2+}($ size $)>L i^{+}($size $)$
B. $S(E . A)>O(E . A)$
C. $H g(I . E)>.C d(I . E)$
D. $P(I . E)>S(I . E)$

## Answer: B::C::D

## - Watch Video Solution

28. Correct order of electron affinity is/are:
A. $S>O$
B. $A l>B$
C. $M g>N a$
D. $P>N$

## Answer: A::B::D

## - Watch Video Solution

29. Which of the following statement(s) is/are correct?
A. van der waals' radius of iodine is more than its covalent radius
B. All isoelectronic ions of corresponding elements belong to the same period of the periodic table.
C. IE. Of N -atom is higher than that of O -atom, while $I E_{2}$ of O -atom is higher than that of N -atom.
D. The electron affinity of fluorine is greater than that of chlorine.

## Answer: A::C

30. Order of Electron affinity of the elements or ions shown correctly?
A. $S>O^{-}$
B. $P>N^{-}$
C. $O^{-}>S^{-}$
D. $N^{-}>P$

## Answer: A: B

## - Watch Video Solution

31. Which of the following statement regarding halogens is/are correct?
A. Ionization energy decreases with increase in atomic number
B. electronegativity decreases with increase in atomic number
C. Electron affinity decreases with increase in atomic number
D. Enthalpy of fusion increses with increase in atomic number

## D Watch Video Solution

32. Which of the following statements are correct?
A. F is the most electronegative and Cs is the most electropositive element
B. The ionization energy of halogens decreses from $F$ to $I$
C. The electron affinity of Cl is higher than that of F thorugh their electronegativities are in the reverse order
D. The electron affinity of noble gases in almost zero

## Answer: A::B::C::D

## - Watch Video Solution

33. Consider the order $\mathrm{O}^{2-}<\mathrm{F}^{+}<\mathrm{Na}^{+}<\mathrm{Mg}^{3+}$. Then correct statement(s) is/are :
A. Increasing order of $Z_{e f f}$.
B. Increasaing order of size
C. Increasing order of I.E
D. Increasing order of E.A

## Answer: A::C::D

## - Watch Video Solution

34. Consider the following reaction:
(i) $O_{(g)}+e^{-} \rightarrow O_{(g)}^{-}, \Delta H_{1}$
(ii) $F_{(g)}+e^{-} \rightarrow F_{(g)}^{-}, \Delta H_{2}$
(iii) $\mathrm{Cl}_{(g)}+e^{-} \rightarrow \mathrm{Cl}_{(g)}^{-}, \Delta H_{3}$
(iv) $O_{(g)}^{-}+e^{-} \rightarrow O_{(g)}^{2-}, \Delta H_{4}$
then according to given information the correct statement is/are:
A. $\Delta H_{3}$ is more negative than $\Delta H_{1}$ and $\Delta H_{2}$
B. $\Delta H_{1}$ is less negative than $\Delta H_{2}$
C. $\Delta H_{1}, \Delta H_{2}$ and $\Delta H_{3}$ are negative whereas $\Delta H_{4}$ is positive
D. $\Delta H_{1}$ and $\Delta H_{3}$ are negative whereas $\Delta H_{2}$ and $\Delta H_{4}$ positive

## Answer: A::B::C

## - Watch Video Solution

35. Which of the following is incorrect order of property as indicated ?
A. $N a^{+}<F^{-}<O^{2-}<N e<A r$ : Atomic size
B. $B r<S e<A s<G e$ :Metallic character
C. $N a<A l<S i<M g$ :Ionisation energy
D. $I<B r<C l<F$ :Electron affinity

## Answer: B::C::D

36. Which of the following is/are correct order?
A. Atomic rdius $F<O<F^{-}<O^{2-}$
B. 2nd ionisation energy $C<N<F<O$
C. Electron affinity: $I<B r<F<C l$
D. $Z_{e f f}$ (effective nuclear change): $A l<A l^{+}<A l^{3+}<A l^{2+}$

## Answer: A::B::C

## - Watch Video Solution

37. Consider the following sequence of reaction:

If electronic configuration of element X is $[N e] 3 s^{1}$, then which of the following order is correct regarding given enthalpies?
A. $\left|\Delta H_{4}\right|=\left|\Delta H_{5}\right|$
B. $\left|\Delta H_{2}\right|>\left|\Delta H_{1}\right|$
C. $\left|\Delta H_{2}\right|>\left|\Delta H_{3}\right|$
D. $\left|\Delta H_{1}\right|=\left|\Delta H_{6}\right|$

## Answer: A::B::D

45. Consider the following Born-Haber's cycle:

(Where $\Delta H_{1}, \Delta H_{2}, \Delta H_{3}, \Delta H_{4}, \Delta H_{5}$ and $\Delta H_{6}$ are in $\mathrm{kJ} / \mathrm{mol}$ )
Then according to given information the correct statement is/are:
A. $\Delta H_{2}$ and $\Delta H_{3}$ are always positive
B. $\Delta H_{1}=2 \Delta H_{2}+\frac{3}{2} \Delta H_{3}+2 \Delta H_{4}+3 \Delta H_{5}+\Delta H_{6}$
C. Second electron gain enthalpy of $X$ is negative
D. $\Delta H_{1}$ must be negative for formationn of $B_{2} X_{5}(\mathrm{~s})$

## Answer: A::B::D

46. Which of the following oxides is/are amphoteric ?
A. $\mathrm{Na}_{2} \mathrm{O}$
B. CaO
C. $\mathrm{Al}_{2} \mathrm{O}_{3}$
D. $\mathrm{SnO}_{2}$

## Answer: C::D

47. Which of the following show amphoteric behaviour?
A. $\mathrm{Zn}(\mathrm{OH})_{2}$
B. $\mathrm{Be}(\mathrm{OH})_{2}$
C. $\mathrm{Al}(\mathrm{OH})_{3}$
D. $\mathrm{Pb}(\mathrm{OH})_{2}$

## Answer: A::B::C::D

## Answer: A::C

## - Watch Video Solution

51. In halogens, which of the following decreases from fluorine to iodine?
A. Bond length
B. Electronegativity
C. The ionization energy of the element
D. Oxidizing power

## Answer: B::C::D

52. Mark the correct statements out of the following:
A. $H e$ and the highest $I . E_{1}$ in the periodic table
B. $C l$ has the highest $E . A$. out of all the elements in the periodic table
C. $H g$ and $B r$ are liquid at room temperature
D. In anyperiod, the atomic radius of the noble gas is lowest

## Answer: A::B::C

## - Watch Video Solution

53. $S, T$ and $U$ are the aqueous chlorides of the elements $X, Y$ and $Z$ respectively. $X, Y$ and $Z$ are in the same period of the periodic table. $U$ gives a white precipitate with NaOH but this white precipitate dissolves as more NaOH is added. When NaOH is added to T , a white precipitate forms which does not dissolve when more base is added. S does not give
precipitate with NaOH .

Which of the following statements are correct?
A. The three elements are metals
B. The electronegativity decreases fro $X$ to $Y$ to $Z$.
C. $X, Y$ and $Z$ could be sodium, magnesium and aluminium respectively
D. The first ionization increases fro $X$ to $Y$ to $Z$.

## Answer: A::C

## - View Text Solution

54. The diagram below shows part of the skeleton of the periodic table ini which elements are indicated by letters which are not their usual symbols.

Answer the following on the basis of modern periodic table:
(I) Alkali metal(s)
(II) an elements with the outer configuration of $d^{8} s^{2}$
(III) Lanthanoids
(IV) Elements with incomplete f-subshell
(VI) Halogen(s)
(VII) s-block element(s)
(VIII) transition element(s)
(IX) Noble gas (s)
(X) Non-transtion element(s)

## - View Text Solution

55. The diagram below shows part of the skeleton of the periodic table in which elements are indicated by letters which are not their usual symbols.

Answer the following on the basis of periodic table:
(I) element having greatest ionic character in its compound
(II) Metal cation which is coloured in its aqueous solution.
(III) Element(s) of which carbonate salt is/are water temperature.
(IV) which element is monoatomic gas at room temperature.

## - View Text Solution

56. Answer the following on the basis of modern periodic table.

(I) Group no. of elements with the valence shell ground state electron configuration $n s^{2} n p^{5}$
(II) Group no. of the elements with the valence shell ground state electron configuratio $n s^{2} n p^{3}$
(III) Group no. of the elements that have only three unpaired $p$ electron in ground state
(V) ground 3A elements.

## - View Text Solution

57. Which of the following statements concerning elements with atomic number 10 is true?
A. it forms a covalent network solid
B. Element is monoatomic
C. It has a almost zero value of electron affinity
D. It has extremely high value of ionization energy

## Answer: B::C::D

## - Watch Video Solution

58. Which of the following pairs of elements have same number of electrons in their outermost shell?
A. $\mathrm{Mn}, \mathrm{Fe}$
B. $\mathrm{Na}, \mathrm{Sr}$
C. As, Bi
D. $\mathrm{Se}, \mathrm{Te}$

## Answer: C::D

## - View Text Solution

59. A change of Zn to $\mathrm{Zn}^{2+}$ is a accompanied by a decrease in:
A. Number of valence electrons
B. atomic mass
C. Atomic number of element ' X ' is 118
D. number of shells

## Answer: A: D

## - View Text Solution

60. The elements which are radioactive and have been named after the name of planet are
A. Hg
B. $N p$
C. $P u$
D. $R a$

## Answer: B::C

## - Watch Video Solution

61. The properties which are common to both groups 1 and 17 elements in the periodic table are:
A. electropositive character incrases down the groups
B. Reactivity decrases from top to bottom in these grous
C. atomic radii incrases as the atomic number increases
D. Electronegativity decreases on moving down a group

## Answer: A::C::D

## - Watch Video Solution

62. There are three elements $\mathrm{A}, \mathrm{B}$ and C . their atomic number are $Z_{1}, Z_{2}$ and $Z_{3}$ respectively. If $Z_{1}-Z_{2}=2$ and $\frac{Z_{1}+Z_{2}}{2}=Z_{3}-2$ and the electronic configuration of element A is $[A r] 3 d^{6} 4 s^{2}$, then correct order of magnetic momentum is/are:
A. $B^{+}>A^{2+}>C^{2+}$
B. $A^{3+}>B^{2+}>C$
C. $B>A>C^{2+}$
D. $B=A^{3+}>C^{3+}$

## Answer: A::B::C

63. Consider the following representation based on long form of periodic table.

Here $P, Q<R$ and $S$ are up, right down the left elements with respect to the central element ' $X$ ' respectively. According to above representation the correct mathc is/are
A. X-Ge, P-Si, Q,As, R-Sn, S-Ga
B. X -Te, P-Se, $\mathrm{Q}-\mathrm{I}, \mathrm{R}-\mathrm{Po}, \mathrm{S}-\mathrm{Sb}$
C. X-Sb, P-As, Q-Te, R-Bi, S-Sn
D. X-IN, P-Ga, Q-Sn, R-TI, S-Cd

## Answer: A::B::C::D

## - View Text Solution

64. Which of the following match is/are correct regarding $\mathrm{B}, \mathrm{Al}, \mathrm{C}$ and Si elements?
A. The highest first ionisation ethalpy : C
B. The largest atomic size: Al
C. The most negative electron gain enthalpy : C
D. The most metallic character: Al

Answer: A: B::D

## - Watch Video Solution

65. Consider the value of all four quantum number for last electron and spin multiplicity ( $2 s+1$ ) for givenn two element ' $X$ ' and ' $Y$ ' in their ground state:
$(, n,, l, m, s,|2 s+1|),(X:, 2,0,0,+1 / 2,1),(Y:, 2,1,-1,-1 / 2,4)$
The according to given information the correct statement is:
A. The bond angle $(H-Y-H)$ of possible hydride of element Y is less than $19028^{\prime}$
B. The possible halide of ' X ' has two vacant p -orbitals on its central atom.
C. Magnetic moment of Y is greater than X
D. $X$ and $Y$ element exhibits only single oxidation are

## Answer: A::B::C

## - Watch Video Solution

66. An element ' $X$ ' present in its ground state, the value of principal annd azimuthal quantum number for last electron of element ' X ' is $\mathrm{n}=3$ and $\mathrm{I}=1$ and spin multiplicity for given element is 4 . then according to given information correct statement(s) regarding givenn element ' $X$ ' is/are:
A. Element ' $X$ ' is 3rd acid period and 15th group element
B. In valence shell of element ' $X$ ' electron density is symmetrically distributed
C. Element ' X ' has full filled valence shell.
D. none of these

## Answer: A::B

## - Watch Video Solution

67. Which of the following pairs have approximately the same atomic radii?
A. Zr and Hf
B. Al and Mg
C. Al and Ga
D. Na and Ne

## Answer: A::C

## - Watch Video Solution

68. The correct order of radiii is/are:
A. $\mathrm{Pb}>\mathrm{Pb}^{2+}>\mathrm{Pb}^{4+}$
B. $\mathrm{In}^{+}>\mathrm{Sn}^{2+}>\mathrm{Sb}^{3+}>T e^{4+}$
C. $\mathrm{Co}>\mathrm{Ni}>\mathrm{Cu}>\mathrm{Zn}$
D. $\mathrm{K}^{+}>\mathrm{Li}^{+}>\mathrm{Mg}^{2+}>A l^{3+}$

## Answer: A::B::D

69. The first ionisation energy of first atom is greater than that of second atom, whereas reverse order is true for their second ionisation energy. Which set of elements is in accordance to above statement?
A. $C>B$
B. $P>S$
C. $B e>B$
D. $M g>N a$

## Answer: A:B::C::D

## - Watch Video Solution

70. Ionization energy of an element is:
A. Equal in magnitude but opposite in sig to the electron gain enthalpy of the cation of the element
B. Same as electron affinity of the element
C. Enegy required to remove one valence electron from an isolated gseous atom in its ground state
D. Equal in magnitude but opposite in sign to $t$ no gain enthalpy of the anion of the element

## Answer: A::C

## - Watch Video Solution

71. Consider the following ionization steps :
$M(g) \rightarrow M^{+}(g)+e^{-}, \Delta H=100 \mathrm{eV}$
$M(g) \rightarrow M^{2+}(g)+2 e^{-}, \Delta H=250 \mathrm{eV}$
Select correct statement(s) a)I.E. 1 of $M(g)$ is 100 eV b)
$M^{+}(g) \rightarrow M^{2+}(g)+e^{-}, \Delta H=150 \mathrm{eV}$ c) $I$. E. 2 of $M(g)$ is $250 \mathrm{eV} \mathrm{d)}$
I. $E \cdot 2$ of $M(g)$ is $14=150 \mathrm{eV}$
A. I. $E_{1}$ of $\mathrm{M}(\mathrm{g})$ is 100 eV
B. I. $E_{1}$ of $\mathrm{Mg}^{+}(g)$ is 150 eV
C. $I . E_{2}$ of $\mathrm{M}(\mathrm{g})$ is 250 eV
D. I. $E_{2}$ of $\mathrm{M}(\mathrm{g})$ is 150 eV

## Answer: A::B::D

## - Watch Video Solution

72. Select the correct order of periodic properties of species :
A. $\mathrm{Fe}^{2+}<\mathrm{Fe}^{3+}$ : lonic radii
B. $N<O$ : Second ionisation energy
C. $C u<Z n$ : Atomic radius
D. $I n<T l$ : First ionisation energy

## Answer: B::C::D

73. Select the incorrect statement(s)/order (s):
A. d-orbital can accommodate 10 electrons
B. $\underset{2 s^{2} 2 p^{6} 3 s^{1} s^{1} 2 s^{2} 2 p^{6}}{N a} \xrightarrow{I \cdot E_{1}} \xrightarrow{I \cdot E_{2}} \underset{2 s^{2} 2 p^{5}}{N a^{2+}} \xrightarrow{I \cdot E_{3}} \underset{2 s^{2} 2 p^{4}}{N a^{3+}}$, order of successive I.E. is
I. $E_{1}<I . E_{2}<>I . E_{3}$
C. Number of unpiared electrons in $\mathrm{Co}^{2+}$ cationgt Number of unpaired electrons in $\mathrm{Co}^{3+}$ cation
D. First ionisation energy of Pt is greater than that of Pd

## Answer: A::B::C

## - Watch Video Solution

74. Consider the following values of I.E.(eV) for elements W and X :

| Element | $I . E_{1}$ | $I . E_{2}$ | $I . E_{3}$ | $I . E_{4}$ |
| :--- | :--- | :--- | :--- | :--- |
| $W$ | 10.5 | 15.5 | 24.9 | 79.8 |
| $X$ | 8 | 14.8 | 78.9 | 105.8 |

Other two element Y and Z hav outer electronic configuration
$n s^{2} n p^{4}$ and $n s^{2} n p^{5}$ respectively. then according to given information which of the following compound(s) is/are not possible?
A. $W_{2} Y_{3}$
B. $X_{2} Y_{3}$
C. $W Z_{2}$
D. $X Z_{2}$

## Answer: B::C

## - View Text Solution

75. The sum of $I E_{1}$ and $I E_{2}, I E_{3}$ and $I E_{4}$ for element P and Q are given below:

|  | $I E_{1}+I E_{2}$ | $I E_{3}+I E_{4}$ |
| :--- | :--- | :--- |
| $(P)$ | 2.45 | 8.82 |
| $(Q)$ | 2.85 | 6.11 |

Then according to the given information the correct statement (s) is/are
A. $P^{2+}$ is more stable than $Q^{2+}$
B. $\mathrm{P}^{2+}$ is less stable than $\mathrm{O}^{2+}$
C. $P^{4+}$ is more stable than $Q^{4+}$
D. $P^{4+}$ is less stable thann $Q^{4+}$

## Answer: A: D

## - Watch Video Solution

76. Consider vlaue of all four quantum number of last electrons and magnetic moment and valence electrons of elements $\mathrm{W}, \mathrm{X}, \mathrm{Y}$ and Z in their ground state:

| Element | $\boldsymbol{n}$ | $\boldsymbol{l}$ | $\boldsymbol{m}$ | $\boldsymbol{y}$ | Magnetic moment $(\mu)$ | Valence electrons |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\boldsymbol{W}$ | 3 | $\mathbf{0}$ | $\mathbf{0}$ | $+\frac{1}{2}$ | $\mathbf{0}$ | 2 |
| $X$ | 3 | 1 | +1 | $-\frac{1}{2}$ | $\sqrt{3}$ | 3 |
| $Y$ | 3 | 1 | -1 | $+\frac{1}{2}$ | $\sqrt{15}$ | 5 |
| $Z$ | 3 | 1 | 0 | $-\frac{1}{2}$ | $\sqrt{8}$ | 6 |

Then according to given information the correct statement (s) is/are:
A. I. $E_{1}$ of element W is greater than I. $E_{1}$ of element X
B. I. $E_{1}$ of element Y is greater than I. $E_{1}$ of element Z
C. I. $E_{2}$ of element X is greater than I. $E_{2}$ of element W
D. I. $E_{2}$ of element Z is greater than $I . E_{2}$ of element Y

## Answer: A::B::C::D

## - View Text Solution

77. Consider the successive ionisation energy for an element ' $A$ ' . $I E_{1}, I E_{2}, I E_{3}, I E_{4}, I E_{5}$ are $100 \mathrm{eV}, 150 \mathrm{eV}, 181 \mathrm{eV}, 2000 \mathrm{eV}, 2200 \mathrm{eV}$. Select correct statement (s) for element 'A' : a)Element 'A' may be metal b)Element ' $A$ ' may from trivalent cation c)Oxide of element ' $A$ ' may be amphoteric d)Element 'A' may be non-metal
A. Element 'A' may be metal
B. Element 'a' may form trivalent cation
C. Oxide of element 'A' may be amphoteric
D. Element 'A' may be non-metal
78. According to Slater's rule, correct order of $Z_{\text {eff }}$ on valence shell electron is :
A. $\mathrm{Fe}>\mathrm{Fe}^{2+}>\mathrm{Fe}^{3+}$
B. $\mathrm{N}^{3-}<\mathrm{O}^{2-}<F^{-}$
C. $\mathrm{Na}^{+}<\mathrm{Mg}^{2+}<A l^{3+}$
D. $T l^{2+}<V^{3+}<M n^{5+}$

## Answer: B::C::D

## - Watch Video Solution

79. Which of the following order is/are correct?
A. $M g^{2+}($ size $)>L i^{+}($size $)$
B. $S(E . A)>O(E . A)$
C. $H g(I . E)>.C d(I . E)$
D. $P(I . E)>S(I . E)$

## Answer: B::C::D

## - Watch Video Solution

80. Correct order of electron affinity is/are:
A. $S>O$
B. $A l>B$
C. $M g>N a$
D. $P>N$

## Answer: A: B

## - Watch Video Solution

81. Which of the following statement(s) is/are correct?
A. van der waals' radius of iodine is more than its covalent radius
B. All isoelectronic ions of corresponding elements belong to the same period of the periodic table.
C. IE. Of N -atom is higher than that of O -atom, while $I E_{2}$ of O -atom is higher than that of N -atom.
D. The electron affinity of fluorine is greater than that of chlorine.

## Answer: A::C

## D View Text Solution

82. Electron affinity of the elements or ions shown correctly?
A. $S>O^{-}$
B. $P>N^{-}$
C. $O^{-}>S^{-}$
D. $N^{-}>P$

## Answer: A: B

## - View Text Solution

83. Which of the following statement regarding halogens is/are correct?
A. Ionization energy decreases with increase in atomic number
B. electronegativity decreases with increase in atomic number
C. Electron affinity decreases with increase in atomic number
D. Enthalpy of fusion increses with increase in atomic number

## Answer: A::B::D

84. Which of the following statements are correct?
A. F is the most electronegative and Cs is the most electropositive element
B. The ionization energy of halogens decreses from F to I
C. The electron affinity of Cl is higher than that of F thorugh their electronegativities are in the reverse order
D. The electron affinity of noble gases in almost zero

## Answer: A::B::C::D

## - View Text Solution

85. Consider the order $\mathrm{O}^{2-}<F^{+}<N a^{+}<M g^{3+}$. Then correct statement(s) is/are :
A. Increasing order of $Z_{e f f}$.
B. Increasaing order of size
C. Increasing order of I.E
D. Increasing order of E.A

## Answer: A:C::D

## - Watch Video Solution

86. Consider the following reaction:
(i) $O_{(g)}+e^{-} \rightarrow O_{(g)}^{-}, \Delta H_{1}$
(ii) $F_{(g)}+e^{-} \rightarrow F_{(g)}^{-}, \Delta H_{2}$
(iii) $\mathrm{Cl}_{(g)}+e^{-} \rightarrow \mathrm{Cl}_{(g)}^{-}, \Delta H_{3}$
(iv) $O_{(g)}^{-}+e^{-} \rightarrow O_{(g)}^{2-}, \Delta H_{4}$
then according to given information the correct statement is/are:
A. $\Delta H_{3}$ is more negative than $\Delta H_{1}$ and $\Delta H_{2}$
B. $\Delta H_{1}$ is less negative than $\Delta H_{2}$
C. $\Delta H_{1}, \Delta H_{2}$ and $\Delta H_{3}$ are negative whereas $\Delta H_{4}$ is positive
D. $\Delta H_{1}$ and $\Delta H_{3}$ are negative whereas $\Delta H_{2}$ and $\Delta H_{4}$ positive

## D Watch Video Solution

87. Which of the following is incorrect order of property as indicated ?
A. $N a^{+}<F^{-}<O^{2-}<N e<A r$ : Atomic size
B. $B r<S e<A s<G e$ :Metallic character
C. $N a<A l<S i<M g$ :Ionisation energy
D. $I<B r<C l<F$ :Electron affinity

## Answer: B::C::D

## - Watch Video Solution

88. Which of the following is/are correct order?
A. Atomic rdius $F<O<\mathrm{F}^{-}<\mathrm{O}^{2-}$
B. 2nd ionisation energy $C<N<F<O$
C. Electron affinity: $I<B r<F<C l$
D. $Z_{e f f}$ (effective nuclear change): $A l<A l^{+}<A l^{3+}<A l^{2+}$

## Answer: A::B::C

## D Watch Video Solution

89. Consider the following sequence of reaction:

If electronic configuration of element $X$ is $[N e] 3 s^{1}$, then which of the following order is incorrect regarding given enthalpies?
A. $\left|\Delta H_{4}\right|=\left|\Delta H_{5}\right|$
B. $\left|\Delta H_{2}\right|>\left|\Delta H_{1}\right|$
C. $\left|\Delta H_{2}\right|>\left|\Delta H_{3}\right|$
D. $\left|\Delta H_{1}\right|=\left|\Delta H_{6}\right|$

Answer: A: B::D

## - Watch Video Solution

90. The correct statement is/are:
A. Zirconium (Zr) and hafnium (Hf) have almost same size
B. Correct order of ionisation energy of coinage metals is CugtAg
$<A u$
C. Carbon atom in $\mathrm{CCl}_{4}$ is more electronegative than carbon atom in $C F_{4}$
D. $\mathrm{Pb}^{2+}$ is more stable than $\mathrm{Pb}^{4+}$

## Answer: A::B::D

91. Which of the following statements is true about electronegativity?
A. Electronegativity of an element depends upon its effective nuclear charge
B. Electronegativity of a cation is proportional to charge on the cation
C. Electronegativity increases as the s-character in hybrid orbital increases
D. Electronegativity of a anion is proportiona to charge on the anion

## Answer: A::B::C

93. Which of the following parameters cannot be estimated by using Born-Haber cycle?
A. Hydration energy of ion
B. Electron gain enthalpy
C. lattice enegy
D. Electronegativity

## Answer: A::D

94. Select correct order(s) of electronegativity of element is/are:
A. Paulling scale (E.N. of F-atom)gtMulliken scale (E.N. of F-atom)
B. $\mathrm{Cl}_{2} \mathrm{O}_{7}$ (E.N. of Cl-atom) $>\mathrm{Cl}_{2} \mathrm{O}_{5}$ (E.N. of C-atom)
C. $\mathrm{CH}_{4}$ (E.N. of C-atom) $>\mathrm{CO}_{2}$ (E.N. of C-atom)
D. $\mathrm{Cu}^{2+}$ (E.N.) $>C u^{+}$(E.N.)

## Answer: A: D

## - Watch Video Solution

95. Choose the correct statement(s):
A. $H^{+}$is the smalest size cation in the periodic table.
B. van der waals' radius of chlorine is more than covalent radius
C. ionic mobility of hydrated $\mathrm{Li}^{+}$is greater than that of hydrated
$N a^{+}$.
D. He atom is having highest I.E. in the periodic state

## (D) Watch Video Solution

96. Select equation having endothermic step:
A. $S^{-}(g) \rightarrow S^{2-}(g)$
B. $\mathrm{Na}^{+}(g)+\mathrm{Cl}^{-}(g) \rightarrow \mathrm{NaCl}(s)$
C. $N(g) \rightarrow N^{-}(g)$
D. $A l^{2+}(g) \rightarrow A l^{3+}(g)$

## Answer: A::C::D

97. Consider the following Born-Haber's cycle:

(Where $\Delta H_{1}, \Delta H_{2}, \Delta H_{3}, \Delta H_{4}, \Delta H_{5}$ and $\Delta H_{6}$ are in $\mathrm{kJ} / \mathrm{mol}$ )
Then according to given information the correct statement is/are:
A. $\Delta H_{2}$ and $\Delta H_{3}$ are always positive
B. $\Delta H_{1}=2 \Delta H_{2}+\frac{3}{2} \Delta H_{3}+2 \Delta H_{4}+3 \Delta H_{5}+\Delta H_{6}$
C. Second electron gain enthalpy of $X$ is negative
D. $\Delta H_{1}$ must be negative for formationn of $B_{2} X_{5}$ (s)

1. Assertion: In CsF, salt, size of $\mathrm{Cs}^{+}$is slightly higher than size of $F^{-}$. Reason: $\mathrm{Cs}^{+}$is largest monoatomic cation and $F^{-}$is smallest anion.
A. If both assertion and reason are true annd the reason is the correct explanation of assertion
B. If both assertion and reason are true but reason is not the correct explanation of assertion
C. If assertion is true but the reason is false
D. if assertion is false but the reason is true

## Answer: D

## - Watch Video Solution

2. Assertion :- First electrons affinity fo all element is positive.

Reason :- Successive electron affinity of all elements is negative
A. If both assertion and reason are true annd the reason is the correct explanation of assertion
B. If both assertion and reason are true but reason is not the correct explanation of assertion
C. If assertion is true but the reason is false
D. if assertion is false but the reason is true

## Answer: D

## - Watch Video Solution

3. Assertion: Helium has the highest value of ionisation energy among all known elements.

Reason: Helium has the highest value of elelctron affinity among all known elements.
A. If both assertion and reason are true annd the reason is the correct
B. If both assertion and reason are true but reason is not the correct explanation of assertion
C. If assertion is true but the reason is false
D. if assertion is false but the reason is true

## Answer: C

## - Watch Video Solution

4. Assertion: $F^{-}$ion has highest hydrated radius among the other halide ions.

Reason: Ionic radius of $F^{-}$is smallest in the periodic table.
A. If both assertion and reason are true annd the reason is the correct
explanation of assertion
B. If both assertion and reason are true but reason is not the correct explanation of assertion
C. If assertion is true but the reason is false
D. if assertion is false but the reason is true

## Answer: A

## - Watch Video Solution

5. Assertion: magnitude of electron gain enthalpy of oxygen is less than that of fluorine but greater than that of nitrogen.

Reason: Ionisation enthalpy order is as follows: $N>O<E$.
A. If both assertion and reason are true annd the reason is the correct
explanation of assertion
B. If both assertion and reason are true but reason is not the correct
explanation of assertion
C. If assertion is true but the reason is false
D. if assertion is false but the reason is true

## Answer: B

6. Assertion: Formation of $\mathrm{Cl}^{-}$ion is exothermic wheres $\mathrm{O}^{2-}$ ion formation is endothermic.

Reason: $E A_{2}$ of oxygen is endothermic and greater than its exothermic $E A_{1}$ value of oxygen.
A. If both assertion and reason are true annd the reason is the correct explanation of assertion
B. If both assertion and reason are true but reason is not the correct explanation of assertion
C. If assertion is true but the reason is false
D. if assertion is false but the reason is true

## Answer: A

7. Assertion: The electron gain enthalpy of N is +ve while that of P is -ve.

Reason: Smaller atomic size of N is which there is a considerable electronelectron repulsion and hence the additional electron is not accepted easily.
A. If both assertion and reason are true annd the reason is the correct explanation of assertion
B. If both assertion and reason are true but reason is not the correct explanation of assertion
C. If assertion is true but the reason is false
D. if assertion is false but the reason is true

## Answer: A

## - Watch Video Solution

8. Assertion: The formation of $F_{(g)}^{-}$from $F_{(g)}$ is exothermic, whereas that of $O_{(g)}^{2-} \mathfrak{o m O} \mathrm{O}_{-}((\mathrm{g}))^{\prime}$ is endotherrmic.

Reason: The addition of second electron to a monovalent anion is difficult because both have the same charge and experience more repulsion.
A. If both assertion and reason are true annd the reason is the correct explanation of assertion
B. If both assertion and reason are true but reason is not the correct explanation of assertion
C. If assertion is true but the reason is false
D. if assertion is false but the reason is true

## Answer: A

## - Watch Video Solution

9. Statement-1: $N a^{+}$and $A I^{3+}$ are isoelectronic but the magnitude of ionic radius or $\mathrm{AI}^{3+}$ is less than that of $\mathrm{Na}^{+}$.

Statement-2: The magnitude of effective nuclear charge of the outer most shell electrons in $A I^{3+}$ is greater than that of $N a^{+}$.
A. If both assertion and reason are true annd the reason is the correct explanation of assertion
B. If both assertion and reason are true but reason is not the correct explanation of assertion
C. If assertion is true but the reason is false
D. if assertion is false but the reason is true

## Answer: A

## - Watch Video Solution

10. Assertion: The third period contains only 8 electrons and not 18 like 4th period.

Reason: In III perriod filling starts from $3 s^{1}$ and complete at $3 p^{6}$ whereas in IV period it starts from $4 s^{1}$ annd complete after $3 d^{10}$ and $4 s^{2}$.
A. If both assertion and reason are true annd the reason is the correct explanation of assertion
B. If both assertion and reason are true but reason is not the correct explanation of assertion
C. If assertion is true but the reason is false
D. if assertion is false but the reason is true

## Answer: A

## - Watch Video Solution

11. Statement-I : $C s$ and F combines violently to form $C s F$.

Statement-II : Cs is most electropositive and F is most electronegative.
A. If both assertion and reason are true annd the reason is the correct explanation of assertion
B. If both assertion and reason are true but reason is not the correct explanation of assertion
C. If assertion is true but the reason is false
D. if assertion is false but the reason is true

## - Watch Video Solution

12. Statement-1: Second electron gain enthalpy of halogens is always positive.

Statement-2: Fluorine has most negative electron gain enthalpy.
A. If both assertion and reason are true annd the reason is the correct explanation of assertion
B. If both assertion and reason are true but reason is not the correct explanation of assertion
C. If assertion is true but the reason is false
D. if assertion is false but the reason is true

## Answer: C

## D Watch Video Solution

13. Assertion: F atom has less electron afffinity than Cl atom.

Reason: Additional electrons are repelled more strongly by $3 p$ electrons in Cl atom than by 2 p electrons in F atom.
A. If both assertion and reason are true annd the reason is the correct explanation of assertion
B. If both assertion and reason are true but reason is not the correct
explanation of assertion
C. If assertion is true but the reason is false
D. if assertion is false but the reason is true

## Answer: C

## - Watch Video Solution

14. Assertion: Among the halogens bond energy of $F_{2}$ is minimum.

Reason: Among halogens F atom is small in size.
A. If both assertion and reason are true annd the reason is the correct explanation of assertion
B. If both assertion and reason are true but reason is not the correct explanation of assertion
C. If assertion is true but the reason is false
D. if assertion is false but the reason is true

## Answer: D

## - Watch Video Solution

15. Assertion: The first ionization energy of Be is greater than that of $B$.

Reason: 2 p -orbital is lower in energy than 2 s -orbital.
A. If both assertion and reason are true annd the reason is the correct explanation of assertion
B. If both assertion and reason are true but reason is not the correct explanation of assertion
C. If assertion is true but the reason is false
D. if assertion is false but the reason is true

## Answer: C

16. Assertion : Noble gases have highest ionisation enthalpies in their respective periods.

Reason : Noble gases have stable closed shell electronic configuration.
A. If both assertion and reason are true annd the reason is the correct explanation of assertion
B. If both assertion and reason are true but reason is not the correct explanation of assertion
C. If assertion is true but the reason is false
D. if assertion is false but the reason is true

## Answer: A

## - Watch Video Solution

17. Assertion: Helium and beryllium have similar outer electronic configuration of the type $n s^{2}$.

Reason: Both are chemically inert.
A. If both assertion and reason are true annd the reason is the correct explanation of assertion
B. If both assertion and reason are true but reason is not the correct explanation of assertion
C. If assertion is true but the reason is false
D. if assertion is false but the reason is true

## Answer: C

## - Watch Video Solution

18. Assertion: The first ionisation enthalpy of aluminium is lower than that of magnesium.

Reason : lonic radius of aluminium is smaller than that of magnesium.
A. If both assertion and reason are true annd the reason is the correct explanation of assertion
B. If both assertion and reason are true but reason is not the correct explanation of assertion
C. If assertion is true but the reason is false
D. if assertion is false but the reason is true

## Answer: B

## - Watch Video Solution

19. Assertion: In CsF, salt, size of $\mathrm{Cs}^{+}$is slight higher than size of $\mathrm{F}^{-}$. Reason: $C s^{+}$is largest monoatomic cation and $F^{-}$is smallest anion.
A. If both assertion and reason are true annd the reason is the correct explanation of assertion
B. If both assertion and reason are true but reason is not the correct
explanation of assertion
C. If assertion is true but the reason is false
D. if assertion is false but the reason is true

## Answer: A

## - View Text Solution

20. Assertion: First electron affinity of all elements is positive.

Reason: Successive electron affinity of all elements is negative.
A. If both assertion and reason are true annd the reason is the correct explanation of assertion
B. If both assertion and reason are true but reason is not the correct explanation of assertion
C. If assertion is true but the reason is false
D. if assertion is false but the reason is true

## Answer: D

## - View Text Solution

21. Assertion: helium atom has highest ionisation energy among all the element.

Reason: helium is smallest atom among all the elements.
A. If both assertion and reason are true annd the reason is the correct
explanation of assertion
B. If both assertion and reason are true but reason is not the correct
explanation of assertion
C. If assertion is true but the reason is false
D. if assertion is false but the reason is true

## Answer: C

22. Assertion: $F^{-}$ion has highest hydrated radius among the other halide ions.

Reason: Ionic radius of $F^{-}$is smallest in the periodic table.
A. If both assertion and reason are true annd the reason is the correct explanation of assertion
B. If both assertion and reason are true but reason is not the correct explanation of assertion
C. If assertion is true but the reason is false
D. if assertion is false but the reason is true

## Answer: A

## - Watch Video Solution

23. Assertion: magnitude of electron gain enthalpy of oxygen is less than that of fluorine but greater than that of nitrogen.

Reason: Ionisation enthalpy order is as follows: ${ }^{`} \mathrm{~N}$ gt O It F.
A. If both assertion and reason are true annd the reason is the correct
explanation of assertion
B. If both assertion and reason are true but reason is not the correct
explanation of assertion
C. If assertion is true but the reason is false
D. if assertion is false but the reason is true

## Answer: B

## - Watch Video Solution

24. Assertion: Formation of $\mathrm{Cl}^{-}$ion is exothermic wheres $\mathrm{O}^{2-}$ ion formation is endothermic.

Reason: $E A_{2}$ of oxygen is endothermic and greater than its exothermic $E A_{1}$ value of oxygen.
A. If both assertion and reason are true annd the reason is the correct explanation of assertion
B. If both assertion and reason are true but reason is not the correct explanation of assertion
C. If assertion is true but the reason is false
D. if assertion is false but the reason is true

## Answer: A

## - Watch Video Solution

25. Assertion: The electron gain enthalpy of N is +ve while that of P is -ve .

Reason: Smaller atomic size of N is which there is a considerable electronelectron repulsion and hence the additional electron is not accepted easily.
A. If both assertion and reason are true annd the reason is the correct explanation of assertion
B. If both assertion and reason are true but reason is not the correct explanation of assertion
C. If assertion is true but the reason is false
D. if assertion is false but the reason is true
