## CHEMISTRY

## BOOKS - CHHAYA CHEMISTRY (BENGALI ENGLISH)

## CHEMICAL THERMODYNAMICS

## NUMERICAL EXAMPLES

1. The volume and temperature of 2 mol of an ideal gas are $10 \mathrm{~L} \& 27^{\circ} C$, respectively. The gas is allowed to expand in an isothermal reversible process to attain a final volume of 25 L . calculate the maximum work done.
2. A 3 mol sample of an ideal gas at STP expands in an isothermal reversible process to atttain a final volume of 100 L . calculate the work done by the gas.

## - Watch Video Solution

3. A 2.5 mol sample of an ideal gas is compressed in reversible isothermal process from a volume of 12 L to a volume of 5 L at $27^{\circ} \mathrm{C}$. Calculate the work done on the gas.

## - Watch Video Solution

4. A gas is compressed by an external pressure of 5 atm. The work done in the process is 1034 J . How much volume of the gas is reduced?

## - Watch Video Solution

5. Work done by 3 mol of an ideal in an isothermal reversible expansion of $30^{\circ} C$ is 9.5 kJ . If the initial volume of the gas is 20 L , then what will be the final volume of the gas?

## - Watch Video Solution

6. The pressure of 3 mol of an ideal gas is 10 atm at $27^{\circ} \mathrm{C}$. Calculate work done by the gas when it is expanded isothermally against an external pressure of 1 atm.

## - Watch Video Solution

7. The pressure of $6 \mathrm{~mol} N_{2}$ gas kept in a cylinder is 30 atm at $30^{\circ} \mathrm{C}$. Suddenly the gas comes out of the cylinder due to leakage. If the atmospheric pressure and temperature and 1 atm and $30^{\circ} C$, then calculate the work done by the gas. Assume that the gas behave ideally.
8. A 5 mol sample of an ideal gas is compressed isothermally and irreversible from 1.5 atm to 15 atm at $27^{\circ} \mathrm{C}$. Calculate the work done on the gas in calorie unit.

## - Watch Video Solution

9. What amount of work is done if an ideal gas expands from 10 L of 20 L at 2 atm pressure?

## - Watch Video Solution

10. What amount of work is done if an ideal gas is commpressed from 0.5 to 0.25 L under 0.1 atm pressure?

## - Watch Video Solution

11. Calculate the work done when 1 mol of water vaporises at $100^{\circ} \mathrm{C}$ and 1 atm pressure. Assume water vapour behaves like an ideal gas.

## - Watch Video Solution

12. Iron reacts with dilute HCl quantitatively to form $\mathrm{H}_{2}: \mathrm{Fe}(\mathrm{s})+2 \mathrm{HCl}(a q) \rightarrow \mathrm{FeCl}_{2}(a q)+\mathrm{H}_{2}(\mathrm{~g})$

56 g of iron is allowed to react completely with dil HCl at $25^{\circ}$. If this reaction is carried out seperately (1) in a closed container of fixed volume and (2) in an open breaker, then calculate the work done in each case. assume $H_{2}$ gas behaves like an ideal gas.

## - Watch Video Solution

13. Calculate the change in internal energy when-
(1) heat released by the system is 200 J and work done on the system is $120 \mathrm{~J}(2)$ heat absorbed and work done by the system are 200 J and 120 J
respectively (3) heat released and work done by the system are 200 J and 120 J respectively.

## - Watch Video Solution

14. In a process, the system performs 142 J of work and the internal energy of the system increases by 879 J . predict the direction of heat flow and also calculate the quantity of heat transferred.

## - Watch Video Solution

15. A system undergoes a process in which it gives up 900 J of heat and its internal energy decreases by 300 J . of the system and its surroundings, which one does work in this process?

## - Watch Video Solution

16. Initial volume of a gas, condined in a cylinder fitted with a piston is 11.2
L. the final volume of the gas becomes 33.6L after expansion againsta expansion if the gas absorbs 1 kJ of heat from the surrounding then what will be the change in internal energy of that gas?

## - Watch Video Solution

17. An ideal gas is expanded from 1 L to 6 L in a closed vessel at 2 atm pressure by applying heat at fixed temperature. Calculate work done and heat absorbed by the gas. [Given: 1 L atm=24.22 cal]

## - Watch Video Solution

18. A cylinder fitted with a piston contains an ideal gas with a volume of 21
L. the gas is compressed isothermally to $1 / 3$ rd of its initial volume under a constant external pressure of 3 atm . Calculate $\mathrm{q}, \mathrm{w}$ and $\Delta U$.
19.1 mol of a non-ideal gas undergoes the given change: ( $2 \mathrm{~atm}, 3 \mathrm{~L}, 95 \mathrm{~K}$ )
$\rightarrow(4 \mathrm{~atm}, 5 \mathrm{~L}, 245 \mathrm{~K})$. In this process, if increase in internal energy of the gas is $30 \mathrm{~L} \cdot$ atm, then what will be its change in enthalpy?

## - Watch Video Solution

20. Determine the change in enthalpy and internal energy when 1 mole of water completely vaporises at $100^{\circ} \mathrm{C}$ and 1 atm pressure. [Latent heat of vaporisation of water=536 $\mathrm{cal} \cdot \mathrm{g}^{-1}$ ]

## - Watch Video Solution

21. How much heat is required to raise the temperature of 90 g of water from $30^{\circ} \mathrm{C}$ to $100^{\circ} \mathrm{C}$ ? [Molar heat capacity of water at constant pressure

$$
\left.=75.3 \mathrm{~J} \cdot \mathrm{~mol}^{-1} \cdot \mathrm{~K}^{-1}\right]
$$

## - Watch Video Solution

22. How much heat will be released when the temperature of 1 mol of water changes from $90^{\circ} \mathrm{C}$ to $80^{\circ} \mathrm{C}$ ? Given: specific heat of water $4.18 J \cdot g^{-1} \cdot K^{-1}$.

## - Watch Video Solution

23. Specific heat of an ideal gas at constant volume \& at constant pressure are 0.015 and $0.025 \mathrm{cal} \cdot \mathrm{g}^{-1} \cdot \mathrm{~K}^{-1}$ respectively. Determine molar mass of the gas.

## - Watch Video Solution

24. At a fixed temperature \& pressure, heat released in the formation of 3 $\mathrm{mol} \mathrm{SO}_{3}(\mathrm{~g})$ from $\mathrm{SO}_{2}(\mathrm{~g})$ and $O_{2}(\mathrm{~g})$ is 291 kJ . What will be the change in enthalpies in the formation of $1 \mathrm{~mol} \& 4 \mathrm{~mol} \mathrm{SO}_{3}(\mathrm{~g})$ ?

## - Watch Video Solution

25. At a particular temperature and pressure, the heat produced in the formation of 2 mol of $\mathrm{C}_{2} \mathrm{H}_{6}(\mathrm{~g})$ from the reaction between $\mathrm{C}_{2} \mathrm{H}_{2}(\mathrm{~g})$ and $H_{2}(g)$ is 626 kJ . What amount of $H_{2}(g)$ will react with the required amount of $\mathrm{C}_{2} \mathrm{H}_{2}(\mathrm{~g})$ to produce 939 kJ of heat at the same temperature and pressure?

## - Watch Video Solution

26. At a particular temperature and pressure, $N_{2}(g)$ and $O_{2}(g)$ react to form 4 mol of $\mathrm{N}_{2} \mathrm{O}$. The heat oabsorbed in this reaction is 328 kJ . What will be change in enthalpy be due to the formation of 2 mol of $N_{2}(g)$ and 1 mol of $O_{2}(g)$ from $N_{2} O(g)$ at the same temperature and pressure?

## - Watch Video Solution

27. The value of $\Delta H$ for the given reaction at 298 K is $-282.85 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$.

Calculate the change in intenral energy: $\mathrm{CO}(\mathrm{g})+\frac{1}{2} \mathrm{O}_{2}(\mathrm{~g}) \rightarrow \mathrm{CO}_{2}(\mathrm{~g})$.
28. Bond energy of a diatomic molecule is given as the change in internal energy due to dissociation of that molecule. Calculate the bond energy of $O_{2}$. Given: $O_{2}(g) \rightarrow 2 O(g), \Delta H=498.3 k J \cdot \mathrm{~mol}^{-1}, T=298 K$.

## ( Watch Video Solution

29. Calculate the values of $\Delta H$ and $\Delta U$ in the vaporisation of 90 g of water at $100^{\circ} \mathrm{C}$ and 1 atm pressure. The latent heat of vaporisation of water at the same temperature and pressure $=540 \mathrm{cal} \cdot \mathrm{g}^{-1}$

## - Watch Video Solution

30. Assuming the reactant and product gases obey the ideal gas law, calculate the change in internal energy $(\Delta E)$ at $27^{\circ} C$ for the given reaction:
$\mathrm{C}_{2} \mathrm{H}_{4}(\mathrm{~g})+3 \mathrm{O}_{2}(\mathrm{~g}) \rightarrow 2 \mathrm{CO}_{2}(\mathrm{~g})+2 \mathrm{H}_{2} \mathrm{O}(\mathrm{l}), \Delta \mathrm{H}=-337$ kcal at $27^{\circ} \mathrm{C}$ and $\mathrm{R}=1.987 \mathrm{cal} \cdot \mathrm{K}^{-1} \cdot \mathrm{~mol}^{-1}$.

## - Watch Video Solution

31. Calculate the standard enthalpy of reaction at $25^{\circ} \mathrm{C}$ temperature for the following reaction:
$\mathrm{C}_{6} \mathrm{H}_{6}(l)+\frac{15}{2} \mathrm{O}_{2}(\mathrm{~g}) \rightarrow 6 \mathrm{CO}_{2}(\mathrm{~g})+3 \mathrm{H}_{2} \mathrm{O}(\mathrm{l})$
Given:The standard enthalpy of formation of $\mathrm{C}_{6} \mathrm{H}_{6}, \mathrm{CO}_{2}(\mathrm{~g})$ and $\mathrm{H}_{2} \mathrm{O}(\mathrm{l})$ are $\quad 49.0 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1},-393.5 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$ and $-285.8 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$ respectively.

## - Watch Video Solution

32. Calculate standard enthalpy of reaction at $25^{\circ} \mathrm{C}$ for the reaction: $\mathrm{CCl}_{4}(\mathrm{~g})+2 \mathrm{H}_{2} \mathrm{O}(\mathrm{g}) \rightarrow \mathrm{CO}_{2}(\mathrm{~g})+4 \mathrm{HCl}(\mathrm{g})$. Given: The standard heat of formation of $\mathrm{CCl}_{4}(g), \mathrm{H}_{2} \mathrm{O}(\mathrm{g}), \mathrm{CO}_{2}(\mathrm{~g})$ and $\mathrm{HCl}(\mathrm{g})$ are $-25.5,-57.8,-94.1$ and $-22.1 \mathrm{kcal} \cdot \mathrm{mol}^{-1}$.
33. $\Delta H$ value for the given reactions at $25^{\circ} C$ are-
$\mathrm{C}_{3} \mathrm{H}_{8}(\mathrm{~g}) \rightarrow 3 \mathrm{C}(\mathrm{s})+4 \mathrm{H}_{2}(\mathrm{~g}), \Delta H^{0}=103.8 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
$2 \mathrm{H}_{2}(\mathrm{~g})+\mathrm{O}_{2}(\mathrm{~g}) \rightarrow 2 \mathrm{H}_{2} \mathrm{O}(\mathrm{l}), \Delta H^{0}=-571.6 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
$\mathrm{C}_{2} \mathrm{H}_{6}(\mathrm{~g})+\frac{7}{2} \mathrm{O}_{2}(\mathrm{~g}) \rightarrow 2 \mathrm{CO}_{2}(\mathrm{~g})+3 \mathrm{H}_{2} \mathrm{O}(\mathrm{l}), \Delta \mathrm{H}^{0}=-1560 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
$\mathrm{CH}_{4}(\mathrm{~g})+2 \mathrm{O}_{2}(\mathrm{~g}) \rightarrow \mathrm{CO}_{2}(\mathrm{~g})+2 \mathrm{H}_{2} \mathrm{O}(\mathrm{l}), \Delta \mathrm{H}^{0}=-890 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
$C(s)+\mathrm{O}_{2}(\mathrm{~g}) \rightarrow \mathrm{CO}_{2}(\mathrm{~g}), \Delta \mathrm{H}^{0}=-393.5 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
Calculate $\Delta H^{0}$ for the reaction at $25^{\circ} \mathrm{C}$
$\mathrm{C}_{3} \mathrm{H}_{8}(\mathrm{~g})+\mathrm{H}_{2}(\mathrm{~g}) \rightarrow \mathrm{C}_{2} \mathrm{H}_{6}(\mathrm{~g})+\mathrm{CH}_{4}(\mathrm{~g})$

## (D) Watch Video Solution

34. Calculate $\Delta H^{0}$ for the following reaction at 298 K :
$\mathrm{C}_{2} \mathrm{H}_{2}(\mathrm{~g})+\mathrm{CO}(\mathrm{g})+\mathrm{H}_{2} \mathrm{O}(\mathrm{l}) \rightarrow \mathrm{C}_{2} \mathrm{H}_{3} \mathrm{COOH}(\mathrm{l})$
Given: at 298K temperature,
$\mathrm{C}_{2} \mathrm{H}_{3} \mathrm{CO}_{2} \mathrm{H}(\mathrm{l})+3 \mathrm{O}_{2}(\mathrm{~g}) \rightarrow 3 \mathrm{CO}_{2}(\mathrm{~g})+2 \mathrm{H}_{2} \mathrm{O}(\mathrm{l}), \Delta \mathrm{H}^{0}=-1368 \mathrm{~kJ}$
$2 \mathrm{C}_{2} \mathrm{H}_{2}(g)+5 \mathrm{O}_{2}(g) \rightarrow 4 \mathrm{CO}_{2}(g)+2 \mathrm{H}_{2} \mathrm{O}(l), \Delta H^{0}=-2600 \mathrm{~kJ}$ $2 \mathrm{CO}(\mathrm{g})+\mathrm{O}_{2}(\mathrm{~g}) \rightarrow 2 \mathrm{CO}_{2}(\mathrm{~g}), \Delta \mathrm{H}^{0}=-566 \mathrm{~kJ}$.

## - Watch Video Solution

35. Calculate the enthalpy change for the reaction:
$\mathrm{C}_{2} \mathrm{H}_{4}(\mathrm{~g})+3 \mathrm{O}_{2}(\mathrm{~g}) \rightarrow 2 \mathrm{CO}_{2}(\mathrm{~g})+2 \mathrm{H}_{2} \mathrm{O}(\mathrm{l})$
Given:
$\mathrm{C}_{2} \mathrm{H}_{6}(g)+\frac{7}{2} \mathrm{O}_{2}(\mathrm{~g}) \rightarrow 2 \mathrm{CO}_{2}(\mathrm{~g})+3 \mathrm{H}_{2} \mathrm{O}(\mathrm{l}), \Delta \mathrm{H}^{0}=-1562.0 \mathrm{~kJ}$
$H_{2}(g)+\frac{1}{2} O_{2}(g) \rightarrow H_{2} O(l), \Delta H^{0}=-286.0 \mathrm{~kJ}$
$C_{2} H_{4}(g)+H_{2}(g) \rightarrow C_{2} H_{6}(g), \Delta H^{0}=-32.0 k J$

## - Watch Video Solution

36. The heat of reaction for the following reaction $\left(\Delta H^{0}\right)$ at $25^{\circ} \mathrm{C}$ temperatue is -1368 kJ :

$$
\mathrm{C}_{2} \mathrm{H}_{5} \mathrm{OH}(\mathrm{l})+3 \mathrm{O}_{2}(g) \rightarrow 2 \mathrm{CO}_{2}(g)+3 \mathrm{H}_{2} \mathrm{O}(\mathrm{l})
$$

If the enthalpy of formation of $\mathrm{CO}_{2}(\mathrm{~g})$ and $\mathrm{H}_{2} \mathrm{O}(\mathrm{l})$ at $25^{\circ} \mathrm{C}$ are -393.5
and $-285.8 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$ respectively, then what will be the value of the standard enthalpy of formation of $\mathrm{C}_{2} \mathrm{H}_{5} \mathrm{OH}(\mathrm{l})$ ?

## - Watch Video Solution

37. Calculate the standard enthalpy of formation of $C_{6} H_{6}(l)$ at $25^{\circ} \mathrm{C}$ temperature using the given data:
$\mathrm{C}_{6} \mathrm{H}_{6}(\mathrm{l})+\frac{15}{2} \mathrm{O}_{2}(\mathrm{~g}) \rightarrow 6 \mathrm{CO}_{2}(\mathrm{~g})+3 \mathrm{H}_{2} \mathrm{O}(\mathrm{l}), \Delta \mathrm{H}^{0}=-781 \mathrm{kcal}$
$\mathrm{H}_{2}(\mathrm{~g})+\frac{1}{2} \mathrm{O}_{2}(\mathrm{~g}) \rightarrow \mathrm{H}_{2} \mathrm{O}(\mathrm{l}), \Delta H^{0}=-68.32 \mathrm{kcal}$
$\mathrm{C}(\mathrm{s}$, graphite $)+\mathrm{O}_{2}(\mathrm{~g}) \rightarrow \mathrm{CO}_{2}(\mathrm{~g}), \Delta H^{0}=-94.04 \mathrm{kcal}$.

## - Watch Video Solution

38. At $25^{\circ} C$ temperature, the heat of combustion of sucrose, carbon and hydrogen are $\quad-5644 \quad \mathrm{~kJ} \cdot \mathrm{~mol}^{-1},-393.5 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1} \quad$ \& $-285.8 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$ respectively. Determine the heat of formation of sucrose at $25^{\circ} C$.
39. At $25^{\circ} \mathrm{C}$ temperature, the standard heat of formation of $\mathrm{CH}_{4}(\mathrm{~g}), \mathrm{CO}_{2}(\mathrm{~g}) \quad$ and $\quad \mathrm{H}_{2} \mathrm{O}(\mathrm{g}) \quad$ are $\quad-74.8$ $\mathrm{kJ} \cdot \mathrm{mol}^{-1},-393.5 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1} \&-241.6 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
respectively. How much heat will be evolved during combustion of $1 m^{3} \mathrm{CH}_{4}(\mathrm{~g})$ at $25^{\circ} \mathrm{C}$ temperature and 1 atm pressure ? Consider $\mathrm{CH}_{4}(\mathrm{~g})$ behaves like an ideal gas.

## - Watch Video Solution

40. Calculate the value of enthalpy of combustion of cyclopropane at $25^{\circ} \mathrm{C}$ and 1 atm pressure.

Given: Standard enthalpy of formation of $\mathrm{CO}_{2}(\mathrm{~g}), \mathrm{H}_{2} \mathrm{O}(\mathrm{l}) \&$ propene (g) at $25^{\circ} \mathrm{C}$ are $-393.5 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1},-285.8 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1} \& 20.4 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$ respectively. also standard enthalpy change for isomerisation reaction: Cyclopropane (g) $\Leftrightarrow$ Propene (g) is $-33.0 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$.

## - Watch Video Solution

41. Diborane $\left[B_{2} H_{6}(g)\right]$ is used as a very effective fuel for rockets.

Calculate the heat of combustion of diborane for the following reaction:
$\mathrm{B}_{2} \mathrm{H}_{6}(\mathrm{~g})+3 \mathrm{O}_{2}(\mathrm{~g}) \rightarrow \mathrm{B}_{2} \mathrm{O}_{3}(\mathrm{~g})+3 \mathrm{H}_{2} \mathrm{O}(\mathrm{g})$
Given: (1) $2 B(s)+\frac{3}{2} O_{2}(g) \rightarrow B_{2} O_{3}(s), \Delta H^{0}=-1273 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
(2) $\mathrm{H}_{2}(\mathrm{~g})+\frac{1}{2} \mathrm{O}_{2}(\mathrm{~g}) \rightarrow \mathrm{H}_{2} \mathrm{O}(\mathrm{l}), \Delta H^{0}=-285.8 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$.
(3) $\mathrm{H}_{2} \mathrm{O}(\mathrm{l}) \rightarrow \mathrm{H}_{2} \mathrm{O}(\mathrm{g}), \Delta \mathrm{H}^{0}=+44 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
(4) $2 B(s)+3 H_{2}(g) \rightarrow B_{2} H_{6}(g), \Delta H^{0}=+36 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$.

## - Watch Video Solution

42. At $25^{\circ} \mathrm{C}$, heat evolved due to complete combustion of 7.8 g of $C_{6} H_{6}(l)$ is 326.4 kJ . Calculate the heat evolved due to complete combustion of the same amount of $C_{6} H_{6}(l)$ at the same temperature and constant pressure of 1 atm .

## - Watch Video Solution

43. Calculate (1) the enthalpy change in the fusion of 100 g ice at $0^{\circ} \mathrm{C}$ temperature and 1 atm pressure pressure (2) the enthalpy change in the vaporisation of 10 g water at $100^{\circ} \mathrm{C}$ temperature and 1 atm pressure. Givenn : Latent heat of ice at $0^{\circ} C$ temperature and 1 atm pressure $=6.02 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$ and latent heat of vaporisation of water at $100^{\circ} \mathrm{C}$ temperature $=40.4 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$.

## - Watch Video Solution

44. Heat required to completely vaporise 7.8 g of benzene at 1 atm pressure and $80^{\circ} \mathrm{C}$ temperature (boiling point of benzene) is 3.08 kJ . What is the value of the enthalpy of vaporisation of benzene? What will be the change in enthalpy if 54.6 g of benzene vapour is condensed at 1 atm pressure and $80^{\circ} \mathrm{C}$ temperature ?

## - Watch Video Solution

45. Determine the heat of neutralisation for the following neutralisation reactions: (1) 100 L of 0.2 (M) HCl solution is mixed with 200 mL of 0.15 (M) NaOH solution. (2) 200 mL of 0.4 (M) $\mathrm{H}_{2} \mathrm{SO}_{4}$ solution is mixed with 300 mL of 0.2 (M) KOH solution.

Given: $\mathrm{H}^{+}(a q)+\mathrm{OH}^{-}(a q) \rightarrow \mathrm{H}_{2} O(l), \Delta H=-57.3 k J$.

## - Watch Video Solution

46. The heat of neutralisation of acetic and NaOH is 55.9 kJ . If the heat of neutralisation of all strong acids and strong bases is 57.3 kJ , then calculate the heat of ionisation of acetic acid.

## - Watch Video Solution

47. Calculate the bond energy of $\mathrm{O}-\mathrm{H}$ bond in $\mathrm{H}_{2} \mathrm{O}(\mathrm{g})$ at the standard state from the following data:
(1) $\mathrm{H}_{2}(\mathrm{~g}) \rightarrow 2 \mathrm{H}(\mathrm{g}), \Delta H^{0}=436 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
(2) $\frac{1}{2} \mathrm{O}_{2}(g) \rightarrow O(g), \Delta H^{0}=249 \mathrm{k} \cdot \mathrm{mol}^{-1}$
(3) $\mathrm{H}_{2}(g)+\frac{1}{2} \mathrm{O}_{2}(g) \rightarrow \mathrm{H}_{2} \mathrm{O}(\mathrm{g}), \Delta H_{f}^{0}\left[\mathrm{H}_{2} \mathrm{O}(\mathrm{g})\right]=-241.8 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$.

## - Watch Video Solution

48. Calculate the bond energy of S-F bond in $S F_{6}, S(g), F(g)$ are -1100, $275,80 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$ respectively.

## - Watch Video Solution

49. Determine the standard enthalpy of formation of isoprene $(\mathrm{g})$ at 298 K temperature. Given: at 298K,
$\Delta H^{0}(C-H)=413 k J \cdot \mathrm{~mol}^{-1}$
$\Delta H^{0}(H-H)=436 k J \cdot \mathrm{~mol}^{-1}$
$\Delta H^{0}(C-C)=346 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$,
$\Delta H^{0}(C=C)=611 k J \cdot \mathrm{~mol}^{-1}$,
$C$ (graphite, s) $\rightarrow C$ (graphite, g$),$
$\Delta H^{0}=717 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
50. Calculate standard enthalpy for the reaction at 298K: $\mathrm{C}_{2} \mathrm{H}_{5} \mathrm{Cl}(\mathrm{g}) \rightarrow \mathrm{C}_{2} \mathrm{H}_{4}(\mathrm{~g})+\mathrm{HCl}(\mathrm{g})$. Given:
$\Delta H^{0}(C-H)=413 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}, \Delta H^{0}(C-C)=346 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$,
$\Delta H^{0}(C=C)=611 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}, \Delta H^{0}(C-C l)=339 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$,
$\Delta H^{0}(H-C l)=432 k J \cdot \mathrm{~mol}^{-1}$.

## - Watch Video Solution

51. When 1.0 g of a compound (molecular weight=28) is burnt in a bomb calorimeter, the temperature of the calorimeter rises from $25^{\circ} \mathrm{C}$ to $25.45^{\circ} \mathrm{C}$. Calculate the heat that evolves when 1 mol of this compound is completely burnt $\left(C_{c a l}=2.5 k J \cdot K^{-1}\right)$.

## - Watch Video Solution

52. At $25^{\circ} \mathrm{C}$ the heat of combustion at constant volume of 1 mol of a compound is 5150 kJ . The temperature of a bomb calorimeter rises from $25^{\circ} \mathrm{C}$ to $30.5^{\circ} \mathrm{C}$ when a certain amount of the compound is burnt in it. If the heat capacity of the calorimeter is $9.76 \mathrm{~kJ} \cdot \mathrm{~K}^{-1}$ then how much of the compound was taken for combustion. [Molar mass of the substance=128]

## - Watch Video Solution

53. Latent heat in fusion of ice at $0^{\circ} \mathrm{C}$ is $6025.24 \mathrm{~J} \cdot \mathrm{~mol}^{-1}$. Calculate molar entropy of the process at $0^{\circ} C$.

## - Watch Video Solution

54. Enthalpy change for the transformation of water into vapour at the standard boiling point is $40.8 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$. Calculate the entropy change for the process.
55. Calculate the entropy change at $0^{\circ} \mathrm{C}$ for the process-
$\mathrm{H}_{2} \mathrm{O}(s) \rightarrow \mathrm{H}_{2} \mathrm{O}(l)$.
Given:
At
$0^{2} \mathrm{C} \quad \mathrm{C}_{2} \mathrm{O}(s) \rightarrow \mathrm{H}_{2} \mathrm{O}(g), \Delta H=51885 \mathrm{~J} \cdot \mathrm{~mol}^{-1}$ and $\mathrm{H}_{2} \mathrm{O}(\mathrm{l}) \rightarrow \mathrm{H}_{2} \mathrm{O}(g)$

## D Watch Video Solution

56. The enthalpy of vaporisation of benzene at $80^{\circ} C$ (boiling point) is 31
$k J \cdot \mathrm{~mol}^{-1}$. What will be the change in entropy of $r$ the transformation of
$31.2 g$ of benzene vapour into liquid benzene at $80^{\circ} C$ ?

## D Watch Video Solution

57.1 mol of an ideal gas is expanded from its initial volume of 1 L to the final volume of 100 L at $25^{\circ} \mathrm{C}$. What will be the change in enthalpy for this process?
58. Pressure of 1 mol of an ideal gas confined in a cylinder fitted with a piston is 50 atm. The gas is expanded reversible when the cylinder is kept in contact to a thermostat at $25^{\circ} \mathrm{C}$. During expansion, the pressure of the gas is decreased from 50 to 5 atm. calculate the change in entropy in this process. if the heat absorbed by the gas during expansion be 5705J, then calculate the change in entropy of the surroundings ?

## - Watch Video Solution

59. At 1 atm and 298 K , entropy change of the reaction, $4 \mathrm{Fe}(s)+3 \mathrm{O}_{2}(\mathrm{~g}) \rightarrow 2 \mathrm{Fe}_{2} \mathrm{O}_{3}(\mathrm{~s})$ is $-549.4 \mathrm{~J} \cdot \mathrm{~K}^{-1}$. In this reaction, if $\Delta H=-1648 k J$, then predict whether the reaction is spontaneous or not.

## - Watch Video Solution

60. At 1 atm and $298 \mathrm{~K} \Delta H^{0}$ value of the reaction $2 \mathrm{H}_{2}(\mathrm{~g})+\mathrm{O}_{2}(\mathrm{~g}) \rightarrow 2 \mathrm{H}_{2} \mathrm{O}(\mathrm{l})$ is -572 kJ . Calculate the change in entropy of the system and surroundings for this reaction. Is this reaction spontaneous at that temperature and pressure? Given: Standard molar entropies of $H_{2}(g), O_{2}(g) \& H_{2} O(l)$ at 298K are 130.6, 205.0 and 69.90 $J \cdot K^{-1} \cdot \mathrm{~mol}^{-1}$ respectively.

## - Watch Video Solution

61. The molar enthalpy of fusion and molar entropy of fusion for ice at $0^{\circ} \mathrm{C}$ and 1 atm are $6.01 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$ and $22.0 \mathrm{~J} \cdot \mathrm{~K}^{-1} \cdot \mathrm{~mol}^{-1}$, respectively. Assuming $\Delta H$ and $\Delta S$ are independent of temperature, show that the melting of ice at 1 atm is not spontaneous, while the reverse process is spotantaneous.

## - Watch Video Solution

62. $\mathrm{Br}_{2}(\mathrm{l})+\mathrm{Cl}_{2}(\mathrm{~g}) \rightarrow 2 \mathrm{BrCl}(\mathrm{g})$, Whether the reaction is spontaneous or not at a certain pressure \& 298 K?
$\left[\Delta H=29.3 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}, \Delta S=104.1 \mathrm{~J} \cdot \mathrm{~K}^{-1} \cdot \mathrm{~mol}^{-1}\right]$

## - Watch Video Solution

63. At a certain pressure and $27^{\circ} C$, the values of $\Delta G$ and $\Delta H$ of a process are -400 kJ and 50 kJ respectively. (1) Is the process exothermic?
(2) It is spontaneous? (3) Determine entropy change of the process.

## - Watch Video Solution

64. Values of $\Delta H \Delta S$ for the given reaction are -95.4 kJ and -198.3 J $\cdot K^{-1}$ respectively:

$$
\mathrm{N}_{2}(\mathrm{~g})+3 \mathrm{H}_{2}(\mathrm{~g}) \rightarrow 2 \mathrm{NH}_{3}(\mathrm{~g})
$$

State whether the reaction will be spontaneous at 500 K or not. Consider
$\Delta H$ and $\Delta S$ are independent of temperature.
65.
$A(s)+B(g) \rightarrow C(g)+D(g), \Delta H=31 k J$ and $\Delta S=+35 J \cdot K^{-1}$.
State whether the reaction will be spontaneous at $100^{\circ} \mathrm{C}$ and $1100^{\circ} \mathrm{C}$ or not? Consider $\Delta H$ and $\Delta S$ are independent of temperature.

## - Watch Video Solution

66. Is the vaporisation of water at $50^{\circ} \mathrm{C}$ and 1 atm spontaneous? Given:

For vaporisation of water at what temperature and pressure,
$\Delta H=40.67 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$ and $\Delta S=108.79 \mathrm{~J} \cdot \mathrm{~K}^{-1} \cdot \mathrm{~mol}^{-1}$.

## - Watch Video Solution

67. At $25^{\circ} \mathrm{C}$ and 1 atm , the heat of formation of 1 mol of water is -285.8 kJ

- $\mathrm{mol}^{-1}$. State whether formation reaction will be spontaneous at that
temperature and pressure or not. Given: The molar entropies of
$\mathrm{H}_{2}(\mathrm{~s}), \mathrm{O}_{2}(\mathrm{~g}) \& \mathrm{H}_{2} \mathrm{O}(\mathrm{l})$ at $25^{\circ} \mathrm{C}$ and 1 atm are $130.5,205.0$ and 69.9 $J \cdot K^{-1} \cdot \mathrm{~mol}^{-1}$ respectively.

## - Watch Video Solution

68. In the reaction, $A \rightarrow B+C, \Delta H=25 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$ and $\Delta S=62.5 \mathrm{~J} \cdot \mathrm{~K}^{-1}$. At which temperature the reaction will occur spontaneously at constant pressure?

## - Watch Video Solution

69. 

$$
\mathrm{H}_{2} \mathrm{O}(\mathrm{~g}) \rightarrow \mathrm{H}_{2} \mathrm{O}(\mathrm{l}), \Delta H=-40.4 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1} \text { and } \Delta S=-108.3 \mathrm{~J} \cdot \mathrm{~K}^{-}
$$

. At which temperature the process will be spontaneous at constant 1 atm?
70. $\mathrm{H}_{2}(g)+\mathrm{Br}_{2}(l) \rightarrow 2 \mathrm{HBr}(g), \Delta H=-72.8 k J\left(1 \mathrm{~atm}, 25^{\circ} \mathrm{C}\right)$ if molar entropies of $H_{2}(g), B r_{2}(l), H B r(g)$ are 130.5, 152. $3 \& 198.3$ $J \cdot K^{-1} \cdot \mathrm{~mol}^{-1}$ respectively then at which temperature the reaction will be spontaneous?

## - Watch Video Solution

71. For
the
reaction
$A(g)+B(g) \rightarrow C(s)+D(l), \Delta H=-233.5 k J$ and $\Delta S=-466.1 J \cdot K$
. At what temperature, equilibrium will be established? In whichi directions the reaction will proceed above and below the temperature?

## - Watch Video Solution

72. In the given reaction, calculate the standard free energy change at $25^{\circ} \mathrm{C}: \mathrm{N}_{2}(\mathrm{~g})+3 \mathrm{H}_{2}(\mathrm{~g}) \rightarrow 2 \mathrm{NH}_{3}$ [Given that,
$\Delta H^{0}=-91.8 k J$ and $\left.\Delta S^{0}=-198 J \cdot K^{-1}\right]$
73. In the given reaction, calculate standard free energy change at $25^{\circ} \mathrm{C}: 2 \mathrm{NO}(g)+\mathrm{O}_{2}(g) \rightarrow 2 \mathrm{NO}_{2}(g)$. Is the reaction spontaneous under standard conditios?
[Given:
$25^{\circ} C, \Delta G_{f}^{0}[N O(g)]=88.57 k J \cdot \mathrm{~mol}^{-1}$ and $\Delta G_{f}^{0}\left[N O_{2}(g)\right]=51.30 k J \cdot m$

## - Watch Video Solution

74. At $25^{\circ} \mathrm{C}$, the standard free energy change for a reaction is 5.4 kJ .

Calculate the value of equilibrium constant of the reaction at the temperature.

## - Watch Video Solution

75. Equilibrium constant for a reaction $1.6 \times 10^{-6}$ at 298 K . Calculate standard free energy change $\left(\Delta G^{0}\right)$ and standard entropy change $\left(\Delta S^{0}\right)$ of the reaction wat that pressure. Given, at 298K, $\Delta H^{0}=25.34 \mathrm{~kJ}$

## - Watch Video Solution

76. At 298K, the standard free energy of formation of $\mathrm{H}_{2} \mathrm{O}(l)=-237.13 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$. Calcualte the value of equilibrium constant at that temperature for the following reaction: $2 \mathrm{H}_{2} \mathrm{O}(\mathrm{l}) \rightarrow 2 \mathrm{H}_{2}(\mathrm{~g})+\mathrm{O}_{2}(\mathrm{~g})$.

## - Watch Video Solution

## WARM UP EXERCISE

1. Define the following with examples: (i) Open system, (ii) Closed system,
(iii) Isolated system.
2. What are diathermal and adiabatic boundaries?

## - Watch Video Solution

3. Identify the correct statement in a chemical reaction-

## - Watch Video Solution

4. What is an adiabatic system? Is this an isolated system?

## - Watch Video Solution

5. Identify the following as an extensive or intensive property: Enthalpy, internal energy, pressure, viscosity, heat capacity, density, electric
potential, specific heat capacity, molar volume, surface tension, universal gas constant, vapour pressure, number of moles, refractive index, entropy.

## - Watch Video Solution

6. A closed container with impermeable diathermal walls contains some amount of gas. If the gas is considered to be a system, what type of system will it be?

## Watch Video Solution

7. $X$ is a state function of a thermodynamic system. How are its finite and infinitesimal changes denoted?

## - Watch Video Solution

8. What do you mean by a state function? Give some examples of state functions.
9. Thermodynamic state functions are path-independent quantities. Explain with an example.

## - Watch Video Solution

10. Give two examples of path-dependent quantities. Are they properties of a system?

## - Watch Video Solution

11. Under what conditions will a system be in themodynamic equilibrium?

## - Watch Video Solution

12. Why is the change in any state function in a cyclic process zero? Is the change in any state function for both reversible and irreversible cyclic process zero?

## - Watch Video Solution

13. A closed system participates in the following process: $A \rightarrow B \rightarrow C$. In the step $A \rightarrow B$, heat absorbed by the system =q cal and in the step $B \rightarrow C$, heat released by the system=q cal. Therefore, in this process the sum of the heat absorbed and heat released by the system is zero. is this an adiabatic process? Given reason.

## - Watch Video Solution

## 14.

1 mol of an ideal gas participate in the process as described in the figure.
(i) What type is the overall process? (ii) is this an isothermal process? (iii)

Mention the isobaric and isochoric steps in this process.

## - View Text Solution

15. Are the following changes reversible or irreversible? Give proper explanations: (i) Melting of ice at $0^{\circ} C$ and 1 atm pressure (ii) The pressure of a gas enclosed in a cylinder fitted with a piston is 5 atm. The gas is expanded against an external pressure of 1 atm.

## - Watch Video Solution

16. 

One mole of an ideal gas participates in a cylic reversible process as described in the figure. Indicate the type of the processes the system undergoes in the steps $\mathrm{AB}, \mathrm{BC}$ and CA . Assume $T_{2}>T_{1}$.

## - View Text Solution

17. Why is a process occurring in an open container considered to be an isobaric?
18. What is the origin of internal energy of a system? Why cannot absolute value of internal energy be determined?

## - Watch Video Solution

19. Why is the internal energy of a system a state function?

## - Watch Video Solution

20. Is the internal energy of a system at $25^{\circ} C$ greater or less than its internal energy at $50^{\circ} C$ ?

## - Watch Video Solution

21. In the process $A \rightarrow B \rightarrow C$, the change in internal energy of the system in the steps $A \rightarrow B$ and $B \rightarrow C$ are $-x j K \cdot \mathrm{~mol}^{-1}$ and $y k J \cdot \mathrm{~mol}^{-1}$, respectively. What will be the change in internal energy of the system in the step $C \rightarrow A$ ?

## - Watch Video Solution

22. What do you mean by heat and work in thermodynamics?

## - Watch Video Solution

23. When heat ( $q$ ) is absorbed by a system, the sign of $q$ is positive, and when it is rejected by a system, the sign of $q$ is negative. Why?

## - Watch Video Solution

24. When work ( $w$ ) is done by the system, the sign of $w$ is negative. But when it is done on the system, the sign of $w$ is positive, give reason.

## - Watch Video Solution

25. Which is not a state function: $(q+w), w, H, G$ ?

## - Watch Video Solution

26. In a process, a system absorbs 500 of heat performs 800 J of work. In the process, $q=$ $\qquad$ and $w=$ $\qquad$ .

## - Watch Video Solution

27. In a process, a system releases 500 J of heat and work done on the system is 300 J . In the process, $\mathrm{q}=$ $\qquad$ and $w=$ $\qquad$ .
28. 

A certain amount of a gas participates in the cyclic process ABCD (follow figure). Calculate the total work done in the process.

## - View Text Solution

29. Under which condition will the pressure-volume work be, $w=-\int_{V_{1}}^{V_{2}} P d V ?$ [P=pressure of the gas].

## - Watch Video Solution

30. Calculate the work done in the following process which an ideal gas undergoes.
31. A particular amount of gas participates separately in the two process given below:

## Process-I:

$P_{1} V_{1} \xrightarrow[\text { expansion }]{\text { constant pressure }} P_{1} V_{2} \xrightarrow[\text { decrease in pressure }]{\text { constant volume }} P_{2} V_{2}$
Process-II
$P_{1} V_{1} \xrightarrow[\text { decrease in pressure }]{\text { constant volume }} P_{2} V_{1} \xrightarrow[\text { expansion }]{\text { constant pressure }} P_{2} V_{2}$
For which process, work done $|w|$ is maximum?

## - Watch Video Solution

32. In which of the following reactions is the work done zero? Assign the sign of $w$ (+ve or -ve) for the cases in which work is involved.
(i) $2 \mathrm{SO}_{2}(\mathrm{~g})+\mathrm{O}_{2}(\mathrm{~g}) \rightarrow 2 \mathrm{SO}_{3}(\mathrm{~g})$
(ii) $2 \mathrm{Na}(\mathrm{s})+2 \mathrm{H}_{2} \mathrm{O}(\mathrm{l}) \rightarrow 2 \mathrm{NaOH}(a q)+\mathrm{H}_{2}(g)$.
(iii) $\mathrm{N}_{2}(g)+\mathrm{O}_{2}(g) \rightarrow 2 \mathrm{NO}(g)$.

## - Watch Video Solution

33. Why does the total energy of an isolated system remains constant?

## - Watch Video Solution

34. Write down the mathematical form of the first law of thermodynamics for an infinitesimal change that involves only pressure-volume work. Write down the form of this equation if the above change occurs reversibly.

## D Watch Video Solution

35. According to the first law of thermodynamics, $\Delta U=q+w$. Write down the form of this equation for the following process: (i) cyclic process (ii) adiabatic process (iii) isothermal expansion of an ideal gas (iv) process occurring in an isolated system.

## ( Watch Video Solution

36. Among the following processes identify those in which the change in internal energy $(\Delta U)$ is zero: (i) isothermal compression of an ideal gas (ii) adiabatic expansion of an ideal gas (iii) Free adiabatic expansion of an ideal gas (iv) reversible cyclic process (v) irreversible cyclic process.

## - Watch Video Solution

37. A closed system undergoes a process $A \rightarrow B$. If it occurs reversible, then the system absorbs $q_{1}$ amount of heat and performs $w_{1}$ amount of work. However, if it occurs out irreversible, then the system absorbs $q_{2}$ amount of heat and does $w_{2}$ amount of work. is $\left(q_{1}+w_{1}\right)$ greater than, less than or equal to $\left(q_{2}+w_{2}\right)$ ?

## - Watch Video Solution

38. For an ideal gas, the isothermal free expansion and adiabatic free expansion are basically the same processes- explain.
39. For chemical changes, why is the change in enthalpy more useful than the change in internal energy?

## - Watch Video Solution

40. From the equation $\mathrm{H}=\mathrm{W}+\mathrm{PV}$, explain what H is a state function.

## - Watch Video Solution

41. From the definition of enthalpy show that for n mol of an ideal gas $\mathrm{H}=\mathrm{U}+\mathrm{nRT}$.

## - Watch Video Solution

42. Prove that for an ideal gas undergoing an isothermal change,
$\Delta H=0$.

## (D) Watch Video Solution

43. Under what conditions are (i) $\Delta U=q_{V} \&$ (ii) $\Delta H=q_{P}$ ?

## - Watch Video Solution

44. Why is the heat capacity a path-dependent quantity?

## - Watch Video Solution

45. Heat required to raise the temperatuer of 1 mol of a gas by $1^{\circ} \mathrm{C}$ is q
at constant volume and $q$ ' at constant pressure. Will $q$ be greater than, less than or equal to q'? Explain.

## - Watch Video Solution

46. Why is the molar heat capacity at constant pressure greater than that at constant volume for gases?

## - Watch Video Solution

47. 

$c_{P}-c_{V}=x J \cdot g^{-1} \cdot K^{-1}$ and $C_{P, m}-C_{V, m}=X j \cdot \mathrm{~mol}^{-1} \cdot K^{-1}$
for an ideal gas. If the molecular mass of the gas be $M$, then establish a relation among $x, X$ and $M$.

## - Watch Video Solution

48. Why is the sign of $\Delta H$ negative for an exothermic reaction and why is it positive for an endothermic reaction?

## - Watch Video Solution

49. A 0.5 mol sample of $H_{2}(g)$ reacts with a 0.5 mol sample of $C l_{2}(g)$ to form 1 mol of $\mathrm{HCl}(\mathrm{g})$. The decrease in enthalpy for the reaction is 93 kJ . Draw an enthalpy diagram for this reaction.

## - Watch Video Solution

50. A 1 mol sample of $N_{2}(g)$ reacts with 1 mol of $O_{2}(g)$ to form 2 mol of $\mathrm{NO}(\mathrm{g})$, where the increase in enthalpy is 180.6 kJ . Draw an enthalpy diagramm for this reaction.

## - Watch Video Solution

51. Identify the exothermic and endothermic changes:
(i) $\mathrm{NO}(g)+\frac{1}{2} \mathrm{O}_{2}(g) \rightarrow \mathrm{NO}_{2}(g)+57.0 \mathrm{~kJ}$
(ii) $\mathrm{H}_{2} \mathrm{O}(s)+6.02 k J \rightarrow \mathrm{H}_{2} \mathrm{O}(l)$
(iii) $\mathrm{C}(\mathrm{s})+\mathrm{H}_{2} \mathrm{O}(\mathrm{g}) \rightarrow \mathrm{CO}(\mathrm{g})+\mathrm{H}_{2}(\mathrm{~g})-130 \mathrm{~kJ}$.
52. Write down the thermochemical equations for the following reactions:
(i) A 1 mol sample of methane gas reacts with 2 mol of oxygen gas to form 1 mol of carbon dioxide and 2 mol of water. In this reaction, 890.5 kJ of heat is produced.
(ii) A 1 mol sample of carbon (graphite) reacts with 1 mol of oxygen tof orm 1 mol fo carbon dioxide gas. the heat evolved in this reaction is 393.5 kJ.
(iii) 6 mol of carbon dioxide gas reacts with 6 mol of water to form 6 mol of oxygen gas and 1 mol of glucose. the heat absorbed in this reaction is 2200 kJ .

## - Watch Video Solution

53. $\mathrm{H}_{2}(g)+\frac{1}{2} \mathrm{O}_{2}(g) \rightarrow \mathrm{H}_{2} \mathrm{O}(l), \Delta H=-285.8 k J$. What will be the value of $\Delta H$ for the reaction: $2 \mathrm{H}_{2} \mathrm{O}(l) \rightarrow 2 \mathrm{H}_{2}(g)+\mathrm{O}_{2}(g)$ ?
54. Show that the difference between the heat of reactionn at constant pressure $\left(q_{P}\right.$ or $\left.\Delta H\right)$ and that at constant volume $\left(q_{V}\right.$ or $\left.\Delta U\right)$ is $P \Delta V$.

## Watch Video Solution

55. What do you mean by the standard state of a substance? Is $25^{\circ} \mathrm{C}$ the standard temperature?

## - Watch Video Solution

56. Why is the concept of standard state necessary? What do you mean by the standard state of iron at $1500^{\circ} \mathrm{C}$ ?

## - Watch Video Solution

57. Mention the standard states of the following elements at $25^{\circ} \mathrm{C}$ and 1 atm: carbon, bromine, iodine, sulphur, oxygen, calcium,
chlorine, fluorine and nitrogen.

## - Watch Video Solution

58. Why is $\Delta H=\Delta U$ for the following two reactions? Explain.
(i) $\mathrm{NaOH}(a q)+\mathrm{HCl}(a q) \rightarrow \mathrm{NaCl}(a q)+\mathrm{H}_{2} \mathrm{O}(l)$
(ii) $\mathrm{CH}_{4}(g)+2 \mathrm{O}_{2}(g) \rightarrow \mathrm{CO}_{2}(g)+2 \mathrm{H}_{2} \mathrm{O}(g)$.

## - Watch Video Solution

59. Why does the value of $\Delta H$ for a chemical reaction depend on the physical states of the reaction(s) and product(s)?

## - Watch Video Solution

60. Give an example of a reaction for each of the following relations between $\Delta H$ and $\Delta U$ : (i) $\Delta U<\Delta H$
(ii) $\Delta U>\Delta H$
(iii) $\Delta U=\Delta H$.

## - Watch Video Solution

61. Give an example of a physical change for each of the following relations between $\Delta H$ and $\Delta U$ :
(i) $\Delta H>\Delta U$
(ii) $\Delta H<\Delta U$
(iii) $\Delta H \approx \Delta U$.

## - Watch Video Solution

62. For which element in each of the following pairs has the standard heat of formation of zero? (i) $\left[O_{2}(g), O_{3}(g)\right]$
(ii) $\left[\mathrm{Cl}_{2}(\mathrm{~g}), \mathrm{Cl}(\mathrm{g})\right]$
(iii) $[S(\mathrm{~s}$, rhombic $), S(s$, monoclinic $)]$ ?
63. In which of the following reactions At $25^{\circ} \mathrm{C}$, does the standard enthalpy change correspond to the standard enthalpy of formation of $\mathrm{H}_{2} \mathrm{O}(\mathrm{l})$ ? Give reasons.
(i) $\mathrm{H}_{2}(g)+\frac{3}{2} \mathrm{O}_{3}(g) \rightarrow \mathrm{H}_{2} \mathrm{O}(l)$
(ii) $\mathrm{H}_{2}(g)+\frac{1}{2} \mathrm{O}_{2}(g) \rightarrow \mathrm{H}_{2} \mathrm{O}(l)$
(iii) $2 \mathrm{H}(\mathrm{g})+\mathrm{O}_{2}(\mathrm{~g}) \rightarrow \mathrm{H}_{2} \mathrm{O}(\mathrm{l})$.

## - Watch Video Solution

64. Which one of the given reactions indicates the formation reaction of the compound produced in the reaction?
(i) S (moochlinic,s) $+\mathrm{O}_{3}(\mathrm{~g}) \rightarrow \mathrm{SO}_{3}(\mathrm{~g})$
(ii) C (graphite, s ) $+2 \mathrm{H}_{2}(\mathrm{~g}) \rightarrow \mathrm{CH}_{4}(\mathrm{~g})$
(iii) $\mathrm{N}_{2}(g)+\mathrm{O}_{2}(g) \rightarrow 2 \mathrm{NO}(g)$.
65. At $25^{\circ} \mathrm{C}$ the standard heat of formation of liquid benzene is +49.0 $\mathrm{kJ} \cdot \mathrm{mol}^{-1}$-what does it mean?

## - Watch Video Solution

66. The standard heat of combustion of solid naphthalene $\left[C_{10} H_{8}(s)\right]$ at $25^{\circ} \mathrm{C}$ is $-5147 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$. What does it mean?

## - Watch Video Solution

67. Give an example of a combustion reaction whose standard enthalpy change in equal to the standard enthalpy of formation of the compound formed in the reaction.

## - Watch Video Solution

68. The standard enthalpy of combustion of $C_{x} H_{y}(l)$ at $25^{\circ} \mathrm{C}$ is Q $\mathrm{kJ} \cdot \mathrm{mol}^{-1}$. Write down the thermochemical equation for the combustion reaction of this compound.

## - Watch Video Solution

69. The standard heats of combustion of $\mathrm{CH}_{4}(\mathrm{~g})$ and $\mathrm{C}_{2} \mathrm{H}_{6}(\mathrm{~g})$ are -890 $\mathrm{kJ} \cdot \mathrm{mol}^{-1}$ and $-1560 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$, respectively. Why is the calorific value of $C_{2} H_{6}(\mathrm{~g})$ lower than that of $\mathrm{CH}_{4}(\mathrm{~g})$ ?

## - Watch Video Solution

70. Define: (i) Enthalpy of fusion, (ii) Enthalpy of vaporisation, (iii) Enthalpy of sublimation.

## - Watch Video Solution

71. Identify whether the enthalpy of the initial state is greater than, less than or equal to that of the final state in the following changes: solid $\rightarrow$ liquid, vopur $\rightarrow$ solid, liquid $\rightarrow$ vapour.

## - Watch Video Solution

72. At a given temperature and pressure, the enthalpies of condensation and vaporisation for a given liquid, are the same but opposite in sign. Why?

## - Watch Video Solution

73. Why are the changes in enthalpies for the given processes the same?
(i) solid $\rightarrow$ liquid $\rightarrow$ vapour
(ii) solid $\rightarrow$ vapour. Consider identical initial and final states.

## - Watch Video Solution

74. What does $\Delta H$ signify in each of the following equations?
(i) $\mathrm{HCl}(\mathrm{g})+5 \mathrm{H}_{2} \mathrm{O}(\mathrm{l}) \rightarrow \mathrm{HCl}\left(5 \mathrm{H}_{2} \mathrm{O}\right), \Delta \mathrm{H}=-64 \mathrm{~kJ}$
(ii) $\mathrm{HCl}(g)+a q \rightarrow \mathrm{HCl}(a q), \Delta H=-75 k J$
(iii) $\mathrm{HCl}\left(5 \mathrm{H}_{2} \mathrm{O}\right)+20 \mathrm{H}_{2} \mathrm{O}(\mathrm{l}) \rightarrow \mathrm{HCl}\left(25 \mathrm{H}_{2} \mathrm{O}\right), \Delta \mathrm{H}=-8.1 \mathrm{~kJ}$.

## Watch Video Solution

75. Change in enthalpy remains the same whether a reaction is carried out in one step or in several steps under the similar reaction conditions explain the rearms.

## - Watch Video Solution

76. Given (at $25^{\circ} \mathrm{C}$ and 1 atm pressure):
$\mathrm{C}(\mathrm{s}$, diamond $)+\mathrm{O}_{2}(\mathrm{~g}) \rightarrow \mathrm{CO}_{2}(\mathrm{~g}), \Delta H^{0}=-393.5 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
$\mathrm{C}(\mathrm{s}$, graphite $)+\mathrm{O}_{2}(\mathrm{~g}) \rightarrow \mathrm{CO}_{2}(\mathrm{~g}), \Delta H^{0}=-391.6 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
Find the standard heat of transition from graphite to diamond.
77. 

Consider the given enthalpy diagram, and calculate the unknown $\Delta H$ by applying Hess's law.

## - View Text Solution

78. For the reaction, $A+B \rightarrow D, \Delta H$ is -30 kJ . Suppose, D is prepared from $A$ and $B$ and then it is again converted into $A$ and $B$ by following the stages $D \rightarrow E A+B$. Calculate the total enthalpy change in these two stages?

## - Watch Video Solution

79. At $25^{\circ} \mathrm{C}$ if the standard enthalpies of formation of $\mathrm{MX}(\mathrm{s}), M^{+}(a q)$ and $X^{-}(a q)$ are -x , y and -z $k J \cdot$ mol $^{-1}$ respectively, then what will the heat of reaction be for the reaction $M^{+}(a q)+X^{-}(a q) \rightarrow M X(s)$.
80. Draw the Born-Haber cycle for the formation of LiF(s) from its elements and using this cycle calculate the lattice enthalpy of LiF(s).

Given: $\Delta H_{f}^{0}[L i F(s)]=-617 k J \cdot \mathrm{~mol}^{-1}$,
$\Delta H_{C}=+161 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}, \Delta H^{0}(F-F)=+159 \mathrm{~kJ} \cdot \mathrm{moL}^{-1}$, $I E_{1}=+520 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}, E A$ of $F=-328 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$.

## - Watch Video Solution

81. Define the following terms: (i) Standard enthalpy of atomisation of an element (ii) Bond dissociation energy (iii) bond enthalpy.

## - Watch Video Solution

82. The standard heat of sublimation of sodium metal is $108.4 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$.

What is its standard heat of atomisation?
83. At $25^{\circ} \mathrm{C}$, the bond dissociation energy of $N_{2}(\mathrm{~g})$ is $946 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$. What does it mean ? What would be the standard atomisation enthalpy of $N_{2}(g)$ at $25^{\circ} C$ ?

## - Watch Video Solution

84. A-B bonds present in $A B_{3}(g)$ molecule undergo stewise dissociation by the following sequence of steps.
(i) $A B_{3}(g) \rightarrow A B_{2}(g)+B(g)$
(ii) $A B_{2}(g) \rightarrow A B(g)+B(g)$
(iii) $A B(g) \rightarrow A(g)+B(g)$

At $25^{\circ} \mathrm{C}$, if the enthalpy changes in steps (i) and (iii) are x and z $\mathrm{kJ} \cdot \mathrm{mol}^{-1}$, respectively, and the bond dissociation energy of A-B bond is y $k J \cdot \mathrm{~mol}^{-1}$, then what would be the enthalpy change in step (ii)?

## - Watch Video Solution

85. Will the transformation of ice into water be spontaneous at $-2^{\circ} \mathrm{C}$ and 1 atm pressure? Will the reverse process be spontaneous at this pressure and temperature?

## - Watch Video Solution

86. Water remains in equilibrium with its vapour at $100^{\circ} \mathrm{C}$ and 1 atm . Will the transformation of water into its vapour be spontaneous at this pressure and temperature?

## - Watch Video Solution

87. Is rusting of iron a spontaneous process?

## - Watch Video Solution

88. What is entropy of a system? Give its mathematical definition. What is its unit?

## Watch Video Solution

89. What is meant by the entropy change of a system in a chemical reaction?

## - Watch Video Solution

90. Give reasons: (i) The change in entropy of a system in a cyclic process is zero. (ii) The change in entropy of a system is a reversible adiabatic process is zero.

## - Watch Video Solution

91. Define (i) Entropy of fusion (ii) Entropy of vaporisation (iii) Standard molar entropy of a substance.

## - Watch Video Solution

92. What are the signs (+ or -) of the entropy changes of the surroundings in exothermic and endothermic process?

## - Watch Video Solution

93. If the process $A \rightarrow B$ occurs reversible, then the change in entropy of the system be, $\Delta S_{1}$. When the same process occurs irreversible, the change in entropy of the system be $\Delta S_{2}$. Will the value of $\Delta S_{1}$ be greater than, less than or equal to the value of $\Delta S_{2}$ ?

## - Watch Video Solution

94. Heat is not exchange between the system and its surroundings during free expansion of an ideal gas. Therefore, in this process, $q=0$. will the change in entropy in this process be zero?

## - Watch Video Solution

95. What will be the sign of $\Delta_{\text {sys }}$ (+ve or -ve) in the process of-(i) vaporisation of a liquid (ii) condensation of a vapour (iii) sublimisation of a solid.

## - Watch Video Solution

96. The following changes are performed on 1 mol of $N_{2}$ gas-
(i) Pressure is decreased at constant at constant temperature.
(ii) volume is decreased at constant temperature.

What will be the sign of $\Delta S_{s y s}$ in these changes?
97. Write the SI unit of entropy.

## ( Watch Video Solution

98. For a process in an isolated system, what are the conditions of spontaneity and equilibrium?

## - Watch Video Solution

99. Write the relationn between $\Delta S_{s y} \& \Delta S_{\text {surr }}$ when a process reaches equilibrium. What will be the value of $\Delta S_{\text {univ }}$ ?

## - Watch Video Solution

100. For a reversible process $\Delta S_{\text {sys }}=-20 J \cdot K^{-1}$. What will be the value of $\Delta S_{\text {surr }}$ in this process?
101. For a spontaneous process $\Delta S_{\text {surr }}=+10 J \cdot K^{-1}$. What will be the value of $\Delta S_{\mathrm{sys}}$ ?

## - Watch Video Solution

102. In which case does the entropy of the surroundings increase or decrease: (i) $A \rightarrow B+C, \Delta H=x \mathrm{~kJ}$
(ii) $2 A \rightarrow A_{2}, \Delta H=-y \mathrm{~kJ}$.

## - Watch Video Solution

103. For process under a set of condition, $\Delta S_{\text {sys }}<0$ and $\Delta S_{\text {surr }}<0$.

Will be process the spontaneous?

## - Watch Video Solution

$\Delta S_{\text {sys }}=x J \cdot K^{-1}$ and $\Delta S_{\text {surr }}=-y J \cdot K^{-1}$. Compare the values of x and $y$.

## - Watch Video Solution

105. Write the second law of thermodynamics in terms of entropy.

## - Watch Video Solution

106. Following two reactions occur spontaneously. What will be the signs of $\Delta S_{\text {sys }}$ and $\Delta S_{\text {surr }}$ in these two reactions?
(i) $A(s) \rightarrow B(s)+C(g), \Delta H>0$
(ii) $2 X(g) \rightarrow X_{2}(g), \Delta H<0$.

## ( Watch Video Solution

107. For a reaction $\Delta H>0$, and for another $\Delta H<0$. For both the relations $\Delta S_{\text {sys }}$. Which one is likely to occur spontaneously? Which one always be occur non-spontaneous?

## - Watch Video Solution

108. Define: (i) Gibbs free energy (ii) the standard free energy of formation of a substance (iii) the standard free energy change in a chemical reaction.

## - Watch Video Solution

109. Explain: (i) Gibbs free energy is a state function. (ii) gibbs free energy is an extensive property.

## - Watch Video Solution

110. For a chemical reaction occurring at constant temperature and pressure show that $\Delta G=-T \Delta S_{\text {univ }}$, where $\Delta G=$ change in free energy of the system and $\Delta S_{\text {univ }}=$ change in entropy of the universe. Using this equation explain when a reaction at a constant temperature and pressure will be (i) spontaneous (ii) non-spontaneous (iii) at equilibrium.

## - Watch Video Solution

111. For a process at a particular temperature and pressure,
$\Delta G=\Delta H-T \Delta S$. It can be written as: $-\Delta G=T\left[-\frac{\Delta H}{T}+\Delta S\right]$.
What does the quantity within the bracket indicate?

## - Watch Video Solution

112. Consider the reaction, $A \rightarrow 2 B$, if the free energy per mole of A is $G_{A}$ and that of B is $G_{B}$ then what will the relation be between $G_{A}$ and $G_{B}$ when the reaction (i) occurs spontaneously and (ii) is at equilibrium?

## (D) Watch Video Solution

113. At a particular temperature and pressure, when will the changes in entropy of the system $\left(\Delta S_{\text {sys }}\right)$ and the surroundings $\left(\Delta S_{\text {surr }}\right)$ be equal but the opposite in sign in a chemical reaction? In this condition, what will the value of $\Delta G$ be? Will the reaction be spontaneous in this condition?

## - Watch Video Solution

114. At a given temperature and pressure, for a chemical reaction $\Delta H<0 \& \Delta S<0$. Is the spontaneously of this reaction dependent upon temperature? If it depends and if the reaction reaches equilibrium at a temperature of $T_{e}$, then will the reaction be spontaneous below or above $T_{e}$ ?

## - Watch Video Solution

115. A physical change at a fixed pressure attains equilibrium at 353 K . In this process, $\Delta H>0$ and $\Delta S>0$. What will be the direction (from left to right or right to left) of this process at 350 K and 355 K ?

## ( Watch Video Solution

116. At a given temperature and pressure, for a chemical reaction $\Delta H>0$ and $\Delta S<0$. The reaction is non-spontaneous at all temperature. But the reverse reaction is spontaneous at all temperaturegive reason.

## ( Watch Video Solution

117. The following reaction occurs spontaneously at 1 atm and 298K.
$\mathrm{NH}_{3}(g)+\mathrm{HCl}(g) \rightarrow \mathrm{NH}_{4} \mathrm{Cl}(s)$. Without doing calculation predict the sign of $\Delta H$ for this process.

## - Watch Video Solution

118. Explain: in a chemical reaction if (i) $\Delta H<0$ and $\Delta S>0$, the spontaneity of the reaction is independent of temperature. (ii) $\Delta H>0$ and $\Delta S>0$, the spontaneity of the reaction is dependent of temperature.

## - Watch Video Solution

119. Write the relation betweenn $\Delta G^{0}$ and the equilibrium constant (K) for a reaction at TK. Using this relation state that for what value of $\Delta G^{0}$, the value of K will be $K>1, K<1, K=1$.

## - Watch Video Solution

## QUESTION ANSWER ZONE FOR BOARD EXAMINATION (VERY SHORT ANSWER TYPE)

1. Classify as open, closed or isolated system: (1) A cup of coffee placed on
a table (2) Water in a beaker is boiled by heating (3) Lead nitrate is
heated in a test tube (4) Solid $\mathrm{NH}_{4} \mathrm{Cl}$ is heated in a closed vessel (5) Substances present in a soda-water bottle (6) Mercury enclosed in the thermometer.

## - Watch Video Solution

2. A certain amount of a gas is enclosed ina container with permeable and diathermal walls. Which type of system does the gas belong to?

## - Watch Video Solution

3. Does the volume of a closed system remain fixed?

## - Watch Video Solution

4. Given an example of a thermodynamic quantity which is not a stable function. Is it a property of a system?
5. A process occurring in an isolated system does not have any effect on its surrounding and the process is also not influenced by its surroundings. Why?

## - Watch Video Solution

6. A system participates in the following process:

What will be the change in enthalpy of the system in this processpositive, negative or zero?

## D View Text Solution

7. If the value of internal energy for 10 g water at a particular temperature be xJ , then what will be the value of internal energy for 20 g water at the same temperature?
8. In a process $A \rightarrow B \rightarrow C \rightarrow D$, the heat absorbed by the system in the steps $A \rightarrow B$ and $B \rightarrow C$ are $q_{1}$ and $q_{2}$, respetively, and the heat released by the system in the $\operatorname{stp} C \rightarrow D$ is $q_{3}$. If $q_{1}+q_{2}+q_{3}=0$, then will the process be adiabatic?

## - Watch Video Solution

9. Why is infinite time required for the completion of an ideal reversible process?

## - Watch Video Solution

10. In a process, if the heat released by the system and work done on the system are 90 J and 120 J , respectively, then what will be of q and w ?
11. If the specific heat capacity and molecular mass ofa gas are $c_{P}$ and $M$ respectively then what will be the molar heat capaciity of the gas?

## - Watch Video Solution

12. Given an example of a process which is simulataneously isothermal and adiabatic.

## - Watch Video Solution

13. At $25^{\circ} \mathrm{C}$ the standard reaction enthalpy for the reaction $A B_{3}(g) \rightarrow \frac{1}{2} A_{2}(g)+\frac{3}{2} B_{2}(g)$ is $\Delta H^{0}$. Find the standard reaction enthalpy for the reaction $A_{2}(g)+3 B_{2}(g) \rightarrow 2 A B_{3}(g)$ at $25^{\circ} C$.

## - Watch Video Solution

14. Mention the standard state of sulphur and iodine at $25^{\circ} \mathrm{C}$.
15. At $25^{\circ} \mathrm{C}$, is the standard reaction enthalpy for the reaction $2 \mathrm{H}(\mathrm{g})+\mathrm{O}(\mathrm{g}) \rightarrow \mathrm{H}_{2} \mathrm{O}(\mathrm{l})$ the same as the standard enthalpy of formation of $\mathrm{H}_{2} \mathrm{O}(l)$ ?

## - Watch Video Solution

16. Assuming experimental conditions are the same, compare
( $\Delta H-\Delta U$ ) values for the gives reaction:
(1) $\mathrm{H}_{2}(g)+\frac{1}{2} \mathrm{O}_{2}(g) \rightarrow \mathrm{H}_{2} \mathrm{O}(l)$
(2) $\mathrm{H}_{2}(\mathrm{~g})+\frac{1}{2} \mathrm{O}_{2}(\mathrm{~g}) \rightarrow \mathrm{H}_{2} \mathrm{O}(\mathrm{g})$.

## - Watch Video Solution

17. What do you mean by the enthalpy of solidification of water at $0^{\circ} \mathrm{C}$ and 1 atm pressure $=-6.02 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$ ?
18. Why are spontaneous/natural processes irreversible?

## - Watch Video Solution

19. Give example of two processes where $\Delta S$ is zero.

## - Watch Video Solution

20. In which of the following two processes, the change in entropy of the system will be negative? (1) Fusion of ice. (2) Condensation of water vapour.

## - Watch Video Solution

21. What will be the change in entropy in an irreversible cyclic process ?
22. Are the given statements correct? (1) if heat is absorbed in a chemical reaction, the reaction cannot be spontaneous. (2) the entropy of the system may decrease in a reaction, but the reaction can occur spontaneously.

## - Watch Video Solution

23. Which of the following will have a greater entropy?
(1) 1 mol of $H_{2}$ gas ( $\mathrm{T}=300 \mathrm{~K}, \mathrm{~T}=5 \mathrm{~mL}$ ) (2) 1 mol of $H_{2}$ gas
$(T=300 K, V=10 \mathrm{~mL})$.

## - Watch Video Solution

24. For a process, $\Delta S_{\text {sys }}=-15 J \cdot K^{-1}$. For what value of $\Delta S_{\text {surr }}$ will the process be non-spontaneous?
25. Which condition does not satisfy the spontaneity criteria ofa reaction at constant temperature and pressure (1) $\Delta H<0, \Delta S<0$,
(2) $\Delta H>0, \Delta S<0$
(3) $\Delta H>0, \Delta S>0$, (4) $\Delta H<0, \Delta S>0$ ?

## - Watch Video Solution

26. Which of the following conditions favours the spontaneity of a reaction at a constant temperature and pressure? $\Delta H>0, \Delta H<0, \Delta S>0, \Delta S<0$.

## - Watch Video Solution

## QUESTION ANSWER ZONE FOR BOARD EXAMINATION (SHORT ANSWER TYPE)

1. According to the definition of thermodynamic system, which system does living beings belong to, and why?
2. The change in internal energy in different steps of the process $A \rightarrow B \rightarrow C \rightarrow D \quad$ are given:
$A \rightarrow B, x \cdot k J \cdot \mathrm{~mol}^{-1}, B \rightarrow C,-y k J \cdot \mathrm{~mol}^{-1}, C \rightarrow D, z k J \cdot \mathrm{~mol}^{-1}$
. What will the value of $\Delta U$ be for the change $A \rightarrow D$ ?

## - Watch Video Solution

3. A gas is allowed to expand against zero external pressure. Explain with reason whether the process is reversible or irreversible.

## - Watch Video Solution

4. Change in enthalpy in different steps of the process $A \rightarrow B \rightarrow C \rightarrow A \quad$ are given:
$A \rightarrow B, x k J \cdot \mathrm{~mol}^{-1}, C \rightarrow A, y k J \cdot \mathrm{~mol}^{-1}$. Find the value of $\Delta H$ for the step $B \rightarrow C$.
5. One mole of an ideal gas is expanded isothermally. In this process, which of the quantity (or quantities) among w, q, $\Delta U, \Delta H$ is (are) zero or $>0$ or $<0$ ?

## - Watch Video Solution

6. Give examples of two processes by which the internal energy of a gas can be increased.

## - Watch Video Solution

7. Give examples of three processes in which the change in internal energy of the system is zero.
8. Why are the standard reaction enthalpies of the following two reactions different?
(1) C (graphite, s) $+\mathrm{O}_{2}(\mathrm{~g}) \rightarrow \mathrm{CO}_{2}(\mathrm{~g}), \Delta H^{0}=-393.5 \mathrm{~kJ}$
(2) $\mathrm{C}($ diamond, s$)+\mathrm{O}_{2}(\mathrm{~g}) \rightarrow \mathrm{CO}_{2}(\mathrm{~g}), \Delta H^{0}=-395.4 \mathrm{~kJ}$

## - Watch Video Solution

9. At $25^{\circ} \mathrm{C}$, the standard reaction enthalpy for the reaction, 2 C (graphite, s) $+\mathrm{O}_{2}(\mathrm{~g}) \rightarrow 2 \mathrm{CO}(\mathrm{g})$ is -221.0 kJ . Does this enthalpy change indicate the standard enthalpy of formation of $\mathrm{CO}(\mathrm{g})$ ? If not, then what would be the value of the enthalpy of formation of $\mathrm{CO}(\mathrm{g})$ at $25^{\circ} \mathrm{C}$ ?

## - Watch Video Solution

10. What do you mean by the standard enthalpy of atomisation of chlorine at $25^{\circ} \mathrm{C}=+121 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$ ?
11. Determine the standard reaction enthalpy for the reaction:
$A_{2} B_{3}(s)+3 C B(g) \rightarrow 2 A(s)+3 C B_{2}(g)$
Given: (1) $2 A(s)+\frac{3}{2} B_{2}(g) \rightarrow A_{2} B_{3}(s), \Delta H^{0}=-x k J$
(2) $C B(g)+\frac{1}{2} B_{2}(g) \rightarrow C B_{2}(g), \Delta H^{0}=-y k J$.

## - Watch Video Solution

12. In which of the following reactions does $\Delta H^{0}$ at $25^{\circ} \mathrm{C}$ indicate the standard enthalpy of formation $\left(\Delta H_{f}^{0}\right)$ of the compound formed in each of the reactions?
(2) $\mathrm{N}_{2}(\mathrm{~g})+3 \mathrm{H}_{2}(\mathrm{~g}) \rightarrow 2 \mathrm{NH}_{3}(\mathrm{~g})$
(2) $\frac{1}{2} \mathrm{~N}_{2}(g)+\frac{1}{3} \mathrm{O}_{3}(g) \rightarrow \mathrm{NO}(g)$.

## - Watch Video Solution

13. Discuss the change in the degree of randomness for the following cases- (1) Combustion of kerosene, (2) Sublimation of dry ice.
14. For a spontaneous or irreversible process occurring in an isolated system, when does the entropy of the system attain maximum value ? Under this condition, what will be the change in entropy of the system?

## - Watch Video Solution

15. Is the entropy change of a system influenced by the change in temperature? Explain.

## - Watch Video Solution

16. Mention if entropy of the system increases or decreases in each of the following cases: (1) Boiling of water.
(2) $2 \mathrm{O}_{3}(\mathrm{~g}) \rightarrow 3 \mathrm{O}_{2}(\mathrm{~g})$
(3) Sublimation of solid iodine
(4) $\mathrm{NH}_{4} \mathrm{Cl}(\mathrm{s}) \rightarrow \mathrm{NH}_{3}(\mathrm{~g})+\mathrm{HCl}(\mathrm{g})$.
17. Why does the entropy of a gaseous systemm increase with the rise in temperature?

## - Watch Video Solution

18. Give an example of a process for each of the given cases: (1)
$\Delta G=0, \Delta S>0$
(2) $\Delta G=0, \Delta S<0$
(3) $\Delta G<0, \Delta S>0$
(4) $\Delta G<0, \Delta S<0$ in a system.

## - Watch Video Solution

19. At $25^{\circ} \mathrm{C}$ and 1 atm pressure, for the reaction $3 O_{2}(g) \rightarrow 2 O_{3}(g), \quad \Delta H=286 k J$ and $\Delta S=-137.2 J \cdot K^{-1} . \quad$ is this reaction spontaneous? Does the spontaneity of thir reaction depend
on temperature? Is the reverse reaction spontaneous ? If so, then why? does the spontaneity of the reverse reaction depend on temperature?

## - Watch Video Solution

20. The standard enthalpy of formation of $\mathrm{C}_{7} \mathrm{H}_{5} \mathrm{~N}_{3} \mathrm{O}_{6}(\mathrm{~s})$ is $-\mathrm{x} \mathrm{kJ} \cdot \mathrm{mol}^{-1}$ at $25^{\circ} \mathrm{C}$. Write the thermochemical equation for the formation reaction of the compound.

## - Watch Video Solution

21. A particular amount of an ideal gas participates in a reversible process as given in the figure. What type of process is this ? Explain the changes
in each step.

## - Watch Video Solution

22. The transformation of $A$ to $B$ can be carried out by the following two ways in which the initial and final states are identical.

$$
\begin{equation*}
A=\xrightarrow{\Delta H=-x k J} B, \tag{1}
\end{equation*}
$$

(2) $A \xrightarrow{\Delta H=-y k J} C \xrightarrow{\Delta H=?} B$, what will be the value of $\Delta H$ during the transformation of C to B ?
23. Under what conditions the heat of reaction at fixed pressure is equal to that at fixed volume?

## - Watch Video Solution

24. The initial pressure, temperature $\&$ volume of 1 mol of a gas are $P_{1}, T_{1}$ and $V_{1}$ respectively. The state of the gas is changed by the following two ways. Will the internal energy change be the same in both cases?
(1) $P_{1} V_{1} T_{2} \xrightarrow[\text { Process }]{\text { Reversible }} P_{2} V_{2} T_{2}$
(2) $P_{1} V_{1} T_{1} \xrightarrow[\text { process }]{\text { Irreversible }} P_{2} V_{2} T_{2}$.

## - Watch Video Solution

25. If one mole of an ideal gas is expanded by the following two ways, then will the value of $P_{2}$ and $P_{2}{ }^{\prime}$ be greater than, less than or equal to $P_{1}$ ?

## - View Text Solution

26. Write three differences betweenn reversible and irreversible processes. Melting of ice at $0^{\circ} C$ and 1 atm pressure is a reversible process-explain.

## - Watch Video Solution

27. The boiling point of benzene is $80.1^{\circ} \mathrm{C}$. At ordinary pressure and $70^{\circ} \mathrm{C}$, the benzene vapour spontaneously transforms into liquid benzene. In this process, what will the signs of $\Delta H, \Delta S$ and $\Delta G$ be?

## - Watch Video Solution

28. Calculate $\Delta U$ and $\Delta H$ in calories if one mole of a monoatomic ideal gas is heated at constant pressure of 1 atm from $25^{\circ} \mathrm{C}$ to $50^{\circ} \mathrm{C}$.
29. How much of hard coal is required to produce the same amount of heat as is produced by the combustion of 2.0 L of gasoline (mainly isooctance, $C_{8} H_{18}$ ). Given: $\Delta_{c} H^{0}$ of $C_{8} H_{18}=-5460 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$, density of isooactane $=0.692 g \cdot m L^{-1}$ and calorific value of hard coal is $32.75 \mathrm{~kJ} \cdot \mathrm{~g}^{-1}$.

## - Watch Video Solution

30. One kg of graphite is burnt in a closed vessel. The same amount of graphite is burnt in an oepn vessel. Will the heat evolved in the two cases be the same ? If not, in which case it would be greater?

## - Watch Video Solution

31. Can $\Delta H$ can be taken as a sole criterion of the spontaneity of a reaction? Justify with example.
32. Explain, Hess's law is a consequence of first law of thermodynamics.

## - Watch Video Solution

33. An intimate mixture of $\mathrm{Fe}_{2} \mathrm{O}_{3}$ and $\mathrm{Al}_{2} \mathrm{O}_{3}$ is used in solid furl for rockets. Calculates the furl value per gram and fuel value per $\mathrm{cm}^{3}$ of the mixture.
$\Delta H\left(\mathrm{Fe}_{2} \mathrm{O}_{3}\right)=1669.4 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
$\Delta H\left(\mathrm{Al}_{2} \mathrm{O}_{3}\right)=832.6 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$.

## - Watch Video Solution

34. In a constant volume calorimeter, 3.5 g of a gas with molecular mass 28 was burnt in excess oxygen at 298.0 K. the temperature of the calorimeter was found to increase from 298.0 K to 298.45 K , due to the combustion process. Given, that the heat capacity of the calorimeter is $2.5 \mathrm{~kJ} \cdot \mathrm{~K}^{-1}$, what will be the value of enthalpy of combustion of the gas?

## - Watch Video Solution

35. If the bond dissociation energies of $\mathrm{XY}(\mathrm{g}), X_{2}(g)$ and $Y_{2}(g)$ are in the ratio of 1:1:0.5 and $\Delta_{f} H$ for the formation of $\mathrm{XY}(\mathrm{g})$ is $-200 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$, then what will be the bond dissociation energy of $X_{2}(g)$ ?

## - Watch Video Solution

## SOLVED WBCHSE SCANNER

1. For the process $\mathrm{H}_{2} \mathrm{O}(\mathrm{l}) \Leftrightarrow \mathrm{H}_{2} \mathrm{O}(\mathrm{g}), \Delta H=40.8 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$ at the boiling poinit of water. Calculate molar entropy change for vaporisation from liquid phase.

## - Watch Video Solution

2. A gas confined in a cylinder with a frictionless piston is made to expand from 1 L to 5 L under constant pressure of 1.5 atm . During the process, 800 J of heat is supplied from external source. Calculate the change in internal energy off the gas. $(1 L \cdot a t m=101.3 J)$.

## - Watch Video Solution

3. What are meant by the terms change of entropy $(\Delta S)$ and change in free energy $(\Delta G)$ of a system. Write down the mathematical relation between them. At $0^{\circ} C$, liqiud water and ice remain in equilibrium. If 1 g of liquid water under equilibrium condition is converted to ice, explain with reason whether the process is endothermic or exothermic.

## - Watch Video Solution

4. Given: $C(s)+\mathrm{O}_{2}(g) \rightarrow \mathrm{CO}_{2}(g), \Delta H=-393.5 k J$
$2 \mathrm{H}_{2}(\mathrm{~g})+\mathrm{O}_{2}(\mathrm{~g}) \rightarrow 2 \mathrm{H}_{2} \mathrm{O}(\mathrm{g}), \Delta \mathrm{H}=-571.6 \mathrm{~kJ}$

Calculate $\Delta H$ of the reaction:
$\mathrm{C}(\mathrm{s})+2 \mathrm{H}_{2} \mathrm{O}(\mathrm{g}) \rightarrow \mathrm{CO}_{2}(\mathrm{~g})+2 \mathrm{H}_{2}(\mathrm{~g})$.

## - Watch Video Solution

5. For the reaction $N_{2}(g)+3 H_{2}(g) \rightarrow 2 N H_{3}(g), \Delta H$ and $\Delta S$ are $-95.4 k J a n d-198.3 J \cdot K^{-1}$ respectively. Assuming reaction be spontaneous at 500K ? Explain.

## - Watch Video Solution

6. (i) Assuing the reactant and product gases as ideal, show that for a gaseous reaction $\Delta H=\Delta E+\Delta n R T$, where $\Delta H$ and $\Delta E$ indicate the changes of enthalpy and internal energy in the reaction.
(ii) the bond energy of any diatomic molecule is defined to be the change in the internal energy for its dissociation. at 298 K , $O_{2}(g) \rightarrow 2 O_{g}, \Delta H=498.3 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$. calculate the bond energy of $O_{2}$ molecule $R=8.314 \mathrm{~J} \cdot \mathrm{~K}^{-1} \cdot \mathrm{~mol}^{-1}$.
7. (i) State the first law of thermodynamics. As ideal gas of volume 6.0 L was made to expand at constant temperature and pressure of 2 atm by supplying heat. If the final volume of the gas was 12.0 L , calculate the work done and the heat supplied in joule in the process. $[1 L \cdot a t m=101.3]$.
(ii) At $0^{\circ} \mathrm{CH}_{2} \mathrm{O}(\mathrm{s}) \Leftrightarrow \mathrm{H}_{2} \mathrm{O}(\mathrm{g}), \Delta \mathrm{H}=51885 \mathrm{~J} \cdot \mathrm{~mol}^{-1}$
$\mathrm{H}_{2} \mathrm{O}(\mathrm{l}) \Leftrightarrow \mathrm{H}_{2} \mathrm{O}(\mathrm{g}), \Delta H=45860 \mathrm{~J} \cdot \mathrm{~mol}^{-1}$
Calculate the change in entropy for the process, $\mathrm{H}_{2} \mathrm{O}(s) \rightarrow \mathrm{H}_{2} \mathrm{O}(l)$ at $0^{\circ} C$.

## - View Text Solution

8. A process is always spontaneous at all temperature if the enthalpy change is $\qquad$ and entropy change is $\qquad$ .

## - Watch Video Solution

9. Two moles of an ideal gas were expanded isothermally against opposing pressure of 1 atm from 20 L to 60 L . Compoute $\mathrm{w}, \mathrm{q}$, $\Delta E$ and $\Delta H$ for the process is joule. (Given $1 L \cdot a t m=101.3 J$ )

## - Watch Video Solution

10. Latent heat of fusion of ice at $0^{\circ} C$ is $80 \mathrm{cal} / \mathrm{g}$. calculate the olar entropy change for the fusion process.

## - Watch Video Solution

11. Calculate $\Delta G^{0}$ for the reaction $\mathrm{H}_{2}(g)+\frac{1}{2} \mathrm{O}_{2}(g) \rightarrow \mathrm{H}_{2} \mathrm{O}(l)$ at 298 K . Given, at 298k $\Delta H_{f}^{0}$ for $H_{2} O(l)$ is $-286 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$ and the molar entropies $\left(S^{0}\right)$ for $H_{2}(g), O_{2}(g)$ and $H_{2} O(l)$ are 130.7, 205.1 and 69.9 $J \cdot K^{-1} \cdot$ mol $^{-1}$ respectively.

## - Watch Video Solution

12. Above what temperature the following reaction will be spontaneous?
$2 \mathrm{CuO}(s) \rightarrow \mathrm{Cu}_{2} \mathrm{O}(s)+\frac{1}{2} \mathrm{O}_{2}(g)$.
Given,
$\Delta H=144.6 \mathrm{~kJ}$ and $\Delta S=0.116 \mathrm{~kJ} \cdot \mathrm{~K}^{-1}$ for the process.

## - Watch Video Solution

13. Calculate $\Delta H$ of the following reaction at $25^{\circ} \mathrm{C}$.
$4 \mathrm{Fe}(\mathrm{s})+3 \mathrm{O}_{2}(\mathrm{~g}) \rightarrow 2 \mathrm{Fe}_{2} \mathrm{O}_{3}(\mathrm{~s})$
Given:
$\mathrm{Fe}_{2} \mathrm{O}_{3}(\mathrm{~s})+3 \mathrm{C}($ graphite $) \rightarrow 2 \mathrm{Fe}(\mathrm{s})+3 \mathrm{CO}(\mathrm{g}), \Delta H=117.30$ kcal
$\mathrm{C}($ graphite $)+\mathrm{O}_{2}(\mathrm{~g}) \rightarrow \mathrm{CO}_{2}(\mathrm{~g}), \Delta \mathrm{H}=-94.05 \mathrm{kcal}$
$\mathrm{CO}(g)+\frac{1}{2} \mathrm{O}_{2}(\mathrm{~g}) \rightarrow \mathrm{CO}_{2}(\mathrm{~g}), \Delta \mathrm{H}=67.63 \mathrm{kcal}$ at $25^{\circ} \mathrm{C}$.

## - Watch Video Solution

14. Discuss whether the difference between the heats of reaction at constant pressure and constant volume will depend on temperature for
the following reaction.
$2 \mathrm{CO}(\mathrm{g})+\mathrm{O}_{2}(\mathrm{~g}) \rightarrow 2 \mathrm{CO}_{2}(\mathrm{~g})$.

## - Watch Video Solution

15. Which of the following is an example of a closed system-
A. a hot water filled thermoflask
B. an ice water filled airtight metallic bottle
C. a water filled stainless steel bowl
D. a hot water filled glass beaker

## Answer: B

## - Watch Video Solution

16. Which is an intensive property of a system-
A. internal energy
B. entropy
C. mass
D. density

## Answer: D

## - Watch Video Solution

17. In a process, 600J of heat is absorbed by a system and 300J of work is done by the system. Calculate the change in internal energy of the system.

## - Watch Video Solution

18. Latent heat of vaporisation of water at normal boiling point is $40.75 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$. Calculate the change in entropy of vaporisation.
19. Calculate the enthalpy of formation of liquid ethyl alcohol from the following data.
$\mathrm{C}_{2} \mathrm{H}_{5} \mathrm{OH}(\mathrm{l})+3 \mathrm{O}_{2}(\mathrm{~g}) \rightarrow 2 \mathrm{CO}_{2}(\mathrm{~g})+3 \mathrm{H}_{2} \mathrm{O}(\mathrm{l}), \Delta \mathrm{H}=-1368 \mathrm{~kJ}$
$C(s)+\mathrm{O}_{2}(\mathrm{~g}) \rightarrow \mathrm{CO}_{2}(\mathrm{~g}), \Delta \mathrm{H}=-393 \mathrm{~kJ}$
$\mathrm{H}_{2}(g)+\frac{1}{2} \mathrm{O}_{2}(g) \rightarrow \mathrm{H}_{2} \mathrm{O}(l), \Delta H=-287 k J$.

## - Watch Video Solution

20. State the condition of spontaneity and equilibrium in terms of Gibbs free energy change of a system.

## - Watch Video Solution

21. Assuming the reactant and product gases of chemical reaction as ideal, show that for a gaseous reaction $\Delta \mathrm{H}=\Delta \mathrm{U}+\Delta \mathrm{nRT}$ where $\Delta \mathrm{H}$ and $\Delta \mathrm{U}$ indicate the changes of enthalpy and internal energy, in the reaction.
22. Which variable is kept constant in an isochoric process?

## - Watch Video Solution

23. Calculate the change in internal energy of the gas when it expands from 2 L to 8 L at a constant pressure of 2 atm absorbing 400 J of heat in the process. ( $1 \mathrm{~L} \cdot \mathrm{~atm}=101.35 \mathrm{~J})$.

## - Watch Video Solution

24. Calculate the work done for a reversible isothermal compression of 1 mol ideal gas 20 L to half of its volume at 400 K $\left[R=8.314 \mathrm{~J} \cdot \mathrm{~K}^{-1} \cdot \mathrm{~mol}^{-1}\right]$.

## - Watch Video Solution

25. At $25^{\circ} \mathrm{C}$ the standard heat of formation of liquid $\mathrm{H}_{2} \mathrm{O}$ is -286.0 $k J \cdot \mathrm{~mol}^{-1}$. Calculate the change in standard internal energy for this formation reaction.

## - Watch Video Solution

26. The temperature of 4 mol of a gas decreases from $40^{\circ} \mathrm{C}$ to $-60^{\circ} \mathrm{C}$ on adiabatic reversible expansion. The molar specific heat of the gas at constant volume being $12 \mathrm{~J} \cdot \mathrm{~K}^{-1} \cdot \mathrm{~mol}^{-1}$, determine the change in internal energy and work done in this process.

## - Watch Video Solution

27. Which one is the correct unit of entropy-
A. $K^{-1} \cdot \mathrm{~mol}^{-1}$
B. $J \cdot K^{-1}$.
C. $J \cdot \mathrm{~mol}^{-1}$
D. $J^{-1} \cdot K^{-1} \cdot \mathrm{~mol}^{-1}$.

## Answer: B

## - Watch Video Solution

28. For the reversible reaction $A=+2 B \leftrightarrow \quad C+$ Heat the forward raction will proceed at
A. low temperature and low pressure
B. low pressure
C. high pressure and low temperature
D. high pressure and high temperature

## Answer: C

## - Watch Video Solution

29. Which one of the following is true for a spontaneous process-
A. $\Delta G=0$
B. $\Delta H=T \Delta S$
C. $\Delta G>0$
D. $\Delta G<0$

## Answer: D

## - Watch Video Solution

30. (i) Why is the enthalpy change for a chemical reaction more important than internal energy change?
(ii) What is meant by isolated system?

## - Watch Video Solution

31. Find out the heat of formation of $\mathrm{CH}_{3} \mathrm{COOH}$. Given that the heat of combusion of $\mathrm{CH}_{3} \mathrm{COOH}$ is $-867 \mathrm{KJ} \mathrm{mol}^{-1}$ and the heat of formation of $\mathrm{CO}_{2}$ and $\mathrm{H}_{2} \mathrm{O}$ are - 393.5 and $-285.9 \mathrm{KJ} \mathrm{mol}^{-1}$ respectively.

## - Watch Video Solution

32. Which one of the following relation shows spontaneity-
A. $\Delta H=T \Delta S$
B. $\Delta H>T \Delta S$
C. $\Delta H<T \Delta S$
D. $\Delta H \neq T \Delta S$

## Answer: C

## - Watch Video Solution

33. For which of the following chemical equation has $\Delta H=\Delta U-$
A. $\mathrm{C}(\mathrm{s})+2 \mathrm{H}_{2} \mathrm{O}(g) \rightarrow 2 \mathrm{H}_{2}(g)+\mathrm{CO}_{2}(g)$
B. $\mathrm{PCl}_{5}(\mathrm{~g}) \rightarrow \mathrm{PCl}_{3}(\mathrm{~g})+\mathrm{Cl}_{2}(\mathrm{~g})$
C. $2 \mathrm{CO}(\mathrm{g})+\mathrm{O}_{2}(\mathrm{~g}) \rightarrow 2 \mathrm{CO}_{2}(\mathrm{~g})$
D. $\mathrm{H}_{2}(g)+B r_{2}(g) \rightarrow 2 \mathrm{HBr}(g)$.

## Answer: D

## - Watch Video Solution

34. Write the definition of entropy.

## - Watch Video Solution

35. If the standard formation enthalpy of $\mathrm{CS}_{2}, \mathrm{CO}_{2}$ and $\mathrm{SO}_{2}$ are $117 \mathrm{kJmol}^{-1}-393 \mathrm{kJmol}^{-1}$ and $-297 \mathrm{kJmol}^{-1} r$ CS_2 + 30 _ 2 rarr CO_2 2SO_3'.
36. (i) State Hess's law.
(ii) Judge the spontaneity of the following reaction at 298 K temperature and at a particular pressure:
$B r_{2}(l)+C l_{2}(g) \rightarrow 2 B r C l(g)$
Given: $\Delta H=29.3 k J \cdot$ mol $^{-1}$ and
$\Delta S=104.1 J \cdot K^{-1} \cdot \mathrm{~mol}^{-1}$.

## - Watch Video Solution

37. At $25^{\circ} \mathrm{C}$ which of the following has enthalpy of formation zero-
A. $H C l(g)$
B. $O_{2}(g)$
C. $O_{3}(g)$
D. $N O(g)$

## Answer: B

38. For which of the following reactions, $\Delta S>0$ -
A. $H_{2}(g)+I_{2}(g) \Leftrightarrow 2 H I(g)$
B. $\mathrm{HCl}(\mathrm{g})+\mathrm{NH}_{3}(\mathrm{~g}) \Leftrightarrow \mathrm{NH}_{4} \mathrm{Cl}(\mathrm{s})$
C. $\mathrm{NH}_{4} \mathrm{NO}_{3}(s) \Leftrightarrow \rightarrow \mathrm{N}_{2} \mathrm{O}(g)+2 \mathrm{H}_{2} \mathrm{O}(g)$
D. $\mathrm{MgO}(s)+\mathrm{H}_{2}(g) \Leftrightarrow \mathrm{Mg}(s)+\mathrm{H}_{2} \mathrm{O}(g)$.

## Answer: C

## - Watch Video Solution

39. Write down the statement of third law of thermodynamics.

- Watch Video Solution

40. Heat of combustion of benzene is $\mathrm{xJ} \cdot \mathrm{mol}^{-1}$. Heat of formation of carbon dioxide and water are $y J \cdot \mathrm{~mol}^{-1}$ and $z J \cdot \mathrm{~mol}^{-1}$ respectively. Calculate the heat of formation of benzene.

## - Watch Video Solution

41. (i) State the second law of thermodynamics ono the basis of entropy.
(ii) Boiling point of ethanol is $78.4^{\circ} \mathrm{C}$. Change in enthalpy during vaporisation of ethanol is $96 \mathrm{~J} \cdot \mathrm{~mol}^{-1}$, calculate the change in entropy of vaporisation of enthanol.

## - Watch Video Solution

42. An amount of work $w$ is done by the system and $q$ amount of heat is supplied to the system. By which the following relations the change in internal energy of the system can be expressed-
A. $\Delta U=q-w$
B. $\Delta U=q+w$
C. $\Delta U=q$
D. $\Delta U=w-q$

## Answer: A

## - Watch Video Solution

43. Which one of the following indicates a spontaneous process-
A. $\Delta G=0$
B. $\Delta H=T \Delta S$
C. $\Delta G>0$
D. $\Delta G<0$

## Answer: D

44. What is meant by an isolated systemm in thermodynamics?

## - Watch Video Solution

45. Write SI unit of entropy.

## - Watch Video Solution

46. (i) State hess's law.
(ii) For the following reaction at 298 K
$2 X+Y \rightarrow Z$
$\Delta H=300 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$ and $\Delta S=0.2 \mathrm{~kJ} \cdot \mathrm{~K}^{-1} \cdot \mathrm{~mol}^{-1}$
At what temperature will the reaction become spontaneous considering
$\Delta H$ and $\Delta S$ to be constant over the temperature range?

## - Watch Video Solution

1. A thermodynamics state function is a quantity-
A. used to determine heat changes
B. whose value is independet of path
C. used to determine pressure-volume work
D. whose value depends on temperature only

## Answer: B

## - Watch Video Solution

2. For the process to occur under adiabatic conditions, the correct conditions is-
A. $\Delta T=0$
B. $\Delta P=0$
C. $q=0$
D. $w=0$

## Answer: C

## - Watch Video Solution

3. Enthalpies of all elements in standard states are-
A. unity
B. zero
C. $<0$
D. different for each element

## Answer: B

## - Watch Video Solution

4. $\Delta U^{0}$ for combustion of methane is $-X k J \cdot \mathrm{~mol}^{-1}$. The value of $\Delta H^{0}$ is-
A. $=\Delta U^{0}$
B. $>\Delta U^{0}$
C. $<\Delta U^{0}$
D. 0

## Answer: C

## - Watch Video Solution

5. The enthalpy of combustion of methane, graphite and dihydrogen at 298K are $-890.3 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1},-393.5 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$ and $-285.8 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$ respectively. Enthalpy of formation of $\mathrm{CH}_{4}(\mathrm{~g})$ will be-
A. $-74.8 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
B. $-52.27 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
C. $+74.8 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
D. $+52.26 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$

## Answer: A

## - Watch Video Solution

6. A reaction, $A+B \rightarrow C+D+q$ is found to have a positive entropy change. The reaction will be-
A. possible at high temperature
B. possible only at low temperature
C. not possible at any temperature
D. possible at any temperature

## Answer: D

## D Watch Video Solution

7. In a process, 701J of heat is absorbed by a system and 394 J of work is done by the system. What is the change in internal energy for the

## - Watch Video Solution

8. The reaction of cyanamide, $\mathrm{NH}_{2} \mathrm{CN}(s)$, with dioxygenn was carried out in a bomb calorimeter, and $\Delta U$ was found to be $-742.7 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$ at 298K. Calculate enthalpy change for the reaction at 298K:
$\mathrm{NH}_{2} \mathrm{CN}(s)+\frac{3}{2} \mathrm{O}_{2}(g) \rightarrow \mathrm{N}_{2}(g)+\mathrm{CO}_{2}(g)+\mathrm{H}_{2} \mathrm{O}(l)$.

## D Watch Video Solution

9. Calculate the number of kJ necessary to raise the temperature of 60 g of aluminium from $35^{\circ} \mathrm{C}$ to $55^{\circ} \mathrm{C}$. Molar heat capacity of Al is $24 J \cdot \mathrm{~mol}^{-1} \cdot K^{-1}$.

## - Watch Video Solution

10. Calculate the enthalpy change on freezing of 1.0 mole of water at $10^{\circ} \mathrm{C}$ to ice at $-10^{\circ} \mathrm{C}, \triangle_{\text {fus }} H=6.03 \mathrm{kJmol}^{-1}$ at $0^{\circ} \mathrm{C}$, $\mathrm{C}_{p}\left[\mathrm{H}_{2} \mathrm{O}(\mathrm{l})\right]=75.3 \mathrm{Jmol}^{-1} \mathrm{~K}^{-1}$
$C_{p}\left[\mathrm{H}_{2} \mathrm{O}(s)\right]=36.8 \mathrm{Jmol}^{-1} \mathrm{~K}^{-1}$

## - Watch Video Solution

11. Enthalpy of combustion of C to $\mathrm{CO}_{2}:-393.5 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$. Calculate the heat released upon formation of 35.2 g of $\mathrm{CO}_{2}$ from carbon and dioxygen gas.

## - Watch Video Solution

12. Enthalpies of formation of $\mathrm{CO}(\mathrm{g}), \mathrm{CO}_{2}(\mathrm{~g}), \mathrm{N}_{2} \mathrm{O}(\mathrm{g})$ and $\mathrm{N}_{2} \mathrm{O}_{4}(\mathrm{~g})$ are $-110,-393,81$ and $9.7 \mathrm{~K} \mathrm{Jmol}^{-1}$ respectively calculate $\Delta H_{r}$ for the reaction
$: \mathrm{N}_{2} \mathrm{O}_{4}(\mathrm{~g})+3 \mathrm{CO}(\mathrm{g}) \rightarrow \mathrm{N}_{2} \mathrm{O}(\mathrm{g})+3 \mathrm{CO}_{2}(\mathrm{~g})$
13. $\mathrm{N}_{2}(g)+3 \mathrm{H}_{2}(g) \rightarrow 2 \mathrm{NH}_{3}(g), \Delta_{r} H^{0}=-92.4 k J \cdot \mathrm{~mol}^{-1}$

What is the standard enthalpy of formation of $\mathrm{NH}_{3}$ ?

## Watch Video Solution

14. Calculate the standard enthalpy of formation of $\mathrm{CH}_{3} \mathrm{OH}(l)$ from the following data:
(1)
$\mathrm{CH}_{3} \mathrm{OH}(\mathrm{l})+\frac{3}{2} \mathrm{O}_{2}(\mathrm{~g}) \rightarrow \mathrm{CO}_{2}(\mathrm{~g})+2 \mathrm{H}_{2} \mathrm{O}(\mathrm{l}), \Delta_{r} \mathrm{H}^{0}=-726 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
(2) $C(s)+O_{2}(g) \rightarrow \mathrm{CO}_{2}(g), \Delta_{c} H^{0}=-393 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
(3) $\mathrm{H}_{2}(g)+\frac{1}{2} \mathrm{O}_{2}(g) \rightarrow \mathrm{H}_{2} \mathrm{O}(\mathrm{l}), \Delta_{f} H^{0}=-286 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$.

## - Watch Video Solution

15. Calculate the enthaply change for the process:
$C C l_{4}(\mathrm{~g}) \rightarrow C(\mathrm{~g})+4 C l(g)$ and calculate the bond enthalpy of $C-C l$ in $\mathrm{CCl}_{4}(\mathrm{~g})$
$\triangle(v a p)) H^{\circ}\left(C C l_{4}\right)=30.5 \mathrm{~kJ} \mathrm{~mol}^{-1}$
$\triangle f H^{\circ}\left(C C l_{4}\right)=135.5 \mathrm{~kJ} \mathrm{~mol}^{-1}$

$$
\triangle_{a} H^{\circ}(C)=715.0 \mathrm{~kJ} \mathrm{~mol}^{-1}
$$

$$
\triangle_{a} H^{\circ}\left(C l_{2}\right)(\text { atomisation })=242 \mathrm{kJmol}^{-1}
$$

## - Watch Video Solution

16. For an isolated system, $\Delta U=0$, what will be $\Delta S$ ?

## - Watch Video Solution

17. For the reaction, $2 A+B \rightarrow C, \Delta H=400 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$ \& $\Delta S=0.2 \mathrm{~kJ} \cdot \mathrm{~K}^{-1} \cdot \mathrm{~mol}^{-1}$ at 298 K . At what temperature will the reaction become spontaneous considering $\Delta H, \Delta S$ to be constant over the temperature range?

## - Watch Video Solution

18. For the reaction $2 C l(g) \rightarrow C l_{2}(g)$, what are the signs of $\Delta H$ and $\Delta S$ ?

## Watch Video Solution

19. 

For
the
reaction
$2 A(g)+B(g) \rightarrow 2 D(g), \Delta U^{0}=-10.5 k J$ and $\Delta S^{0}=-44.1 J \cdot K^{-1}$
. Calculate $\Delta G^{0}$ for the reaction and predict whether it may occur spontaneously.

## - Watch Video Solution

20. Equilibrium consistant for a reaction is 10 . find the value of $\Delta G^{0}$ ?
$R=8.314 J \cdot K^{-1} \cdot \mathrm{~mol}^{-1}, T=300 K$.

## - Watch Video Solution

21. Comment on the thermodynamic stability of $\mathrm{NO}(\mathrm{g})$.

## Given:

$$
\frac{1}{2} \mathrm{~N}_{2}(g)+\frac{1}{2} \mathrm{O}_{2}(g) \rightarrow N O(g), \Delta_{r} H^{0}=90 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}, \mathrm{NO}(\mathrm{~g})+\frac{1}{2} \mathrm{O}_{2}(\mathrm{~g})
$$

## - Watch Video Solution

22. Calculate the entropy change in the surrounding when $1,00 \mathrm{~mol}$ of $\mathrm{H}_{2} \mathrm{O}(l)$ is formed under standard conditions.
$\Delta_{f} H^{0}=-286 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$

## - Watch Video Solution

## HIGHER ORDER THINKING SKILLS (HOTS) QUESTIONS

1. The results obtained by applying the mathematical form of the first law of thermodynamics for different process are given below. Identify the process (w=P-V work only): $\Delta U=0, q+w=0$
2. The entropy of the system decreases on condensation of a vapour though it occurs spontaneously. Explain.

## - Watch Video Solution

3. The formation of ice from water is exothermic in nature, but water does not convert into ice spontaneously at ordinary temperature and pressure, why?

## - Watch Video Solution

4. "The amount of heat present in hot water is greater than that in cold water"- explain whether the statement is correct or not.
5. Give examples of two processes involving only P-V work, where the system does not perform any work.

## - Watch Video Solution

6. For the reaction, $\mathrm{CH}_{4}(g)+\frac{1}{2} \mathrm{O}_{2}(g) \rightarrow \mathrm{CH}_{3} \mathrm{OH}(g), \Delta H^{0}=$ negative at $25^{\circ} C$. If the standard enthalpies of combustion of $\mathrm{CH}_{4}(\mathrm{~g})$ and $\mathrm{CH}_{3} \mathrm{OH}(\mathrm{g})$ at $25^{\circ} \mathrm{C}$ are $-x \mathrm{~kJ} \cdot \mathrm{~mol}^{-1} \&-y k J \cdot \mathrm{~mol}^{-1}$ respectively, then will the value of $x$ be less than, greater than or equal to the value of $y$ ?

## - Watch Video Solution

7. A plant is growing. What do you think of the entropy changes of the plant and its surroundings?

## - Watch Video Solution

8. When does an adiabatic process become isentropic?

## - Watch Video Solution

9. At a certain temperature and pressure, $\Delta H=0$ for the reaction: $\mathrm{X}+\mathrm{X}=$ $X_{2}$. Show that the reaction is non-spontaneous at this temperature and pressure.

## - Watch Video Solution

10. The magnitude of work done by a gas is a reversible expansion is greater than that in an irreversible expansion provided the initial and final state are identical in both processes-explain.

## - Watch Video Solution

11. 1 mol of an ideal gas is freely expanded at constant temperature. In this process, which of the quantity or quantities among $\mathrm{w}, \mathrm{q}, \Delta U, \Delta H$ are O or $>0$ or $<0$ ?

## - Watch Video Solution

12. A gas cools down during adiabatic expansion and it becomes hot during adiabatic compression-explain.

## - Watch Video Solution

13. Given: (1) $A(s)+B_{2}(g) \rightarrow A B_{2}(g), \Delta H^{0}=-x k J$
(2) $A(s)+\frac{3}{2} B_{2}(g) \rightarrow A B_{3}(g), \Delta H^{0}=-y k J$

Using above equations, determine standard reaction enthalpy for the reaction:
$2 A B_{3}(g) \rightarrow 2 A B_{2}(g)+B_{2}(g)$.
14. At $25^{\circ} \mathrm{C}$ the standard enthalpy of formation of freon gas $\left(\mathrm{CHClF}_{2}\right)$ is $-480.0 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$. Wirte down of therrmochemical equation representing the formation reaction of the compound.

## - Watch Video Solution

15. For each of the given changes, state whether the final enthalpy is greater or less than the initial enthalpy:
(1) $\mathrm{H}_{2} \mathrm{O}(s) \rightarrow \mathrm{H}_{2} \mathrm{O}(l)$
(2) $\mathrm{H}_{2} \mathrm{O}(g) \rightarrow \mathrm{H}_{2} \mathrm{O}(\mathrm{l})$.

## - Watch Video Solution

16. Give two examples of spontaneous processes in which disorderliness of the system decreases.

## - Watch Video Solution

17. There occurs no exchange of heat between a system and its surroundings in an adiabatic process. So, the change in entropy of the system is zero in this process. Justify the statement.

## - Watch Video Solution

18. $A(g)+A(g) \rightarrow A_{2}(g)$, these type of reaction are generally exothermic. Explain.

## - Watch Video Solution

19. What do you mean by perpetual motion machine of the second kind?

## - Watch Video Solution

20. At ordinary temperature and pressure, solid $\mathrm{NH}_{4} \mathrm{Cl}$ dissolves in water to form $\mathrm{NH}_{4}^{+}(a q)$ and $\mathrm{Cl}^{-}(a q)$ ions. The process is endothermic. Indicate the signs ( + or - ) of $\Delta S_{\text {sys }}, \Delta S_{\text {surr }}, \Delta H$ and $\Delta G$.

## ENTRANCE QUESTION BANK

1. Which of the following statement is true-
A. entropy increases when water vaporises
B. randomness decreases in the fusion of ice
C. randomness increases in the condensation of water vapour
D. randomness remains unchanged during vaporisation of water

## Answer: A

## - Watch Video Solution

2. Identify the correct statement in a chemical reaction-
A. the entropy always increases
B. the change in entropy along with suitable change in enthalpy decides the rate of reaction
C. the enthalpy always decreases
D. both the enthalpy and the entropy remains constant

## Answer: B

## - Watch Video Solution

3. The condition for spontaneity of a process is-
A. lowering of entropy at constant temperature \& pressure
B. lowering of gibbs free energy of the system at constantn temperature and pressure
C. Increase in entropy of the system at constant temperature and
D. increase in Gibbs free energy of the universe at constant temperature and pressure.

## Answer: B

## D Watch Video Solution

4. $P \cdot V$ Work done by an ideal gaseous system at constant volume is (E is internal energy of the system)-
A. $-\frac{\Delta P}{P}$
B. zero
C. $-V \Delta P$
D. $-\Delta E$.

## Answer: B

5. Mixing of two different ideal gases under isothermal reversible condition will lead to-
A. increase in gibbs free energy of the system
B. no change of entropy of the system
C. increase in entropy of the system
D. increase in enthalpy of the system

## Answer: C

## - Watch Video Solution

6. For an isothermal expansion of an ideal gas, the correct combination of the thermodynamic parameters will be-
A. $\Delta U=0, Q=0, w \neq 0$ and $\Delta H \neq 0$
B. $\Delta U \neq 0, Q \neq 0, w \neq 0$ and $\Delta H=0$.
C. $\Delta U=0, Q \neq 0, w=0$ and $\Delta H \neq 0$
D. $\Delta U=0, Q \neq 0, w \neq 0$ and $\Delta H=0$

Answer: D

## - Watch Video Solution

7. The change in entropy (dS) is defined as-
A. $d S+\frac{\delta q}{T}$
B. $d S=\frac{d H}{T}$
C. $d S=\frac{\delta q_{r e v}}{T}$
D. $d S=\frac{(d H-d G)}{T}$.

Answer: C

- Watch Video Solution

8. $\Delta H$ for cooling 2 mol ideal monoatomic gas from $225^{\circ} \mathrm{C}$ to $125^{\circ} \mathrm{C}$ at constant pressure will be $\left[C_{P}=\frac{5}{2} R\right]$ -
A. 250 R
B. $-500 R$
C. $500 R$
D. $-250 R$

## Answer: B

## - Watch Video Solution

9. For a spontaneous process, correct statement (s) is (are)-
A. $\left(\Delta G_{s y s}\right)_{T, P}>0$
B. $\Delta S_{\text {sys }}+\Delta S_{\text {surr }}>0$
C. $\left(\Delta G_{\text {sys }}\right)_{T, P}<0$
D. $\left(\Delta U_{s y s}\right)_{T, V}>0$

## Answer: B::C

## - Watch Video Solution

10. Given: $C+O_{2} \rightarrow \mathrm{CO}_{2}, \Delta H^{0}=-x k J$
$2 \mathrm{CO}+\mathrm{O}_{2} \rightarrow 2 \mathrm{CO}_{2}, \Delta \mathrm{H}^{0}-y \mathrm{~kJ}$
Heat of formation of carbon monoxide will be-
A. $\frac{y-2 x}{2}$
B. $y+2 x$
C. $2 x-y$
D. $\frac{2 x-y}{2}$

## Answer: A

## - Watch Video Solution

11. The enthalpy of vaporisation of a certain liquid at its boiling point off $35^{\circ} \mathrm{C}$ is $24.64 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$. The value of change in entropy for the process is-
A. $704 \mathrm{~J} \cdot \mathrm{~K}^{-1} \cdot \mathrm{~mol}^{-1}$
B. $80 \mathrm{~J} \cdot \mathrm{~K}^{-1} \cdot \mathrm{~mol}^{-1}$
C. $24.64 \mathrm{~J} \cdot \mathrm{~K}^{-1} \cdot \mathrm{~mol}^{-1}$
D. $7.04 \mathrm{~J} \cdot \mathrm{~K}^{-1} \cdot \mathrm{~mol}^{-1}$

## Answer: B

## - Watch Video Solution

12. $\Delta H$ and $\Delta S$ of a certain reaction are -400 $\mathrm{kJ} \cdot \mathrm{mol}^{-1}$ and $-20 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1} \cdot \mathrm{~K}^{-1}$ respectively. The temperature below which the reaction is spontaneous is-
A. 100 K
B. $20^{\circ} \mathrm{C}$
C. 20 K
D. $120^{\circ} \mathrm{C}$

## Answer: C

## - Watch Video Solution

13. For the reaction $X_{2} Y_{4}(l) \rightarrow 2 X Y(g)$ at 300 K the values of $\Delta U$ and $\Delta S$ are 2 kcal and $20 \mathrm{cal} \cdot \mathrm{K}^{-1}$ respectively. The value of $\Delta G$ for the reaction is-
A. -3400 cal
B. 3400 cal
C. -2800 cal
D. 2000 cal

## Answer: C

14. For the reaction $2 \mathrm{SO}_{2}(\mathrm{~g})+\mathrm{O}_{2}(\mathrm{~g}) \Leftrightarrow 2 \mathrm{SO}_{3}(\mathrm{~g})$ at 300 K , value of $\Delta G^{0}$ is $-690.9 R$. The equilibrium constant value for the reaction at that temperature is ( R is gas constant) -
A. $10 \mathrm{~atm}^{-1}$
B. 10 atm
C. 10
D. 1

## Answer: C

## - Watch Video Solution

15. The condition for a reaction to occur spontaneously is -
A. $\Delta H$ must be negative
B. $\Delta S$ must be netagive
C. $(\Delta H-T \Delta S)$ must be negative
D. $(\Delta H+T \Delta S)$ must be negative.

## Answer: C

## - Watch Video Solution

16. During a reversible adiabatic process, the pressure of a gas is found to be proportional to the cube of its absolute temperature. The ratio $\frac{C_{P}}{C_{V}}$ for the gas is-
A. $\frac{3}{2}$
B. $\frac{7}{2}$
C. $\frac{5}{3}$
D. $\frac{9}{7}$

## Answer: A

17. The heat of neutralisation of a strong base and a strong acid is 13.7 kcal. The heat released when 0.6 mol HCl solution is added to 0.25 mol of NaOH is-
A. 3.425 kcal
B. 8.22 kcal
C. 11.645 kcal
D. 13.7 kcal

## Answer: A

## - Watch Video Solution

18. The entropy change involved in the isothermal reversible expansion of 2 mol of an ideal gas from a volume of $10 \mathrm{~cm}^{3}$ to a volume of $100 \mathrm{~cm}^{3}$ at $27^{\circ} \mathrm{C}$ is-
A. $38.3 \mathrm{~J} \cdot \mathrm{~mol}^{-1} \cdot K^{-1}$
B. $35.8 \mathrm{~J} \cdot \mathrm{~mol}^{-1} \cdot K^{-1}$
C. $32.3 \mathrm{~J} \cdot \mathrm{~mol}^{-1} \cdot \mathrm{~K}^{-1}$
D. $42.3 \mathrm{~J} \cdot \mathrm{~mol}^{-1} \cdot K^{-1}$

## Answer: A

## - Watch Video Solution

19. Among the following expressions which one is incorrect-
A. $w_{\text {rev, iso }}=-n R T \ln \frac{V_{f}}{V_{i}}$
B. $\ln \mathrm{K}=\frac{\Delta H^{0}-T \Delta S^{0}}{R T}$
C. $K=e^{-\Delta G^{0} / R T}$
D. $\frac{\Delta G_{\text {sys }}}{\Delta S_{\text {total }}}=-T$

## Answer: B

20. A cylinder filled with 0.04 mol of ideal gas expands reversible from 50 mL to 375 mL at a constant temperature of $37.0^{\circ} \mathrm{C}$. As it does so, it absorbs 208 J heat, q and w for the process will be $\left(R 8.314 J \cdot \mathrm{~mol}^{-1} \cdot \mathrm{~K}^{-1}\right)$ -
A. $q=+208 J, w=+208 J$
B. $q=+208 J, w=-208 J$
C. $q=-208 J, w=-208 J$
D. $q=-208 J, w=+208 J$.

## Answer: B

## - Watch Video Solution

21. For complete combustion of enthanol,

$$
\mathrm{C}_{2} \mathrm{H}_{5} \mathrm{OH}(\mathrm{l})+3 \mathrm{O}_{2}(\mathrm{~g}) \rightarrow 2 \mathrm{CO}_{2}(\mathrm{~g})+3 \mathrm{H}_{2} \mathrm{O}(\mathrm{l})
$$

The amount of heat produced as measured in bomb calorimeter, is $1364.47 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$ at $25^{\circ} \mathrm{C}$. Assuming ideally the enthalpy of
combustion, $\Delta H_{c}\left(k J \cdot m^{-1}\right)$ for the reaction will be $\left(R=8.314 J \cdot K^{-1} \cdot \mathrm{~mol}^{-1}\right)-$
A. -1350.50
B. -1366.95
C. -1361.95
D. -1460.50

## Answer: B

## ( Watch Video Solution

22. The following reaction is performed free energy of formation of $N O(g)$ is $86.6 \mathrm{~kJ} / \mathrm{mol}$ at 298 K . What is the standard free energy of formation of $\mathrm{NO}_{2}(g)$ at $298 \mathrm{~K}\left(K_{p}=1.6 \times 10^{12}\right)$ -
A. $8660-\frac{\ln \left(1.6 \times 10^{12}\right)}{R(298)}$
B. $0.5\left[2 \times 86600-R(298) \ln \left(1.6 \times 10^{12}\right)\right.$
C. $R(298) \ln \left(1.6 \times 10^{12}\right)-86600$
D. $86600+R(298) \ln \left(1.6 \times 10^{12}\right)$

## Answer: B

## - Watch Video Solution

23. The standard Gibbs energy change at 300 K for the reaction $2 A \Leftrightarrow B+C$ is 2494.2 J . at a given time, composition of the reaction mixture is $[A]=\frac{1}{2},[B]=2$ and $[C]=\frac{1}{2}$. The reaction proceeds in the $[R=8.314 J / K / m o l, c=2.718]-$
A. forward direction because $Q<K_{c}$
B. reverse direction because $Q<K_{c}$
C. forward direction because $Q>K_{c}$
D. reverse direction because $Q>K_{c}$.

## Answer: D

24. The heats of combustion of carbon and carbon monoxide are -393.5 and $-283.5 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$ respectively. The heat of formation (in kJ) of carbon monoxide per mole is-
A. 110.5
B. 676.5
C. -676.5
D. -110.5

## Answer: D

## - Watch Video Solution

25. Given, $\mathrm{C}($ graphite $)+\mathrm{O}_{2}(\mathrm{~g}) \rightarrow \mathrm{CO}_{2}(\mathrm{~g}), \Delta_{r} H^{0}=-393.5 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
$\mathrm{H}_{2}(\mathrm{~g})+\frac{1}{2}(\mathrm{~g}) \rightarrow \mathrm{H}_{2} \mathrm{O}(\mathrm{l}), \Delta_{r} H^{0}=-285.8 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
$\mathrm{CO}_{2}(\mathrm{~g})+2 \mathrm{H}_{2} \mathrm{O}(\mathrm{l}) \rightarrow \mathrm{CH}_{4}(\mathrm{~g})+2 \mathrm{O}_{2}(\mathrm{~g}), \Delta_{r} \Delta \mathrm{H}^{0}=+890.3 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
Based on the above thermochemical equations, the value of $\Delta_{r} H^{0}$ at

298K for the reaction,
$\mathrm{C}($ graphite $)+2 \mathrm{H}_{2}(g) \rightarrow C H_{4}(g)$, will be-
A. $-74.8 k J \cdot \mathrm{~mol}^{-1}$
B. $-144.0 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
C. $+74.8 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
D. $+144.0 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$

## Answer: A

## ( Watch Video Solution

26. The combustion of benzene (I) gives $\mathrm{CO}_{2}(g)$ and $\mathrm{H}_{2} \mathrm{O}(l)$. Given that heat of combustion of benzene at constant volume is $-3263.9 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$ at $25^{\circ} \mathrm{C}$, heat of combustion (in $\mathrm{kJ} \cdot \mathrm{mol}^{-1}$ ) of benzene at constant pressure will be $\left(R=8.314 J \cdot K^{-1} \cdot \mathrm{~mol}^{-1}\right)$ -
A. 4152.6
B. -452.46
C. 3260
D. -3267.6

## Answer: D

## - Watch Video Solution

27. 

$\frac{1}{2} A \rightarrow B, \Delta H=+150 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}, 3 B \rightarrow 2 C+D, \Delta H=-125 \mathrm{~kJ} \cdot \mathrm{mc}$ then $\Delta H$ of the reaction $B+D \rightarrow E+2 C$ will be-
A. $525 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
B. $-175 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
C. $-325 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
D. $325 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$

## Answer: B

28. Which is correct option for free expansion of an ideal gas under adiabatic condition-
A. $q=0, \Delta T \neq 0, w=0$
B. $q \neq 0, \Delta T=0, w=0$
C. $q=0, \Delta T=0, w=0$
D. $q=0, \Delta T<0, w \neq 0$.

## Answer: C

## - Watch Video Solution

29. Enthalpy change for the reaction, $4 H(g) \rightarrow 2 \mathrm{H}_{2}(g)$ is $-869.5 k J$. The dissociation energy of $\mathrm{H}-\mathrm{H}$ bond is-
A. -434.8 kJ
B. -869.6 kJ
C. +434.8 kJ
D. $+217.4 k J$

## Answer: C

## - Watch Video Solution

30. If the enthalpy change for the transition of liquid water to steam is $30 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$ at $27^{\circ} \mathrm{C}$, the entropy change in $\mathrm{J} \cdot \mathrm{mol}^{-1} \cdot \mathrm{~K}^{-1}$ for the process would be-
A. 10
B. 1.0
C. 0.1
D. 100

Answer: D
31. In which of the given reactions, standard reaction entropy change $\left(\Delta S^{0}\right)$ is positive and standard Gibbs energy change $\left(\Delta G^{0}\right)$ decreases sharply with increasing temperature-
A. C(graphite) $+\frac{1}{2} \mathrm{O}_{2}(g) \rightarrow \mathrm{CO}(g)$
B. $\mathrm{CO}(g)+\frac{1}{2} \mathrm{O}_{2}(\mathrm{~g}) \rightarrow \mathrm{CO}_{2}(\mathrm{~g})$
C. $M g(s)+\frac{1}{2} O_{2}(g) \rightarrow M g O(s)$
D. $\mathrm{C}(\mathrm{s})+\mathrm{O}_{2}(\mathrm{~g}) \rightarrow \mathrm{CO}_{2}(\mathrm{~g})$

## Answer: A

## - Watch Video Solution

32. For the reaction, $\quad X_{2} O_{4}(l) \rightarrow 2 \mathrm{XO}_{2}(g), \Delta U=2.1 \quad$ kcal, $\Delta S=20 \mathrm{cal} \cdot \mathrm{K}^{-1}$ at 300 K , hence, $\Delta G$ is -
B. $-2.7 c k c a l$
C. 9.3 kcal
D. -9.3 kcal

## Answer: B

## - Watch Video Solution

33. Heat of combustion of carbon to $\mathrm{CO}_{2}$ is $-393.5 \mathrm{~kJ} / \mathrm{mol}$. The heat released upon the formation of 35.2 kg of $\mathrm{CO}_{2}$ from carbon and oxygen gas is-
A. $-315 k J$
B. $+315 k J$
C. $-630 k J$
D. -3.15 kJ

## Answer: A

34. For a sample of perfect gas when the pressure is changed isothermally from $p_{i}$ to $p_{f}$ the entropy change is given by-
A. $\Delta S=n R T \ln \left(\frac{p_{f}}{p_{i}}\right)$
B. $\Delta S=n R \ln \left(\frac{p_{i}}{p_{f}}\right)$
C. $\Delta S=n R T \ln \left(\frac{p_{f}}{p_{i}}\right)$
D. $\Delta S=R T \ln \left(\frac{p_{i}}{p_{f}}\right)$.

## Answer: B

## - Watch Video Solution

35. Consider the following liquid-vapour equilibrium.
liquid $\Leftrightarrow$ vapour
which of the following relations is correct-
A. $\frac{d \ln P}{d T^{2}}=-\frac{\Delta H_{v}}{T^{2}}$
B. $\frac{d \ln P}{d T}=\frac{\Delta H_{v}}{R T^{2}}$
c. $\frac{d \ln G}{d T^{2}}=\frac{\Delta H_{v}}{R T^{2}}$
D. $\frac{d \ln P}{d T}=-\frac{\Delta H_{v}}{R T}$

## Answer: B

## - Watch Video Solution

36. The correct thermodynamic conditios for the spontaneous reaction at all temperature is-
A. $\Delta H<0$ and $\Delta S>0$
B. $\Delta H<0$ and $\Delta S<0$
C. $\Delta H<0$ and $\Delta S=0$
D. $\Delta G>0$ and $\Delta S<0$
37. A gas is allowed to expand in a well insulated container against a constant external pressure of 2.5 atm from an initial volume of 2.50 L to a final volume of 4.50 L . the change in internal energy $\Delta U$ of the gas in joules will be-
A. -500 J
B. -505 J
C. +505 J
D. 1136.25 J

## Answer: B

## - Watch Video Solution

38. For a given reaction, $\Delta H=35.5 k J \cdot \mathrm{~mol}^{-1} \quad$ and
$\Delta S=83.6 \mathrm{~J} \cdot \mathrm{~mol}^{-1}$. The reaction is spontaneous at (assume that
$\Delta H$ and $\Delta S$ do not vary with temperature)-
A. $T>425 K$
B. all temperature
C. $T>298 K$
D. $T<425 K$.

## Answer: A

## - Watch Video Solution

39. The bond dissociation energies of $X_{2}, Y_{2}$ and $X Y$ are in the ratio of 1:0.5:1. $\Delta H$ for the formation of XY is $-200 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$. The bond dissociationn energy of $X_{2}$ will be-
A. $200 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
B. $100 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
C. $800 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
D. $400 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$

## Answer: C

## - Watch Video Solution

40. Which of the following is intensive property-
A. enthalpy
B. entropy
C. specific heat
D. volume

## Answer: C

## - Watch Video Solution

41. Which of the following is not a thermodynamic function-
A. internal energy
B. work done
C. enthalpy
D. entropy

## Answer: B

## - Watch Video Solution

42. For adiabatic process, which is correct-
A. $\Delta T=0$
B. $\Delta S=0$
C. $q=0$
D. $q_{P}=0$

## Answer: C

43. The enthalpy of formation of $\mathrm{CO}(\mathrm{g}), \mathrm{CO}_{2}(\mathrm{~g}), \mathrm{N}_{2} \mathrm{O}(\mathrm{g})$ and $\mathrm{N}_{2} \mathrm{O}_{4}(\mathrm{~g})$ is $-110,-393,+811$ and $10 \mathrm{~kJ} / \mathrm{mol}$ respectively. for the reaction,
$\mathrm{N}_{2} \mathrm{O}_{4}(\mathrm{~g})+3 \mathrm{CO}(\mathrm{g}) \rightarrow \mathrm{N}_{2} \mathrm{O}(\mathrm{g})+3 \mathrm{CO}_{2}(\mathrm{~g}) \Delta \mathrm{H}_{r}(\mathrm{~kJ} / \mathrm{mol})$ is-
A. -212
B. +212
C. +48
D. -48

## Answer: D

## - Watch Video Solution

44. Bond dissociation energy of $\mathrm{CH}_{4}$ is $360 \mathrm{~kJ} / \mathrm{mol}$ and $\mathrm{C}_{2} H_{6}$ is 620 $\mathrm{kJ} / \mathrm{mol}$. Then bond dissociation energy of C-C bond is-
A. $170 \mathrm{~kJ} / \mathrm{mol}$
B. $50 \mathrm{~kJ} / \mathrm{mol}$
C. $80 \mathrm{~kJ} / \mathrm{mol}$
D. $220 \mathrm{~kJ} / \mathrm{mol}$

## Answer: C

## D Watch Video Solution

45. Which thermodynamic parameter is not a state function-
A. $q$ at constant pressure
B. $q$ at constant volume
C. w at adiabatic
D. $w$ at isothermal

## Answer: D

46. A diatomic gas at pressure $P$, compressed adiabatically to half of its volume, what is the final pressure-
A. $(2)^{1.4} P$
B. $P /(2)^{1.4}$
C. $(2)^{\frac{5}{3}} P$
D. $P /(2)^{5 / 3}$

## Answer: A

## - Watch Video Solution

47. For the reaction of one mole of zinc dust with one mole of sulphur acid in a bomb calorimeter, $\Delta U$ and $w$ correspond to-
A. $\Delta U<0, w=0$
B. $\Delta U<0, w<0$
C. $\Delta U>0, w=0$
D. $\Delta U>0, w>0$

## Answer: A

## - Watch Video Solution

48. The heat liberated when 1.89 g of benzoic acid is burnt in a bomob calorimeter at $25^{\circ} \mathrm{C}$ and it increases the temperature of 18.94 kg of water by $0.632^{\circ} \mathrm{C}$. If the specific heat of water at $25^{\circ} \mathrm{C}$ is $0.998 \mathrm{cal} \cdot \mathrm{g}^{-1} \cdot{ }^{\circ} \mathrm{C}^{-1}$, the value of the heat of combustion of benzoic acid is-
A. 881.1 kcal
B. 771.124 kcal
C. 981.1 kcal
D. 871.2 kcal

## Answer: B

## - Watch Video Solution

49. The heat liberated when 1.89 g of benzoic acid is burnt in a bomb calorimeter at $25^{\circ} \mathrm{C}$ increase the temperature of 18.94 kg of water by $0.632^{\circ} \mathrm{C}$. If the specific heat of water at $25^{\circ} \mathrm{C}$ is $0.998 \mathrm{cal} / \mathrm{g}-\mathrm{deg}$, the value of the heat of combustion of benzoic acid is
A. 881.1 kcal
B. 771.124 kcal
C. 981 kcal
D. 871.2 kcal

## Answer: B

## - Watch Video Solution

50. What is the entropy change in $2 \mathrm{~mol} N_{2}$, when its temperature is taken from 400 K to 800 K , at constant pressure-
A. $30 \mathrm{~J} / \mathrm{K}$
B. $60 \mathrm{~J} / \mathrm{K}$
C. $40 \mathrm{~J} / \mathrm{K}$
D. $20 \mathrm{~J} / \mathrm{K}$

## Answer: C

## - Watch Video Solution

51. 1 mole of an ideal gas expands isothermally reversible from 2 litre to 4 litre and 3 moles of the same gas expands from 2 litre to $x$ litre and doing same work, what is ' $x$ '-
A. $(8)^{1 / 3}$
B. $(4)^{2 / 3}$
C. 2
D. 4

## Answer: B

## - Watch Video Solution

52. Which of the following are extensive properties-
A. volume and enthalpy
B. volume and temperature
C. volume and specific heat
D. pressure and temperature

## Answer: A

## - Watch Video Solution

53. If one monoatomic gas is expanded adiabatically from 2 L to 10 L at 1 atm external pressure then the value of $\Delta U$ (in $\mathrm{atm} \cdot L$ ) is-
A. -8
B. 0
C. -66.7
D. 58.2

## Answer: A

## - Watch Video Solution

## MCQ HOTSPOT (SINGLE CORRENT TYPE)

1. The equation of state for ' $n$ ' mol of an ideal gas is $P V=n R T$. In this equation, the respective number of intensive and extensive properties are-
A. 2,3
B. 3,2
C. 1,4
D. 4,1

## Answer: B

## - Watch Video Solution

2. $\mathrm{H}_{2} \mathrm{O}(\mathrm{l}) \rightarrow \mathrm{H}^{+}(a q)+\mathrm{OH}^{-}(a q), \Delta H^{0}=57.32 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
$\mathrm{H}_{2}(\mathrm{~g})+\frac{1}{2} \mathrm{O}_{2}(\mathrm{~g}) \rightarrow \mathrm{H}_{2} \mathrm{O}(\mathrm{l}), \Delta H^{0}=-285.8 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$ at $25^{\circ} \mathrm{C}$. If
$\Delta H_{f}^{0}\left[H^{+}(a q)\right]=0$, then the standard heat of formation $\left(k J \cdot \mathrm{~mol}^{-1}\right)$ for $\mathrm{OH}^{-}(a q)$ at $25^{\circ} \mathrm{C}$ is-
A. -142.9
B. -228.48
C. -343.12
D. -253.71

## Answer: B

3. For a reaction at TK $\Delta H>0$ and $\Delta S>0$. If the reaction attains equilibrium at a temperature of $T_{1} K$, (assume $\Delta H$ and $\Delta S$ are independent of temperature) then the reaction is spontaneous
A. $T<T_{1}$
B. $T>T_{1}$
C. $T=T_{1}$
D. $T \geq T_{1}$.

## Answer: B

## - Watch Video Solution

4. The change in entropy for 2 mol ideal gas in an isothermal reversible expansion from 10 mL to 100 mL at $27^{\circ} \mathrm{C}$ is-
A. $26.79 \mathrm{~J} \cdot \mathrm{~K}^{-1}$
B. $38.29 \mathrm{~J} \cdot \mathrm{~K}^{-1}$
C. $59.07 J \cdot K^{-1}$
D. $46.26 \mathrm{~J} \cdot \mathrm{~K}^{-1}$

## Answer: B

## - Watch Video Solution

5. Which of the statements is true-
A. a reaction, in which $\Delta H<0$ is always spontaneous
B. a reaction, in which $\Delta H>0$ can never occur spontaneously
C. for a spontaneous process in an isolated system, $\Delta S_{\text {sys }}>0$
D. for a spontaneous process in an isolated system, $\Delta S_{\text {sys }}=0$

## Answer: C

6. 

$\mathrm{CaCO}_{3}(s) \rightarrow \mathrm{CaO}(s)+\mathrm{CO}_{2}(g), \Delta H^{0}=+179.1 k J \cdot \mathrm{~mol}^{-1} \quad$ and $\Delta S^{0}=160.2 J \cdot K^{-1}$. If $\Delta H^{0}$ and $\Delta S^{0}$ are temperature independent, then temperature above which the reaction will be spontaneous is equal to-
A. 1008 K
B. 1200 K
C. 845 K
D. 1118 K

## Answer: D

## D Watch Video Solution

7. When a gas (molar mass $=28 g \cdot \mathrm{~mol}^{-1}$ ) of mass 3.5 is burnt completely in presence of excess oxygen in a bomb calorimeter, the temperature of the calorimeter increases from 298 K to 298.45 K . the heat
of combustion at constant volume for the gas (Given: heat capacity of the calorimeter $=2.5 k J \cdot K^{-1}$ ) is-
A. $4.5 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
B. $8.0 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
C. $9.0 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
D. $9.5 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$

## Answer: C

## - Watch Video Solution

8. For the reaction, $2 \mathrm{NH}_{3}(\mathrm{~g}) \rightarrow \mathrm{N}_{2}(\mathrm{~g})+3 \mathrm{H}_{2}(\mathrm{~g})$ -
A. $\Delta H<0, \Delta S>0$
B. $\Delta H>0, \Delta S>0$
C. $\Delta H>0, \Delta S<0$
D. $\Delta H<0, \Delta S<0$

## - Watch Video Solution

9. Which of the following pairs is true for the process $C_{6} H_{6}(g)\left[1 \mathrm{~atm}, 80.1^{\circ} \mathrm{C}\right] \rightarrow C_{6} H_{6}(\mathrm{l})\left[1 \mathrm{~atm}, 80.1^{\circ} \mathrm{C}\right]-$
A. $\Delta G<0, \Delta S>0$
B. $\Delta G<0, \Delta S<0$
C. $\Delta G=0, \Delta S<0$
D. $\Delta G=0, \Delta S>0$

## Answer: C

## - Watch Video Solution

10. The internal energy change when a system goes from state $P$ to $Q$ is $30 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$. If the system goes from P to Q by a reversible path and
returns to state $P$ by an irreversible path, what would be the net change in internal energy-
A. 30kJ
B. $<30 k J$
C. zero
D. $>30 k J$

## Answer: C

## - Watch Video Solution

11. If at normal pressure and $100^{\circ} \mathrm{C}$ the changes in enthalpy and entropy for the process, $\mathrm{H}_{2} \mathrm{O}(l) \rightarrow \mathrm{H}_{2} \mathrm{O}(g)$, are $\Delta H$ and $\Delta S$ respectively, then $\Delta H-\Delta U$ is-
A. $5.6 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
B. $6.2 k J \cdot \mathrm{~mol}^{-1}$
C. $3.1 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
D. $4.8 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$.

## Answer: C

## - Watch Video Solution

12. At $25^{\circ} \mathrm{C}$, the standard heat of formation for $\mathrm{Br}_{2}(\mathrm{~g})$ is $30.9 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
. At this temperature, the heat of vaporisation for $B r_{2}(l)$ is-
A. $<30.9 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
B. $30.9 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
C. $>30.9 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
D. cannot be predicted

## Answer: B

## - Watch Video Solution

13. At $25^{\circ} \mathrm{C}$, when 0.5 mol of HCl reacts completely with 0.5 mol of NaOH in a dilute solution, 28.65 kJ of heat is liberated. If at $25^{\circ} \mathrm{C} \quad \Delta H_{f}^{0}\left[\mathrm{H}_{2} \mathrm{O}(\mathrm{l})\right]=-285.8 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$, then $\Delta H_{f}^{0} O H^{-}(a q)$ is-
A. $-314.45 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
B. $-228.5 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
C. $-257.15 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
D. $-343.1 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$

## Answer: B

## - Watch Video Solution

14. On combustion $C_{x} H_{y}(l)$ forms $\mathrm{CO}_{2}(g)$ and $\mathrm{H}_{2} \mathrm{O}(l)$. At a given temperature and pressure, the value of $\left(\frac{\Delta H-\Delta U}{R T}\right)$ in this combustion reaction is-
A. $\frac{x}{5}$
B. $\frac{x+y}{5}$
C. $-\frac{y}{4}$
D. $\frac{x-y}{4}$

## Answer: C

## - Watch Video Solution

15. An ideal gas is compressed isothermaly at $25^{\circ} \mathrm{C}$ from a volume of 10 L to a volume of 6L. Which of the following is not true for this process-
A. $q<0$
B. $w>0$
C. $\Delta U=0$
D. $\Delta H>0$

## Answer: D

16. At $27^{\circ} C$, for the reaction $a A(g)+B(g) \rightarrow 2 C(g), P \Delta V=-2.5 k J$
. The value of 'a' is-
A. 1
B. 2
C. 3
D. 4

## Answer: B

## - Watch Video Solution

17. When 1 mol of an ideal gas is compressed in a reversible isothermal process at T K, the pressure of the gas changes from 1 atm to 10 atm . In the process, if the work done by the gas be 5.744 kJ , then T is-
A. 400 K
B. 300 K
C. 420 K
D. 520 K

## Answer: B

## - Watch Video Solution

18. For 0.5 mol of an ideal gas, 15 cal of heat is required to raise its temperature by 10K at constant volume. The molar heat capacity for the gas at constant pressure is-
A. $3 \mathrm{cal} \cdot \mathrm{K}^{-1} \cdot \mathrm{~mol}^{-1}$
B. $4 \mathrm{cal} \cdot \mathrm{K}^{-1} \cdot \mathrm{~mol}^{-1}$
C. $5 \mathrm{cal} \cdot \mathrm{K}^{-1} \cdot \mathrm{~mol}^{-1}$
D. $4.5 \mathrm{cal} \cdot \mathrm{K}^{-1} \cdot \mathrm{~mol}^{-1}$

## Answer: C

19.1 mol of an ideal gas is enclosed in a cylinder fitted with a frictionless and weightless piston. The gas absorbs $\mathrm{x} k \mathrm{k}$ heat and undergoes expansion. If the amount of expansion work done by the gas is xkJ , then the expansion is-
A. adiabatic
B. cyclic
C. isothermal
D. cannot be predicted

## Answer: C

## - Watch Video Solution

20. Given (at $25^{\circ} \mathrm{C}$ ):
$\mathrm{Ca}(\mathrm{s})+\frac{1}{2} \mathrm{O}_{2}(\mathrm{~g}) \rightarrow \mathrm{CaO}(\mathrm{s}), \Delta H^{0}=-635.2 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
$\mathrm{H}_{2}(\mathrm{~g})+\frac{1}{2} \mathrm{O}_{2}(\mathrm{~g}) \rightarrow \mathrm{H}_{2} \mathrm{O}(\mathrm{l}), \Delta H^{0}=-285.8 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
$\mathrm{CaO}(s)+\mathrm{H}_{2} \mathrm{O}(\mathrm{l}) \rightarrow \mathrm{Ca}(\mathrm{OH})_{2}(\mathrm{~s})$,
$\Delta H^{0}=-65.6 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
The heat of formation (in $\mathrm{kJ} \cdot \mathrm{mol}^{-1}$ ) for $\mathrm{Ca}(\mathrm{OH})_{2}$ (s) is-
A. -855.4
B. -673.9
C. -986.6
D. -731.7

## Answer: C

## - Watch Video Solution

21. Given (at $25^{\circ} \mathrm{C}$ ):
$2 \mathrm{FeSO}_{4}(s) \rightarrow \mathrm{Fe}_{2} \mathrm{O}_{3}(\mathrm{~s})+\mathrm{SO}_{2}(\mathrm{~g})+\mathrm{SO}_{3}(\mathrm{~g}), \Delta \mathrm{H}^{0}=340.1 \mathrm{~kJ}$
$2 \mathrm{Fe}(\mathrm{s})+\frac{3}{2} \mathrm{O}_{2}(\mathrm{~g}) \rightarrow \mathrm{Fe}_{2} \mathrm{O}_{3}(\mathrm{~s}), \Delta \mathrm{H}^{0}=-824.2 k J$
$\mathrm{S}(\mathrm{s}$, rhombic $)+\mathrm{O}_{2}(\mathrm{~g}) \rightarrow \mathrm{SO}_{2}(\mathrm{~g}), \Delta H^{0}=-296.8 \mathrm{~kJ}$
$\mathrm{SO}_{2}(\mathrm{~g})+\frac{1}{2} \mathrm{O}_{2}(\mathrm{~g}) \rightarrow \mathrm{SO}_{3}(\mathrm{~g}), \Delta H^{0}=-98.9 k J$
Heat of formation (in kJ $\mathrm{mol}^{-1}$ ) of $\mathrm{FeSO}_{4}(\mathrm{~s})$ at $25^{\circ} \mathrm{C}$ is-
A. -879.9
B. -789.6
C. -976.5
D. -928.4

## Answer: D

## - Watch Video Solution

22. At $25^{\circ} \mathrm{C}$, the standard heats of formation of $\mathrm{H}_{2} \mathrm{O}(g), \mathrm{H}_{2} \mathrm{O}_{\mathrm{g}}, \mathrm{H}(\mathrm{g})$ and $\mathrm{O}(\mathrm{g}) \quad$ are $\quad-241.8, \quad-135.66,218$ and $248.17 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$ respectively. The bond energy (in $\mathrm{kJ} \cdot \mathrm{mol}^{-1}$ ) of O-O bond in $\mathrm{H}_{2} \mathrm{O}_{2}(\mathrm{~g})$ molecule is-
A. 179.23
B. 160.19
C. 142.6
D. 157.16

## Answer: C

## - View Text Solution

23. Given (at $25^{\circ} \mathrm{C}$ ):
$\mathrm{C}(\mathrm{s}$, graphite $)+\frac{1}{2} O_{2}(g) \rightarrow C O(g), \Delta H^{0}=-110.5 k J \cdot \mathrm{~mol}^{-1}$ $\frac{1}{2} O_{2}(g) \rightarrow O, \Delta H^{0}=+249.1 k J \cdot \mathrm{~mol}^{-1}$

$$
C O(g) \rightarrow C(g)+O(g), \Delta H^{0}=1073.24 k J \cdot \mathrm{~mol}^{-1}
$$

The standard enthalpy change for the process, $\mathrm{C}(\mathrm{s}$, graphite) $\rightarrow C(g)$ at $25^{\circ} C$ is-
A. $+934.64 k J \cdot \mathrm{~mol}^{-1}$
B. $713.64 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
C. $962.74 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
D. $652.39 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$

## D Watch Video Solution

24. At
$25^{\circ} C$,
for
the
reaction,
$H^{+}(a q)+\mathrm{OH}^{-}(a q) \rightarrow \mathrm{H}_{2} O(l), \Delta H^{0}=-57.3 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$. If the ionisation enthalpy of HCN in water by $45.2 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$, then the standard heat of reaction (in $k J \cdot \mathrm{~mol}^{-1}$ ) for the reaction, $\mathrm{HCN}(a q)+\mathrm{NaOH}(a q) \rightarrow \mathrm{NaCN}(a q)+\mathrm{H}_{2} \mathrm{O}(l)$, in dilute aqueous solution is-
A. -113.5
B. -12.1
C. -102.5
D. -35.7

## Answer: B

25. The temperature of a bomb calorimeter changes from $25^{\circ} \mathrm{C}$ to $32.7^{\circ} \mathrm{C}$ when wg of naphthalene (molar mass $=128 \mathrm{~g} \cdot \mathrm{~mol}^{-1}$ ) is burnt completely in the calorimeter. If the heat of combustion at constant volume for naphthalene is $-5152 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$, then w is (heat capacity of the calorimeter $=8.19 k J \cdot K^{-1}$ ).
A. 0.87 g
B. 1.91 g
C. 2.37 g
D. 1.57 g

## Answer: D

## - Watch Video Solution

26. In which of the following processes the change in entropy for the system is zero-
A. irreversible adiabatic processes
B. reversible adiabatic process
C. a spontaneous process occurring is an isolated system
D. isothermal expansion of an ideal gas

## Answer: B

## - Watch Video Solution

27. A system undergoes the process: $A \rightarrow B \rightarrow C \rightarrow D$. In this process, the change in a state function ( X ) of the system is x . in the steps $A \rightarrow B$ and $B \rightarrow C$ of the process, if the changes in X are y and z respectively, then the change in X in step $D \rightarrow C$ is-
A. $x-y-z$
B. $x-z+y$
C. $y+z-x$
D. $y-z-x$

## Answer: C

## D Watch Video Solution

28. At $27^{\circ} C, \Delta H=+6 k J$ for the reaction $A+2 B \rightarrow 3 C$. In the reaction, if $\Delta S_{\text {univ }}=2 J \cdot K^{-1}$ then $\Delta S_{s y s}$ (in $J \cdot K^{-1}$ ) is-
A. +2
B. +3
C. +20
D. +22

## Answer: D

## - Watch Video Solution

29. An LPG cylinder contains 14 kg of butane. A family requires $2 \times 10^{4} \mathrm{~kJ}$ of heat for their cooking purpose everyday. By how many days will the
butane in the cylinder be used up (Given: heat of combustion for butane= $-2658 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$ )-
A. 15 days
B. 20 days
C. 32 days
D. 40 days

## Answer: C

## - Watch Video Solution

30. For a reaction involving 1 mol of Zn and 1 mol of $\mathrm{H}_{2} \mathrm{SO}_{4}$ in a bomb calorimeter-
A. $\Delta U>0, w>0$
B. $\Delta U>0, w=0$
C. $\Delta U<0, w<0$
D. $\Delta U<0, w=0$

Answer: D

## - Watch Video Solution

31. Assuming that water vapour is an ideal gas, the internal energy change $(\Delta U)$ when 1 mol of water is vaporised at 1 bar pressure and $100^{\circ} \mathrm{C}$, will be (Given: at 1 bar and 373 K , molar enthalpy of vaporisation of water is $41 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}, R=8.3 \mathrm{~J} \cdot \mathrm{~mol}^{-1} \cdot \mathrm{~K}^{-1}$ )-
A. $4.100 \mathrm{~kJ}^{2} \mathrm{~mol}^{-1}$
B. $3.7904 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
C. $37.904 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
D. $41.00 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$

## Answer: C

32. At $25^{\circ} \mathrm{C}$ and 1 atm pressure, $\Delta H$ and pressure-volume work for the reaction, $\quad 2 \mathrm{H}_{2}(\mathrm{~g})+\mathrm{O}_{2}(\mathrm{~g}) \rightarrow 2 \mathrm{H}_{2} \mathrm{O}(\mathrm{g})$, are -483.7 kJ and 2.47 kJ respectively. In this reaction the value of $\Delta U$ is-
A. -486.17 kJ
B. $-481.23 k J$
C. $-400.23 k J$
D. -492.6 kJ

## Answer: B

## - Watch Video Solution

33. The initial state of 1 mol of an ideal gas is $\left(P_{1}, V_{1}, T_{1}\right)$. The gas is expanded by a reversible isothermal process and also by a reversible adiabatic process separately. If final volume of the gas is same in both the processes, and changes in internal energy in the isothermal and adiabatic processes are $\Delta U_{1}$ and $\Delta U_{2}$ respectively, then-
A. $\Delta U_{1}=\Delta U_{2}$
B. $\Delta U_{1}<\Delta U_{2}$
C. $\Delta U_{1}>\Delta U_{2}$
D. cannot be predicted

## Answer: C

## - Watch Video Solution

34. At a constant pressure the amount of heat required to raise the temperature of 1 mol of an ideal gas by $10^{\circ} C$ is xk . If the same increase in temperature were carried out at constant volume, then the heat required would be-
A. $>x$ kJ
B. $<x$ kJ
C. $=x \mathrm{~kJ}$
D. $\geq \mathrm{xkJ}$

## D Watch Video Solution

35. Enthalpy of fusion of ice at $0^{\circ} \mathrm{C}$ and 1 atm is $6.02 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$. The change in entropy $\left(J \cdot K^{-1}\right)$ of the surroundings when 9 g of water is frozen at $0^{\circ} C$ and 1 atm pressure is-
A. +11.02
B. -11.02
C. -20.27
D. +23.09

## Answer: B

36. At given pressure and a temperature of $300 \mathrm{~K}, \Delta S_{\text {sys }}$ and $\Delta S_{\text {surr }}$ for a reaction are $8.0 J \cdot K^{-1}$ and $4.0 J \cdot K^{-1}$ respectively. $\Delta G$ for this reaction is-
A. -3.0 kJ
B. -3.6 kJ
C. 3.0 kJ
D. $-4.2 k J$

## Answer: B

## - Watch Video Solution

37. In a reversible process, if changes in entropy of the system and its surroundings are $\Delta S_{1} \& \Delta S_{2}$ respectively, then-
A. $\Delta S_{1}+\Delta S_{2}>0$
B. $\Delta S_{1}+\Delta S_{2}<0$
C. $\Delta S_{1}+\Delta S_{2}=0$
D. $\Delta S_{1}+\Delta S_{2} \geq 0$.

## Answer: C

## - Watch Video Solution

38. A flask of volume 1 L contains 1 mol of an ideal gas. The flask is connected to an evacuated flask, and as a result the volume of the gas becomes 10 L . the change in entropy $\left(J \cdot K^{-1}\right)$ of the gas is this process is-
A. 9.56
B. 19.14
C. 11.37
D. 14.29

## Answer: B

39. The heats of neutralisation of four acids $A, B, C$ and $D$ are 13.7, 9.4, 11.2 and 12.4 kcal respectively when they are neutralised against a common base. The weakest acid among $A, B, C$ and $D$ is-
A. A
B. B
C. C
D. D

## Answer: B

## - Watch Video Solution

40. In a closed insulated container, a liquid is stirred with a paddle to increase the temperature. Which is true-

$$
\text { A. } \Delta U=w \neq 0, q=0
$$

B. $\Delta U=w=q \neq 0$
C. $\Delta U=0, w=q \neq 0$
D. $w=0, \Delta U=q \neq 0^{`}$

## Answer: A

## - Watch Video Solution

41. How many calories are required to increase the temperature of 40 g of Ar from $40^{\circ} \mathrm{C}$ to $100^{\circ} \mathrm{C}$ at a constant volume $\left(R=2 \mathrm{cal} \cdot \mathrm{mol}^{-1} \cdot K^{-1}\right)-$
A. 120
B. 2400
C. 1200
D. 180

## Answer: D

42. Water is supercooled to $-4^{\circ} \mathrm{C}$. The enthalpy (H) of the supercooled water is-
A. same at ice at $-4^{\circ} \mathrm{C}$
B. more than ice at $-4^{\circ} \mathrm{C}$
C. same as ice at $0^{\circ} C$
D. less than ice at $-4^{\circ} C$.

## Answer: D

## - Watch Video Solution

43. Standard entropy of $X_{2}, Y_{2}$ and $X Y_{3}$ are 60, 40 and $50 \mathrm{~J} \cdot \mathrm{~K}^{-1} \cdot \mathrm{~mol}^{-1}$ respectively. For the reaction $\frac{1}{2} X_{2}+\frac{3}{2} Y_{2} \rightarrow X Y_{3},(\Delta H=-30 \mathrm{~kJ})$ to be at equilibrium, the temperature will be-
A. 1250 K
B. 750 K
C. 500 K
D. 1000 K

## Answer: B

## - Watch Video Solution

44. Two moles of a gas of volume 50 L and pressure 1 atm are compressed adiabatically and reversibly to 10 atm . What is the atomicity of the gas $\left(T_{1} / T_{2}=0.4\right)-$
A. 1
B. 2
C. 3
D. 4

## - Watch Video Solution

45. Given (at $25^{\circ} \mathrm{C}$ ):
$\mathrm{C}(\mathrm{s}$, graphite $) \rightarrow C(g), \Delta H^{0}=+713.64 \mathrm{kJmol}^{-1}$
$\frac{1}{2} \mathrm{H}_{2}(g) \rightarrow H(g), \Delta H^{0}=+218 k J \cdot \mathrm{~mol}^{-1}$
$6 \mathrm{C}(\mathrm{s}$, graphite $)+3 H_{2}(g) \rightarrow C_{6} H_{6}(g), \Delta H^{0}=+82.93 k J \cdot \mathrm{~mol}^{-1}$
At $25^{\circ} \mathrm{C}$, if the energy of C_H and C-C bonds are 418 and $347 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$ respectively, then the $C=C$ bond energy is-
A. $+679.8 k J \cdot \mathrm{~mol}^{-1}$
B. $+652.63 k J \cdot \mathrm{~mol}^{-1}$
C. $+808.75 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
D. $+763.39 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$

## Answer: B

46. $\Delta H$ value for the given reactions at $25^{\circ} \mathrm{C}$ are-
$C_{3} H_{8}(g) \rightarrow 3 C(s)+4 H_{2}(g), \Delta H^{0}=103.8 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
$2 \mathrm{H}_{2}(\mathrm{~g})+\mathrm{O}_{2}(\mathrm{~g}) \rightarrow 2 \mathrm{H}_{2} \mathrm{O}(\mathrm{l}), \Delta H^{0}=-571.6 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
$\mathrm{C}_{2} \mathrm{H}_{6}(\mathrm{~g})+\frac{7}{2} \mathrm{O}_{2}(\mathrm{~g}) \rightarrow 2 \mathrm{CO}_{2}(\mathrm{~g})+3 \mathrm{H}_{2} \mathrm{O}(\mathrm{l}), \Delta \mathrm{H}^{0}=-1560 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
$\mathrm{CH}_{4}(\mathrm{~g})+2 \mathrm{O}_{2}(\mathrm{~g}) \rightarrow \mathrm{CO}_{2}(\mathrm{~g})+2 \mathrm{H}_{2} \mathrm{O}(\mathrm{l}), \Delta \mathrm{H}^{0}=-890 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
$C(s)+O_{2}(g) \rightarrow \mathrm{CO}_{2}(g), \Delta H^{0}=-393.5 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
Calculate $\Delta H^{0}$ for the reaction at $25^{\circ} \mathrm{C}$
$\mathrm{C}_{3} \mathrm{H}_{8}(\mathrm{~g})+\mathrm{H}_{2}(\mathrm{~g}) \rightarrow \mathrm{C}_{2} \mathrm{H}_{6}(\mathrm{~g})+\mathrm{CH}_{4}(\mathrm{~g})$
A. +98.45 kJ
B. -55.70 kJ
C. 62.37 kJ
D. -47.25 kJ

## Answer: B

47. At $0^{\circ} C$ and normal pressure, the enthalpy of fusion of ice is $334.7 \mathrm{~J} \cdot \mathrm{~g}^{-1}$. At this temperature and pressure, if 1 mol of water iis converted into 1 mol ice, then the change in entropy of the system will be-
A. $16.7 J \cdot K^{-1}$
B. $-16.7 J \cdot K^{-1}$
C. $22.06 \mathrm{~J} \cdot \mathrm{~K}^{-1}$
D. $-22.06 \mathrm{~J} \cdot \mathrm{~K}^{-1}$

## Answer: D

## - Watch Video Solution

48. Given: $\mathrm{NH}_{3}(g)+3 \mathrm{Cl}_{2}(\mathrm{~g}) \rightarrow \mathrm{NCl}_{3}(\mathrm{~g})+3 \mathrm{HCl}(\mathrm{g}),-\Delta \mathrm{H}_{1}$
$\mathrm{N}_{2}(\mathrm{~g})+3 \mathrm{H}_{2}(\mathrm{~g}) \rightarrow 2 \mathrm{NH}_{3}(\mathrm{~g}), \Delta \mathrm{H}_{2}$

$$
\mathrm{H}_{2}(\mathrm{~g})+\mathrm{Cl}_{2}(\mathrm{~g}) \rightarrow 2 \mathrm{HCl}(\mathrm{~g}), \Delta \mathrm{H}_{3}
$$

Heat of formation $\left(\Delta H_{f}\right)$ of $N C l_{3}$ in terms of $\Delta H_{1}, \Delta H_{2}$ and $\Delta H_{3}$ is-

$$
\text { A. }-\Delta H_{1}+\frac{\Delta H_{2}}{2}-\frac{3}{2} \Delta H_{3}
$$

B. $\Delta H_{1}+\frac{\Delta H_{2}}{2}-\frac{3}{2} \Delta H_{3}$
C. $\Delta H_{1}-\frac{\Delta H_{2}}{2}-\frac{3}{2} \Delta H_{3}$
D. none of these

## Answer: A

## - Watch Video Solution

49. When 1 g of graphite is completely burnt in a bomb calorimeter, the temperature of the bomb and water rises from $25^{\circ} \mathrm{C}$ to $30.5^{\circ} \mathrm{C}$. If the heat capacity of the calorimeter is $5.96 \mathrm{~kJ} \cdot{ }^{\circ} \mathrm{C}^{-1}$, then the heat of combustion per mole of graphite at constant volume is-
A. $-357.13 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
B. $-289.71 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
C. $-393.36 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
D. $-307.94 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$

## Answer: C

## D Watch Video Solution

50. The volume of a gas is reduced to half from its original volume. The specific heat will -
A. reduce to half
B. double
C. remain constant
D. increase four times

## Answer: C

## - Watch Video Solution

51. For which molar specific heat is temperature independent-
A. argon
B. hydrogen
C. nitrogen
D. carbon dioxide

## Answer: A

## D Watch Video Solution

52. Which of the following quantities are stable functiond-
A. q
B. $q+w$
C. w
D. U+PV

## Answer: B::D

53. Which of the following comments are true-
A. only for an ideal gas, $C_{P, m}>C_{V, m}$
B. for any gas, $C_{P, m}>C_{V, m}$
C. for a solid substance, $C_{P, m} \approx C_{V, m}$
D. for 'n' mol of ideal gas, $C_{P, m}-C_{V, m}=n R$

## Answer: B::C::D

## - Watch Video Solution

54. When 3 g of ethane gas is brunt at $25^{\circ} C, 156 \mathrm{~kJ}$ of heat is liberated. If the standard enthalpies of formation for $\mathrm{CO}_{2}(g)$ and $\mathrm{H}_{2} \mathrm{O}(l)$ are -393.5 and -285.8 $\mathrm{kJ} \cdot \mathrm{mol}^{-1}$ respectively, then for ethane gas-
A. standard heat of combustion $=-1560 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
B. standard heat of formation $=-67.9 k J \cdot \mathrm{~mol}^{-1}$
C. standard heat of combustion $=-832 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
D. standard heat of formation $=-84.4 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$.

## Answer: A::D

## - Watch Video Solution

55. A reaction is spontaneous at a temperature of 300 K , but it is nonspontaneous at a temperature of 400 K . If $\Delta H$ and $\Delta S$ for the reaction do not depend on temperature, then-
A. $\Delta H>0$
B. $\Delta H<0$
C. $\Delta S>0$
D. $\Delta S<0$

## Answer: B::D

56. The reaction, $3 O_{2}(g) \rightarrow 2 O_{3}(g)$, is non-spontaneous at any temperature. Hence-
A. the reverse reaction is spontaneous at any temperature
B. $\Delta H<0$ and $\Delta S<0$ for the reverse reaction
C. $\Delta H>0, \Delta S>0$ for the reverse reaction
D. $\Delta H<0$ and $\Delta S>0$ for the reverse reaction

## Answer: A:D

## - Watch Video Solution

57. For isothermal free expansion of an ideal gas-
A. $\Delta U=0$
B. $\Delta S<0$
C. $\Delta S>0$
D. $\Delta H>0$

## Answer: A: C

## - Watch Video Solution

58. The changes in which of the following quantities are zero for a cyclic process-
A. enthalpy
B. work
C. entropy
D. internal energy

## Answer: A::C::D

## - Watch Video Solution

59. Which of the following relations are true for the reaction, $\mathrm{PCl}_{5}(\mathrm{~g}) \rightarrow \mathrm{PCl}_{3}(\mathrm{~g})+\mathrm{Cl}_{2}(\mathrm{~g})-$
A. $\Delta H<0$
B. $\Delta G>0$
C. $\Delta S<0$
D. $\Delta S>0$

## Answer: B::D

## - Watch Video Solution

60. Identify the correct statement-
A. standard state of bromine $\left(25^{\circ} \mathrm{C}, 1 \mathrm{~atm}\right)$ is $\mathrm{Br}_{2}(\mathrm{~g})$
B. C(graphite, s) $\rightarrow C$ (diamond, s), here $\Delta H \neq 0$
C.standard enthalpy change for the reaction

$$
N_{2}(g)+O_{2}(g) \rightarrow 2 N O(g) \text { at } 25^{\circ} \mathrm{C} \text { and } 1 \text { atm is standard }
$$

enthalpy of formation of $\mathrm{NO}(\mathrm{g})$
D. at a particular temperature and pressure, if $\Delta H=x k J$ for the reaction $A+3 B \rightarrow 2 C$ then $\Delta H=-\frac{x}{2} \mathrm{~kJ}$ for the reaction

$$
C \rightarrow \frac{1}{2} A+\frac{3}{2} B
$$

## Answer: B::D

## - Watch Video Solution

61. Which of the following statement are correct-
A. in any adiabatic process, $\Delta S_{s y s}=0$
B. in isothermal expansion of an ideal gas, $\Delta H=0$
C. an endothermic reaction will be spontaneous if in this reaction
$\Delta S_{s y s}>0$
D. heat capacity is a path depend quantity

## Answer: B::C::D

## Watch Video Solution

62. Correct statements are-
A. $A+B \rightarrow D, \Delta H=x k J$. This reaction is performed in the following two steps: (i) $A+B \rightarrow C$
(ii) $C \rightarrow D$. If in step (i) $\Delta H=y k J$, then $\Delta H=(x-y) J$ in step
(ii)
B. For a spontaneous process occuring in an isolated system $\Delta S_{s y s}>0$ at equilibrium
C. in a spontaneous chemical reaction at constant temperature and pressure, $\Delta G=-T \Delta S_{\text {surr }}$
D. in a chemical reaction $\Delta H>0$ and $\Delta S>0$. The reaction attains equilibrium at temperature, $T_{c}$. At constant pressure and constant temperature TK the reaction will be spontaneous, if $T>T_{c}$.

## - View Text Solution

63. Some reaction and their $\Delta H^{0}$ values are given below:
$\mathrm{C}($ graphite, s$)+\frac{1}{2} O_{2}(g) \rightarrow C O(g), \Delta H^{0}=a \mathrm{~kJ}$
$\mathrm{CO}(g)+\frac{1}{2} \mathrm{O}_{2}(g) \rightarrow \mathrm{CO}_{2}(g), \Delta H^{0}=b \mathrm{~kJ}$
$H_{2}(g)+\frac{1}{2} O_{2}(g) \rightarrow H_{2} O(l), \Delta H^{0}=c \mathrm{~kJ}$
$\mathrm{CH}_{4}(g)+2 \mathrm{O}_{2}(g) \rightarrow \mathrm{CO}_{2}(g)+2 \mathrm{H}_{2} \mathrm{O}(l), \Delta H^{0}=d \mathrm{~kJ}$
2C(gaphite, s) $+3 H_{2}(g) \rightarrow C_{2} H_{6}(g), \Delta H^{0}=m \mathrm{~kJ}$
Which of the following statements are correct-
A. standard heat of
formation
of
$C H_{4}(g)=(a+b+2 c-d) k J \cdot m o l-1$
B. standard heat of
$C_{2} H_{6}=(2 a+2 b+3 c-m) k J \cdot \mathrm{~mol}^{-1}$
C. standard heat of combustion of carbon $=a k J \cdot \mathrm{~mol}^{-1}$
D. standard heat of formation of $\mathrm{CO}_{2}(g)=(a+b) k J \cdot \mathrm{~mol}^{-1}$.

## D Watch Video Solution

64. At $25^{\circ} \mathrm{C}$, in which of the given reactions do standard enthalpies of reactions indicate standard enthalpies of formation of the product in the respective reactions-
A. $\mathrm{H}_{2}(g)+\frac{1}{3} \mathrm{O}_{3}(g) \rightarrow \mathrm{H}_{2} \mathrm{O}(l)$
B. $N a(s)+\frac{1}{2} C l_{2}(g) \rightarrow N a C l(s)$
C. $C O(g)+\frac{1}{2} O_{2}(g) \rightarrow \mathrm{CO}_{2}(g)$
D. $\frac{1}{2} H_{2}(g)+I_{2}(s) \rightarrow H I(g)$

## Answer: B::D

## - Watch Video Solution

65. I. $\mathrm{CaCO}_{3}(s) \rightarrow \mathrm{CaO}(s)+\mathrm{CO}_{2}(g)$
II. $\mathrm{SO}_{2}(\mathrm{~g})+\frac{1}{2} \mathrm{O}_{2}(g) \rightarrow \mathrm{SO}_{3}(g)$
III. $P C l_{5}(g) \rightarrow P C l_{3}(g)+C l_{2}(g)$
IV. $\mathrm{N}_{2}(g)+\mathrm{O}_{2}(g) \rightarrow 2 \mathrm{NO}(g)$

For which of these reactions, P-V work is negative-
A. I
B. II
C. III
D. IV

## Answer: A:C

## - Watch Video Solution

66. Which of the given reactions are endothermic in nature-
A. combustion of methane
B. decomposition of water
C. dehydrogenation of ethane to ethene
D. conversion of graphite to diamond

## Answer: B::C::D

## - Watch Video Solution

67. At constant volume and $298 \mathrm{~K}, 1 \mathrm{~mol}$ of a gas is heated and the final temperature is 308 K . If heat supplied to the gas is 500 J , then for the overall process-
A. $w=0$
B. $w=-500 J$
C. $\Delta U=500 J$
D. $\Delta U=0$

## Answer: A::C

68. True for spontaneous dissolution of KCl in water are-
A. $\Delta G<0$
B. $\Delta H>0$
C. $\Delta S_{\text {surr }}<0$
D. $\Delta H<0$

## Answer: A: B

## - Watch Video Solution

69. When a bottle of perfume is opened, odorus molecules mix with air and diffuse gradually throughout the room. The correct facts about the process are-
A. $\Delta S=0$
B. $\Delta G<0$
C. $\Delta S>0$
D. $\Delta S<0$

## Answer: B::C

## - Watch Video Solution

70. At $0^{\circ} C$ and 10 atm pressure 14 g of oxygen is subjected to undergo a reversible adiabatic expansion to a pressure of 1 atm. Hence in this process-
A. final temperature of the gas is 141.4 K
B. final temperature of the gas is 217.3 K
C. work done=293.2 cal
D. work done=-286 cal
71. Choose the reactions in which the standard reaction enthalpy (at $25^{\circ} \mathrm{C}$ ) represent the standard formation enthalpy of the product-
A. $\mathrm{H}_{2}(\mathrm{~g})+\frac{1}{3} \mathrm{O}_{3}(\mathrm{~g}) \rightarrow \mathrm{H}_{2} \mathrm{O}(\mathrm{l})$
B. $\mathrm{Na}(\mathrm{s})+\frac{1}{2} \mathrm{Cl}_{2}(g) \rightarrow \mathrm{NaCl}(s)$
C. $\mathrm{CO}(g)+\frac{1}{2} \mathrm{O}_{2}(\mathrm{~g}) \rightarrow \mathrm{CO}_{2}(\mathrm{~g})$
D. $\frac{1}{2} H_{2}(g)+\frac{1}{2} I_{2}(g) \rightarrow H I(g)$

## Answer: B::D

## - Watch Video Solution

## VERY SHORT TYPE QUESTIONS

1. (i) Which type of system does not interact with its surroudings?
(ii) Classify the following systems into open, closed and isolated sysstem:
(a) a plant (b) certain amount of a liquid enclosed in a container with rigid, impermeable and adiabatic wall.

## - Watch Video Solution

2. If the volume and density of 5 g of pure iron sample are ' V ' and ' d ' respectively then what will be the volume and density of 10 g of the same sample?

## - Watch Video Solution

3. Why is the enthalpy (but not molar enthalpy) of a systemm an extensive property?

## - Watch Video Solution

4. Show that the unit of 'PV' is the unit of work or energy.
5. Specific heat capacity of 10 g of a simple of aluminium is x cal $\cdot g^{-1} \cdot K^{-1}$. Is the vlaue of specific heat capacity of 5 g of that sample $\frac{x}{2} \mathrm{cal} \cdot \mathrm{g}^{-1} \cdot \mathrm{~K}^{-1}$ ?

## - Watch Video Solution

6. On which factors does the change in a state function depend?

## - Watch Video Solution

7. The initial state of a system is $A$. this system participates in the following process: $A \rightarrow B \rightarrow C \rightarrow A$. What will be the change in internal energy of the system is this process?

## - Watch Video Solution

8. Which of the following is (are) not a state function?
(i) Enthalpy (ii) Heat capacity (iii) Heat (iv) Work done.

## Watch Video Solution

9. Among pressure of the system and the surroundings, which one is represented by ' P ' in the equation $H=U+P V$ ? What would be the change in enthalpy for the reaction $A_{2}(s)+B_{2}(g) \rightarrow 2 A B(g)$ ?

## - Watch Video Solution

10. At T K, what will be the value of ( $\mathrm{H}-\mathrm{U}$ ) for 1 mol of ideal gas?

## - Watch Video Solution

11. In an isothermal expansion of an ideal gas both $\Delta H$ and $\Delta U$ are zero. What will be the values of $\Delta U$ and $\Delta H$ in isothermal compression
in an isolated system?

## - Watch Video Solution

12. What will be the value of the change in internal energy of a process occurring in an isolated system?

## - Watch Video Solution

13. In a process, $q$ cal heat is absorbed by a closed system. If work done by the system is $w$ cal, then what will be the value of the change in internal energy $(\Delta U)$ in this process?

## - Watch Video Solution

14. For a process occurring in a closed system, $\Delta U=q$. If only pressurevolume work is performed by the system then which type of process is this?
15. The amount of heat released by a system at constant pressure is 20 kJ . What will be the value of $\Delta H$ in this process?

## - Watch Video Solution

16. For an ideal gas $C_{V, m}=12.47 \mathrm{~J} \cdot \mathrm{~mol}^{-1} \cdot K^{-1}$. What will be the value of $C_{P, m}$ ?

## - Watch Video Solution

17. A liquid in a closed adiabatic container is stirred. Among $\Delta U, w$ and $q$ , which one will be zero?

## - Watch Video Solution

18. If the temperature of 1 mol of an ideal gas is doubled then what will be the change in value of internal energy? Will it increase, decrease or remain the same?

## - Watch Video Solution

19. $2 \mathrm{H}_{2}+\mathrm{O}_{2} \rightarrow 2 \mathrm{H}_{2} \mathrm{O}, \Delta \mathrm{H}=-571.6 \mathrm{~kJ}$. Does this equation express the thermochemical equation for the formation of $\mathrm{H}_{2} \mathrm{O}$ ?

## - Watch Video Solution

20. What temperature and pressure are usually considered as the standard state of a substance?

## - Watch Video Solution

21. Which allotropic form of carbon is considered as a source of carbon in the formation reactions of carbon compounds at $25^{\circ} \mathrm{C}$ and 1 atm ?

## Watch Video Solution

22. Which of the following two reactions indicates the formation reaction of $\mathrm{HI}(\mathrm{g})$ at $25^{\circ} C$ and 1 atm ?
(i) $\frac{1}{2} \mathrm{H}_{2}(g)+\frac{1}{2} I_{2}(g) \rightarrow H I(g)$
(ii) $\frac{1}{2} H_{2}(g)+\frac{1}{2} I_{2}(s) \rightarrow H I(g)$.

## - Watch Video Solution

23. Between $O_{2}(g)$ and $O_{3}(g)$, whose standard enthalpy of formation $\left(\Delta H_{f}^{0}\right)$ is taken as zero at 1 atm and $25^{\circ} \mathrm{C}$ ?

## - Watch Video Solution

24. In which of the following reactions the standard heat of reaction is equal to the standard heat of formation of $\mathrm{CaBr}_{2}(s)$ at $25^{\circ} \mathrm{C}$ ?
(i) $\mathrm{Ca}(\mathrm{s})+\mathrm{Br}_{2}(\mathrm{l}) \rightarrow \mathrm{CaBr}_{2}(\mathrm{~s})$
(ii) $\mathrm{Ca}(\mathrm{s})+B r_{2}(g) \rightarrow \mathrm{CaBr}_{2}(g)$.

## - Watch Video Solution

25. Heat required to vaporise 1 g of water at $100^{\circ} \mathrm{C}$ and 1 atm is 2.26 kJ .

What is the enthalpy of vaporisation of water at this temperature and pressure?

## - Watch Video Solution

26. 1 mol of $\mathrm{H}_{2} \mathrm{O}(l)$ is formed when 1 mol of $\mathrm{H}^{+}$ions and 1 mol of $\mathrm{OH}^{-}$ ions react together is aqueous solution. Does this reaction represent the formation reaction of water?
27. Consider the reaction:
(i) $A_{2}(s)+B_{2}(g) \rightarrow A_{2}(g)+B_{2}(g), \Delta H=-x \mathrm{~kJ}$
(ii) $A_{2}(g)+B_{2}(g) \rightarrow 2 A B(g), \Delta H=-y \mathrm{~kJ}$

What is the value of the change in enthalpy for the following reaction $A_{2}(s)+B_{2}(g) \rightarrow 2 A B(g) ?$

## - Watch Video Solution

28. S(monoclinic, s) $\rightarrow S$ (rhombic, s)'. What is enthalpy change of this process called?

## - Watch Video Solution

29. 

$H_{2}(g)+\frac{1}{2} O_{2}(g) \rightarrow H^{+}(a q)+\mathrm{OH}^{-}(a q), \Delta H^{0}=-228.5 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$
. If $\Delta H_{f}^{0}\left[H^{+}\right]=0$, then what will be the value of $\Delta H_{f}^{0}\left[O H^{-}\right]$?
30. The bond dissociation energies of three A-B bonds in $A B_{3}(g)$ molecule are $\mathrm{x}, \mathrm{y}$ and $\mathrm{zkJ} \cdot \mathrm{mol}^{-1}$ respectively. What is the bond energy of A-B bond?

## - Watch Video Solution

31. Why is the heat of reaction of a reaction occurring in a bomb calorimeter equal to the change in internal energy of the reaction system?

## - Watch Video Solution

32. For which type of molecule the bond energy is equal to the bond dissociation energy?

## - Watch Video Solution

33. What will be the difference between $\Delta H$ and $\Delta U$ in the combustion reaction of $C_{10} H_{8}(g)$ at $25^{\circ} \mathrm{C}$ ?

## Watch Video Solution

34. Write down the relation between $\Delta H$ and $\Delta U$ for the following reaction:
$\mathrm{CH}_{3} \mathrm{COOH}(a q)+\mathrm{NaOH}(a q) \rightarrow \mathrm{CH}_{3} \mathrm{COON}(a q)+\mathrm{H}_{2} \mathrm{O}(l)$.

## - Watch Video Solution

35. If the bond energy of $\mathrm{C}-\mathrm{H}$ bond is $+416.18 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$, then what will be the enthalpy of formation of $\mathrm{C}-\mathrm{H}$ bond?

## - Watch Video Solution

36. What is the most important feature of Hess's law?
37. The standard bond dissociation energy of $A_{2}(g), B_{2}(g)$ and $A B(g)$ molecules are $\mathrm{x}, \mathrm{y}$ and $\mathrm{z} \mathrm{kJ} \cdot \mathrm{mol}^{-1}$ respectively. What will be the standard enthalpy of formation of $\mathrm{AB}(\mathrm{g})$ ?

## - Watch Video Solution

38. At temperature TK the difference between $\Delta H$ and $\Delta U$ for the following reaction is $+\frac{1}{2} R T: A+\frac{1}{2} B_{2}(g) \rightarrow A B(g)$.

What is the physical state of A (solid or gas)?

## - Watch Video Solution

39. Give an example of a spontaneous process in which the change in enthalpy of the system is positive.

## - Watch Video Solution

40. What will be the sign of enthalpy change and entropy change for a process to be spontaneous at all temperature?

## Watch Video Solution

41. What will be the signs of $\Delta G$ for melting of ice at 267 K and 276 K temperature and 1 atm pressure?

## - Watch Video Solution

42. Water and ice remain in equilibrium at $0^{\circ} C$ and 1 atm pressure. What will be the value of $\Delta G$ and the sign of $\Delta S_{\text {system }}$ at this equilibrium?

## - Watch Video Solution

43. Which one of the following relation or expression is true for a spontaneous process of $\Delta G=0, \Delta H=T \Delta S, \Delta G>0, \Delta G<0$ ?
44. What will be the sign of entropy change for the process $I_{2}(g) \rightarrow I_{2}(s) ?$

## - Watch Video Solution

45. What will be the change in entropy of the surroundings in a spontaneous process occurring in an isolated system?

## - Watch Video Solution

46. Is the entropy of the universe constant?

## - Watch Video Solution

47. Given an example of a process in which the change in enthalpy of the system is negative.

## - Watch Video Solution

48. What sign (+ or -) of entropy change in an endothermic reaction makes the reaction non-spontaneous at any temperature?

## - Watch Video Solution

49. In which case the $\Delta S_{s y s}$ will be maximum between the following two processes-
(i) ice $\rightarrow$ water
(ii) $I_{2}(s) \rightarrow I_{2}(g)$.

## - Watch Video Solution

50. Predict the sign of $\Delta S^{0}$ for the given reaction?
$2 \mathrm{H}_{2} \mathrm{~S}(\mathrm{~g})+3 \mathrm{O}_{2}(\mathrm{~g}) \rightarrow 2 \mathrm{H}_{2} \mathrm{O}(\mathrm{g})+2 \mathrm{SO}_{2}(\mathrm{~g})$.

## Watch Video Solution

51. Does the Gibbs free energy of a substance decrease or increase if the amount of the substance is increased?

## - Watch Video Solution

52. In a process, the value of the change in entropy of the system and its surroundings are x and $-\mathrm{y} J \cdot K^{-1}$. If $x>y$, then will the process be spontaneous?

## - Watch Video Solution

53. The change in entropy of the system in a process $A \rightarrow B \rightarrow C$ is $25 J \cdot K^{-1}$. If the change in entropy of the system in the step $B \rightarrow C$ is $15 J \cdot K^{-1}$, then what will be the change in entropy of the system in the step $B \rightarrow A$ ?

## - Watch Video Solution

## FILL IN THE BLANKS

1. Sign of $\Delta U$ in adiabatic expansion of a gas is $\qquad$ .

## - Watch Video Solution

2. In a process $q>0$, but $\mathrm{w}=0$. so, the internal energy of the system will (increase/decrease) $\qquad$ .

## - Watch Video Solution

3. According to first law, for a cyclic process $q+w=$ $\qquad$ .

## - Watch Video Solution

4. Volume of a substance is an $\qquad$ property while molar volume of a substance in an $\qquad$ property.

## - Watch Video Solution

5. Specific heat capacity of a substance is x cal $\cdot g^{-1} \cdot{ }^{\circ} C^{-1}$. Specific heat capacity of 100 g of that substance will be $\qquad$ .

## - Watch Video Solution

6. Molar heat capacity of a substance at constant pressure is $\qquad$ than that at constant volume.

## - Watch Video Solution

7. In Vaporisation of water, the signs of $q$ and $w$ are ___ and respectively.

## D Watch Video Solution

8. For a process occurring at constant volume, $\Delta U=+10 k J$. In this process, q= $\qquad$ .

## - Watch Video Solution

9. In isothermal expansion of 1 mol of an ideal gas, $q=+12 k J$. The value of $w=$ $\qquad$ and $\Delta U=$ $\qquad$ .

## D Watch Video Solution

10. In a chemical reaction, if the total enthalpies of reactants and products are $H_{R}$ and $H_{P}$ respectively then $H_{P}>H_{R}$ for $\qquad$ reaction
$\qquad$ reaction.

## - Watch Video Solution

11. At $25^{\circ} \mathrm{C}$, the standard state of liquid ethanol means $\qquad$ ethanol at $25^{\circ} \mathrm{C}$ and $\qquad$ pressure.

## - Watch Video Solution

12. 

Given:
$\mathrm{C}_{3} \mathrm{H}_{8}(\mathrm{~g})+5 \mathrm{O}_{2}(\mathrm{~g}) \rightarrow 3 \mathrm{CO}_{2}(\mathrm{~g})+4 \mathrm{H}_{2} \mathrm{O}(\mathrm{l})$ and $\mathrm{C}_{3} \mathrm{H}_{8}(\mathrm{~g})+5 \mathrm{O}_{2}(\mathrm{~g}) \rightarrow 3 \mathrm{C}$
. At a fixed temperature and pressure between these two reactions the heat evolved in the second reaction is $\qquad$ than that in the first one.

## - Watch Video Solution

13. At $25^{\circ} \mathrm{C}$ and 1 atm , the standard reaction enthalpy for the reaction C (graphite, s) $+\mathrm{O}_{2}(\mathrm{~g}) \rightarrow \mathrm{CO}_{2}(\mathrm{~g})$ is the $\ldots \ldots$ of $\mathrm{CO}_{2}(\mathrm{~g})$.
14. At $25^{\circ} \mathrm{C}$ and 1 atm , standard reaction enthalpy for the reaction, $\mathrm{CH}_{4}(\mathrm{~g})+2 \mathrm{O}_{2}(\mathrm{~g}) \rightarrow \mathrm{CO}_{2}(\mathrm{~g})+2 \mathrm{H}_{2} \mathrm{O}(\mathrm{l})$ is $\ldots \ldots$ of $\mathrm{CH}_{4}(\mathrm{~g})$.

## - Watch Video Solution

15. At $25^{\circ} \mathrm{C}$, for the reaction,
$H^{+}(a q)+\mathrm{OH}^{-}(a q) \rightarrow \mathrm{H}_{2} O(l), \Delta H^{0}=-57.3 k J \cdot \mathrm{~mol}^{-1}$. If the ionisation enthalpy of HCN in water by $45.2 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$, then the standard heat of reaction (in $k J \cdot \mathrm{~mol}^{-1}$ ) for the reaction, $\mathrm{HCN}(a q)+\mathrm{NaOH}(a q) \rightarrow \mathrm{NaCN}(a q)+\mathrm{H}_{2} \mathrm{O}(l)$, in dilute aqueous solution is-

## - Watch Video Solution

16. The change in entropy for the process
$K C l(s)+100 \mathrm{H}_{2} \mathrm{O}(l) \rightarrow \mathrm{KCl}\left(100 \mathrm{H}_{2} \mathrm{O}\right)$ is called $\qquad$ .

## (D) Watch Video Solution

17. At $25^{\circ} \mathrm{C}$ and 1 atm if the bond energy of $C l_{2}(g)$ is $242 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$, then the standard enthalpy of atomisation of chlorine at the same temperature+ $\qquad$ .

## - Watch Video Solution

18. In the reaction $\Delta S_{s y s}=x J \cdot K^{-1}$ and $\Delta S_{\text {surr }}=-y J \cdot K^{-1}$. The reaction will be spontaneous if $\qquad$ .

## - Watch Video Solution

19. In the cyclic process $A \xrightarrow{I} B C \xrightarrow{I I} A$ the change in entropy of the system are $\Delta S_{1}, \Delta S_{2} \& \Delta S_{3} . \Delta S_{1}+\Delta S_{2}+\Delta S_{3}=$ $\qquad$ .

## - Watch Video Solution

20. $\mathrm{NH}_{4} \mathrm{Cl}(s)+\mathrm{H}_{2} \mathrm{O}(l) \rightarrow \mathrm{NH}_{4}^{+}(a q)+\mathrm{Cl}^{-}(a q)$. it is an endothermic process. In this process the signs (+ or -) of $\Delta S_{s y s}$ and $\Delta S_{\text {surr }}$ are___ and ___ respectively.

## ( Watch Video Solution

21. A reaction is non-spontaneous at all temperature but the reverse reaction is spontaneous at all temperature. The signs (+ or -) of $\Delta H$ and $\Delta S_{\text {sys }}$ for the reverse reaction are $\qquad$ and $\qquad$ respectively.

## - Watch Video Solution

22. In an exothermic process $\Delta S_{s y s}<0$. In this reaction the sign (+ or -) of $\Delta S_{\text {surr }}$ is $\qquad$ . This reaction will be spontaneous if the numerical value of $\Delta S_{s y s}$ is $\qquad$ than that of $\Delta S_{\text {surr }}$.

## ( Watch Video Solution

23. In a spontaneous process occurring at constant pressure and at temperature TK, $\Delta H>0, \Delta S>0$. In this process the numerical value of $\Delta H$ is $\qquad$ than that of $\qquad$ .

## SHORT TYPE QUESTIONS

1. Assuming the system performs only pressure-volume work, show that heat absorbed by a closed system at constant volume is equal to the increase in its internal energy.

## - Watch Video Solution

2. Assuming the system performs only pressure-volume work, show that heat evolved by a closed systemm at constant pressure is equal to the decrease in its enthalpy.
3. Show that the total energy of ann isolated system always remains constant.

## - Watch Video Solution

4. Why is the temperature of a system a state function?

## - Watch Video Solution

5. What are the conditions for a system to be in thermodynamic equilibrium?

## - Watch Video Solution

6. Give one example for each of an isobaric and isothermal process.
7. Why is the sudden expansion or compression of a gas considered to be an adiabatic process ?

## - Watch Video Solution

8. Give thermodynamic definition of heat and work.

## - Watch Video Solution

9. Internal energy is a property of a system, but heat is not- explain.

## - Watch Video Solution

10. Show that both heat and work are path dependent quantities.
11. Why does the internal enegy of a system increases with rise in temperature?

## Watch Video Solution

12. What does pressure-volume work mean? Why is it considered that work done by a system is negative but work done on the system is positive?

## - Watch Video Solution

13. Show that for an ideal gas the difference between the molar heat capacities at constant pressure and at constant volume is equal to the universal gas constant (R).

## - Watch Video Solution

14. In case of a solid or a liquid substance $C_{P, m} \approx C_{V, m}$, but in case of gaseous substances $C_{P, m}>C_{V, m}$. Explain.

## - Watch Video Solution

15. For liquid ethanol at $25^{\circ} \mathrm{C}, \Delta H_{f}^{0}=-277.69 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$. Represent the thermochemical equation showing the formation reaction of liquid ethanol.

## - Watch Video Solution

16. Reaction enthalpy for an exothermic reaction is negative- why?

## - Watch Video Solution

17. For which of the following reactions does the standard enthalpy of reaction represent the standard enthalpy of formation of $\mathrm{CH}_{4}(g)$ ?

Explain it.
(a) $\mathrm{C}($ diamond, s$)+4 \mathrm{H}_{2}(\mathrm{~g}) \rightarrow \mathrm{CH}_{4}(g)$
(b) C (graphite, s) $+\mathrm{O}_{2}(g) \rightarrow \mathrm{CH}_{4}(g)$.

## - Watch Video Solution

18. Given: $\mathrm{C}($ graphite, s$)+O_{2}(g) \rightarrow \mathrm{CO}_{2}(g), \Delta H^{0}=x_{1}$
$\mathrm{C}($ graphite, s$)+\frac{1}{2} O_{2}(g) \rightarrow C O(g), \Delta H^{0}=x_{2}$
$\mathrm{CO}(g)+\frac{1}{2} \mathrm{O}_{2}(g) \rightarrow \mathrm{CO}_{2}(g), \Delta H^{0}=x_{3}$
Express $x_{3}$ in terms of $x_{1}$ and $x_{2}$.

## - Watch Video Solution

19. At $25^{\circ} C, \Delta H_{f}^{0}=0$ for graphite, but for diamond $\Delta H_{f}^{0} \neq 0$. Why?

## - Watch Video Solution

20. Mention two applications of Hess's law.
21. "At $25^{\circ} \mathrm{C}$, the standard heat of combustion of graphite is $-94300 \mathrm{cal} \cdot \mathrm{mol}^{-1 \text { "-what does it mean? }}$

## - Watch Video Solution

22. "At $25^{\circ} \mathrm{C}$, the standard heat of formation of $\mathrm{H}_{2} \mathrm{O}(l)$ is $-285.83 \mathrm{~kJ} \cdot \mathrm{~mol}^{-1}$ "-What does it mean?

## - Watch Video Solution

23. $\frac{1}{2} A_{2}(g)+\frac{1}{2} B_{2}(g) \rightarrow A B(g), \Delta H=-50 k c a l$. If the bond energies of $A_{2}(g), B_{2}(g)$ and $A B(g)$ are $\mathrm{xkcal} \cdot \mathrm{mol}^{-1} \frac{x}{2} \mathrm{kcal} \cdot \mathrm{mol}^{-1}$ and $\mathrm{x} \mathrm{kcal} \cdot \mathrm{mol}^{-1}$ respectively then what will be the value of x ?

## - Watch Video Solution

24. $C(s)+\frac{1}{2} O_{2}(g) \rightarrow C O(g), \Delta H=-110.4 k J$. Does this $\Delta H$ represent enthalpy of combustion of carbon?

## LONG TYPE QUESTIONS

1. For a closed system, determine the change in internal energy $(\Delta U)$ when (a) q cal of heat is absorbed by the system and w cal of work is performed on the system (b) q cal of heat is absorbed by the system and w cal of work is performed by the system (c) q cal of heat is evolved by the system and w cal of work is performed on the system (d) heat is not
absorbed or evolved by the system, but w cal of work is performed by the system.

## - Watch Video Solution

2.1 mol of an ideal gas participates in the following process:
$P, V \rightarrow P, 2 V \rightarrow \frac{P}{2}, 2 V \rightarrow \frac{P}{2}, V \rightarrow P, V$
Calculate the total work done in this process.

## Watch Video Solution

3. Identify the following processes each of which occurs in a closed system. Consider only pressure-volume work is perforemd in these processes.
(a) $q=0, w>0, \Delta U=0$
(b) $q>0, \Delta U>0, w=0$.

## - Watch Video Solution

4. $C_{6} H_{6}(l) \rightarrow C_{6} H_{6}(g)$, in this transformation what will be the signs ( + or -) of the given quantities: $\mathrm{q}, \mathrm{w}, \Delta H, \Delta U$. Explain.

## - Watch Video Solution

5. For an ideal gas, $C_{V}=\frac{3}{2} R$. (a) What will be the change in internal energy $(\Delta U)$ of 1 mole of an ideal gas if its temperature is increased by 4 K at constant volume ? What would be $\Delta U$ if the temperature of this gas is increased by the same amount of constant pressure? keeping pressure constant if the temperature of that same amount of gas is increased by 4 K then what will be the change in internal energy $(\Delta U)$ of that gas? (c) give reason for different values of $\Delta U$ and $\Delta H$ ?

## - Watch Video Solution

6. Give one example for each of the following processes-
(i) $\Delta P($ system $)=0$ (ii) $\Delta V($ system $)=0$
(iii) $\Delta T$ (system) $=0$
(iv) $q=0$
(v) $\Delta U$ (system) $=0$.

## - Watch Video Solution

7. Give definition: (i) closed system (ii) adiabatic system (iii) open system (iv) isolated system.

## - Watch Video Solution

8. Explain with examples: (i) enthalpy of a system is an extensive property
(ii) boiling point of a liquid is an intensive property (c) concentration is an intensive property.

## - Watch Video Solution

9. (i) 1 mol of an ideal gas expands isothermally and reversible from ( $\left.P_{1} V_{1} T\right)$ to $\left(P_{2} V_{2} T\right)$. Write down the equation showinig the amount of
heat absorbed by the given ideal gas.
(ii) In an isothermal expansion of an ideal gas, the pressure of the gas decreases from $P_{1}$ to $P_{2}$. write down the equation of work done by the gas in this process.
(iii) The temperature of 1 mol of an ideal gas is increased from $T_{1}$ and $T_{2}$. write down the equations for the changes in enthalpy and internal energy.

## Watch Video Solution

10. State the condition at which $\Delta H=\Delta U$. For which reactions-(i)
$\Delta H>\Delta U$
(ii) $\Delta H<\Delta U$ ?

## - Watch Video Solution

11. (i) What do you mean by standard enthalpy of formation?
(ii) Is the standard enthalpy of reaction of the following reaction equal to
the standard enthalpy off formation of $\mathrm{H}_{2} \mathrm{O}(l)$ at $25^{\circ} \mathrm{C}: \mathrm{H}_{2}(\mathrm{~g})+\frac{1}{3} \mathrm{O}_{3}(\mathrm{~g}) \rightarrow \mathrm{H}_{2} \mathrm{O}(\mathrm{l})$ ? Explain.

## - Watch Video Solution

24. Give reason for the necessity of second law of thermodynamics.

## - Watch Video Solution

25. Write down the Clausius and Planck-Kelvin statement of the second law off thermodynamics.

## - Watch Video Solution

26. Define entropy from molecular point of view. At a particular temperature the entropy of a substance in its gaseous state is greater than that in liquid state which is in turn greater than in solid stateexplain.

## - Watch Video Solution

27. What do you mean by entropy of fusion and entropy of vaporisation?

Give the mathematical expression of each.

## Watch Video Solution

28. What is the physical significance of entropy ? Write the second law of thermodynamics in terms of entropy.

## - Watch Video Solution

29. Show that in a process at constant temperature and pressure, the

Gibbs free energy change of a system, $\Delta G=-T \Delta S_{\text {total }}$.

## - Watch Video Solution

30. (i) What is the relation between Gibbs free energy change and spontaneity of a process?
(ii) Write down the relation between standard free energy change and equilibrium constant.

## - Watch Video Solution

31. If the value of $\Delta H$ and $\Delta S$ are of following type, then at what condition a reaction will occur spontaneously?
(i) $\Delta H>0$ and $\Delta S>0$
(ii) $\Delta H<0$ and $\Delta S>0$

## - Watch Video Solution

32. Under which of the following conditions a reaction will occur spontaneously?
(i) $\Delta H<0$ and $\Delta S<0$
(ii) $\Delta H>0$ and $\Delta S<0$.

## - Watch Video Solution

33. How does the spontaneity of an endothermic reaction depend on temperature when (i) $\Delta S>0$ and (ii) $\Delta S<0$ ?

## - Watch Video Solution

34. How does the spontaneity of an exothermic reaction depend on temperature when (i) $\Delta S>0$ and (ii) $\Delta S<0$ ?

## - Watch Video Solution

35. There is not certainty that the reaction will be spontaneous even if
$\Delta H$ is negative-explain it, state its limitation and exception.

## - Watch Video Solution

36. Give the mathematical definition of entropy change. Discuss the relationship between entropy change \& spontaneity of a process.
37. (i) Spontaneity of a process can be determined from the entropy change and also from the Gibbs free energy change. But the Gibbs free energy change in more useful than entropy change to determine the spontaneity of a process. Explain it.
(ii) Show that Gibbs energy change of a system at certain temperature and pressure, $\Delta G=\Delta H-T \Delta S$.

## - Watch Video Solution

## Numerical Problems

1. A certain amount of gas is expanded from a volume of 20 mL to 42.6 mL by the following three processes (i) against zero pressure (ii) against constant external pressure of 1.2 atm (iii) against constant external pressure of 2.0 atm. Calculate the work done in each of the above three processes.
2. At $27^{\circ} C, 4.0 g$ of He is expanded reversibly and isothermally when the pressure drops from 10 to 1.0 atm. Calculate the work done in calorie, assuming an ideal behavior of the gas.

## - Watch Video Solution

3. At $27^{\circ} \mathrm{C}, 2 \mathrm{~mol}$ of an ideal gas is expanded from a volume of 10 L to 100
L. In this case what will be the maximum value of work done ?

## - Watch Video Solution

4. At $27^{\circ} C, 4.2 g N_{2}$ gas is expanded reversibly and isothermally from a pressure of 10 atm to 1 atm. Calculate $q, \Delta U, \Delta H$ and w for this expansion. Assume $N_{2}$ gas behaves ideally.
5.1 mol of an ideal gas is expanded from volume $V_{1}$ to $10 V_{1}$. If work done by the gas is 10 kJ and the initial pressure of the gas is $1 \times 10^{7} \mathrm{~Pa}$, then calculate $V_{1}$. What will be the temperature of the gas if the amount is 2 mol ?

## - Watch Video Solution

6.2 mol of an ideal gas participates in the following process -
(a) Calculate total work done and total heat change.
(b) Calculate $\Delta U$ and $\Delta H$ of the overall process.

## - View Text Solution

7. (i) The pressure and temperature of 0.8 g of He gas are 1 atm and 298 K respectively. If 400 J of heat is applied to the gas at constant volume, what will be change in internal energy and the final temperature of the gas?
(ii) If the same amount of heat is applied to the gas at constant pressure, then what will be the change in internal energy and the final temperature of the gas? For both the cases, assume He gas behaves ideally and its $C_{V}=\frac{3}{2} R$.

## - Watch Video Solution

8. The temperature of 1 mol of an ideal monoatomic gas at constant pressure of 1 atm changes from $25^{\circ} \mathrm{C}$ and $50^{\circ} \mathrm{C}$. Calculate $\Delta U$ and $\Delta H$ in this process, $\left(C_{V}=\frac{3}{2} R\right)$.

## - Watch Video Solution

9. In a reaction 4 kJ of heat is released. If the same amount of heat is supplied to 200 g of water at $25^{\circ}$, what will be the final temperature of water ? [Given : molar heat capacity of water $=75.24 \mathrm{~J} . K^{-1} \mathrm{~mol}^{-1}$ ]

## - Watch Video Solution

10. How much heat is required for the following transformation-Given : Specific heat capacities of water and ice are 4.18J. $\mathrm{g}^{-1} . K^{-1}$ and $2.09 \mathrm{~J} . \mathrm{g}^{-1} . K^{-1}$.

## - View Text Solution

11. The amount of work done when a gas is expanded from a volume of 5 L to 10 L against a constant external pressure of 2 atm is used to heat 15 g of water present at a temperature of 300 K . Calculate the final temperature of water. (Given : molar heat capacity of water $\left.=75.6 \mathrm{~J} . \mathrm{K}^{-1} . \mathrm{mol}^{-1}\right)$.

## - Watch Video Solution

12. 2 mol of an ideal gas is compressed by an isothermal reversible process at $27^{\circ} \mathrm{C}$. As a result, pressure of the gas increases from 1 to 10 atm. Calculate $w, q, \Delta U$ and $\Delta H$ for the process.
13. 100 ml of a liquid is present in an insulated container at a pressure of 1 bar. The pressure is steeply increased to 100 bar. The volume of the liquid is decreased by 1 ml at this constant pressure. Find the values of $\Delta H$ and $\Delta U$.

## - Watch Video Solution

14. For the reaction, $2 \mathrm{CO}+\mathrm{O}_{2} \rightarrow 2 \mathrm{CO}_{2}, \Delta H=-560 \mathrm{~kJ} .2 \mathrm{~mol} \mathrm{CO}$ and 1 mol of $O_{2}$ are taken in container of volume 1L. They completely form two moles of $\mathrm{CO}_{2}$. The gases deviate apreciably form ideal behaviour. If the pressure in the vessel changes from 70 to 40 atm, find the magnitude (absolute value) of $\Delta U$ at 500 K .

## - Watch Video Solution

15. A sample of argon gas at 1 atm pressure and $27^{\circ} \mathrm{C}$ expands reversibly and adiabatically from $1.25 d m^{3} \rightarrow 2.50 \mathrm{dm}^{3}$. Calculate the enthalpy change in this process ( $C_{V}, m$ for argon is $12.48 J . K^{-1} . \mathrm{mol}^{-1}$ ).

## - Watch Video Solution

16. At $25^{\circ} \mathrm{C}$, the heat of combustion of naphthalene at constant volume is $-1230 \mathrm{kcal} \mathrm{mol}^{-1}$. Calculate the heat of reaction at constant pressure and $25^{\circ} \mathrm{C}$.

## - Watch Video Solution

17. The change in enthalpy due to combustion of glucose is $2880 \mathrm{~kJ} \mathrm{~mol}^{-1}$. $25 \%$ of this energy is utilised by the body muscles to do physical work. If 100 kJ of energy is used by the muscles to walk 1 km then what will be the maximum distance a person can walk after consuming 120 g of glucose?
18. Calculate the standard enthalpy of formation of $n$ - butane. Given : standard enthalpy of combustion of $n$ - butane, C (graphite) and $H_{2}(g)$ are $-2878.5 \mathrm{~kJ} \mathrm{~mol}^{-1},-393.5 \mathrm{~kJ} \mathrm{~mol}^{-1}$ and -285.8 kJ m respectively.

## Watch Video Solution

19. Calcaulte reaction enthalpy of the following reaction at $25^{\circ} \mathrm{C}$.
$\mathrm{SO}_{2}(g)+2 \mathrm{H}_{2} \mathrm{~S}(\mathrm{~g}) \rightarrow 3 \mathrm{~S}($ rhombic $)+2 \mathrm{H}_{2} \mathrm{O}(\mathrm{l})$.
Given : $\Delta H_{f}^{0}$ of $S_{2}(g), H_{2} S(g)$, $\mathrm{S} \quad$ (rhombic) and $\mathrm{H}_{2} \mathrm{O}(l)$ at $25^{\circ} \mathrm{C}$ are $-70.96,-4.82,0$ and $-68.32 \mathrm{kcal} \mathrm{mol}^{-1}$ respectively.

## - Watch Video Solution

20. Al(s) and $\mathrm{Fe}(\mathrm{s})$ are oxidised by oxygen to form $\mathrm{Al}_{2} \mathrm{O}_{3}(s)$ and $\mathrm{Fe}_{2} \mathrm{O}_{3}(s)$ respectively. If the standard enthalpy of formation of $\mathrm{Al}_{2} \mathrm{O}_{3}(s)$ and $\mathrm{Fe}_{2} \mathrm{O}_{3}(s) \quad$ are $-1669.8 \mathrm{~kJ} \mathrm{~mol}^{-1}$ and $-824.2 \mathrm{~kJ} \mathrm{~mol}^{-1}$ respectively, calculate the change in enthalpy of the given reaction :
$2 \mathrm{Al}(\mathrm{s})+\mathrm{Fe}_{2} \mathrm{O}_{3}(s) \rightarrow 2 \mathrm{Fe}(s)+\mathrm{Al}_{2} \mathrm{O}_{3}(s)$

## - Watch Video Solution

21. Determine standard heat of formation of $\mathrm{MnO}_{2}$ from the following data : $2 \mathrm{Al}(\mathrm{s})+\frac{3}{2} \mathrm{O}_{2}(\mathrm{~g}) \rightarrow \mathrm{Al}_{2} \mathrm{O}_{3}(\mathrm{~s}), \Delta \mathrm{H}^{0}=-1670 \mathrm{~kJ}$
$3 \mathrm{MnO}_{2}(s)+4 \mathrm{Al}(s) \rightarrow 3 \mathrm{Mn}(s)+2 \mathrm{Al}_{2} \mathrm{O}_{3}(s), \Delta H^{0}=-1792 k J$

## - Watch Video Solution

22. At $25^{\circ} \mathrm{C}$ and 1 atm, heat of formation of $\mathrm{C}_{2} \mathrm{H}_{4}(\mathrm{~g}), \mathrm{CO}_{2}(\mathrm{~g})$ and $\mathrm{H}_{2} \mathrm{O}(\mathrm{l})$ are
$52 \mathrm{~kJ} \mathrm{~mol}^{-1},-394 \mathrm{~kJ} \mathrm{~mol}^{-1}$ and $-286 \mathrm{~kJ} \mathrm{~mol}^{-1}$ respectively.

Calculate the heat of combustion of $C_{2} H_{4}(g)$.

## - Watch Video Solution

23. Standard molar heat of formation of ethane, $\mathrm{CO}_{2}$ and water are $-21.1,-94.1$ and -68.3 kcal respectively. Calculate the molar heat of combustion of ethane.

## Watch Video Solution

24. At $25^{\circ} \mathrm{C}$, standard enthalpy of combustion of combustion of hydrogen, cyclohexene $\left(C_{6} H_{10}\right)$ and cyclohexane $\left(C_{6} H_{12}\right)$ are $-241,-3800$ and $-3920 \mathrm{kj} \mathrm{mol}^{-1}$ respectively. Determine the heat of hydrogenation of cyclohexene.

## - Watch Video Solution

25. The amount of heat evolved during complete combustion of 7.8 g benzene at constant volume and $27^{\circ} \mathrm{C}$ is 3270 kJ . Calculate heat of combustion of benzene at constant pressure and $27^{\circ} \mathrm{C}$.

## - Watch Video Solution

26. Heat of neutralisation of $\mathrm{NH}_{4} \mathrm{OH}$ and HCl is $-51.46 \mathrm{~kJ} \mathrm{~mol}^{-1}$
.Calculate the ionization enthalpy of $\mathrm{NH}_{4} \mathrm{OH}$. [Enthalpy of neutralisation of strong acid-strong base is $-57.35 \mathrm{~kJ} \mathrm{~mol}^{-1}$ ]

## - Watch Video Solution

27. Standard enthalpy of combustion of $C H_{4}(g)$ is $802.8 \mathrm{~kJ} \mathrm{~mol}^{-1}$. If the bond dissociation energies of $C-H, O=O$ and $O-H$ bonds are $416.2,493.7$ and $464.4 \mathrm{~kJ} \mathrm{~mol}^{-1}$ respectively then calculate the bond dissociation energy of $\mathrm{C}=\mathrm{O}$ bond.
28. Determine the standard enthalpy of formation of $\mathrm{FeO}(\mathrm{s})$ and $\mathrm{Fe}_{2}\left(\mathrm{O}_{3}(s)\right.$ from the following data:
$3 \mathrm{C}($ graphite, $s)+\mathrm{Fe}_{2} \mathrm{O}_{3}(s) \rightarrow 2 \mathrm{Fe}(\mathrm{s})+3 \mathrm{CO}(\mathrm{g}), \Delta H^{0}=492.6 \mathrm{~kJ}$
$C($ graphite,$s)+F e O(s) \rightarrow F e(s)+C O(g), \Delta H^{0}=155.8 k J$
$C$ (graphite, $s)+O_{2}(g) \rightarrow C O_{2}(g), \Delta H^{0}=-393.51 k J$
$\mathrm{CO}(g)+\frac{1}{2} \mathrm{O}_{2}(s) \rightarrow \mathrm{CO}_{2}(g), \Delta H^{0}=-282.98 k J$

## - Watch Video Solution

29. Given that (at $25^{\circ} \mathrm{C}$ ) :
$\frac{1}{2} H_{2}(g)+\frac{1}{2} O_{2}(g) \rightarrow O H(g), \Delta H^{0}=38.95 \mathrm{~kJ} \mathrm{~mol}^{-1}$
$H_{2}(g)+\frac{1}{2} O_{2}(g) \rightarrow H_{2} O(g), \Delta H^{0}=-241.8 \mathrm{~kJ} \mathrm{~mol}^{-1}$
$H_{2}(g) \rightarrow 2 H(g), \Delta H^{0}=436.0 \mathrm{~kJ} \mathrm{~mol}^{-1}$
$O_{2}(g) \rightarrow 2 O(g), \Delta H^{0}=498.3 \mathrm{~kJ} \mathrm{~mol}^{-1}$
Calculate $\Delta H^{0}$ for the following reaction -
$(a) O H(g) \rightarrow H(g)+O(g)$
(b) $\mathrm{H}_{2} \mathrm{O}(g) \rightarrow 2 \mathrm{H}(\mathrm{g})+\mathrm{O}(\mathrm{g})$
30. Molar heats of combustion of $C_{2} H_{2}(g), C$ (graphite) and $H_{2}(g)$ are $-310.62 \mathrm{kcal},-94.05 \mathrm{kcal}$ and -68.32 kcal respectively. Calculate the standard heat of formation of $\mathrm{C}_{2} \mathrm{H}_{2}(\mathrm{~g})$.

## - Watch Video Solution

31. Given that : (i) heat of formation of water $=-68.3 \mathrm{kcal}$ (ii) heat of combustion of acetylene $=-310.6 \mathrm{kcal}$ (iii) heat of combustion of ethylene $=-337.2 \mathrm{kcal}$. Calculate the heat of reaction for the hydrogenation of acetylene at constant volume $\left(25^{\circ} \mathrm{C}\right)$.

## - Watch Video Solution

32. The standard molar heat of formation of ethane, carbon dioxide and liquid water are $-21.1,-94.1$ and -68.3 kcal respectively. Calculate the standard molar heat of combustion of ethane.
33. An intimate mixture of ferric oxide, $\left(\mathrm{Fe}_{2} \mathrm{O}_{3}\right)$ and aluminium, (Al) is used in solid fuel rockets. Calculate the fuel value per gram and fuel value per cc of the mixture. Heats of formation and densities are as follows : $\Delta H_{f}^{0}\left(A l_{2} O_{3}\right)=399 \mathrm{kcal} \mathrm{mol}^{-1}, \Delta H_{f}^{0}\left(\mathrm{Fe}_{2} O_{3}\right)=199 \mathrm{kcal} \mathrm{mol}^{-1}$, Density of $\mathrm{Fe}_{2} \mathrm{O}_{3}=5.2 \mathrm{~g} / \mathrm{cc}$, Density of $\mathrm{Al}=2.7 \mathrm{~g} / \mathrm{cc}$.

## - Watch Video Solution

34. Show that the reaction, $\mathrm{CO}(g)+\frac{1}{2} \mathrm{O}_{2}(g) \rightarrow \mathrm{CO}_{2}(g)$ at 300 K is spontaneous and exothermic, when the standard entropy change is $-0.094 \mathrm{~kJ} \mathrm{~mol}^{-1} K^{-1}$. Standard Gibbs fre energies of formation for $C O_{2}$ and CO are -394.4 and $-137.2 \mathrm{~kJ} \mathrm{~mol}^{-1}$ respectively.

## - Watch Video Solution

35. The melting point and boiling point of sulphur dioxide are $-75^{\circ} \mathrm{C}$ and $-10^{\circ} \mathrm{C}$ respectively. If the change in enthalpy of fusion and vaporisation of sulphur dioxide are $7.4 \mathrm{~kJ} \mathrm{~mol}^{-1}$ and $25.2 \mathrm{~kJ} \mathrm{~mol}^{-1}$ respectively, calculate the change in entropy of fusion and vaporisation of $\mathrm{SO}_{2}$ ?

## - Watch Video Solution

36. Find $\Delta S^{0}$ of the reaction :
$\mathrm{CH}_{4}(\mathrm{~g})+\mathrm{CO}_{2}(\mathrm{~g}) \rightarrow 2 \mathrm{CO}(\mathrm{g})+2 \mathrm{H}_{2}(\mathrm{~g})$
Given : $S^{0}\left(C H_{4}\right)=188 \mathrm{~J} \mathrm{~mol}^{-1} K^{-1}$,
$S^{0}\left(\mathrm{CO}_{2}\right)=213.8 \mathrm{~J} \mathrm{~mol}^{-1} . K^{-1}$,
$S^{0}(C O)=197.6 \mathrm{~J} \mathrm{~mol}^{-1} \cdot K^{-1}$
$S^{0}\left(H_{2}\right)=130.7 \mathrm{~J} \mathrm{~mol}^{-1} \cdot K^{-1}$

## - Watch Video Solution

37. The change in enthalpy of vaporisation of 1 mol of water is $40850 \mathrm{~J} \mathrm{~mol}^{-1}$ at $100^{\circ} \mathrm{C}$ and 1 atm pressure. What is the difference between molar entropy of water and water vapour at that temperature and pressure?

## - Watch Video Solution

38. If the change in entropy of reversible isothermal expansion of 1 mol of an ideal gas is $9.135 \mathrm{~J} \mathrm{~mol}^{-1} . K^{-1}$, what will be the entropy change of the surroundings and universe ? If the above expansion of gas is allowed to occur against zero pressure, what will be the entropy change of the system and surroundings ?

## - Watch Video Solution

39. Calculate the change in entropy for the following process : 2 mol of
$N_{2}\left(1,1\right.$ atm, $\left.-195.6^{\circ} C\right) \rightarrow 2 \mathrm{~mol}$ of $N_{2}\left(g, 1\right.$ atm $\left.-195.6^{\circ} C\right)$
[Given that, change in molar enthalpy for the vaporisation of $\left.N_{2}=5.586 \mathrm{~kJ} \mathrm{~mol}^{-1}\right]$

## - Watch Video Solution

40. The values of $\Delta H$ and $\Delta S$ in vaporisation of water at 1 atm pressure are $40.63 \mathrm{~kJ} \mathrm{~mol}^{-1}$ and $108.8 \mathrm{~J} . K^{-1} . \mathrm{mol}^{-1}$ respectively. At what temperature the free energy change of the reaction will be zero ? What will be the sign of $\Delta G$ below that temperature?

## - Watch Video Solution

41. At 300 K , the enthalpy change and entropy change of a reaction are -10 kcal and -30 cal. $K^{-1}$ respectively. Does the reaction occur spontaneously at 400 K ? If not, then calculate the maximum temperature at which the reaction will occur spontaneously ?

## - Watch Video Solution

42. $\mathrm{H}_{2} \mathrm{O}(l) \rightarrow \mathrm{H}_{2}(g)+\frac{1}{2} \mathrm{O}_{2}(g)$ Does the above reaction occur spontaneously at 298 K ? Given that standard enthalpy of formation of water $=-285.83 \mathrm{~kJ} \mathrm{~mol}^{-1}$, standard entropy of $\mathrm{H}_{2}(\mathrm{~g}), \mathrm{O}_{2}(\mathrm{~g})$ and $\mathrm{H}_{2} \mathrm{O}(\mathrm{l})$ are 130.57, 205.04 and $69.95 \mathrm{~J} . \mathrm{K}^{-1} . \mathrm{mol}^{-1}$ respectively.

## - Watch Video Solution

43. At 298 K , the equilibrium constant of a reaction is $1.8 \times 10^{-7}$. If $\Delta H^{0}$ of the reaction is 28.6 kJ , calculate the value of $\Delta S^{0}$.

## - Watch Video Solution

44. At $298 \mathrm{~K}, \Delta H$ and $\Delta S$ for a reaction are
-65.49 kJ and $-145 \mathrm{~J} . \mathrm{K}^{-1}$ respectively.

Calculate
$\Delta G, \Delta S_{\text {univ }}$ and $\Delta S_{\text {surr }}$ at that temperature.
$\Delta H=-10000 \mathrm{~J} . \mathrm{mol}^{-1}$ and $\Delta S=-33.3 \mathrm{~J} . \mathrm{mol}^{-1} \cdot K^{-1}$.
At what temperature will the reaction procees spontaneously from (i) left to right : (ii) right to left ?

## - Watch Video Solution

46. Two moles of a perfect gas undergoes the following process: (i) a reversible isobaric expansion from (1.0 atm, 20.0 L ) to ( $1.0 \mathrm{~atm}, 40.0 \mathrm{~L}$ ). (ii) a reversible isochoric change of state from ( $1.0 \mathrm{~atm}, 40.0 \mathrm{~L}$ ) to ( 0.5 atm , 40.0 L ). (iii) a reversible isothermal expansion from ( $0.5 \mathrm{~atm}, 40.0 \mathrm{~L}$ )to ( 1.0 atm, 20.0 L )
(i) Sketch with labels each procsses on the same P-V diagram.
(ii) Calculate the total work (w) and the total heat (Q) involved in the above process.
(iii) What will be values of $\Delta U, \Delta H$ and $\Delta S$ for overall process?
47. At $25^{\circ} \mathrm{C}, \Delta H^{0}$ for the reaction , $\mathrm{N}_{2}(g)+\frac{1}{2} \mathrm{O}_{2}(g) \rightarrow \mathrm{N}_{2} \mathrm{O}(\mathrm{g})$, is +82 kJ . At this temperature if the standard molar entropies for $N_{2}(g), O_{2}(g)$ and $N_{2} O(g)$ are 191.6, 205.2 and 219.9J. $K^{-1} . \mathrm{mol}^{-1}$ respectively, calculate $\Delta S_{\text {univ }}^{0}$ for the reaction.

## - Watch Video Solution

## Practice Set 6

1. The condition for spontaneity of process is

## - Watch Video Solution

2. Which of the following statement is true
A. entropy increases when water vaporises
B. randomness decreases in the fusion of ice
C. randomness increases in the condensation of water vapour
D. randomness remain unchanged during vaporisation of water

## - Watch Video Solution

3. Which is an intensive property of a system

## - Watch Video Solution

4. In which of the following processes change in entropy for the system is zero-

## - Watch Video Solution

5. Which relation is correct -
A. $\mathrm{dG}=\mathrm{VdP}-\mathrm{Sd} \mathrm{T}$
B. $d G=P d V+T d S$
C. $\mathrm{dH}=-\mathrm{VdP}+\mathrm{TdS}$
D. $d G=V d P+S d T$

6. Mixing of two different ideal gases under isothermal reversible condition will lead to

## - Watch Video Solution

7. 

A
spontaneous
process
has
$\Delta S_{\text {sys }}=x J . K^{-1}$ and $\Delta S_{\text {surr }}=-y J . K^{-1}$. Compare the values of x and $y$.

## - Watch Video Solution

8. Give two examples which are path dependent quantities. Are they properties of the system ?

## - Watch Video Solution

9. What do you mean by the enthalpy of solidification of water at $0^{\circ} \mathrm{C}$ and 1 atm pressure $=-6.02 \mathrm{~kJ} \mathrm{~mol}^{-1}$ ?

## - Watch Video Solution

10. Why is infinite time required for the completion of an ideal reversible process ?

## - Watch Video Solution

11. 2 mol of an ideal gas is compressed by an isothermal reversible process at $27^{\circ} \mathrm{C}$. As a result, pressure of the gas increases from 1 to 10 atm. Calculate $w, q, \Delta U$ and $\Delta H$.

## (D) Watch Video Solution

12. Find out the heat of formation of $\mathrm{CH}_{3} \mathrm{COOH}$. Given that the heat of Combustion of $\mathrm{CH}_{3} \mathrm{COOH}$ is $-867 \mathrm{~kJ} \mathrm{~mol}^{-1}$ and the heat of formation of $\mathrm{CO}_{2}$ and $\mathrm{H}_{2} \mathrm{O}$ are -393.5 and $-285.9 \mathrm{~kJ} \mathrm{~mol}^{-1}$ respectively.

## - Watch Video Solution

13. (a) At $25^{\circ} \mathrm{C}$, standard reaction enthalpy for the reaction 2 C (graphite,
s) $+O_{2}(g) \rightarrow 2 \mathrm{CO}(\mathrm{g})$ is -221.0 kJ . Does this value indicate the standard enthalpy of formation of $\mathrm{CO}(\mathrm{g})$ ? If not, then what would be the value of enthalpy of formation of $\mathrm{CO}(\mathrm{g})$ at $25^{\circ} \mathrm{C}$ ?
(b) A gas is allowed to expand against zero external pressure. Explain with reason whether the procss is reversible or not.

## - Watch Video Solution

14. Calculate enthalpy change on freezing 1 mol water at $10^{\circ} \mathrm{C}$ to ice at $-10^{\circ} C . \Delta_{\mathrm{fus}} H=6.03 \mathrm{~kJ} \mathrm{~mol}^{-1}$ at $0^{\circ} C$.

$$
C_{p}\left[H_{2} O(l)\right]=75.3 \quad \mathrm{~J} . \mathrm{mol}^{-1} \cdot K^{-1},
$$

$$
C_{p}\left[H_{2} O(s)\right]=36.8 \mathrm{~J} \mathrm{~mol}^{-1} . K^{-1}
$$

## - Watch Video Solution

15. 

$C_{p}-C_{V}=x J . g^{-1} . K^{-1}$ and $C_{p, m}-C_{V, m}=X \mathrm{~J} \mathrm{~mol}^{-1} . K^{-1}$ for an ideal gas. If the molecular mass of the gas be $M$, then establish a realation among $x, X$ and $M$. (b) Give an example of a process which is simultaneosuly isothermal and adiabatic.
