

BIOLOGY

BOOKS - NCERT BIOLOGY (HINGLISH)

THE FUNDAMENTAL UNIT OF LIFE

The Fundamental Unit Of Life

1. Which of the following can be made into crystal?

A. A bacterium

B. An Amoeba

C. A virus

D. A sperm

Answer: C

Watch Video Solution

2. A cell with swell up if

A. the concentration of water molecules in the cell
is higher than the concentration of water
molecules in surrounding medium

- B. the concentration of water molecules in surrounding medium is higher than water molecules concentration in the cell
- C. the concentration of water molecules is same in the cell and in the surrounding medium
- D. concentration of water molecules does not matter

Answer: B

Watch Video Solution

3. Chromosomes are made up of

A. DNA

B. Protein

C. DNA and protein

D. RNA

Answer: C

Watch Video Solution

4. Which of these options are not a function of ribosomes?

I. It helps in manufacture of protein molecules.

II. It helps in manufacture of enzymes.

III. In helps in manufacture of hormones.

IV. In helps in manufacture of starch molecules.

A. I and II

B. II and III

C. III and IV

D. IV and I

Answer: C

Watch Video Solution

5. Which of these is not related to endoplasmic reticulum?

- A. It behaves as transport channel for proteins between nucleus and cytoplasm
- B. It transports materials between various regions in cytoplasm
- C. It can be the site of energy generation
- D. It can be the site for some biochemical activities of the cell

Answer: C

Watch Video Solution

6. Following are a few definitions of osmosis. Read carefully and select the correct definition.

A. Movement of water molecules from a region of higher concentration to a region of lower concentration through a semipermeable membrane.

B. Movement of solvent molecules from its higher concentration to lower concentration

C. Movement of solvent molecules from higher concentration to higher concentration of solution through a permeable membrane

D. Movement of solute molecules from lower concentration to higher concentration of solution through a semipermeable membrane

Answer: A

Watch Video Solution

7. Plasmolysis in a plant cell is defined as

A. break down (lysis) of plasma membrane in hypotonic medium

B. shrinkage of cytoplasm in hypertonic medium

C. shrinkage of nucleoplasm

D. None of the above

Answer: B

Watch Video Solution

8. Which of the following are covered by a single membrane?

A. Mitochondria

B. Vacuole

C. Lysosome

D. Plastid

Answer: C

Watch Video Solution

9. Find out the false sentences.

A. Golgi apparatus is involved with the formation of lysosomes

B. Nucleus, mitochondria and plastid have DNA, hence they are able to make their own structural proteins.

C. Mitochondria is said to be the power house of the cell as ATP is generated in them

D. Cytoplasm is called as protoplasm

Answer: D

Watch Video Solution

10. Find out the correct sentence

A. Enzymes packed in lysosomes are made through

RER (Rough Endoplasmic Reticulum)

B. Rough endoplasmic reticulum and smooth

endoplasmic reticulum produce lipid and protein

respectively

C. Endoplasmic reticulum is related with the destruction of plasma membrane

D. Nucleoid is present inside the nucleoplasm of eukaryotic nucleus

Answer: A

Watch Video Solution

11. Which cell organelle plays a crucial role in detoxifying many poisons and drugs in a cell?

A. Golgi apparatus

B. Lysosomes

C. Smooth endoplasmic reticulum

D. Vacuoles

Answer: C

Watch Video Solution

12. The proteins and lipids, essential for building the cell membrane, are manufactured by

A. endoplasmic reticulum

B. Golgi apparatus

C. plasma membrane

D. mitochondria

Answer: A

Watch Video Solution

13. The undefined nuclear region of prokaryotes are also known as

A. nucleus

B. nucleolus

C. nucleic acid

D. nucleoid

Answer: D

Watch Video Solution

14. The cell organelle involved in forming complex sugars from simple sugars are

A. endoplasmic reticulum

B. ribosomes

C. plastids

D. Golgi apparatus

Answer: D

Watch Video Solution

15. Which out of the following is not a function of vacuole ?

A. Storage

B. Providing turgidity and rigidity to the cell

C. Waste excretion

D. Locomotion

Answer: D

Watch Video Solution

16. Amoeba takes food through

A. exocytosis

B. endocytosis

C. plasmolysis

D. Both exocytosis and endocytosis

Answer: B

Watch Video Solution

17. The cell wall of which of these is not made up of cellulose

A. bacteria

B. Hydrilla

C. mango tree

D. cactus

Answer: A

Watch Video Solution

18. Silver nitrate solution is used to study

A. endoplasmic reticulum

B. Golgi apparatus

C. nucleus

D. mitochondria

Answer: b

Watch Video Solution

19. Organelle other than nucleus, containing DNA is

A. endoplasmic reticulum

B. Golgi apparatus

C. mitochondria

D. lysosome

Answer: C

Watch Video Solution

20. Kitchen of the cell is

- A. Mitochondria
- B. endoplasmic reticulum
- C. chloroplast
- D. Golgi apparatus

Answer: C

Watch Video Solution

21. Lipid molecules in the cell are synthesised by

- A. smooth endoplasmic reticulum

B. rough endoplasmic reticulum

C. Golgi apparatus

D. plastids

Answer: A

Watch Video Solution

22. Cell arises from pre-existing cell was stated by

A. Haeckel

B. Virchow

C. Hooke

D. Schleiden

Answer: B

Watch Video Solution

23. Cell theory was formulated by

A. Schleiden and Schwann

B. Virchow

C. Hooke

D. Haeckel

Answer: A

[Watch Video Solution](#)

24. The only cell organelle seen in prokaryotic cell is

A. mitochondria

B. ribosomes

C. plastids

D. lysosomes

Answer: B

[Watch Video Solution](#)

25. Organelle without a cell membrane is

A. ribosome

B. Golgi apparatus

C. chloroplast

D. nucleus

Answer: A

Watch Video Solution

26. $1\mu m$ is

A. $10^{-6}m$

B. $10^{-9}m$

C. $10^{-10}m$

D. $10^{-3}m$

Answer: A

Watch Video Solution

27. Lysosome arises from

A. endoplasmic reticulum

B. Golgi apparatus

C. nucleus

D. mitochondria

Answer: B

Watch Video Solution

28. Living cells were discovered by

A. Robert Hooke

B. Purkinje

C. Leeuwenhoek

D. Robert Brown

Answer: C

Watch Video Solution

29. Select the odd one out

- A. The movement of water across a semi permeable membrane is affected by the amount of substances dissolved in it
- B. Membranes are made of organic molecules like proteins and lipids
- C. Molecules soluble in organic solvents can easily pass through the membrane.
- D. Plasma membranes contain chitin sugar in plants

Answer: D

Watch Video Solution

30. Why are lysosome known as suicidal-bags of a cell?

Watch Video Solution

31. Do you agree that 'A cell is a building unit of an organism'. If yes, explain why?

Watch Video Solution

32. Why does the skin of your finger shrink when you wash clothes for a long time?

Watch Video Solution

33. Why is endocytosis found in animals only?

Watch Video Solution

34. A person takes concentrated solution of salt, after sometime, he starts vomiting. What is the phenomenon responsible for such situation? Explain.

Watch Video Solution

35. Name any cell organelle which is non-membranous.

Watch Video Solution

36. We eat food composed of all the nutrients like carbohydrates, proteins, fats, vitamins, minerals and water. After digestion, these are absorbed in the form of glucose, amino acids, fatty acids, glycerol, etc. what mechanisms are involved in absorption of digested food and water?

Watch Video Solution

37. If you are provided with some vegetables to cook. You generally add salt into the vegetables during

cooking process. After adding salt, vegetables release water. What mechanism is responsible for this?

Watch Video Solution

38. If cells of onion peel and RBC are separately kept in hypotonic solution, what among the following will take place? Explain the reason for your.

(a) Both the cells will swell.

(b) RBC will burst easily while cells of onion peel will resist the bursting to some extent.

(c) Both (a) and (b) are correct.

(d) RBC and onion peel cells will behave similarly.

Watch Video Solution

39. Bacteria do not have chloroplast, but some bacteria are photoautotrophic in nature and perform photosynthesis. Which part of bacterial cell performs this?

Watch Video Solution

40. Match the following columns

Column I

A. Smooth endoplasmic

B. Lysosome

C. Nucleoid

D. Food vacuoles

E. Chromatin material and nucleolus

Column II

1. Amoeba

2. Nucleus

3. Bacteria

4. Detoxification

5. Suicidal bag

Watch Video Solution

41. Write the name of different plants parts in which chromoplast, chloroplast and Leucoplast are present.

Watch Video Solution

42. Name the organelles which show the analogy written as under

- (i) Transporting channels of the cell
- (b) Power house of the cell
- (c) Packaging and dispatching unit of the cell
- (d) Digestive bag of the cell
- (e) Storage sacs of the cell

(f) Kitchen of the cell

(g) Control room of the cell

Watch Video Solution

43. How is bacterial cell different from onion peel?

Watch Video Solution

44. How do substances like carbon dioxide (CO_2) and water (H_2O) move in and out of the cell?

Watch Video Solution

45. How does an Amoeba obtain its food?

Watch Video Solution

46. Name the two organelles in a plant cell that contain their own genetic material and ribosome.

Watch Video Solution

47. Why are lysosomes also known as scavengers of the cells?

Watch Video Solution

48. Which cell organelle controls most of the activities of the cell?

Watch Video Solution

49. Which kind of plastid is more common in
(a) roots of the plant (b) leaves of the plant (c) flowers and fruits

Watch Video Solution

50. Why do plant cells possess large sized vacuole?

Watch Video Solution

51. How are chromatin, chromatid and chromosomes related to each other?

Watch Video Solution

52. What are the consequences of the following conditions?

(a) A cell containing higher water concentration than the surrounding medium

(b) A cell having low water concentration than the surrounding medium.

(c) A cell having equal water concentration to its surrounding medium.

[Watch Video Solution](#)

53. Draw a plant cell and label the parts which

(a) determines the function and development of the cell. (b) packages materials coming from the endoplasmic reticulum.

(c) provides resistance to microbes to withstand hypotonic external media without bursting.

(d) is site for any biochemical reaction necessary to sustain life.

(e) is a fluid contained inside the nucleus.

[Watch Video Solution](#)

54. Illustrate only a plant cell as seen under electron microscope. How its different from animal cell?

Watch Video Solution

55. Draw a neat labelled diagram of an animal cell.

Watch Video Solution

56. Draw a well labelled diagram of an eukaryotic nucleus. How is it different from nucleoid?

Watch Video Solution

57. Differentiate between rough and smooth endoplasmic reticulum. How is endoplasmic reticulum important for membrane biogenesis?

Watch Video Solution

58. In brief state what happens when

- (a) Dry apricots are left for sometime in pure water and later transferred to sugar solution?
- (b) A red blood cell is kept in concentrated saline solution?
- (c) The plasma-membrane of a cell breaks down?
- (d) When Rheo leaves are boiled in water first and then

a drop of sugar syrup is put on it,

(e) Golgi complex are removed

Watch Video Solution

59. Draw a neat diagram of plant cell and label any three parts which differentiate it from animal cell.

Watch Video Solution
