BOOKS - NCERT BIOLOGY (HINGLISH)

BIOTECHNOLOGY PRINCIPLES AND PROCESS

Biotechnology Principles And Process

1. Rising of dough is due is

A. multiplication of yeast

B. production of CO_2

C. emulsification

D. hydrolysis of wheat flour starch into
sugars .

Answer: B

Watch Video Solution

2. An enzyme catalysing the removal of nucleotides from the ends of DNA is

A. endonuclease

B. exonuclease

C. DNA ligase

D. Hind II

Answer:

Watch Video Solution

3. The transfer of genetic material from one bacterium to another through the mediation of a vector like virus is termed as

A. trasnsduction

B. conjugation

C. transformation

D. translation

Answer:

Watch Video Solution

4. Which of the given statements is correct in the context of observing DNA separated by agarose gel electrophoresis ?

A. DNA can be seen in visible light.

B. DNA can be seen without staining in visible light.

C. Ethidium bromide stained DNA can be seen in visible light.

D. Ethidium bromide stained DNA can be seen under exposure to UV light.

Answer:

Watch Video Solution

5. Restriction' in restriction enzyme refers to

A. cleaving of phosphodiester bond in DNA

by the enzyme

B. cutting of DNA at specific position only

C. prevention of the multiplication of

bacteriophage in bacteria.

D. All of the above.

Answer:

Watch Video Solution

6. Which of the following is not required in the preparation of a recombinant DNA molecule ?

A. Restriction endonucleases

B. DNA ligase

C. DNA fragments

D. E. coli

Answer:

Watch Video Solution

7. In agarose gel electrophoresis, DNA molecules are separated on the basis of their

A. charge only

B. size only

C. charge to size ratio

D. All of these

Answer:

Watch Video Solution

8. The most important feature in a plasmid to be used as a vector is

A. Origin of replication (Ori)

B. presence of a selectable marker

C. presence of sites for restriction

endonuclease

D. its size

Answer:

Watch Video Solution

9. While isolating DNA from bacteria, which of the following enzymes is not used ?

A. Lysozyme

B. Ribonuclease

C. Deoxyribonuclease

D. Protease.

Answer:

Watch Video Solution

10. Which of the following has popularised the PCR (polymerase chain reactions)?

A. Easy availability of DNA template

B. Availability of synthetic primers

C. Availability of cheap deoxyribonucleotides.

D. Availability of Thermostable DNA polymerase

Answer:

Watch Video Solution

11. An antibiotic resistance gene in a vector usually helps in the selection of

- A. competent cells
- B. transformed cells
- C. recombinant cells
- D. None of these

Answer:

Watch Video Solution

12. Significance of 'heat shock' method in bacterial transformation is to facilitate:

A. Binding of DNA to the cell wall

B. Uptake of DNA through membrane transport proteins

C. Uptake of DNA through transient pores in the bacterial cell wall

D. Expression of antibiotic resistance gene.

Answer:

Watch Video Solution

13. The role of DNA ligase in the construction of a recombinant DNA molecule is :

A. formation of phosphodiester bond between two DNA fragments

B. formation of hydrogen bonds between sticky ends of DNA fragments

C. ligation of all purine and pyrimidine bases.

D. None of the above.

Answer:

Watch Video Solution

14. Which of the following is not a source of restriction endonuclease ?

- A. *Haemophilus influenzae*
- B. *Escherichia coli*
- C. *Agrobacterium tumefaciens*
- D. *Bacillus amyloliquefaciens*

Answer:

Watch Video Solution

15. Which of the following steps are catalysed by Taq polymerase in a PCR reaction ?

A. Denaturation of template DNA.

B. Annealing of primers to template DNA

C. Extension of primer end on the template

DNA

D. All of the above.

Answer:

Watch Video Solution

16. A bacterial cell was transformed with a recombinant DNA that was generated using a human gene. However, the transformed cells did not produce the desired protein. Reason could be

A. human gene may have intron which bacteria cannot process

B. amino acid codons for humans and bacteria are different

C. human protein is formed but degraded by bacteria

D. All of the above.

Answer:

Watch Video Solution

17. Which of the following should be chosen for best yield if one were to produce a recombinant protein in large amounts ?

- A. Laboratory flask of largest capacity
- B. A stirred-tank bioreactor without in-lets and out-lets
- C. A continuous culture system
- D. Any of the above.

Answer:

Watch Video Solution

18. Who among the following was awarded the Nobel Prize for the development of PCR technique ?

- A. Herbert Boyer
- B. Hargoving khurana
- C. Kary Mullis
- D. Arthur komberg

Answer:

Watch Video Solution

19. Which of the following statements does not hold true for restriction enzyme ?

- A. It recognises a palindromic nucleotide sequence
- B. It is an endonuclease
- C. It is isolated from viruses
- D. It produces the same kind of sticky ends in different DNA molecules.

Answer:

Watch Video Solution

20. How is copy number of the plasmid vector related to yield of recombinant protein?

Watch Video Solution

21. Would you choose an exonuclease, while producing a recombinant DNA molecule?

 [Watch Video Solution](#)

22. What does H in 'Hind' and III refer to the enzyme 'Hind III'?

[Watch Video Solution](#)

23. Restriction enzymes should not have more than one site of action in the cloning site of a vector. Comment.

[Watch Video Solution](#)

24. What does competent refer to in competent cells used in transformation experiments?

Watch Video Solution

25. What is the significance of adding proteases at the time of isolation of genetic material (DNA)?

Watch Video Solution

26. While doing a PCR, denaturation step is missed. What will be its effect on the process?

Watch Video Solution

27. Name a recombinant vaccine that is currently being used in vaccination program.

Watch Video Solution

28. Do biomolecules (DNA and protein) exhibit biological activity in anhydrous conditions?

Watch Video Solution

29. What modification is done on the Ti-plasmid of *Agrobacterium tumefaciens* to convert it into cloning vector?

Watch Video Solution

30. What is meant by gene cloning?

Watch Video Solution

31. Both a wire maker and a molecular biologist who had developed a recombinant vaccine claim to be biotechnologists. Who in your opinion is correct?

Watch Video Solution

32. A recombinant DNA molecule was created by ligating a gene to a plasmid vector. By mistake, an exonuclease was added to the tube containing the recombinant DNA. How does this affect the next step in the experiment, i.e., bacterial transformation?

Watch Video Solution

33. Restriction enzymes that are used in the construction of recombinant DNA are

endonucleases which cut the DNA at specific recognition sequence? What would be the disadvantage if they do not cut the DNA at specific recognition sequence?

[Watch Video Solution](#)

34. A plasmid DNA and linear DNA (both are of the same size) have one site for restriction endonuclease. When cut and separated on agarose gel electrophoresis, plasmid shows

one DNA band, while linear DNA shows two fragments Explain.

[Watch Video Solution](#)

35. How does one visualise DNA on an agarose gel?

[Watch Video Solution](#)

36. A plasmid without a selectable marker was chosen as vector for cloning a gene. How

does this affect the experiment?

Watch Video Solution

37. A mixture of fragmented DNA was electrophoresed in an agarose gel. After staining the gel with ethidium bromide, no DNA bands were observed. What could be the reason?

Watch Video Solution

38. Describe the role of $CaCl_2$ in the preparation of competent cells?

Watch Video Solution

39. What would happen when one grows a recombinant bacterium in the bioreactor but forget to add antibiotic to the medium in which the recombinant is growing?

Watch Video Solution

40. Identify and explain A,B and C in the PCR diagram given below.

[View Text Solution](#)

41. Name the regions marked A,B and C

[Watch Video Solution](#)

42. For selection of recombinants, insertional inactivation of antibiotic marker has been

supercoded by insertional inactivation of a marker gene coding for a chromogenic substrate. Give reasons.

[Watch Video Solution](#)

43. Describe the role of agrobacterium in transforming a plant cell.

[Watch Video Solution](#)

44. Illustrate the design of a bioreactor. Highlight the difference between a flask in your laboratory and a bioreactor which allows cells to grow in a continuous culture system.
