PHYSICS

BOOKS - HC VERMA PHYSICS (HINGLISH)

CIRCULAR MOTION

Examples

1. A particle moves in a circle of radius 20 cm with linear speed of 10 m/s. Find the angular velocity

A. $500\frac{rad}{s}$

B. $150\frac{rad}{s}$

C. $50\frac{rad}{s}$

D. $15\frac{rad}{s}$

Answer: C

Watch Video Solution

2. A particle travels in a circle of radius 20 cm at a speed thast uniformly increases. If the speed changes from 5.0 m/s to 6.0 m/s in 2.0s, find the angular aceleration.

A. $12.5 rads^2$

B. $3.5 rads^2$

C. $2.5 rads^2$

D. $4.5 rads^2$

Answer: C

Watch Video Solution

3. Find the magnitude of the linear acceleration of a particle moving in a circle of radius 10 cm with uniform speed completing the circle in 4s.

A. $1.5\pi^2$

B. $2.5\pi^2$

C. $3.5\pi^2$

D. $4.5\pi^2$

Answer: B

Watch Video Solution

4. A particle moves in a circle of radius 20 cm. Its linear speed is given by v=2t, where t is in second and v in metre/ second. Find the radial and tangential acceleration at t=3s.

A. $10\frac{m}{s^2}, 2\frac{m}{s^2}$

B. $100\frac{m}{s^2}, 12\frac{m}{s^2}$

C. $100\frac{m}{s^2}, 5\frac{m}{s^2}$

D. $180\frac{m}{s^2}, 2\frac{m}{s^2}$

Answer: D

Watch Video Solution

5. A small block of mass 100 g moves wth uniform speed n a horizontal circular groove, with vertical side walls, of radisu 25 cm.If the block takes 2.0 s to complete ne round, find the normal contact force by tehside wall of the groove.

Watch Video Solution

6. The road at a circular turn of radius 10 m is banked by an angle of 10^0. With what speed should a vehicle move on the turn so that the normal contact force is able to provide the necessary centripetal force?

Watch Video Solution

7. A body weights 98 N on a spring balance at the north pole. What will be its weight recorded on the same scale if it is shifted to te equator? Use g=$G\frac{M}{R^2} = 9.8\frac{m}{s^2}$ and the radius of the earth R=6400 km.

Watch Video Solution

Worked Out Examples

1. A car has to move on a level turn of radius 45 m. If the coefficient of static friction between the tire and the road is $\mu_s = 2.0,$ find the maximum speed the car can take without skidding.

Watch Video Solution

2. A circular track of radius 600 m is to be designed for cars at an average speed of 180 km/h. What should be the angle of banking of the track?

A. $\tan^{-1}\left(\frac{5}{12}\right)$

B. $\tan^{-1}\left(\frac{2}{5}\right)$

C. $\tan^{-1}\left(\frac{1}{2}\right)$

D. $\tan^{-1}\left(\frac{5}{2}\right)$

Answer: A

Watch Video Solution

3. A particle of mass ma is suspended from a ceiling thrugh a string of length L. The prticle moves in a horizontal circle of radius r. Find (a) the speed of the prticle and (b). the tension in the string. Sch a system is called a conical pendulum

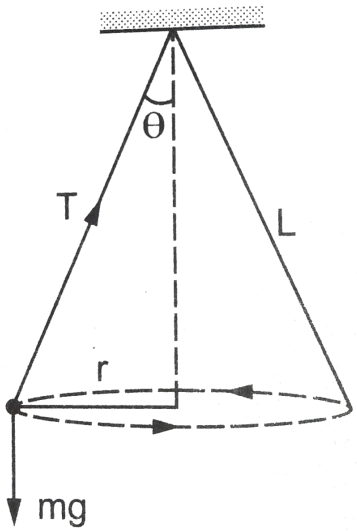

Figure 7-W2

.

A. $v = \dfrac{r\sqrt{g}}{(L^2 - r^2)^{\frac{1}{4}}}$ and $T = \dfrac{mgL}{(L^2 - r^2)^{\frac{1}{2}}}$

B. $v = \dfrac{r^2\sqrt{g}}{(L^3 - r^3)^{\frac{1}{4}}}$ and $T = \dfrac{mgL}{(L^2 - r^2)^{\frac{1}{2}}}$

C. $v = \frac{r\sqrt{g}}{(L^2 - r^2)^{\frac{1}{4}}}$ and $T = \frac{mgL^2}{(L^2 - r^2)^{\frac{1}{2}}}$

D. $v = \frac{r\sqrt{g}}{(L^2 - r^2)^{\frac{1}{4}}}$ and $T = \frac{mgL}{(L^2 - r^2)^{\frac{1}{4}}}$

Answer: A

Watch Video Solution

4. One end of a massless sprinf of spring constant 100 N/m and natural length 0.5 m is fixed and the other end is connected to a particle of mass 0.5 kg lying on as frictionless horizontla table. The spring remains horizontal. If the mass is made to rotate at an angular velocityof 2 rad/s, find the elongation of the spring.

Watch Video Solution

5. A simple pendulum is constructed by attaching a bob of mas m to a string of length L fixed at its upper end. The bob oscillates in a

vertical circle. It is found that the speed of the bob is v when the string makes an angle θ with the vertical. Find the tension in the string at this instant.

Watch Video Solution

6. A cylindrical bucket filled with water is whirled around in a vertical circle of radius r. What can be the minimum speed at the top of the path if water does not all out from the bucket ? If it continues with this speed, what normal contact force the bucket exerts on water at the lowest point of the path?

Watch Video Solution

7. A fighter plane is pulling out for a dive at a speed of 900 km/hr. Assuming its path to be a vertical circle of radius 2000 m and its mass to be 16000 kg, find the force exerted by the air on it at the lowest point. Take $g = 9.8\frac{m}{s^2}$.

Watch Video Solution

8. Figure shows as rod of length 20 cm pivoted near an end and which is made to rotate in a horizontal plane with a constant angular speed. A ball of mass m is spuspended by a string angular also of length 20 cm from the other end of the rod. If the angle θ made by the stirng with the vertical is 30^0. find the anglular speed of the rotation. Take $g = 10m/s^2$

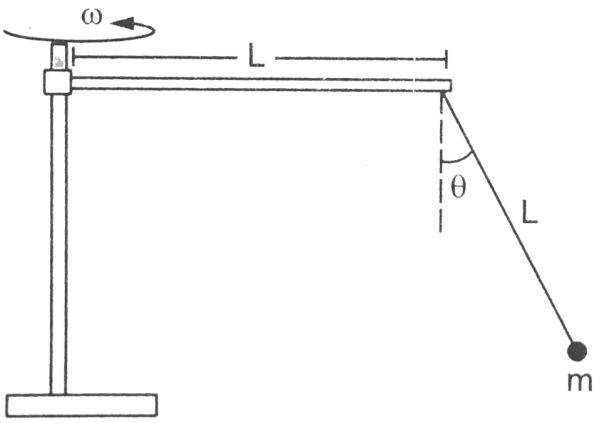

Figure 7-W5

A. $\omega = 5.0rad/s$

B. $\omega = 9.8rad/s$

C. $\omega = 2.2 rad/s$

D. $\omega = 4.4 rad/s$

Answer: D

Watch Video Solution

9. Two blocks each of mass M are connected to the ends of a light frame as shown in figure. The frame si rotated about the vertical line of symmetry. The rod breaks if the tension in it exceeds T_0. Find the maximum frequency with which the frame may be rotted without breaking the rod.

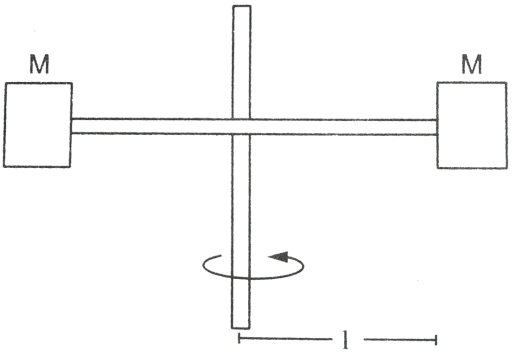

Figure 7-W6

Watch Video Solution

10. IN a rotor, a hollow verticla cylindrical structure rotates about its axis and a person rests asgainst he inner wall. At a particular speed of the rotor, the floor below the person is removed and the person hangs resting against the wall without any floor. If the radius of the roter is 2m and the coefficient of static frictioin between the wall and theperson is 0.2, find the minimum speed at which the floor may be removed Take $g = 10\frac{m}{s^2}$.

Watch Video Solution

11. A hemispherical bowl of radius R is set rotating about its axis of symmetry which is kept vertical. A small block kept in the bowl rotates with the bowl without slipping on its surface. If the surfaces of the bowl is smooth, and the angle made by the radius through the block

with the vertical is θ, find the angular speed at which the bowl is rotating.

Watch Video Solution

12. A metal rign of mass m and radius R is placed on a smooth horizontal table and is set rotating abut its own axis in such a way that each part of the ring moves with a speed v. Find the tension in the ring.

Watch Video Solution

13. A table with smooth horiztonal surface is truning at an angular speed ω abouyt its axis. A groove is made on the surface along a radius and a particle is gently placed inside the groove at a distance a from the centre. Find the speed of the speed of the particle as its distance from teh centre becomes L.

A. $v = \omega^2 \left(L^2 - a^2\right)^{\frac{1}{3}}$

B. $v = \omega\left(L^2 - a^2\right)$

C. $v = \omega^2 \sqrt{L^2 - a^2}$

D. $v = \omega \sqrt{L^2 - a^2}$

Answer: D

Watch Video Solution

Short Answer

1. You are driving a motorcycle on a horizontal road. It is moving with a uniform velocity. Is it possible to accelerate the motorcycle without putting higher petrol input rate into the engine?

Watch Video Solution

2. Some washing machines have cloth driers. It contains a drum in which wet clothes are kept. As the drum rotates, the water particles get separated from the cloth. The general description of this action is that the centrifugal force throws the water particles away from the drum. Comment on this statement from the viewpoint of an observer rotating with the drum and the observer who is washing the clothes.

Watch Video Solution

3. A small coin is placed on a record roting at $33\frac{1}{3}$ rev/minute. The coin does not slip on the record. Where does it get the required centripetal fore from?

Watch Video Solution

4. A bird while flying takes a let turn, where dcoes it get the centripetal force from?

Watch Video Solution

5. Is it necssary to express all angles in radianwhile using the equation $\omega = \omega_0 = \alpha t$?

Watch Video Solution

6. After a good meal at a party you wash your hands and find that you have forgotten to bring your handkerchief. You shake your hands vigorusly to remove the water as much as you can. Why is water removed in this process?

Watch Video Solution

7. A smooth block loosely fits in a circular tube placed on a horizontal surface. The block moves in as uniform circular motion along the tube figure. Which wall (inner or outer) will exert a nonzero normal contact

force on the block?

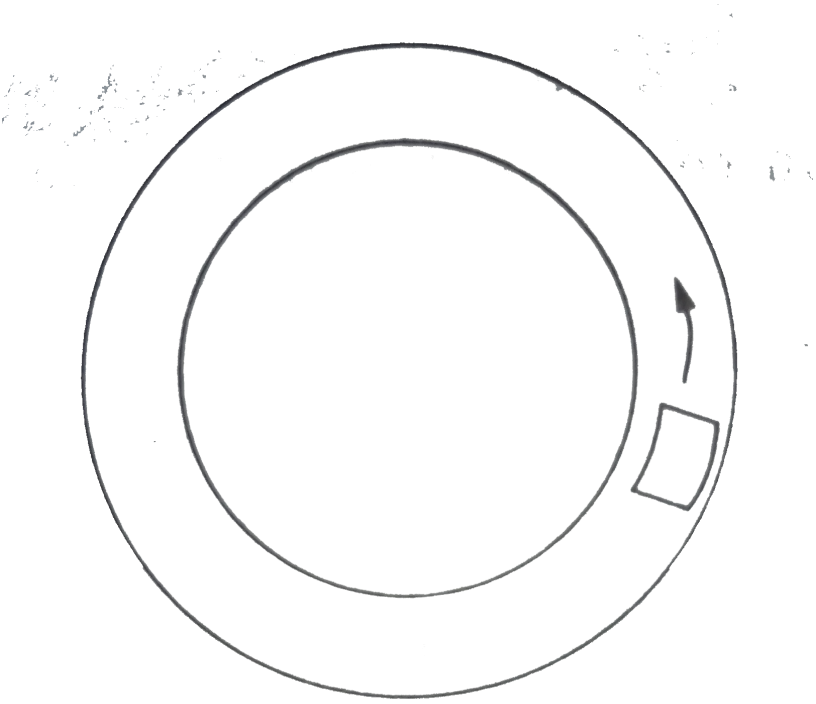

Figure 7-Q1

Watch Video Solution

8. Consider the circular motion f the earth around the sun. Which of the following statements is more appropriate? a. Gravitational attraction of the sun on the earth is equal to the centripetal force. b. Grvitational attraction of the sun on the earth is the centripetal force.

Watch Video Solution

9. A car driver going at speed v suddenly finds a wide wall at a distance r . Should he apply breakes or turn the car in a circle of radius r to avoid hitting the wall.

Watch Video Solution

10. A heavy mass m is hanging from a sting in equilibrium without breaking it. When this same mass is set into oscillation, the string breaks, Explain.

Watch Video Solution

Objective 1

1. When a particle moves in a circle with a uniform speed

A. its velocity and acceleration re both constant

B. its velocilty is constant but the acceleration changes

C. its acceleration is constant but the velocity changes

D. its velocity and acceleration both change.

Answer: D

Watch Video Solution

2. Two cars having masses m_1 and m_2 miove in circles of radii r_1 and r_2 respectively. If they complete the circle is equal time the ratio f their angular speedsd $\frac{\omega_1}{\omega_2}$ is

A. $\frac{m_1}{m_2}$

B. $\frac{r_1}{r_2}$

C. $m_1 \frac{r_1}{m_2} r_2$

D. 1

Answer: D

Watch Video Solution

3. A car moves at a constant speed on a road as shown in figure. The normal force by the road on the car is N_A and N_B when it is at the points A and B respectively

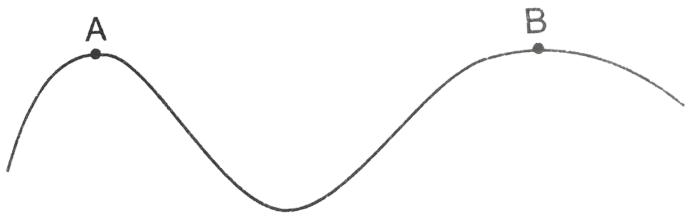

Figure 7-Q2

A. $N_A = N_B$

B. $N_A > N_B$

C. $N_A < N_B$

D. insufficient informtion to decide the relation of N_A and N_B

Answer: C

Watch Video Solution

4. A particle of mass m is observed from an inertial frame of reference and is found to move in a circle of radius r with a uniform speed v. The centrifugal force on it is

A. $\frac{mv^2}{r}$ towards the centre

B. $\frac{mv^2}{r}$ away from the centre

C. $\frac{mv^2}{r}$ along the tangent through the particle

D. zero

Answer: D

Watch Video Solution

5. A particle of mass m rotates with a uniform angular speed ω. It is viewed from a frame rotating about the Z-axis with a uniform angular speed ω_0. The centrifugal force on the particler is

A. $m\omega^2 a$

B. $m\omega_0^2 a$

C. $m\left(\frac{\omega+\omega_0}{2}\right)^2 a$

D. $m\omega\omega_0 a$

Answer: B

Watch Video Solution

6. A particle is kept fixed on as turntable rotating uniformly. As seen from the ground the particle goes in a circle,its speed is $20cm/s$ and

acceleration is $20cm/s^2$ The particle is now shifted to a new positon to make the radius half of the original value. The new values of the speed and acceleration will be

A. $10cm/s, 10cm/s^2$

B. $10cm/s, 80cm/s^2$

C. $40cm/s, 10cm/s^2$

D. $40cm/s, 40cm/s^2$

Answer: A

Watch Video Solution

7. Water in a bucket is whirled in a vertical circle with a string attached to it. The water does not fall down even when the bucket is inverted at the top of its path. We conclude that in this position

A. $mg = \frac{mv^2}{r}$

B. mg is greater than $\frac{mv^2}{r}$

C. mg is not greater than $\frac{mv^2}{r}$

D. `mg is not less than (mv^2)/r

Answer: C

Watch Video Solution

8. A stone of mass m tied to a string of length l is rotated in a circle with the other end of the string as the centre. The speed of the stone is v. If the string breaks, the stone will move

A. towards the centre

B. away from the centre

C. along a tangent

D. will stop.

Answer: C

Watch Video Solution

9. A motorcycle is going on an overbridge of radius R. The driver maintains a constant speed. As the motorcycle is ascending on the overbridge, the normal force on it

A. increase

B. decrease

C. remains the same

D. fluctuates

Answer: A

Watch Video Solution

10. Three identical cars A,B and C are moving at the same speed on three bridges. The car A goes on a plane bridge, B on a bridge convex upward and C goes on a bridge concave upward. Let F_A, F_B and F_C be the normal forces exerted by the cars on the bridges when they are at the middle of bridges

A. F_A is maximum of the three forces

B. F_B is maximum of the three forces.

C. F_C is maximum of the three forces.

D. $F_A = F_B = F_C$

Answer: C

Watch Video Solution

11. A car runs east to west and another car B of the same mass runs from west to east at the same path along the equator. A precess the

track with a force N_1 and B presses the track with a force N_2. Then

A. $F_1 > F_2$

B. $F_1 < F_2$

C. $F_1 = F_2$

D.

$$the \in f \text{ or } mationis \in sufficietn \to f \in dtherelationbetween$$

F_1 and F_2`.

Answer: A

Watch Video Solution

12. If the earth stops rotating, the apparent value of g on its surface will

A. increse everywhere

B. decrease everywhere

C. remain the same everywhere

D. increase at some places and remain the same at some other places.

Answer: D

Watch Video Solution

13. A rod of length L is pivoted at one end and is rotated with as uniform angular velocity in a horizontal plane. Let T_1 and T_2 be the tensions at the points L//4 and 3L//4 away from the pivoted ends.

A. $T_1 > T_2$

B. $T_2 > T_1$

C. $T_1 = T_2$

D. $The relation between$T_1 and T_2` depends on whether the rod rotates clockwise or anticlockwise.

Answer: A

Watch Video Solution

14. A simple pendulum having bob of maas m is suspended from the ceiling of a car used in a stunt film shooting. The car moves up along an inclined cliff at a speed v and makes a jump to leavwe the cliff and lands at some the top of the cliff. The tension in the string when the car is in air is

A. mg

B. $mg - \frac{mv^2}{R}$

C. $mg + \frac{mv^2}{R}$

D. zero

Answer: D

Watch Video Solution

15. Let θ denote the angular displacement of a simple pendulum oscillating in a vertical plane. If the mass of the bob is m, the tension in the string is $mg\cos\theta$

A. always

B. never

C. at the extreme position

D. at the mean position

Answer: C

Watch Video Solution

Objective 1

1. A coin placed on a rotating turntable just slips if it is placed at a distance of 4 cm turntableis double, it will just slip at a distance of

A. 1cm

B. 2cm

C. 4cm

D. 8cm

Answer: A

View Text Solution

Objective 2

1. An object follows a curved path. The following quantities may remain constant during the motion

A. speed

B. velocity

C. acceleration

D. magnitude of acceleration

Answer: A::D

Watch Video Solution

2. Assume that the earth goes round the sun in a circular orbit with a constant speed of 30 km/s

A. The averge velocityof the earth from, 1st Jan, 90 to 30th June, 90 is zero

B. The averge acceleration during the above period is $60k\frac{m}{s^2}$

C. The average speed from 1st Jan, 90 to 31st Dec, 90 is zero

D. The instantaneous acceleration of the earth ponts towards the sun.

Answer: D

Watch Video Solution

3. The position vector of a particle in a circular motion about the origin sweeps out equal areal in equal time. Its

A. velocity remains constant

B. speed remains constant

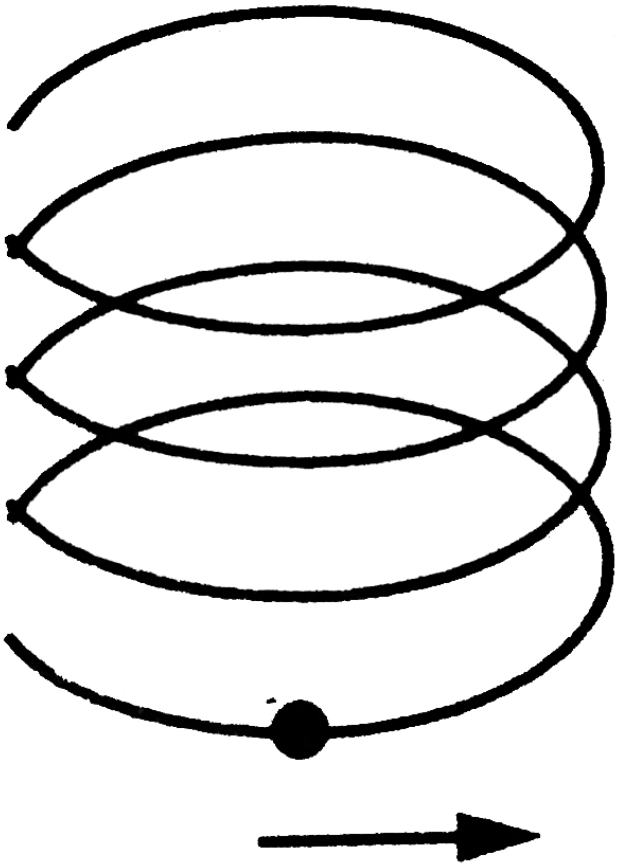
C. accelertion remains constant

D. tangential accelertion remains constant

Answer: B::D

Watch Video Solution

4. A particle is going in a spiral path as shown in figure with constant speed.



A. The velocity of the particle is constant.

B. The acceleration of the particle is constant

C. The magnitude of acceleration is constant.

D. The magnitude of accelertioin is decreasing continously

Answer: C

Watch Video Solution

5. A car of maas M is moving on a horizontal circular path of radius r. At an instant its speed is v and is increasing at a rate a.

A. The acceleration of the car is towards the centre of the path

B. The magnitude the frictional force on the car is greater than $\frac{mv^2}{r}$.

C. The friction coefficient between the ground and the car is not less than $\frac{a}{g}$.

D. The friction coefficient between the ground and the car is

$$\mu = \frac{\tan^{-1} v^2}{r} g$$

Answer: B::C

Watch Video Solution

6. A circular road of radius r is banked for a speed v=40 km/hr. A car of mass m attempts to go on the circular road. The friction coefficient between the tire and the road is negligible.

A. the car cannot make a turn without skidding.

B. If the car turns at a speed less than 40 km/hr, it will slip down

C. If the car turns at the correct speed of 40 km/hr, the force by the road on the car is equal to $\frac{mv^2}{r}$

D. If the car turns at the correct speed of 40 km/hr, the force by the road on the car is greater than mg as well as greater than

$\frac{mv^2}{r}$

Answer: B::D

Watch Video Solution

7. A person applies a constant force $\vec{F}$ on a particle of mass m and finds tht the particle movs in a circle of radius r with a uniform speed v as seen from an inertial frame of reference.

A. This is not possible

B. There are other forces on the particle

C. The resultant of the other forces is $\frac{mv^2}{r}$ towards the centre

D. The resultant of the other forces varies in magnitude as well as in direction.

Answer: B::D

Watch Video Solution

Exercises

1. Find the accelerationof the moonwith respect to the eath from the following data, Distance between the earth and the moon $= 3.85 \times 10^5$ km and the time taken by the moon to complete one revolution aroudn the earth `=27.3days

Watch Video Solution

2. Find the acceleration of a particle placed on the surface of the earth at the equator due to earth's rotation. The diameter of erth =12800 km andit takes 24 hour for the earth to comlete one revolution about its axis.

Watch Video Solution

3. A particle moves in circle of radius 1.0 cm at a speed given by v=2.0 t where v is in cm/s and t in seconeds. A. find the radia accelerationof the particle at t=1 s. b. Findthe tangential acceleration at t=1s. c.Find the magnitude of the aceleration at t=1s.

Watch Video Solution

4. A scooter weighing 150 g together with its rider moving at 36 km/hr is to take a turn of radis 30 m. What horiontal force on the scooter is needed to make the turn possible?

A. 50N

B. 500N

C. 5000N

D. 5N

Answer: B

Watch Video Solution

5. A scooter weighing 150 kg together with its rider moving at 36 km/hr is to take a turn of radius 30 m. What horizontal force on the scooter is needed to make the turn possible?If the horizontal force needed for the turn in the previous problem is to be supplied by the normal force by the road what should be the proper angle of banking?

Watch Video Solution

6. A park has a radis of 10 m. If a vehicle goes round it at an averge speed of 18 km/hr, what shoud be the proper angle of banking?

Watch Video Solution

7. If the road of the previous problem is horizontal (no banking), what should be the minimum friction coefficeint so that a scooter going at 18 km/hr does not skid?

Watch Video Solution

8. A circular road of radius 50 m has the angel of banking equal to 30^0 . At what speed should a vehicle go on this road so that the friction is not used?

A. $17m/\sec$

B. $20m/\sec$

C. $24m/\sec$

D. $40m/\sec$

Answer: A

Watch Video Solution

9. In the Bohr model of hydrogen atom, the electron is treated as a particle going in a circle with the centre at the proton. The proton itself is assumed to be fiex in an inertial frame. The centripetal force is provided byi the Coloumb attraction. In the ground state, the electron goes round the proton in a circle of radius $5.3 \times 10^{-11} m$. Find the speed of the electron in the ground state. Mass of the electron $= 9.1 \times 10^{-31} kg$ and charge of the electron $= 1.6 \times 10^{-19} C$.

Watch Video Solution

10. A stone is fastened to one end of a string and is whirled in a verticla circle of radius R. Find the minimum speed the stone can have at the highest point of the circle.

A. $v = \sqrt{3Rg}$

B. $v = \sqrt{Rg}$

C. $v = \sqrt{4Rg}$

D. $v = \sqrt{7Rg}$

Answer: B

Watch Video Solution

11. A ceiling fan has a diameter (of the circle through the outer edges of the three blades) of 120 cm and rpm 1500 at ful speed.Consider a particle of mass 1 g sticking at the outer end of a blade. How much force does it experience when the fan runs at full speed? who exerts this force on teh particle? How much force does the particle exert on the blade along its surface?

Watch Video Solution

12. As mosquito is sitting on an L.P. record disc rotating on a turn table at $33\frac{1}{3}$ revolutions per minute. The distance of the mosquito from the center of the turn table is 10 cm. Show that the friction coefficient between the record and the mosquito is greater than $\frac{\pi^2}{81}$. Take $g = 10\frac{m}{s^2}$

Watch Video Solution

13. A simple pendulum is suspended from the ceilling of a car taking a trun of radius 10 m at a seed of 36 km/h. Findte angle made by the string of the pendulum with the vertical if this angle does not dchange during the turn. Take $g = 10\frac{m}{s^2}$.

Watch Video Solution

14. The bob of a simple pendulum of length 1 m has mass 100 g and a speed of 1.4 m/s at the lowest point in its path. Find the tension in

the stirng at this instant.

Watch Video Solution

15. Suppose the bob of the previous problem has a speed of 1.4 m/s when the string makes an angle of 0.20 radian with the vertical. Find the tension at this instant. You can use $\cos\theta = 1 - \frac{\theta^2}{2}$ and $\sin\theta = \theta$ for small theta`.

Watch Video Solution

16. Suppose the amplitude of a simple pendulum having a bob of mass m is θ_0. Find the tension in the string when the bob is at its extreme position.

Watch Video Solution

17. A person stands on a spring balance at the equator. a.By wht fraction is the balance reading less than his true weight? b.If the speed of earth's rotation is increased by such an amount that the balance reading is half the true weight, what will be the lenght o the day in this case?

Watch Video Solution

18. A turn of radius 20 m is banked for the vehicles going at a speed of 36km/h. If the coefficient of static friction between the road and the tyre is 0.4, what are the possible speeds of a vehicle so that it neither slips down nor skids up?

A. between $10m/s$ and $15m/s$

B. between $10m/s$ and $15\sqrt{\frac{1}{6}}m/s$

C. between $10\sqrt{\frac{1}{6}}m/s$ and $15m/s$

D. None of these

Answer: C

Watch Video Solution

19. A motorcycle has to move with a constnt speed on an overbridge which is in the form of as circular are of radius R and has a total length L. Suppose the motorcycle starts from the highest point. a. what can its maximum velocity be for which the contact with the road is not broken at the highest point? b. If the motorcycle goes at speed $\frac{1}{\sqrt{2}}$ times the maximum found in part a. where will it lose the contact with the road? c. What maximum uniform speed can it maintain on the bridge if it does not lose contact anywhere on the bridge?

Watch Video Solution

20. A car starts rest, on a horizontal circular road of radius R, the tangential acceleration of the car is a. The friction coefficient between the road and the tyre is μ Find the speed at which car will skid and also find the distance after travelling it skids.

Watch Video Solution

21. A block of mass m is kept on a horizontal ruler . The friction coefficient between the ruler and the block is μ . The ruler is fixed at one end the block is at a distance L from the fixed end . The ruler is rotated about the fixed end in the horizontal plane through the fixed end

a. What can the maximum angular speed be for which the block does not slip?

b. If the angular speed of the ruler is uniform increase from zero at an angular acceleration a at angular speed will the block slip?

Watch Video Solution

22. A track consists of two circular pars ABC andCDE of equal rdius 100 m and joined smoothly as shown in figure.Each part sutends a right ngle at its centre. A cycle weighing 100 kg together with rider travels at a constant speed of 18 km/h on the track. A. Findteh nromal contct force by tehroad on the cycle whenit is at B and at D. b.Findteh force of friction exerted by the track on the tyres when the cycle is at B,C and D. c. Find the normal force between teh road and teh cycle just before and just after the cycle crosses C. d. What should be the minimum friction coefficient between the road and the tyre, which will ensure that teh cyclist can move with constant speed? Take $g = 10\frac{m}{s^2}$

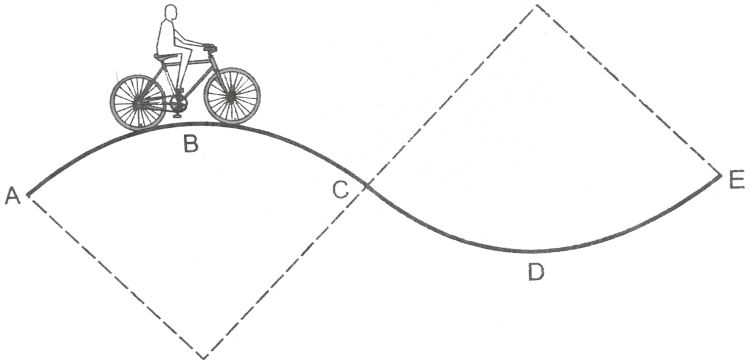


Figure 7-E1

Watch Video Solution

23. In a children's park a heavy rod is pivoted at the centre and is made to rotate about the pivot so tht the rod always remains horizontal. Two kids hold the rod near the ends and thus rotate with the rod figure. Let the mas of each kid be 15 kg, the distance betweent eh points of the rod where the two kids hold it be 3.0 m and supose that teh rod rotates at the rate of 20 revolutions per minute. Find the force of fircton exerted by te rod on one of the kids.

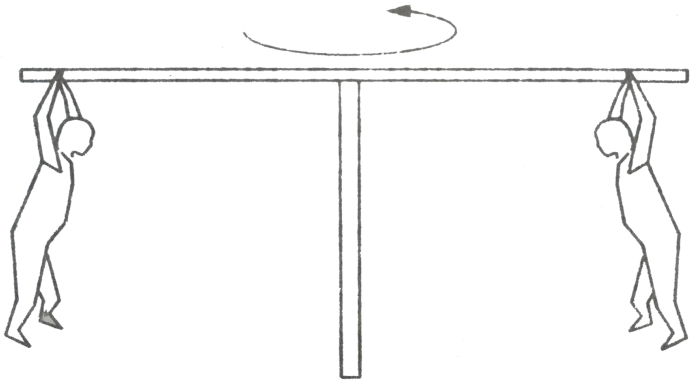

Figure 7-E2

Watch Video Solution

24. A hemisphericla bowl of rdius R is rotated about its axis of symetry which is kept vertical.A small block is kept in the bowl at a position where the radius makes an angle θ with the vertical. The block rottes with the bowl without any sliping. The friction coefficient between the block and teh bowl surface is μ. Find the range of the angular speed for which the block will not slip.

Watch Video Solution

25. A particle is projected with a speed u at angle θ with the horizontal. Consider a small part of its path ner the highest position and take it approximately to be a circular arc. What is the rdius of this circle? This radius is called the adius of curvature of the curve at the point.

Watch Video Solution

26. What is the radius of curvature of the parabola traced out by the projectile in which a particle is projected with a speed u at an angle θ with the horizontal, at a point where the velocity of particle makes an angle $\theta/2$ with the horizontal.

Watch Video Solution

27. A block os mass m moves on as horizontal circle against the wall of a cylindrical room of radius R. The floor of the room onwhich the block moves is smoth but the friction coefficient between the wall and the block is μ. The block is given an initial speed v_0. As a function of the speed v write a. the normal force by the wall on the block. b. thefrictional force by the wall and c. the tangential acceleration of the block. d. Integrate the tangential acceleration $\left(\frac{dv}{dt} = v\frac{dv}{ds}\right)$ to obtain the speed of the block after one revoluton.

Watch Video Solution

28. A table with smooth horizontal surface is fixed in a cabin that rotates with a uniform angular velocity ω in a circular pathof radius R. A smooth groove AB of length $L(<<R)$ is made on the surface of the table. The groove makes an angleθ with the radius OA of the circle in which the cabin rotates. A small particle is kept at the point A in the groove and is released to move along AB. Find the time taken by tehparticle to reach the point B.

29. A car moving at a speed of 36 km/h is taking a turn on a circular road of radius 50 m. A small wooden plate is kept on the seat with its

plane perpendicular to the radius of the circular road figure. A small bock of mass 100 g is kept on the seat which rests against the plate. The friction coefficient between the block and the plate is $\mu = 0.58$. a. Find the normal contact force exerted by the plate on the block. b. The plate is slowly turned so that the angle between the normal to the plate and the radius of the road slowly increases Find the angle at which the block will just start sliding on the plate.

30. A table with smooth horizontal surface is placed in a cabin which moves in a circle of a large radius R Figure. A smooth pulley of small radius is fastened to the table. Two masses m and 2m placed on te tableare connected through a string going over the pulley. Initially the masses are held by a personwith the strings aslong teh outward radius and then the system is released from rest (with respect to the cabin). Find the magnitude of the initial acceleration of the mases as seen from the cabin and the tension in the starting.
