

# BIOLOGY

## BOOKS - NCERT BIOLOGY (HINGLISH)

### ECOSYSTEM

#### Ecosystem

1. Decomposers like fungi and bacteria are:
  - i. autotrophs
  - ii. heterotrophs

iii. saprotrophs iv. Chemo-autotrophs

Choose the correct answer:

A. I and iii

B. I and iv

C. ii and iii

D. I and ii

**Answer: c**

**Watch Video Solution**

2. The process of mineralisation by microorganisms helps in the release of

A. inorganic nutrients from humus

B. both organic and inorganic nutrients from detritus

C. organic nutrients from humus

D. inorganic nutrients from detritus and formation of humus.

**Answer: a**

3. Productivity is the rate of production of biomass expressed in terms of

(i)  $(\text{kcal m}^{-3}) \text{yr}^{-1}$

(ii)  $\text{g}^{-2} \text{yr}^{-1}$

(iii)  $\text{g}^{-1} \text{yr}^{-1}$  (iv)  $(\text{kcal m}^{-2}) \text{yr}^{-1}$

A. ii

B. iii

C. ii and iv

D. i and iii

**Answer: c**

**Watch Video Solution**

4. An inverted pyramid of biomass can be found in which ecosystem?

A. Forest

B. marine

C. Gras land

D. Tundra

**Answer: b**

**Watch Video Solution**

**5. Which of the following is not a producer?**

A. Spirogyra

B. Agaricus

C. Volvox

D. Nostoc

**Answer: b**

Watch Video Solution

6. Which of the following ecosystems is most productive in terms of net primary production?

- A. Deserts
- B. Tropical rain forests
- C. Oceans
- D. Estuaries

**Answer: b**

[Watch Video Solution](#)

7. Pyramid of numbers is

A. Always upright

B. Always inverted

C. Either upright or inverted

D. Neither upright nor inverted

**Answer: c**

[Watch Video Solution](#)

8. Approximately how much of the solar energy that falls on the leaves of a plant is converted to chemical energy by photosynthesis?

A. less than 1%

B. 2-10%

C. 0.3

D. 0.5

**Answer: b**

9. Among the following where do you think the process of decomposition would be the fastest?

A. Tropical rain forest

B. Antarctic

C. Dry arid region

D. Alpine region

**Answer: a**

Watch Video Solution

**10.** How much of the net primary productivity of a terrestrial ecosystem is eaten and digested by herbivores?

A. 0.01

B. 0.1

C. 0.4

D. 0.9

**Answer: d**

Watch Video Solution

11. During the process of ecological succession, the changes that take place in communities are

A. orderly and sequential

B. random

C. very quick

D. not influenced by the physical environment

**Answer: a**

**Watch Video Solution**

**12. Climax community is in a state of**

- A. non-equilibrium
- B. equilibrium
- C. disorder
- D. constant change

**Answer: b**

**Watch Video Solution**

**13.** Among the following biogeochemical cycles, which one does not have losses due to respiration?

A. Phosphorus

B. Nitrogen

C. Sulphur

D. All of these

**Answer: d**

Watch Video Solution

14. The sequence of communities of primary succession in water is

A. Phytoplankton, sedges, free-floating hydrophytes, rooted hydrophytes, grasses and trees.

B. Phytoplankton, free-floating hydrophytes, rooted hydrophytes, sedges, grasses and trees.

C. Free-floating hydrophytes, sedges, phytoplankton, rooted hydrophytes, grasses and trees.

D. Phytoplankton, rooted submerged hydrophytes, floating hydrophytes, reed swamp, sedges, meadow and trees.

**Answer: d**

**Watch Video Solution**

15. The reservoir for the gaseous type of biogeochemical cycle exists in:

A. stratosphere

B. atmosphere

C. ionosphere

D. lithosphere

**Answer: a**

**Watch Video Solution**

16. If the carbon atoms fixed by producers already have passed through three species, the trophic level of the last species would be

- A. scavenger
- B. tertiary producer
- C. tertiary consumer
- D. secondary consumer

**Answer: c**

**Watch Video Solution**

17. Which of the following type of ecosystem is expected in an area where evaporation exceeds precipitation, and mean annual rainfall is below 100mm:

- A. Grassland
- B. Shrubby forest
- C. Desert
- D. mangrove

**Answer: c**

**Watch Video Solution**

**18.** The zone at the edge of a lake or ocean which is alternatively exposed to air and immersed in water is called.

A. pelagic zone

B. benthic zone

C. lentic zone

D. littoral zone

**Answer: d**

**Watch Video Solution**

19. Edaphic factor refers to

A. water

B. soil

C. relative humidity

D. altitude

**Answer: b**

**Watch Video Solution**

20. Which of the following is an ecosystem service provided by a natural ecosystem?

A. Cycling of nutrients

B. prevention of soil erosion

C. Pollutant absorption and reduction of  
the threat of global warming

D. All of the above

**Answer: d**

**Watch Video Solution**

**21.** Name an organism found as secondary carnivore in an aquatic ecosystem.

**Watch Video Solution**

**22.** What does the base tier of the ecological pyramid represent ?

**Watch Video Solution**

**23.** Under what conditions would a particular stage in the process of succession revert back to an earlier stage?

**Watch Video Solution**

**24.** Arrange the following as observed in Vertical stratification of a forest, Grass, Shrubby plants, Teak, Amaranths.

**Watch Video Solution**

**25.** Name an omnivore which occurs in both grazing food chain and the decomposer food chain.

**Watch Video Solution**

**26.** Justify the pitcher plant as a producer.

**Watch Video Solution**

**27.** Name any two organisms which can occupy more than one trophic level in an ecosystem.

**Watch Video Solution**

**28.** In the North East region of India, during the process of jhum cultivation, forests are cleared by burning and left for regrowth after a year of cultivation. How would you explain the regrowth of forest in ecological term?

**Watch Video Solution**

**29.** Climax stage is achieved quickly in secondary succession as compared to primary succession. Why?

**Watch Video Solution**

**30.** Among bryophytes, lichens and fern which one is a pioneer species in a xeric succession?

**Watch Video Solution**

**31.** What is the ultimate source of energy for the ecosystems?

**Watch Video Solution**

**32.** Is the common edible mushroom an autotroph or a heterotroph?

**Watch Video Solution**

**33.** Why are oceans least productive?

**Watch Video Solution**

**34.** Why is the rate of assimilation of energy at the herbivore level called secondary productivity?

**Watch Video Solution**

**35.** Why are nutrient cycles in nature called biogeochemical cycles?

**Watch Video Solution**

**36.** Give any two examples of xerarch succession.

**Watch Video Solution**

**37.** Define self sustainability

**Watch Video Solution**

**38.** Given below is a figure of an ecosystem.

Answer the following questions?

(i) What type of ecosystem is shown in the figure?

(ii) Name any plant that is characteristic of such ecosystem.

**Watch Video Solution**

**39.** What is common to earthworm, mushroom, soil mites and dung beetle in an ecosystem.

**Watch Video Solution**

**40.** Organisms at a higher trophic level have less energy available. Comment.

**Watch Video Solution**

**41.** The number of trophic levels in an ecosystem are limited. Comment.

**Watch Video Solution**

**42.** Is an aquarium a complete ecosystem?

**Watch Video Solution**

**43.** What could be the reason for the faster rate of decomposition in the tropics?

[Watch Video Solution](#)

**44.** Human activities interfere with carbon cycle. List any two such activities.

[Watch Video Solution](#)

**45.** Flow of energy through various trophic levels in an ecosystem is unidirectional and non-cyclic. Explain.

[Watch Video Solution](#)

**46.** Apart from plants and animals, microbes form a permanent biotic component in an ecosystem. While plants have been referred to as autotrophs and animals as heterotrophs. What are microbes referred to as? How do the microbes fulfill their energy requirements?

**Watch Video Solution**

**47.** Poaching of tiger is a burning issue in today's world. What implication would this

activity have on the functioning of the ecosystem of which the tigers are an integral part?

[Watch Video Solution](#)

**48.** In relation to energy transfer in ecosystem, explain the statement "10kg of deer's meat is equivalent to 1 kg of lion's flesh".

[Watch Video Solution](#)

**49.** Primary productivity varies from ecosystem to ecosystem. Explain ?

**Watch Video Solution**

**50.** Sometimes due to biotic/abiotic factor the climax remain in a particular seral stage (pre climax) without reaching climax. Do you agree with this statement. If yes give a suitable example.

**Watch Video Solution**

**51.** What is an incomplete ecosystem? Explain with the help of suitable example.

**Watch Video Solution**

**52.** What are the shortcomings of ecological pyramids in the study of ecosystem?

**Watch Video Solution**

53. How do you distinguish between humification and mineralisation?

 [Watch Video Solution](#)

54. Fill in the trophic levels (1,2,3 and 4) in the boxes provided in the figure.

[Watch Video Solution](#)

**55.** The rate of decomposition of detritus is affected by the abiotic factors like availability of oxygen, pH of the soil substratum, temperature etc. Discuss.

[Watch Video Solution](#)

**56.** A farmer harvests his crop and expresses his harvest in three different ways.

(a) I have harvested 10 quintals of wheat.

(b) I have harvested 10 quintals of wheat today in one acre of land.

(c) I have harvested 10 quintals of wheat in one acre of land, 6 months after sowing.

Do the above statements mean one and the same thing. If your answer is 'yes', give reasons. And if your answer is 'no' explain the meaning of each expression.

**Watch Video Solution**

**57.** Justify the following statement in terms of ecosystem dynamics. "Nature tends to increase the gross primary productivity, while man tends to increase the net primary productivity".

**Watch Video Solution**

**58.** Which of the following ecosystems will be more productive in terms of primary productivity? Justify your answer. A young

forest, a natural Old forest, a shallow polluted lake, alpine meadow.

[Watch Video Solution](#)

**59.** What are the three types of ecological pyramids. What information is conveyed by each pyramid with regard to structure, function and energy in the ecosystem.

[Watch Video Solution](#)

**60.** Write a short note on pyramid of numbers and pyramid of biomass.

**Watch Video Solution**

**61.** Given below is a list of autotrophs and heterotrophs. With your knowledge about food chain, establish various linkages between the organisms on the principle of 'eating and being eaten'. What is this inter-linkage established known as?

Algae, hydrilla, grasshopper, rat, squirrel, crow, maize plant, deer, rabbit, lizard, wolf, snake, peacock, phytoplankton, crustaceans, whale, tiger, lion, sparrow, duck, crane, cockroach, spider, toad, fish, leopard, elephant, goat, Nymphaea, Spirogyra.

[Watch Video Solution](#)

**62.** "The energy flow in the ecosystem follows the second law of thermodynamics." Explain.

[Watch Video Solution](#)

**63.** What will happen to an ecosystem if

(a) All producers are removed

(b) All organisms of herbivore level are eliminated and

(c) All top carnivore population is removed

**Watch Video Solution**

**64.** Give two examples of artificial or man made ecosystems. List the salient features by which they differ from natural ecosystems.

**Watch Video Solution**

**65.** The biodiversity increases when one moves from the pioneer to the climax stage. What could be the explanation?

**Watch Video Solution**

**66.** What is a biogeochemical cycle. What is the role of the reservoir in a biogeochemical

cycle? Give an example of a sedimentary cycle with reservoir located in earth's crust.

[Watch Video Solution](#)

**67.** What will be the P/R ratio of a climax community and a pioneer community? What explanation could you offer for the changes seen in P/R ratio of a pioneer community and the climax community?

[Watch Video Solution](#)
