LIGHT : REFLECTION AND REFRACTION

Light Reflection And Refraction

1. Which of the following can make a parallel beam of light from a point source is incident

on it ?

- A. Concave mirror as well as convex lens
- B. Convex mirror as well as concave lens
- C. Two plane mirrors placed at 90° to each other
- D. Concave mirror as well as concave lens

Answer: A

Watch Video Solution

2. A 10mm long awl pin is placed vertically in front of a concave mirror. A 5mm long image of the awl pin is formed at 30cm in front of the mirror. The focal length of this mirror is

A. -30 cm

B. -20 cm

C. -40 cm

D. -60 cm

Answer: B

Watch Video Solution

3. Under which of the following conditions a concave mirror can form a real image larger than the actual object ?

A. When the object is kept at a distance equal to its radius of curvature

B. When object is kept at a distance less than its focal length

C. When object is placed between the focus and centre of curvature

D. When object is kept at a distance greater than its radius of curvature

Answer: C

Watch Video Solution

4. Figure shows a ray of light as it travels from medium A to medium B. Refractive index of the

medium B relative to medium A is

- A. $\frac{\sqrt{3}}{\sqrt{2}}$
- B. $\frac{\sqrt{2}}{\sqrt{3}}$
- C. $\frac{1}{\sqrt{2}}$
- D. $\sqrt{2}$

Answer: A

Watch Video Solution

5. A light ray enters from medium A to medium B as shown in Figure. The refractive index of medium A relative to B will be

A. greater than unity

B. less than unity

C. equal to unity

D. zero

Answer: A

Watch Video Solution

6. Beams of light are incident through the holes A and B and emerge out of box through the holes C and D respectively as shown in Figure. Which of the following could be inside

the box ?

A. A rectangular glass slab

B. A convex lens

C. A concave lens

D. A prism

Answer: A

Watch Video Solution

7. A beam of light is incident through the holes on side A and emerges out of the holes on the other face of the box as shown in Figure. Which of the following could be inside the box ?

A. Concave lens

B. Rectangular glass slab

C. Prism

D. Convex lens

Answer: D

Watch Video Solution

8. Which of the following statements is true?

A. A convex lens has 4 diopetre power

having a focal length 0.25 m

B. A convex lens has 4 dioptre power

having a focal length -0.25 m

C. A concave lens has 4 dioptre power

having a focal length 0.25 m

D. A concave lens has 4 dioptre power

having a focal length -0.25 m

Answer: A

Watch Video Solution

9. Magnification produced by a rear view mirror fitted in vehicles

A. is less than one

B. is more than one

C. is equal to one

D. can be more than or less than one

depending upon the position of the

object in front of it.

Answer: A

Watch Video Solution

10. Rays from Sun converge at a point 15cm in front of a concave mirror. Where should an object be placed so that size of its image is equal to the size of the object ?

- A. 15 cm in front of the mirror
- B. 30 cm in front of the mirror
- C. between 15 cm and 30 cm in front of the mirror

D. more than 30 cm in front of the mirror

Answer: B

Watch Video Solution

11. A full length image of a distant tall building can definitely be seen by using

A. a concave mirror

B. a convex mirror

C. a plane mirror

D. both concave as well as plane mirror

Answer: B

Watch Video Solution

12. In torches, search lights and headlights of vehicles the bulb is placed

A. between the pole and the focus of the reflector

B. very near to the focus of the reflector

C. between the focus and centre of curvature of the reflector

D. at the centre of curvature of the reflector

Answer: B

Watch Video Solution

13. The laws of reflection hold good for

A. plane mirror only

B. concave mirror only

C. convex mirror only

D. all mirrors irrespective of their shape

Answer: D

Watch Video Solution

14. The path of a ray light coming from air passing through a rectangular glass slab traced by four students are shown as A, B, C

and D in Figure. Which one of them is correct ?

A. A

B. B

C. C

D. D

Answer: B

Watch Video Solution

15. You are given water, mustard oil, glycerine and kerosene. In which of these media a ray of light incident obliquely at same angle would bend the most ?

A. Kerosene

B. Water

C. Mustard oil

D. Glycerine

Answer: D

Watch Video Solution

16. Which of the following ray diagrams is correct for the ray of light incident on a

concave mirror as shown in figure.

A. A

B. B

C. C

D. D

Answer: D

Watch Video Solution

17. Which of the following ray diagrams is correct for the ray of light incident on a lens shown in Fig. ? Choices are given in Fig.

A. A

B. B

C. C

D. D

Answer: A

Watch Video Solution

18. A child is standing in front of a magic of a mirror, She finds the image of her head bigger, the middle portion of her body of the same size and that of the legs smaller. The following is the order of combinations for the magic mirror from the top.

A. Plane, convex and concave

B. Convex, concave and plane

C. Concave, plane and convex

D. Convex, plane and concave

Answer: C

Watch Video Solution

19. In which of the following, the image of an object placed at infinity will be highly diminished and point sized ?

A. Concave mirror only

B. Convex mirror only

C. Convex lens only

D. Concave mirror, convex mirror, concave lens and convex lens

Answer: D

Watch Video Solution

20. Identify the device used as spherical mirror or lens in following cases, when the image formed is virtual and erect in each case.

(a) Object is placed between device and its focus, image formed is enlarged and behind it.

(b) Object is placed between the focus and device, image formed is enlarged and on the same side as that of the object.

(c) Object is placed between infinity and device, image formed is diminished and between focus and optical centre on the same side as that of the object.

(d) Object is placed between infinity and device, image formed is diminished and between pole and focus, behind it.

[Watch Video Solution](#)

21. Why does a light ray incident on a rectangular glass slab immersed in any medium emerges parallel to itself ? Explain using a diagram.

[Watch Video Solution](#)

22. A pencil when dipped in water in a glass tumbler appears to be bent at the interface of air and water. Will the pencil appear to be bent to the same extent, if instead of water we use liquids like, kerosene or turpentine. Support your answer with reason.

Watch Video Solution

23. How is the refractive index of a medium related to the speed of light ? Obtain an expression for refractive index of a medium

with respect to another in terms of speed of light in these two media ?

[Watch Video Solution](#)

24. Refractive index of diamond with respect to glass is 1.6 and absolute refractive index of glass is 1.5. Find out the absolute refractive index of diamond.

[Watch Video Solution](#)

25. A convex lens of focal length 20 cm can produce a magnified virtual as well as real image. Is this a correct statement ? If yes, where shall the object be placed in each case for obtaining these images ?

Watch Video Solution

26. Sudha finds out that the sharp image of the window pane of her science laboratory is formed at a distance of 15cm from the lens.

She now tries to focus the building visible to her outside the window instead of the window pane without disturbing the lens. In which direction will she move the screen to obtain a sharp image of the building ? What is the approximate focal length of this lens ?

[Watch Video Solution](#)

27. How are power and focal length of a lens related ? You are provided with two lenses of focal length 20cm and 40cm respectively.

Which lens will you use to obtain more convergent light ?

[Watch Video Solution](#)

28. Under what condition in an arrangement of two plane mirrors, incident ray and reflected ray will always be parallel to each other, whatever may be angle of incidence. Show the same with the help of diagram.

[Watch Video Solution](#)

29. Draw a ray diagram showing the path of rays of light when it enters with oblique incidence (i) from air into water , (ii) from water into air.

Watch Video Solution

30. Draw ray diagrams showing the image formation by a concave mirror when an object is placed

(a) between pole and focus of the mirror , (b) between focus and centre of curvature of the

mirror

(c) at centre of curvature of the mirror , (d) a

little beyond centre of curvature of the mirror

(e) at infinity

[Watch Video Solution](#)

31. Draw ray diagrams showing the image formation by a convex lens when an object is placed

(a) between optical centre and focus of the lens

(b) between focus and twice the focal length of the lens

(c) at twice the focal length of the lens

(d) at infinity , (e) at the focus of the lens

[Watch Video Solution](#)

32. Write laws of refraction. Explain the same with the help of ray diagram, when a ray of light passes through a rectangular glass slab.

[Watch Video Solution](#)

33. Draw ray diagrams showing the image formation by a concave lens when an object is placed

(a) between focus and twice the focal length of the lens

(b) beyond twice the focal length of the lens

Watch Video Solution

34. Draw ray diagrams showing the image formation by a convex mirror when an object is placed

(a) at infinity (b) at finite distance from the mirror

[Watch Video Solution](#)

35. The image of a candle flame formed by a lens is obtained on a screen placed on the other side of the lens. If the image is three times the size of the flame and the distance between lens and image is 80cm , at what distance should the candle be placed from the

lens ? What is the nature of the image at a distance of 80cm from the lens ?

[Watch Video Solution](#)

36. Size of image of an object by a mirror having a focal length of 20cm is observed to be reduced to $\frac{1}{3}rd$ of the size ? At what distance the object has been placed from the mirror ? What is the nature of the image and the mirror ?

[Watch Video Solution](#)

37. Define power of a lens. What is its unit ?

One student uses a lens of focal length 50cm and another of -50cm . What is the nature of the lens and power used by each of the them ?

Watch Video Solution

38. A student focussed the image of a candle flame on a white screen using a convex lens. He noted down the position of the candle, screen and the lens as under

Position of candle = 12.0cm

Position of convex lens = 50.0cm

Position of the screen = 88.0cm

(i) What is the focal length of the convex lens ?

(ii) Where will the image be formed if he shifts the candle towards the lens at a position of 31.0cm .

(iii) What will be the nature of the image formed if he further shifts the candle towards the lens ?

(iv) Draw a ray diagram to show the formation of the image in case (iii) as said above.
