

PHYSICS

BOOKS - GURUKUL BOOKS & PACKAGING PHYSICS (HINGLISH)

MARCH 2017

Section I

1. If the pressure of an ideal gas is decreased by 10% isothermally, then its volume will

A. decrease by 9 %

B. increase by 7 %

C. increase by 10 %

D. increase by 11.4 %

Answer: D

Watch Video Solution

2. Stretching of a rubber band results in

..... .

- A. no change in potential energy.
- B. zero volume of potential energy.
- C. increase in potential energy.
- D. decrease in potential energy.

Answer: C

Watch Video Solution

3. When the angular acceleration of a rotating body is zero, which physical quantity will be equal to zero ?

A. Angular momentum

B. Moment of inertia

C. Torque

D. Radius of gyration

Answer: C

Watch Video Solution

4. In a damped harmonic oscillator, periodic oscillations have amplitude.

A. gradually increasing

B. suddenly increasing

C. suddenly decreasing

D. gradually decreasing

Answer: D

Watch Video Solution

5. A sine wave of wavelength λ is travelling in a medium. The minimum distance between the two particles always having same speed is.

A. λ

B. $\frac{\lambda}{2}$

C. $\frac{\lambda}{3}$

D. $\frac{\lambda}{4}$

Answer: B

Watch Video Solution

6. The speed of transverse wave on a stretched string is

A. \sqrt{T}

B. T

C. $\frac{1}{\sqrt{T}}$

D. $\frac{1}{T}$

Answer: A

Watch Video Solution

7. Find the wavelength at which a black body radiates maximum energy, if its temperature is

427° C.

(Wein's constant $b = 2.898 \times 10^{-3} mK$)

A. $0.0414 \times 10^{-6} m$

B. $4.14 \times 10^{-6} m$

C. $41.4 \times 10^{-6} m$

D. $414 \times 10^{-6} m$

Answer: B

Watch Video Solution

8. Explain the concept of centripetal force.

[Watch Video Solution](#)

9. Show that R.M.S. velocity of gas molecules is directly proportional to square root of its absolute temperature.

[Watch Video Solution](#)

10. Obtain the differential equation of linear simple harmonic motion.

Watch Video Solution

11. Draw a neat, labelled diagram for a liquid surface in contact with a solid, when the angle of contact is acute .

Watch Video Solution

12. A hole is drilled half way to the centre of the Earth. A body is dropped into the hole. How much will it weigh at the bottom of the hole if the weight fo the body on the Earth's surface is 350 N?

Watch Video Solution

13. A solid sphere of mass 1 kg rolls on a table with linear speed 2 m/s, find its total kinetic energy.

[Watch Video Solution](#)

14. A transverse wave is produced on a stretched string 0.9 m long and fixed at its ends. Find the speed of the transverse wave, when the string vibrates while emitting second overtone of frequency 324 Hz.

[Watch Video Solution](#)

15. A body cools at the rate $0.5^{\circ}C / \text{minute}$ when is $25^{\circ}C$ above the surroundings.

Calculate the rate of cooling when it is $15^{\circ}C$ above the same surroundings.

[Watch Video Solution](#)

16. Show that period of a satellite revolving around the Earth depends upon mass of the Earth.

[Watch Video Solution](#)

17. Obtain an expression for torque acting on a rotating body with constant angular acceleration. Hence state the dimensions and SI unit of torque.

Watch Video Solution

18. The total energy of free surface of a liquid drop is 2π times the surface tension of the liquid. What is the diameter of the drop ?

[Assume all terms in SI unit].

[Watch Video Solution](#)

19. A vehicle is moving on a circular track whose surface is inclined towards the horizon at an angle of 10° . The maximum velocity with which it can move safely is 36 km/hr. Calculate the length of the circular track.

$$[\pi = 3.142]$$

[Watch Video Solution](#)

20. Prove the law of conservation of energy for a particle performing simple harmonic motion. Hence graphically show the variation of kinetic energy and potential energy w.r.t. instantaneous displacement.

Two sound notes have wavelengths $\frac{83}{170}m$ and $\frac{83}{172}m$ in the air. These notes when sounded together produce 8 beats per second. Calculate the velocity of sound in the air and frequencies of the two notes.

Watch Video Solution

21. Explain the formation of stationary waves by analytical method. Show the formation of stationary wave diagrammatically.

A mass of 1 kg is hung from a steel wire of radius 0.5 mm and length 4 m. Calculate the extension produced. What should be the area of cross-section of the wire so that elastic limit is not exceeded? Change in radius is negligible ?

Given $g = 9.8 \text{ m/s}^2$, Elastic limit of steel is $2.4 \times 10^8 \text{ N/m}^2$, Y for steel

$(Y_{\text{steel}}) = 20 \times 10^{10} \text{ N/m}^2, \pi = 3.142$.

Watch Video Solution

Section II

1. If A.C. voltage is applied to a pure capacitor, then voltage across the capacitor

A. leads the current by phase angle $\left(\frac{\pi}{2}\right)$

rad.

B. leads the current by phase angle (π)

rad.

C. lags behind the current by phase angle

$$\left(\frac{\pi}{2}\right) \text{rad.}$$

D. lags behind the current by phase angle

$$(\pi) \text{rad.}$$

Answer: C

Watch Video Solution

2. DOPPLER EFFECT

A. frequency increase

B. frequency decrease

C. wavelength decrease

D. frequency and wavelength increase.

Answer: B

Watch Video Solution

3. If a watch-glass containing a small quantity of water is placed on two dissimilar magnetic poles, then water

A. shows a depression in the middle

B. shows an elevation in the middle.

C. surface remains horizontal.

D. evaporates immediately.

Answer: A

Watch Video Solution

4. A device that converts one form of energy into another form is termed as

A. amplifier

B. transducer

C. receiver

D. demodulator

Answer: B

Watch Video Solution

5. When a p-n-p transistor is operated in saturation region, then its

A. base-emitter junction is forward biased and base-collector junction is reverse biased .

B. both base-emitter and base-collector junctions are reverse biased.

C. both base-emitter and base-collector junctions are forward biased.

D. base-emitter junction is reverse biased and base-collector junction is forward biased.

Answer: C

Watch Video Solution

6. In a photon-electron collision

A. only total energy is conserved

B. only total momentum is conserved

C. both total energy and total momentum

are conserved

D. both total momentum and total energy
are not conserved

Answer: C

Watch Video Solution

7. If the charge on the condenser of $10\mu F$ is
doubled, then the energy stored in it becomes

..... .

A. zero

B. twice that of initial energy

C. half the initial energy

D. four times the initial energy

Answer: D

Watch Video Solution

8. Distinguish between interference and diffraction of light.

Watch Video Solution

9. A galvanometer can be converted into a voltmeter by connecting a

Watch Video Solution

10. State the advantages of a potentiometer over a voltmeter.

Watch Video Solution

11. Draw a neat and labelled block diagram of a receiver.

Watch Video Solution

12. A rectangular coil of a moving coil galvanometer contains 100 turns, each having area 15cm^2 . It is suspended in the radial magnetic field 0.03 T. The twist constant of suspension fibre is 15×10^{-10} N-m/degree.

Calculate the sensitivity of the moving coil galvanometer.

[Watch Video Solution](#)

13. The magnetic flux through a loop is varying according to relation $\phi = 6t^2 + 7t + 1$ where ϕ is in milliweber and t is in second. What is the e.m.f. induced in the loop at $t = 2$ second ?

[Watch Video Solution](#)

14. An unknown resistance is placed in the left gap and resistance of 50 ohm is placed in the right gap of a meter bridge . The null point is obtained at 40 cm from the left end. Determine the unknown resistance.

Watch Video Solution

15. Find the frequency of revolution of an electron in Bohr's 2nd orbit, if the radius and speed of electron in that orbit is

$2.14 \times 10^{-10}m$ and $1.09 \times 10^6 m/s$

respectively.

$[\pi = 3.142]$

Watch Video Solution

16. Explain with a neat diagram, how a p-n junction diode is used as a half wave rectifier.

Watch Video Solution

17. Self induction and Mutual induction

[Watch Video Solution](#)

18. A cube of marble having each side 1 cm is kept in an electric field of intensity 300 V/m. Determine the energy contained in the cube of dielectric constant 8.

[Given : $\epsilon_0 = 8.85 \times 10^{-12} C^2 / Nm^2$]

[Watch Video Solution](#)

19. An electron in an atom revolves around the nucleus in an orbit of radius 0.53 \AA . If the frequency of revolution of an electron is $9 \times 10^9 \text{ MHz}$. calculate the orbital angular momentum.

[Given : Charge on an electron
 $= 1.6 \times 10^{-19} \text{ C}$, Gyromagnetic ratio
 $8.8 \times 10^{10} \text{ C/kg}$, $\pi = 3.142$]

Watch Video Solution

20. Describe the biprism experiment to find the wavelength of the monochromatic light.

Draw the necessary ray diagram.

The width of plane incident wavefront is found to be doubled on refraction in denser medium.

If it makes an angle of 65° with the normal, calculate the refractive index for the denser medium.

View Text Solution

21. Draw a neat, labelled energy level diagram for H atom showing the transitions.

Explain the series of spectral lines for H atom.

Whose fixed inner orbit numbers are 3 and 4 respectively.

The work function for potassium and caesium are 2.25 eV and 2.14 eV respectively. Is the photoelectric effect possible for either of them if incident wavelength is 5180 Å ?

[Given : Planck's constant

$= 6.63 \times 10^{-34} \text{ J. s.}$, Velocity of light

$= 3 \times 10^8 \text{ m/s}$, $1\text{eV} = 1.6 \times 10^{-19} \text{ J}$]

Watch Video Solution
