NCERT - NCERT PHYSICS(HINGLISH)

GRAVITATION

Exercise

1. The mass of the earth is 6×10^{24} kg and that of the moon is 7.4×10^{22} kg. If the distance between the earth and the moon is

3.84×10^5 km, calculate the force exerted by the earth on the moon. (Take $G = 6.7 \times 10^{-11} Nm^2kg^{-2}$)

[Watch Video Solution](#)

2. A car falls off a ledge and drops to the ground in $0.5s$. let $g = 10m/s^2$ (for simplifying the calculation).

(i) what is its speed on striking the ground ?

what is its average speed during 0.5s?

(iii) How high is the ledge from the ground ?

Watch Video Solution

3. An object is thrown vertically upwards and rises to a height of 10 m. Calculate

(i) the velocity with which the object was thrown upwards and (ii) the time taken by the object to reach the highest point.

Watch Video Solution

4. Mass of an object is 10 kg. what is its weight on earth ?

[Watch Video Solution](#)

5. An object weigh 10 N when measured on the surface of the earth. What would be its weight when measure on the surface of moon ?

[Watch Video Solution](#)

6. A block of wood is kept on a table top. The mass of the wooden block is 5 kg and its dimensions are $40\text{cm} \times 20\text{cm} \times 10\text{cm}$. Find the pressure exerted by the wooden block on the table top if it is made to lie on the table with its sides of dimension (a) $20\text{cm} \times 10\text{cm}$ (b) $40\text{cm} \times 20\text{cm}$. Given $g = 9.8 \frac{\text{m}}{\text{s}^2}$.

Watch Video Solution

7. Relative density of silver is 10.8. The density of water is $10^3 \frac{kg}{m^3}$. What is the density of silver in SI.

[Watch Video Solution](#)

8. State the universal law of gravitation.

[Watch Video Solution](#)

9. Write the formula to find the magnitude of the gravitational force between the Earth and an object on the surface of the Earth.

Watch Video Solution

10. What do you mean by free fall?

Watch Video Solution

11. What do you mean by acceleration due to gravity?

Watch Video Solution

12. Distinguish between mass and weight.

Watch Video Solution

13. Why is the weight of an object on the Moon $(1/6)$ th its weight on the Earth?

Watch Video Solution

14. Why is it difficult to hold a school bag having strap made of thin and strong string?

Watch Video Solution

15. What do you mean by buoyancy?

Watch Video Solution

16. Why does an object float or sink when placed on the surface of water?

Watch Video Solution

17. You find your mass to be 42 kg on a weighing machine. Is your mass more or less than 42kg?

Watch Video Solution

18. You have a bag of cotton and an iron bar, each indicating a mass of 100 kg when measured of a weighing machine. In reality, one is heavier than the other. Can you say which one is heavier and why?

Watch Video Solution

19. How does the force of gravitation between two objects change when the distance between them is reduced to half ?

[Watch Video Solution](#)

20. Gravitational force acts on all objects in properties to their masses. Why then, a heavy object does not fall faster than a light object?

[Watch Video Solution](#)

21. What is the magnitude of the gravitational force between the Earth and a 1kg object on its surface ? (Mass of the earth is 6×10^{24} kg and radius of the Earth is $6.4 \times 10^6 m$).

[Watch Video Solution](#)

22. The Earth and the moon are attracted to each other by gravitational force. Does the earth attract the moon with a force that is greater or smaller or the same as the force with which the moon attracts the earth? Why?

[Watch Video Solution](#)

23. If the moon attracts the earth, why does the earth not move towards the moon?

Watch Video Solution

24. What happens to the force between two object, if

(i) The mass of one object is doubled? (ii) The distance between the object is doubled and tripled?

(iii) The masses of both object are doubled?

[Watch Video Solution](#)

25. What is importance of the universal law of gravitation?

[Watch Video Solution](#)

26. What is the acceleration of free fall?

[Watch Video Solution](#)

27. What do we call the gravitational force between the earth and an object ?

[Watch Video Solution](#)

28. Amit buys few grams of gold at the poles as per the instruction of one of his friends. He hands over the same when he meets him at the equator. Will the friend agree with the weight of gold bought ? If not, why ? [Hint. The

value of g is greater at the poles than at the equator.]

[Watch Video Solution](#)

29. Why will a sheet of paper fall slower than one that is crumpled into a ball?

[Watch Video Solution](#)

30. Gravitational force on the surface of the moon is only $1/6$ as gravitational force on the

earth. What is the weight in newtons of a 10kg object on the moon and on the earth?

[Watch Video Solution](#)

31. A ball is thrown vertically upwards with a velocity of $49\text{m} / \text{s}$. Calculate

- (i) The maximum height to which it rises,
- (ii) the total time it takes to return to the surface of the earth.

[Watch Video Solution](#)

32. A stone is released from the top of a tower of height 19.6m. Calculate its final velocity just before touching the ground.

[Watch Video Solution](#)

33. A stone is thrown vertically upward with an initial velocity of 40m/s . Taking $g = 10\text{m/s}^2$, find the maximum height reached by the stone. What is the net displacement and the total distance covered by the stone?

[Watch Video Solution](#)

34. Calculate the force of gravitation between the earth the sun, given that the mass of the earth = 6×10^{24} kg and mass of the sun = 2×10^{30} kg. The average distance between the two is 1.5×10^{11} m.

Watch Video Solution

35. A stone is allowed to fall from the top of a tower 100m high and at the same time

another stone is projected vertically upwards from the ground with a velocity of 25m/s . Calculate when and where the two stone will meet.

[Watch Video Solution](#)

36. A ball thrown up vertically returns to the thrower after 6 s. Find

(a) the velocity with which it was thrown up.

(b) the maximum height it reaches, and (c) its position after 4 s.

[Watch Video Solution](#)

37. In what direction does the buoyant force on an object immersed in a liquid act?

[Watch Video Solution](#)

38. Why does a block of plastic released under water come up to the surface of water?

[Watch Video Solution](#)

39. The volume of 50 g of a substance is 20 cm^3 . If the density of water is $1 \frac{g}{cm^3}$, will the substance float or sink?

Watch Video Solution

40. The volume of 500 g sealed packet is 350 cm^3 . Will the packet float or sink if the density of water is $1 \frac{g}{cm^3}$? What will be the mass of the water displaced by this packed?

Watch Video Solution
