Solids

Exercise

1. The energy liberated in the recombination of hole-electron pair is converted into

electromagnetic radiation. If the maximum wave length emitted is 600 nm, find the value of forbidden energy gap.

[Watch Video Solution](#)

2. The energy liberated in the recombination of hole-electron pair is converted into electromagnetic radiation. If the maximum wavelength emitted is 500 nm, find value of forbidden energy gap.

[Watch Video Solution](#)

3. The energy liberated in the recombination of hole-electron pair is converted into electromagnetic radiation. If the maximum wave length emitted is 400 nm, find the value of forbidden energy gap.

[Watch Video Solution](#)

4. A semiconductor has electron concentration of $4 \times 10^{12} \text{ cm}^{-3}$ and hole concentration of

$7 \times 10^{-3} \text{cm}^{-3}$. Is the semiconductor n-type or p-type ?

[Watch Video Solution](#)

5. A semiconductor has electron concentration of $4 \times 10^{12} \text{cm}^{-3}$ and hole concentration of $7 \times 10^{-3} \text{cm}^{-3}$. Calculate conductivity of the semiconductor if electron mobility = $22000 \text{cm}^2 \text{V}^{-1} \text{s}^{-1}$ and hole mobility = $150 \text{cm}^2 \text{V}^{-1} \text{s}^{-1}$.

[Watch Video Solution](#)

6. A semiconductor has electron concentration of $8 \times 10^{-13} \text{ cm}^{-3}$ and hole concentration of $4 \times 10^{-12} \text{ cm}^{-3}$. Is the semiconductor p-type or n-type ?

[Watch Video Solution](#)

7. A semiconductor has electron concentration of $8 \times 10^{-13} \text{ cm}^{-3}$ and hole concentration of $4 \times 10^{-12} \text{ cm}^{-3}$. Calculate conductivity of the sample if electron mobility =

$24000\text{cm}^2\text{V}^{-1}\text{s}^{-1}$ and hole mobility =
 $200\text{cm}^2\text{V}^{-1}\text{s}^{-1}$ and $e = 1.6 \times 10^{-19}\text{C}$.

[Watch Video Solution](#)

8. In a sample of semi conductor mobilities of electrons and holes are $24 \times 10^3\text{cm}^2\text{V}^{-1}\text{S}^{-1}$ and $0.2 \times 10^3\text{cm}^2\text{V}^{-1}\text{S}^{-1}$ respectively. If the density of electrons is $0.8 \times 10^{14}\text{cm}^{-3}$ and that of holes is $0.4 \times 10^{14}\text{cm}^{-3}$. Find the nature of semi-conductor and its conductivity.

[Watch Video Solution](#)

9. Draw a lattice structure of an intrinsic semiconductor.

Watch Video Solution

10. What is conduction band ?

Watch Video Solution

11. What is doping ?

[Watch Video Solution](#)

12. What is valence band ?

[Watch Video Solution](#)

13. What is an intrinsic Semi-conductor ?

[Watch Video Solution](#)

14. What is doping ?

[Watch Video Solution](#)

15. What is an Extrinsic Semi-conductor ?

[Watch Video Solution](#)

16. Draw the energy-band diagram of p-type semiconductor.

[Watch Video Solution](#)

17. Draw the energy-band diagram for an insulator.

[Watch Video Solution](#)

18. What is Fermi energy level ?

[Watch Video Solution](#)

19. What is doping ?

[Watch Video Solution](#)

20. What do you mean by the term doping in semiconductors ?

Watch Video Solution

21. What type of impurity is added to obtain N-Type and P-Type semi conductors ?

Watch Video Solution

22. What is the effect of rise in temperature on the conductivity of copper and silicon ?

Watch Video Solution

23. What is an Extrinsic Semi-conductor ?

Watch Video Solution

24. What is n-type semiconductor ?

Watch Video Solution

25. What do you mean by p-type semi conductor ?

Watch Video Solution

26. Choose the correct option: Electrical conductivity of a semi conductor -

A. decreases with rise in its temperature.

B. increases with rise in its temperature.

C. does not changes with temperature.

D. first decreases and then increases with
rise in temperature.

Answer:

Watch Video Solution

27. Choose the correct option : A pure
semiconductor behaves slightly as a
conductor at :

A. high temperature

B. room temperature

C. low temperature

D. none of these

Answer:

Watch Video Solution

28. For metal conductors, the electrical resistivity decreases with the rise in temperature.(True/False)

[Watch Video Solution](#)

29. p-type semiconductor is obtained by doping silicon with Indium(In).(Yes/No)

[Watch Video Solution](#)

30. What are extrinsic semiconductor ? Explain acceptor-type semi-conductors.

[Watch Video Solution](#)

31. Explain various energy bands in an atom.

Watch Video Solution

32. What is doping ? Write three necessary conditions for it and two methods of doping.

Watch Video Solution

33. Distinguish between conductor and semiconductor on the basis of their energy

bands.

[Watch Video Solution](#)

34. What are extrinsic semi-conductors ? Explain donor type semi-conductor.

[Watch Video Solution](#)

35. What are 'holes'? Write their characteristics.

[Watch Video Solution](#)

36. Distinguish between energy levels and energy bands.

Watch Video Solution

37. What are extrinsic semiconductor ? Explain acceptor-type semi-conductors.

Watch Video Solution

38. Distinguish between n-type and p-type semiconductors.

Watch Video Solution

39. Distinguish between intrinsic and extrinsic semiconductors.

Watch Video Solution

40. What is the difference between a single crystal and polycrystal ?

Watch Video Solution

41. What is doping ? Write three necessary conditions for it and two methods of doping.

Watch Video Solution

42. Define hole. Give its two characteristics.

[Watch Video Solution](#)

43. Distinguish between intrinsic and extrinsic semiconductors.

[Watch Video Solution](#)

44. What is doping ? Write three necessary conditions for it and two methods of doping.

[Watch Video Solution](#)

45. How does conductivity of a semi conductor change with the rise in temperature ?

Watch Video Solution

46. Distinguish between n-type and p-type semiconductors.

Watch Video Solution

47. Distinguish between n-type and p-type semiconductors.

Watch Video Solution

48. Distinguish between conductor and semiconductor on the basis of their energy bands.

Watch Video Solution

49. Explain the band theory of solids.

Watch Video Solution

50. What are extrinsic semiconductors ?

Explain how p-type and n-type semiconductors are formed ?

Watch Video Solution
