PHYSICS

BOOKS - SUNIL BATRA 41 YEARS IITJEE PHYSICS (HINGLISH)

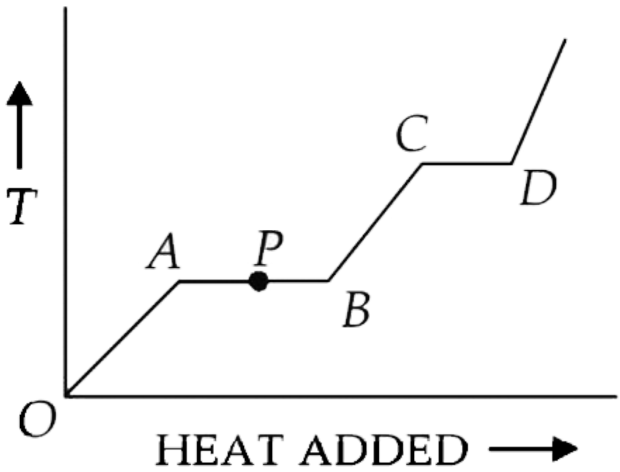
HEAT AND THERMODYNAMICS

Jee Main And Advanced

1. One mole of a mono-atomic ideal gas is mixed with one mole of a diatomic ideal gas. The molar specific heat of the mixture at constant volume is ......

Watch Video Solution

2. The variation of temprature of a material as heat is given to it at a constant rate is shown in the figure. The material is in solid state at the point O. The state of the material at the point P is.....



Watch Video Solution

3. During an experiment, an ideal gas is found to obey an additional law $VP^2 = cons\tan t$, The gas is initially at a temprature T, and volume V. When it expands to a volume $2V$, the temperature becomes.......

Watch Video Solution

4. 300 grams of water at $25^\circ C$ is added to 100 grams of ice at $0^\circ C$. The final temperature of the mixture is .....^@C

Watch Video Solution

5. The earth receives at its surface radiation from the sun at the rate of $1400 Wm^{-2}$. The distance of the centre of the sun from the surface of the earth is $1.5 \times 10^{11} m$ and the radius of the sun is $7 \times 10^{8} m$. Treating the sun as a black body, it follows from the above data taht its surface temperature is ......K

Watch Video Solution

6. A solid copper sphere (density rho and specific heat c) of radius r at an initial temperature $200 K$ is suspended inside a chamber whose walls are at almost $0 K$. The time required for the temperature of the sphere to drop to 100K is ....

Watch Video Solution

7. A point source of heat of power P is placed at the centre of a spherical shell of mean radius R. The material of the shell has thermal conductivity K. If the temperature difference between the outer and inner surface of the shell in not to exceed T, the thickness of the shell should not be less than ....

Watch Video Solution

8. A substance of mass M kg requires a power input of P wants to remain in the molten state at its melting point. When the power source is turned off, the sample completely solidifies in time t seconds. The latent heat of fussion of the substance is ....

Watch Video Solution

9. A container of volume $1m^3$ is divided into two equal parts by a partition. One part has an ideal gas at 300K and the other part is vacuum. The whole system is thermally isolated from the surroundings. When the partition is removed, the gas expands to occupy the whole volume. Its temperature will now be ....

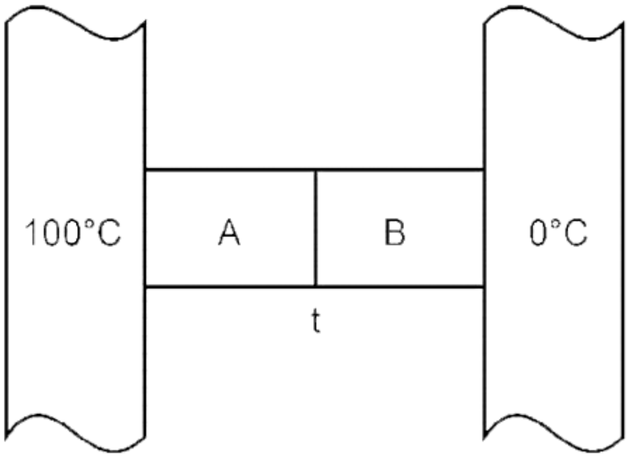
Watch Video Solution

10. An ideal gas with pressure P, volume V and temperature T is expanded isothermically to a volume 2V and a final pressure P_i, If the same gas is expanded adiabatically to a volume 2V, the final pressure P_a. The ratio of the specific heats of the gas is 1.67. The ratio $\frac{P_a}{P_1}$ is ....

Watch Video Solution

11. Two metal cubes A and B of same size are arranged as shown in Figure. The extreme ends of the combination are maintened at the indicated temperatures. The arrangement is thermally insulted. The coefficients of thermal conductivity of A and B are $300W/m^\circ C$ and $200W/m^\circ C$, respectively. After steady state is reached the temperature t of the

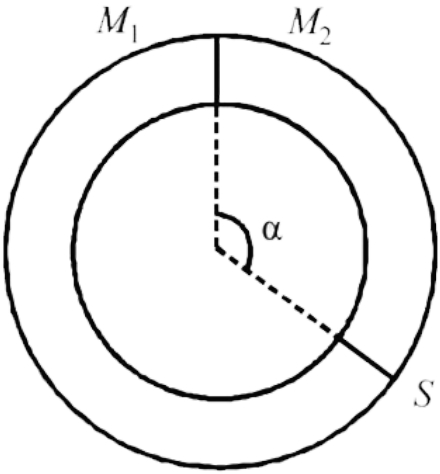
interface will be ......



Watch Video Solution

12. A ring shaped tube contain two ideal gases with equal masses and relative molar masses $M_1 = 32 \text{ and } M_2 = 28.$

The gases are separated by one fixed partion and another movable stopper S which can move freely without friction inside the ring. The angle α as shown in the figure is ...... degrees.



Watch Video Solution

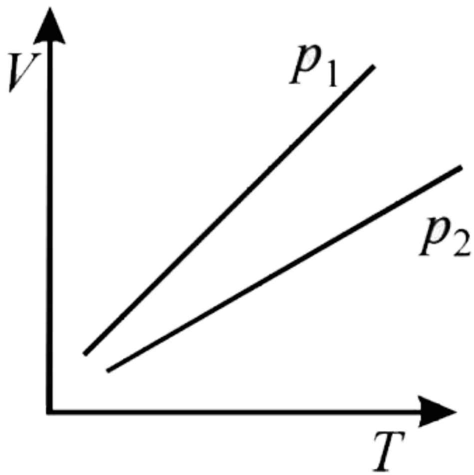
13. Earth recieves $1400W/m^2$ of solar power. If all the solar energy falling on a lens of area $0.2m^2$ is focused on to a block of ice of mass 280 grams, the time taken to melt the ice will be..... Minutes. $(Latentheatoffusionofice = 3.3 \times 10^5 J/kg.)$

Watch Video Solution

14. The root-mean square speeds of the molecules of different ideal gses, maintained at the same temperature are the same.

Watch Video Solution

15. The volume V versus temperature T graphs for a cetain amount of a perfect gas at two pressure p_1 and p_2 are as shown in Fig. It follows from the graphs that p_1 is greater than p_2.



Watch Video Solution

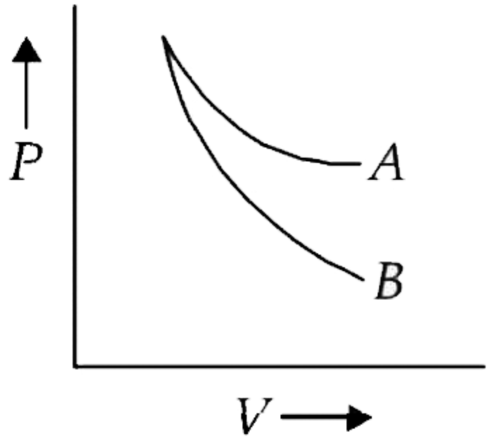
16. Two different gases at the same temperature have equal root mean square velocities.

Watch Video Solution

17. The ratio of the velocity of sound in Hydrogen gas $\left(\gamma = \frac{7}{5}\right)$ to that in Helium gas $\left(\gamma = \frac{5}{3}\right)$ at the same temperature is sqrt(21/3).

Watch Video Solution

18. The curves A and B in the figure shown P-V graphs for an isothermal and an adiabatic process for an idea gas. The isothermal process is represented by the curve A.



Watch Video Solution

19. At a given temperature, the specific heat of a gas at constant pressure is always greater than its specific heat at constant volume.

Watch Video Solution

20. The root mean square (rms) speed of oxygen molecules (O_2) at a certain tempereture T (degree absolute) is V. If the temperatrue is doubled and oxygen gas dissociates into atomic oxygen, the rms speed remains unchanged.

Watch Video Solution

21. Two spheres of the same material have radii 1m and 4m and temperatures 4000K and 2000K respectively. The energy radiated per second by the first sphere is greater than that by the second.

Watch Video Solution

22. A constant volume gas thermometer works on

A. The Principle of Archimedes

B. Boyel's Law

C. Pascal's Law

D. Charle's Law

Answer: D

Watch Video Solution

23. A metal ball immersed in alcohol weights $W_1 at 0^\circ C$ and $W_2 at 50^\circ C$. The coefficient of expansion of cubical the metal is less than that of the alcohol. Assuming that the density of the metal is large compared to that of alcohol, it can be shown that

A. $W_1 > W_2$

B. $W_1 = W_2$

C. $W_1 < W_2$

D. None of these

Answer: C

Watch Video Solution

24. A wall has two layers A and B, each made of different material. Both the layers have the same thickness. The thermal conductivity of the meterial of A is twice that of B . Under thermal equilibrium, the temperature difference across the wall is $36^\circ C$. The temperature difference across the layer A is

A. $6^\circ C$

B. $12^\circ C$

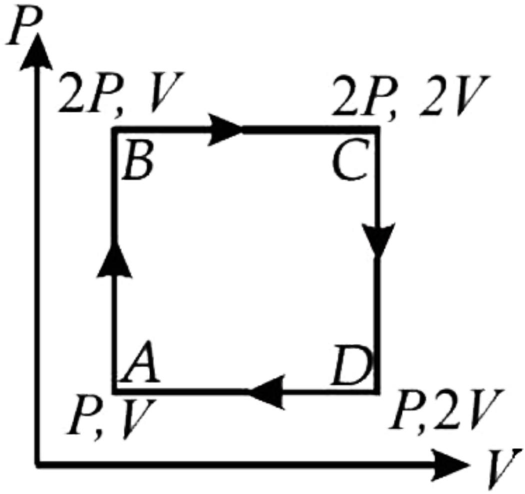
C. $18^\circ C$

D. $24^\circ C$

Answer: B

Watch Video Solution

25. An ideal monatomic gas is taken round the cycle ABCDA as shown in the P-V diagram. The work time during the cycle is



A. PV

B. $2PV$

C. $\frac{1}{2}PV$

D. zero

Answer: A

Watch Video Solution

26. If one mole of a monatomic gas $\left(\gamma = \frac{5}{3}\right)$ is mixed with one mole of a diatomic gas $\left(\gamma = \frac{7}{5}\right)$, the value of gamma for mixture is

A. 1.40

B. 1.50

C. 1.53

D. 3.07

Answer: B

Watch Video Solution

27. From the following statements concerning ideal gas at any given temperature T, select the correct one (s)

A. The coefficient of volume expansion at constant pressure is the same for all idea gases

B. The average translational kinetic energy per molecule of oxygen gas is $3kT$, k being Boltzmann constant

C. The mean-free path of molecules increases with increases in the pressure

D. In a gaseous mixture, the average translational kinetic energy of the molecules of each component is different

Answer: A

Watch Video Solution

28. Three rods of identical area of cross-section and made from the same metal from the sides of an isosceles triangle. ABC, right angled at B. The points A and B are maintained at temperatures T and $\sqrt{2}T$ RESPECTIVELY. In the steady state the temperature of the point C is T_C.

Assuming that only heat conduction takes place , $\frac{T_C}{T}$ is equal to

A. $\frac{1}{2\sqrt{2}-1}$

B. $\frac{3}{\sqrt{2}+1}$

C. $\frac{1}{\sqrt{3}\left(2\sqrt{2}-1\right)}$

D. $\frac{1}{\sqrt{2}+1}$

Answer: B

Watch Video Solution

29. Two metallic spheres S_1 and S_2 are mode of the same material and have got identical surface finish. The mass of S_1 is thrice that of S_2. Both the spheres are heated to the same high temperature and placed in the same room having lower temperature but are thermally insulted from each other. The ratio of the initial rate of coiling of S_1 to that of S_2 is

A. $\frac{1}{3}$

B. $\frac{1}{\sqrt{3}}$

C. $\frac{\sqrt{3}}{1}$

D. $\left(\frac{1}{3}\right)^{\frac{1}{3}}$

Answer: D

Watch Video Solution

Watch Video Solution

30. The average translational kinetic energy of O_2 (relative molar mass 32) molecules at a particular temperature is 0.048eV. The translational kinetic energy of N_2 (relative molar mass 28) molecules in eV at the same temperature is

A. 0.0015

B. 0.003

C. 0.048

D. 0.768

Answer: C

Watch Video Solution

31. A vessel contains 1 mole of O_2 gas (relative molar mass 32) at a temperature T. The pressure of the gas is P. An identical vessel containing one mole of He gas (relative molar mass 4) at temperature 2T has a pressure of

A. $\frac{P}{8}$

B. P

C. $2P$

D. $8P$

Answer: C

Watch Video Solution

32. A spherical black body with a radius of 12cm radiates 450W power at 500K. If the radius were halved and the temperature doubled, the power radiated in watt would be

A. 225

B. 450

C. 900

D. 1800

Answer: D

Watch Video Solution

33. A closed compartment containing gas is moving with some acceleration in horizontal direction. Neglect effect of gravity. Then the pressure in the compartment is

A. same everywhere

B. lower in the front side

C. lower in the rear side

D. lower in the upper side

Answer: B

Watch Video Solution

34. A gas mixture consists of 2 moles of oxygen and 4 moles of argon at temperature T. Neglecting all vibrational modes, the total internal energy of the system is

A. $4RT$

B. $15RT$

C. $9RT$

D. $11RT$

Answer: D

Watch Video Solution

35. The ratio of the speed of sound in nitrogen gas to that in helium gas, at 300K is

A. $\left(\sqrt{2/7}\right)$

B. $\left(\sqrt{1/7}\right)$

C. $\left(\sqrt{3}\right)/5$

D. $\left(\sqrt{6}\right)/5$

Answer: C

Watch Video Solution

36. A monatomic ideal gas, initially at temperature T_1, is enclosed in a cylinder fitted with a frictionless piston. The gas is allowed to expand adiabatically to a temperature T_2 by releasing the piston suddenly. If L_1 and L_2 are the length of the gas column before expansion respectively, then $\frac{T_1}{T_2}$ is given by

A. $\left(\frac{L_1}{L_2}\right)^{2/3}$

B. $\left(\frac{L_1}{L_2}\right)$

C. $\left(\frac{L_2}{L_1}\right)$

D. $\left(\frac{L_2}{L_1}\right)^{2/3}$

Answer: D

Watch Video Solution

37. A block of ice at $-10^{\circ}C$ is slowly heated and converted to steam at $100^{\circ}C$. Which of the following curves represents the phenomenon qualitatively?

A. 
B. 
C. 
D. \

Answer: A

Watch Video Solution

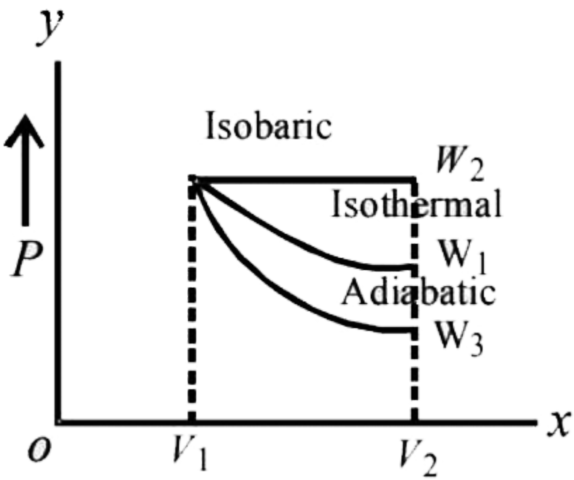
38. An ideal gas is initially at temperature T and volume V. Its volume is increased by ΔV due to an increase in temperature ΔT, pressure remaining constant. The quantity $\delta = \dfrac{\Delta V}{V \Delta T}$ varies with temperature as

A. 
B. 
C. 
D. 
Answer: C

Watch Video Solution

Watch Video Solution

39. Starting with the same initial conditions, an ideal gas expands from volume $V_1 \rightarrow V_2$ in three different ways. The work done by the gas is W_1 if the process is purely isothermal, W_2if purely isobaric and W_3 if purely adiabatic. Then



A. $W_2 > W_1 > W_3$

B. $W_1 > W_2 > W_3$

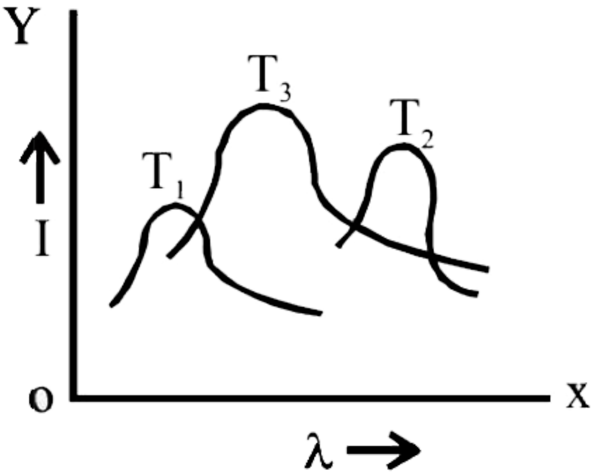
C. $W_2 > W_3 > W_1$

D. $W_2 > W_1 > W_3$

Answer: A

Watch Video Solution

40. The plots of intensity versus wavelength for three black bodies at temperature T_1, T_2 and T_3 respectively are as shown. Their temperatures are such that



A. $T_1 > T_2 > T_3$

B. $T_1 > T_3 > T_2$

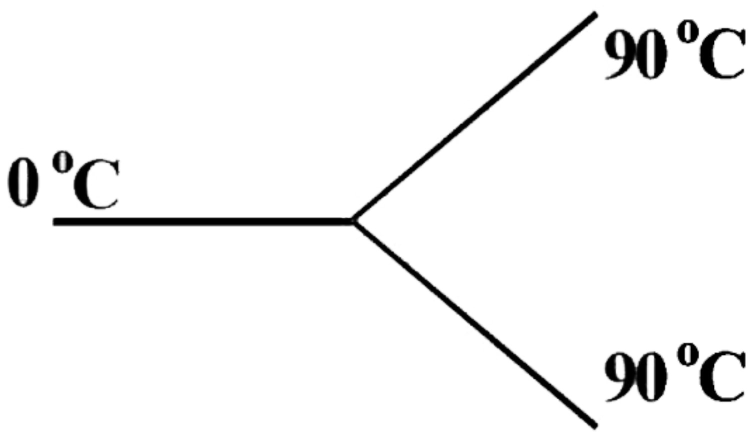
C. $T_2 > T_3 > T_1$

D. $T_3 > T_2 > T_1$

Answer: B

Watch Video Solution

41. Three rods made of same material and having the same cross-section have been joined as shown. In the figure.Each rod is of the same length. The left and right ends are kept at $0^{\circ} C$ and $90^{\circ} C$ respectively. The temperature of the junction of the three rods will be



A. $45^{\circ} C$

B. $60^{\circ} C$

C. $30^{\circ} C$

D. $20^{\circ} C$

Answer: B

Watch Video Solution

42. In a given process on an ideal gas, $dW = 0$ and $dQ < 0$. Then for the gas

A. the temperature will decrease

B. the volume will increase

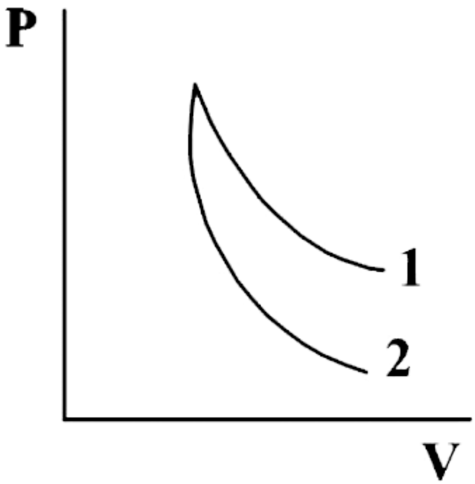
C. the pressure will remain constant

D. the temperature will increase

Answer: A

Watch Video Solution

43. P-V plots for two gases during adiabatic processes are shown in the figure. Plots 1 and 2 should corresponds respectively to



A. He and O_2

B. O_2 and He

C. He and Ar

D. O_2 and N_2

Answer: B

Watch Video Solution

44. When a block of iron in mercury at $0^{\circ} C$, fraction $K_1$of its volume is submerged, while at the temperature $60^{\circ} C$, a fraction K_2 is seen to be submerged. If the coefficient of volume expansion of iron is γ_{Fe} and that of mercury is γ_{Hg}, then the ratio $(K_1)/(K_2)$ can be expressed as

A. $\dfrac{1+(60\gamma_{Fe})}{1+(60\gamma_{hg})}$

B. $\dfrac{1-(60\gamma_{Fe})}{1+(60\gamma_{Hg})}$

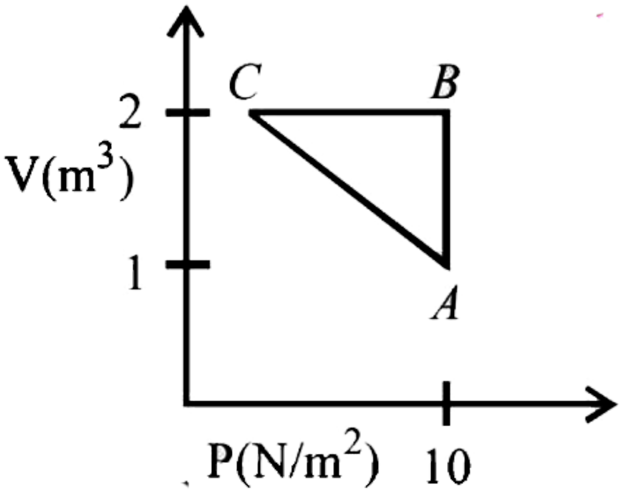
C. $\dfrac{1+(60\gamma_{Fe})}{1-(60\gamma_{Hg})}$

D. $\dfrac{1+(60\gamma_{Hg})}{1+(60\gamma_{Fe})}$

Answer: A

Watch Video Solution

45. An ideal gas is taken through the cycle $A \to B \to C \to A$, as shown in the figure, If the net heat supplied to the gas in the cycle is 5J, the work done by the gas in the process CtoA is



A. $-5J$

B. $-10J$

C. $-15J$

D. $-20J$

Answer: A

Watch Video Solution

46. Which of the following graphs correctly represents the variation of

$$\beta = -\frac{dV/dP}{V}$$

with P for an ideal gas at constant temperature?

A. 
B. 
C. 
D. 
Answer: A

Watch Video Solution

47. An ideal Black-body at room temperature is thrown into a furnace. It is observed that

A. initially it is the darkest body and at later times the brightest

B. it is the darkest body at all times

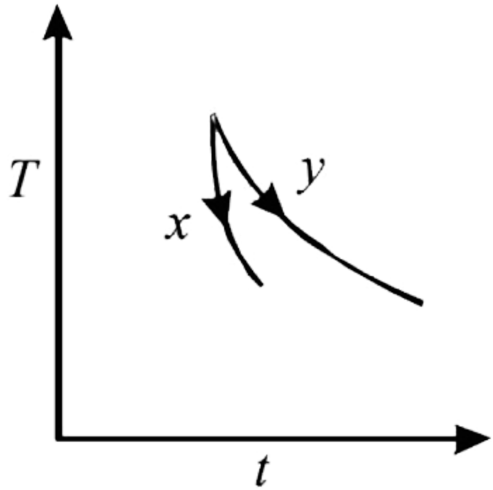
C. it cannot be distinguished at all times

D. initially it is the darkest body and at later times it cannot be distinguished

Answer: A

Watch Video Solution

48. The graph, shown in the adjacent diagram, represents the variation of temperature (T) of two bodies, x and y having same surface area, with time (t) due to the emission of radiation. Find the correct relation between the emissivity and absorptivity power of the two bodies



A. $E_x > E_y \& a_x < a_y$

B. $E_x < E_y \& a_x > a_y$

C. $E_x > E_y \& a_x > a_y$

D. $E_x < E_y \& a_x < a_y$

Answer: C

Watch Video Solution

49. Two rods, one of aluminium and the other made of steel, having initial length l_1 and l_2 are connected together to from a single rod of length $l_1 + l_2$. The coefficients of linear expansion for aluminium and steel are α_a and α_s and respectively. If the length of each rod increases by the same amount when their temperature are raised by $t^0 C$, then find the ratio $l_1 / (l_1 + l_2)$

A. $(\alpha_s) / (\alpha_a)$

B. $(\alpha_a) / (\alpha_s)$

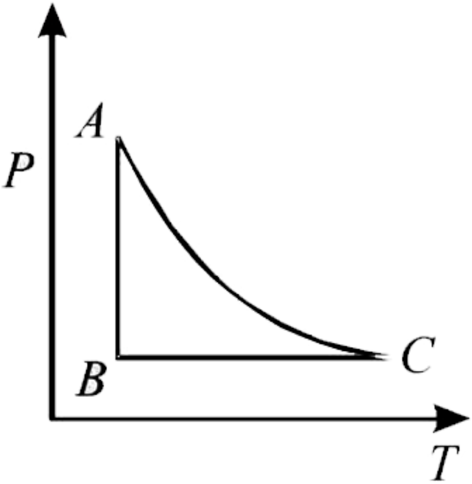
C. $(\alpha_s) / ((\alpha_a) / (\alpha_s))$

D. $(\alpha_a) / ((\alpha_a) / (\alpha_s))$

Answer: C

Watch Video Solution

50. The PT diagram for an ideal gas is shown in the figure, where AC is an adiabatic process, find the corresponding PV diagram.



A. (a) 
B. (b) 
C.

D. (d) 
Answer: B

Watch Video Solution

51. 2kg of ice at $20^{C}\circ$ is mixed with 5kg of water at $20^{C}\circ$ in an insulating vessel having a negligible heat capacity. Calculate the final mass of water remaining in the container. It is given that the specific heats of water & ice are $1kcal/kg/^{\circ}C0.5$

$kcal/kg/^{\circ}C$ while the latent heat of fusion of ice is $80kcal/kg$

A. $7kg$

B. $5kg$

C. $4kg$

D. $2kg$

Answer: B

Watch Video Solution

52. Three discs A,B and C having radii 2,4 and 6 cm respectively are coated with carbon black. Wavelength for maximum intensity for the three discs are 300,400 and 500 nm respectively. If Q_A, Q_B and Q_C are power emitted by A,B and D respectively, then

A. Q_A will be maximum

B. Q_B will be maximum

C. Q_C will be maximum

D. $Q_A = Q_B = Q_C$

Answer: B

Watch Video Solution

53. If liquefied oxygen at 1 atmospheric pressure is heated from 50K to 300k by supplying heat at constant rate. The graph of temperature vs time will be

A. 
B. 
C. 
D. 
Answer: C

Watch Video Solution

54. Two identical rods are connected between two containers on of tehm is at $100^\circ C$ and another is at $0^\circ C$. If rods are connected in parralel them the rate of melting of ice is $q_1 gm / \sec$.

If they are connected in series then the rate is q_2. The ratio q_2 / q_1 is

A. 2

B. 4

C. $1/2$

D. $1/4$

Answer: D

Watch Video Solution

55. An ideal gas is initially at P_1, V_1 is expands to P_2, V_2 and then compressed adiabatically to the same volume V_1 and pressure P_3. If W is the net work done by the gas in complete process which of the following is true.

A. $W > 0, P_3 > P_1$

B. $W < 0, P_3 > P_1$

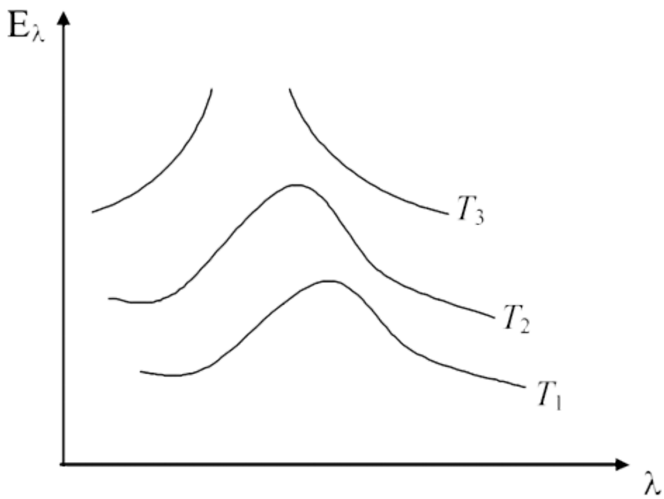
C. $W > 0, P_3 < P_1$

D. $W < 0, P_3 < P_1$

Answer: B

Watch Video Solution

56. Variation of radiant energy emitted by sun, filament of tungsten lamp and welding arc as a function of its wavelength is shown in figure. Which of the following option is the correct match?



A. $Sun - T_3, tungsten filament - T_1, weld \in garc - T_2$

B. $Sun - T_2, tungsten filament - T_1, weld \in garc - T_3$

C. $Sun - T_3, tungsten filament - T_2, weld \in garc - T_1$

D. $Sun - T_1, tungstenfilament - T_2, weld \in garc - T_3$

Answer: A

Watch Video Solution

57. In which of the following process, convection does not take place primarily

A. Sea and land breeze

B. boiling of water

C. heating air around a furnace

D. warming of glass of bulb due to filament

Answer: D

Watch Video Solution

58. A spherical body of area A, and emissivity e = 0.6 is kept inside a black body. What is the rate at which energy is radiated per second at temperature T

A. $0.4AT^4$

B. $0.8AT^4$

C. $6.0AT^4$

D. $1.0AT^4$

Answer: None of these

Watch Video Solution

59. Calorie is defined as the amount of heat required to raise temperature of 1 g of water by $1^\circ C$ abd it is defined under which of the following conditions?

A. From $14.5^\circ C \rightarrow 15.5^\circ C$ at 760mm of Hg.

B. From $98.5^\circ C \rightarrow 99.5^\circ C$ at 760mm of Hg.

C. From $13.5^\circ C \rightarrow 14.5^\circ C$ at 76mm of Hg.

D. From $3.5^\circ C \rightarrow 4.5^\circ C$ at 76mm of Hg.

Answer: A

Watch Video Solution

60. Water of volume 2 litre in a container is heated with a coil of $1kWat27^\circ C$. The lid of the container is open and energy dissipates at rate of $160J/s$. In how much time temperature will rise from $27^\circ C \rightarrow 77^\circ C$ [Given specific heat of water is $4.2kJ/kg$]

A. 7 min

B. $6 \text{ min } 2s$

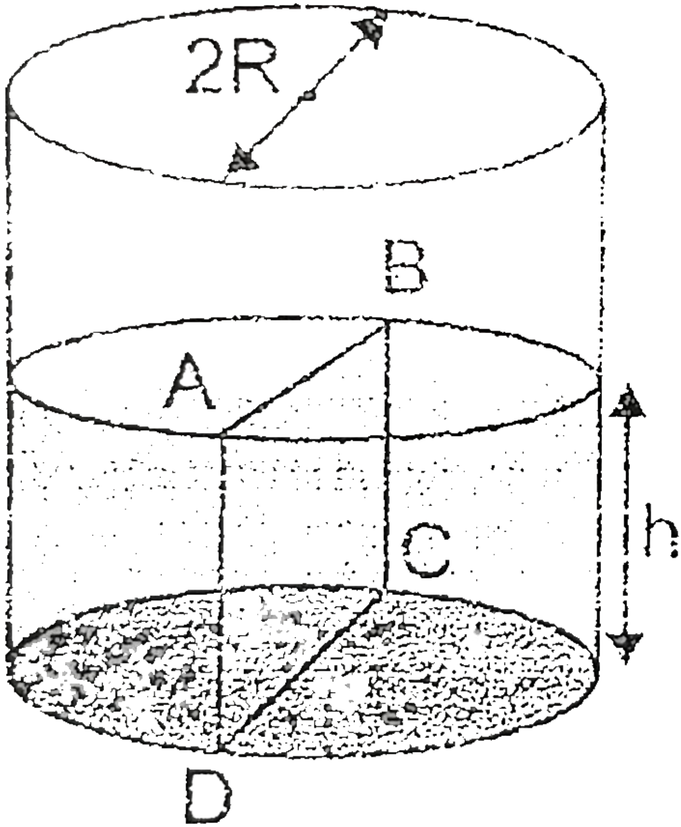
C. 8 min 20s`

D. 14 min

Answer: C

Watch Video Solution

61. Water is filled up to a height h in a beaker of radiys R as shown in the figure. The density of water is ρ, the surface tension of water is T and the atmospheric pressure is P_0. Consider a vertical section $ABCD$ of the water column through a diameter of the beaker. The force on water on one side on this section by water on the other side of this section has magnitude



A. $\left|2P_0RH + \pi R^2\rho gh - 2RT\right|$

B. $\left|2P_0Rgh + R\rho gh^2 + 2RT\right|$

C. $\left|P_0\pi R^2 + R\rho gh^2 - 2RT\right|$

D. $\left|P_0\pi R^2 + R\rho gh^2 + 2RT\right|$

Answer: B

Watch Video Solution

62. An ideal gas is expanding such that $PT^{\circ} = cons\tan t.$ The coefficient of colume expansion of the gas is-

A. $1/T$

B. $1/T$

C. $3/T$

D. $4/T$

Answer: C

Watch Video Solution

63. A real gas behaves like an ideal gas if its

A. pressure is temperature are both high

B. pressure is temperature are both low

C. pressure is high temperature are both low

D. pressure is low temperature are both high

Answer: D

Watch Video Solution

64. 5.6 liter of helium gas at STP is adiabatically compressed to 0.7 liter. Taking the initial temperature to be T_1, the work done in the process is

A. $\frac{9}{8}RT_1$

B. $\frac{3}{2}RT_1$

C. $\frac{15}{8}RT_1$

D. $\frac{9}{2}RT_1$

Answer: A

Watch Video Solution

65. A mixture of 2 moles of helium gas $(a \rightarrow micmass = 4a\mu)$ and 1 mole of argon gas $(a \rightarrow micmass = 40a\mu)$ is kept at 300K in a container. The ratio of the rms speeds $\left(\frac{v_{rms}(helium)}{(v_{rms}(argon))}\right)$ is

A. 0.32

B. 0.45

C. 2.24

D. 3.16

Answer: D

Watch Video Solution

66. Two moles of ideal helium gas are in a rubber balloon at $30^\circ C$. The balloon is fully expandable and can be assumed to require no energy in its expansion. The temperature of the gas in the balloon is slowly changed to $35^\circ C$. The amount of heat required in raising the temperature is nearly (take R $= 8.31 J/mol.\,K$)

A. $62J$

B. $104J$

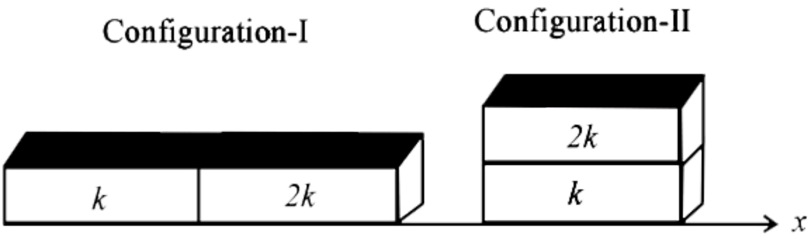
C. $124J$

D. $208J$

Answer: D

Watch Video Solution

67. Two rectangular blocks, having identical dimensions, an be arranged either in configuration-I or in configuration-II as shown in the figure. One of the blocks has thermal conductivity k and the other 2k. The temperature difference between the ends along the x-axis is the same in both the configurations. It takes 9s to transport a certain amount of heat from the hot end to the cold end in the configuration-I. The time to transport the same amount of heat in the configuration-II is



A. $2.0s$

B. $4.5s$

C. $3.0s$

D. $6.0s$

Answer: A

Watch Video Solution

68. Two non-reactive monoatomic ideal gases have their atomic masses in the ratio $2:3$. The ratio of their partial pressures, when enclosed in a vessel kept at a constant temperature, is $4:3$. The ratio of their densities is

A. $1:4$

B. $1:2$

C. $6:9$

D. $8:9$

Answer: D

Watch Video Solution

69. Parallel rays of light of intensity $I = 912 WM^{-2}$ are incident on a spherical black body kept in surroundings of temperature 300K. Take Stefan-Boltzmann constant $\sigma = 5.7 \times 10^{-8}$ $Wm^{-2}K^{-4}$ and assume that the energy exchange with the surroundings is only through radiation. The final steady state temperature of the black body is close to

A. $330K$

B. $660K$

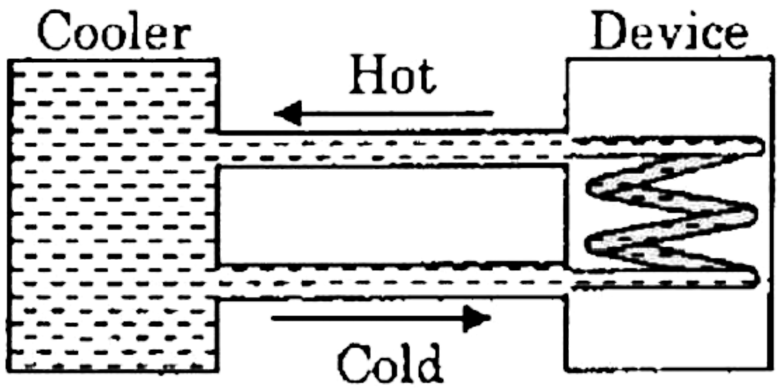
C. $990K$

D. $1550K$

Answer: A

Watch Video Solution

70. A water cooler of storages capacity 120 liters can cool water at a constant rate of P watts. In a closed circulation system (as shown schematically in the figure), the water from the cooler is used to cool an external device that generates constantly 3kW of heat (thermal load). The temperature of water fed into the device cannot exceed $30^{\circ}C$ and the entire stored 120 liters of water is initially cooled to $10^{\circ}C$. The entire system is thermally insulated. The minimum value of P (in watts) for which the device can be operated for 3hours is



(Specific heat of water is $4.2kJkg^{-1}K^{-1}$ and the density of water is $1000kgm^{-3}$)

A. 1600

B. 2067

C. 2533

D. 3933

Answer: B

Watch Video Solution

71. A gas is enclosed in a cylinder with a movable frictionless piston. Its initial thermodynamic state at pressure $P_i = 10^5$ Pa and volume $V_i = 10^{-3} m^3$ changes to a final state at $P_f = (1/32) \times 10^5 Pa$ and $V_f = 8 \times 10^{-3} m^3$ in an adiabatic quasi-static process, such that $P^3 V^3 = cons\tan t$. Consider another thermodynamic process that brings the system form the same initial state to the same final state in two steps: an isobaric expansion at P_i followed by an isochoric (isovolumetric) process at volume V_r. The amount of heat supplied to the system i the two-step process is approximately

A. $112 J$

B. $294 J$

C. $588 J$

D. $813 J$

Answer: C

Watch Video Solution

72. The ends Q and R of two thin wires, PQ and RS, are soldered (joined) together. Initially each of the of wire has a length of 1m at $10^{\circ} C$. Now the end P is maintained at $10^{\circ} C$, while the ends S is heated and maintained at $400^{\circ} C$. The system is thermally insultated from its surroundings. If the thermal conductivity of wire PQ is twice that of the wire RS and the coefficient of linear thermal expansion of PQ is $1.2 \times 10^{-5} K^{-1}$, the change in length of the wire PQ is

A. $0.78 mm$

B. $0.90 mm$

C. $1.56 mm$

D. $2.34 mm$

Answer: A

Watch Video Solution

73. At room temperature the rms speed of the molecules of a certain diatomic gas is formed to be $1930 m / \sec$ The gas is .

A. H_2

B. F_2

C. O_2

D. Cl_2

Answer: A

Watch Video Solution

74. 70 calories of heat required to raise the temperature of 2 moles of an ideal gas at constant pressure from $30^\circ C \rightarrow 35^\circ C$. The amount of heat required (in calories) to raise the temperature of the same gas through the same range $(30^\circ C \rightarrow 35^\circ C)$ at constant volume is:

A. 30

B. 50

C. 70

D. 90

Answer: B

Watch Video Solution

75. Steam at $100^\circ C$ is passed into $1.1kg$ of water contained in a calorimeter of water equivalent $0.02kg$ at $15^\circ C$ till the temperature of the calorimeter and its content rises to $80^\circ C$. What is the mass of steam condensed? Latent heat of steam = $536cal/g$.

A. 0.130

B. 0.065

C. 0.260

D. 0.135

Answer: A

Watch Video Solution

76. A cylinder of radius R made of a material of thermal conductivity K_1 is surrounded by a cylinderical shell of inner radius R and outer radius 2R made of a material of thermal conductivity K_2. The two ends of the combined system are maintained at two different temperatures. There is no loss of heat across the cylindrical surface and the system is in steady state. The effictive thermal conductivity of the system is

A. $K_1 + K_2$

B. $K_1K_2/(K_1 + K_2)$

C. $(K_1 + 3K_2)/4$

D. $(3K_1 + 3K_2)/4$

Answer: C

Watch Video Solution

77. For an ideal gas :

A. the change in internal energy in a constant pressure process from temperature $T_1 \to T_2$ is equal to $nC_v(T_2 - T_1)$, where C_v is the molar specific heat at constant volume and n the number of moles of the gas.

B. the change in internal energy of the gas and the work done by the gas are equal in magnitude in an adiabatic process.

C. the internal energy does not change in an isothermal process.

D. no heat is added or removed in an adiabatic process.

Answer: A::B::C::D

Watch Video Solution

78. When an ideal diatomic gas is heated at constant pressure, the fraction of the heat energy supplied which increases the internal energy of the gas is

A. $\frac{2}{5}$

B. $\frac{3}{5}$

C. $\frac{3}{7}$

D. $\frac{5}{7}$

Answer: D

Watch Video Solution

79. Three closed vessels A, B and C are at the same temperature T and contain gasses which obey the Maxwellian distribution of velocities. Vessel A contain only O_2 and N_2. If the average speed of the O_2 molecules in vessel A is v_1 that of the N_2 molecules in vessel B us v_2, the average speed of the O_2 molecules in vessel C is

A. $\dfrac{v_1 + v_2}{2}$

B. v_1

C. $(v_1 v_2)^{\frac{1}{2}}$

D. $\sqrt{\dfrac{3kT}{M}}$

Answer: B

Watch Video Solution

80. An ideal gas is taken from the state A (pressure P, volume V) to the state B (pressure $p/2$, volume 2V) along a straight line path in the P-V diagram. Select the correct statement (s) from the following :

A. The work done by the gas in the process A to B exceeds the work that would be done by it if the system were taken from A to B along the isotherm.

B. In the T-V diagram, the path AB becomes a part of a parabola

C. In the P-T diagram, the path AB becomes a part of a hyperbola

D. In going from A to B, the temperature T of the gas first increases to a maximum value and then decreases.

Answer: A::B::D

Watch Video Solution

81. Two bodies A and B ahave thermal emissivities of 0.01 and 0.81 respectively. The outer surface areas of the two bodies are the same. The two bodies emit total radiant power of the same rate. The wavelength λ_B corresponding to maximum spectral radiancy in the radiation from B shifted from the wavelength corresponding to maximum spectral radiancy in the radiation from A, by $1.00\mu m$. If the temperature of A is 5820K:

A. the temperature of B is 1934K

B. $\lambda_B = 1.5\mu m$

C. the temperature of B is 11604K

D. the temperature of B is 2901K

Answer: A::B

Watch Video Solution

82. The temperature of an ideal gas is increased from 120K to 480K. If at 120K the root-mean-squre velocity of the gas molecules is v, at 480K it becomes

A. $4v$

B. $2v$

C. $v/2$

D. $v/4$

Answer: B

Watch Video Solution

83. A given quantity of a ideal gas is at pressure P and absolute temperature T. The isothermal bulk modulus of the gas is

A. $\frac{2}{3}P$

B. P

C. $\frac{3}{2}P$

D. $2P$

Answer: B

Watch Video Solution

84. Two cylinders A and B fitted with pistons contain equal amounts of an ideal diatomic gas at 300K. The piston of A is free to move, while that B is held fixed. The same amount of heat is given to the gas in each cylinder. If the rise in temperature of the gas in A is 30K, then the rise in temperature of the gas in B is

A. $30K$

B. $18K$

C. $50K$

D. $42K$

Answer: D

Watch Video Solution

85. During the melting of a slab of ice at 273K at atmospheric pressure,

A. positive work is done by the ice-water system on the atmosphere.

B. positive work is done on the ice-water system by the atmosphere.

C. the internal energy of the ice-water system increases.

D. the internal energy of the ice-water system decreases.

Answer: B::C

Watch Video Solution

86. A blackbody is at a temperature of 2880K. The energy of radiation emitted by this object with wavelength between 499nm and 500nm is U_1, between 999nm and 1000nm is U_2 and between 1499 nm and 1500 nm is U_3. The Wien constant $b = 2.88 \times 10^6 nmK$. Then

A. $U_1 = 0$

B. $U_3 = 0$

C. $U_1 > U_2$

D. $U_2 > U_1$

Answer: D

Watch Video Solution

87. A bimetallic strip is formed out of two identical strips one of copper and the other of brass. The coefficients of linear expansion of the strip goes up by $\Delta T$and the strip bends to from an arc of radius of curvature R. Then R is.

A. proportional to ΔT

B. inversely proportional to ΔT

C. proportional to $|\alpha_B - \alpha_C|$

D. inversely proportional to $|\alpha_B - \alpha_C|$

Answer: B::D

Watch Video Solution

88. Two identical containers A and B with frictionless pistons contain the same ideal gas at the same temperature and the same velocity V. The mass of the gas in A is m_A, and that in B is m_B. The gas in each cylinder is now allowed to expand isothermally to the same final volume 2V. The changes in the pressure in A and B are found to be ΔP and $1.5\Delta P$ respectively. Then

A. $4m_A = 9m_B$

B. $2m_A = 3m_B$

C. $3m_A = 2m_B$

D. $9m_A = 4m_B$

Answer: C

Watch Video Solution

89. Let $\bar{v}$, v_{rms} and v_p respectively denote the mean speed. Root mean square speed, and most probable speed of the molecules in an ideal monatomic gas at absolute temperature T. The mass of a molecule is m. Then

A. no molecules can have a speed greater than $\sqrt{2}v_{rms}$

B. no molecule can have a speed less than $v_p / \sqrt{2}$

C. $v_p < \bar{v} < v_{rms}$

D. the average kinetic energy of a molecules is $\frac{3}{4}mv_p^2$.

Answer: C::D

Watch Video Solution

Watch Video Solution

90. A vessel contains a mixture of one mole of oxygen and two moles of nitrogen at 300K. The ratio of the average rorational kinetic energy per O_2 molecules to that per N_2 molecules is

A. $1:1$

B. $1:2$

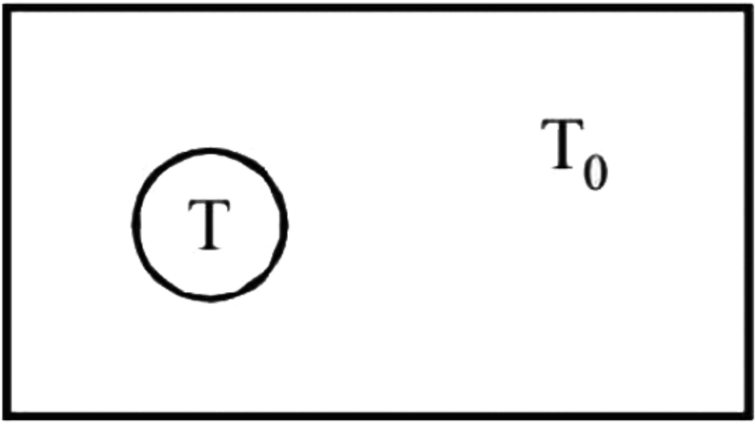
C. $2:1$

D. depends on the moments of inertia of the two molecules

Answer: A

Watch Video Solution

91. A black body of temperature T is inside chamber of T_0 temperature initially. Sun rays are allowed to fall from a hole in the top of chamber. If the temperature of black body (T) and chamber (T_0) remains constant, then



A. Black body will absorb more radiation

B. Black body will absorb less radiation

C. Black body emit more energy

D. Black body emit energy equal to enrgy absorbed by it

Answer: A::C::D

Watch Video Solution

92. C_v and C_p denote the molar specific heat capacities of a gas at costant volume and constant pressure, respectively. Then

A. $C_p - C_v$ is larger for a diatomic ideal gas than for a monoatomic ideal gas

B. $C_p + C_v$ is larger for a diatomic ideal gas than for a monatomic ideal gas

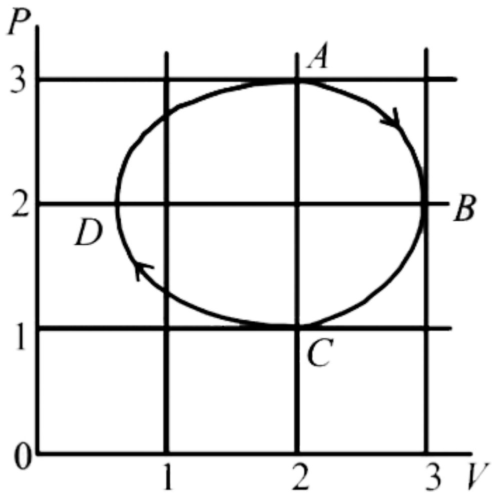
C. C_p / C_v is larger for a diatomic ideal gas than for a monoatomic ideal gas

D. $C_p . C_v$ is larger for a diatomic ideal gas than for a monoatomic ideal gas

Answer: B::D

Watch Video Solution

93. The figure shows the P-V plot of an ideal gas taken through a cycle ABCDA. The part ABC is a semi-circle and CDA is half of an ellipse. Then,



A. the process during the path $A \rightarrow B$ is isothermal

B. work done during the path $B \rightarrow C \rightarrow D$

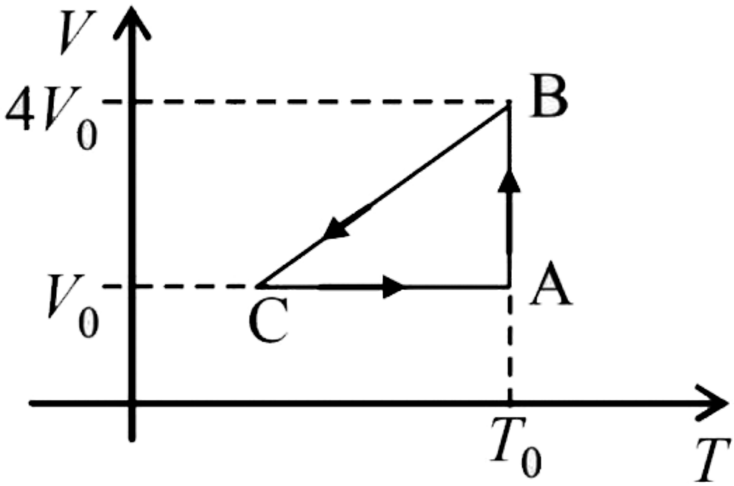
C. heat flows out of the gas during the path $B \rightarrow C \rightarrow D$

D. the process during the path $A \rightarrow B$ is isothermal

Answer: B::D

Watch Video Solution

94. One mole of an ideal gas in initial state A undergoes a cylic process ABCA, as shown in the figure. Its pressure at A is P_0. Choose the correct option (s) from the following



A. Internal energies at A and B are the same

B. Work done by the gas in process AB is $P_0 V_0 \ln 4$

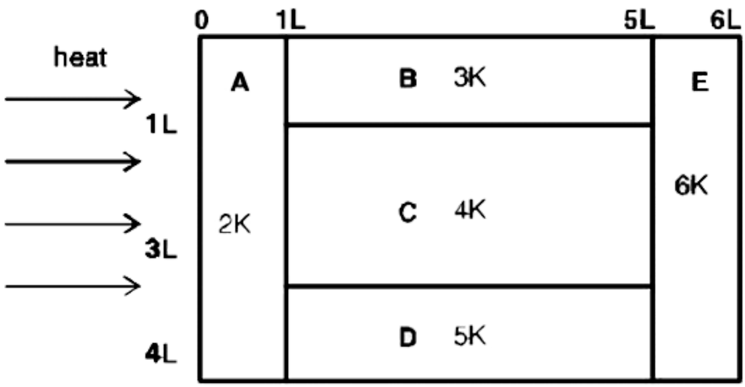
C. Pressure at C is $\frac{P_0}{4}$

D. Temperature at C is $\frac{T_0}{4}$

Answer: A::B

Watch Video Solution

95. A composite block is made of slabs A,B,C,D and E of different thermal conductivities (given in terms of a constant K and sizes (given in terms of length, L) as shown in the figure. All slabs are of same width. Heat 'Q' flows only from left to right through the blocks. Then in steady state



A. heal flow through A and E slabs are same.

B. heat flow through slab E is maximum

C. temperature difference across slab E is smallest.

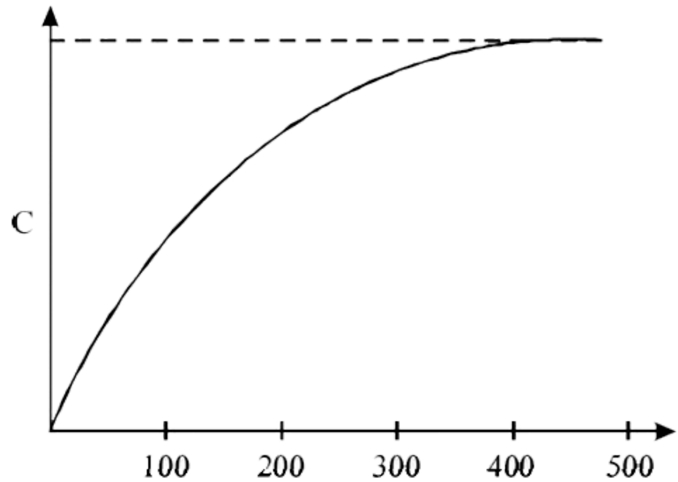
D. heat flow through C=heat flow through B + heat flow throughD.

Answer: A::C::D

Watch Video Solution

Watch Video Solution

96. The figure below shows the variation of specific heat capacity (C) of a solid as a function of temperature (T). The temperature is increased continuousely form 0 to 500K at a constant rate. Ignorign any volume change, the following statement (s) is (are) correct to a reasonable approximation.



A. The rate at which heat is absorbed in the range 0-100K varies linearly with temperature T.

B. Heat absorbed in increasing the temperature from 0-100K is less than the heat required for increasing the temperature from 400-

500K.

C. There is no change in the rate of heat absorption in the range 400-500K.

D. The rate of heat absorption increases in the range 200-300K.

Answer: A::B::C::D

Watch Video Solution

97. A container of fixed volume has a mixture of a one mole of hydrogen and one mole of helium in equilibrium at temperature T. Assuming the gasses are ideal, the correct statement (s) is (are)

A. The average energy per mole of the gas mixture is 2RT

B. The ratio of speed of sound in the gas mixture to tah tin helium gas is $\sqrt{6/5}$

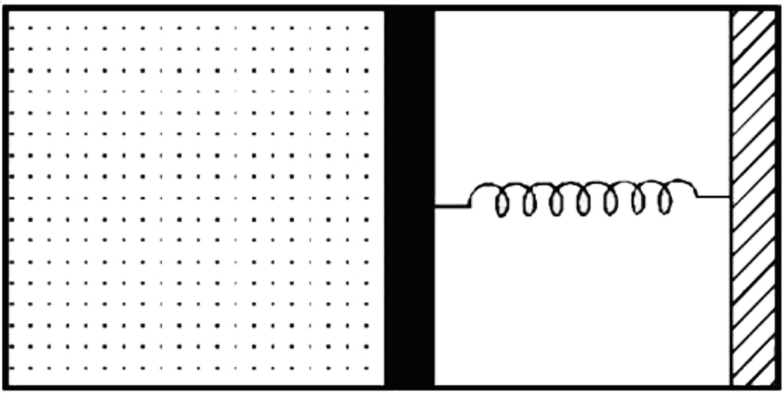
C. The ratio of the rms speed of helium atoms to that of hydrogen molecules is $1/2$

D. The ratio of the rms speed of helium atoms to that of hydrogen molecules is $\frac{1}{\sqrt{2}}$

Answer: A::B::C

Watch Video Solution

98. An ideal monoatomic gas is confined in a horizontal cylinder by a spring loaded piston (as shown in the figure). Initially the gas is at temperature T_1, pressure P_1 and volume $V_1$and the spring is in its relaxed state. The gas is tehn heated very slowly to temperature T_2 ,pressure $P_2$and volume V_2. During this process the piston moves out by a distance x. Ignoring the friction between the piston and the cylinder, the correct statement (s) is (are)



A. If $V_2 = 2V_1$ and $T_2 = 3T_1$, then the o the energy stored in the spiring is $\frac{1}{4}P_1V_1$

B. If $V_2 = 2V_1$ and $T_2 = 3T_1$, then the change in internal energy is $3P_1V_1$

C. If $V_2 = 3V_1$ and $T_2 = 4T_1$, then the work done by the gas is $\frac{7}{3}P_1V_1$

D. If $V_2 = 3V_1$ and $T_2 = 4T_1$, then the heat supplied to the gas is $\frac{17}{6}P_1V_1$

Answer: B::C

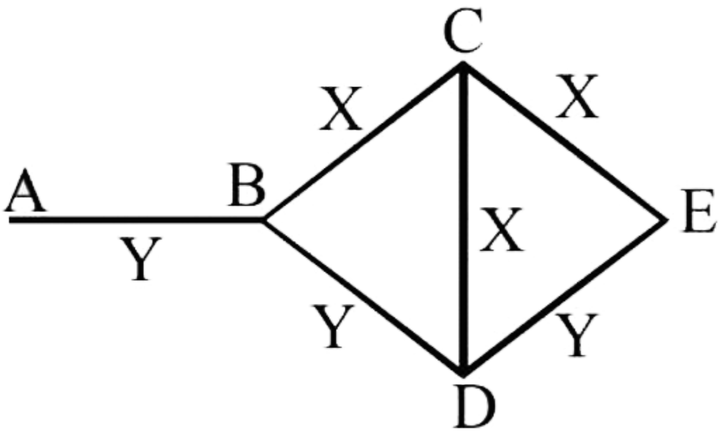
Watch Video Solution

99. A sinker of weight w_0 has an apparent weight w_1 when weighed in a liquid at a temperature t_1 and w_2 when weight in the same liquid at temperature t_2. The coefficient of cubical expansion of the material of sinker is β. What is the coefficient of volume expansion of the liquid.

Watch Video Solution

100. Three rods of material X and three rods of material Y are connected as shown in the figure. All the rods are of identical length and cross-sectional area. If the end A is maintained at $60^\circ C$ and the junction E at $10^\circ C$. Calculate the temperature of the junction B, C and D. The thermal conductivity of X is $0.92 cal / \sec - cm^\circ C$ and that of Y is

$0.46 cal / \sec - cm - ^\circ C$.

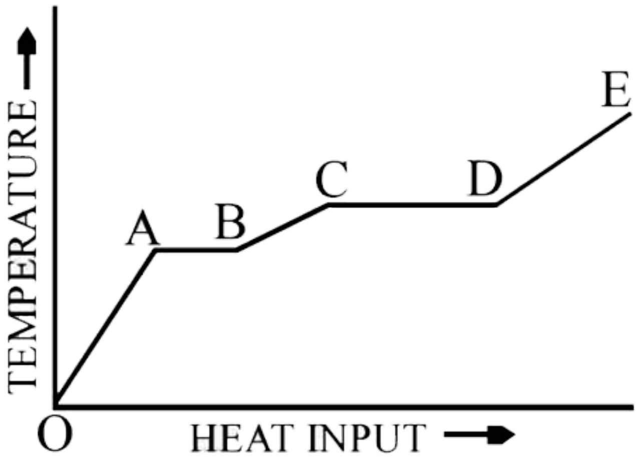


Watch Video Solution

101. Given samples of 1 c.c. of hydrogen and 1 c.c. of oxygen, both at N.T.P. which sample has a larger number of molecules?

Watch Video Solution

102. A solid material is supplied with heat at a constant rate. The temperature of the material is changing with the heat input as shown in the graph in figure. Study the graph carefully and answer the following questions:



(i) What do the horizontal regions AB and CD represent?

If CD is equal to 2AB, what do you infer?

What does the slope of DE represents?

The slope of OAgtthe slope of BC. What does this indicate?

Watch Video Solution

103. A jar contains a gas and a few drops of water at absolute temperture T_1. The pressure in the jar is $830mm$ of mercury. The temperature of the jar is reduced by 1%. The saturation vapour pressures of water at the two temperatures are $30mm$ of mercury and $25mm$ of mercury. Calculate the new pressure in the jar.

Watch Video Solution

104. A cyclic process $ABCA$ shown in the $V-T$ diagram is performed with a constant mass of an ideal gas. Show the same process on a $p-V$ diagram. In the figure, CA is parrallel to the Vaxis and BC is parallel to the T-axis.

Watch Video Solution

105. A lead bullet just melts when stopped by an obstacle. Assuming that 25 per cent of the heat is absorbed by the obstacle, find the velocity of the bullet if its initial temperature is $27^{\circ} C$. (Melting point of lead=$327^{\circ} C$, specific heat of lead =$0.03cal \text{ or } ies / gm / ^{\circ} C$, latent jeat of fusion of lead=$6cal \text{ or } ies / gm, J = 4.2jo\underline{e}s / cal \text{ or } ie$).

Watch Video Solution

Watch Video Solution

106. Calculate the work done when one mole of a perfect gas is compressed adiabatically. The initial pressure and volume of the gas are $105N/m^2$ and 6 litres respectively. The final volume of the gas are 2 litre. Molar specific heat of the gas at constant volume is $3R/2$.

Watch Video Solution

107. A solid sphere of copper of radius R and a hollow sphere of the same materail of inner radius r and outer radius A are heated to the same temperature and allowed to cool in the same environment. Which of tehm starts cooling faster?

Watch Video Solution

108. $1g$ mole of oxygen at $27^\circ C$ and 1 atmosphere pressure is enclosed in a vessel.

(a) Assuming the molecules to be moving with v_{rms}, find the number of collisions per second which the molecules make with one square metre area of the vessel wall.

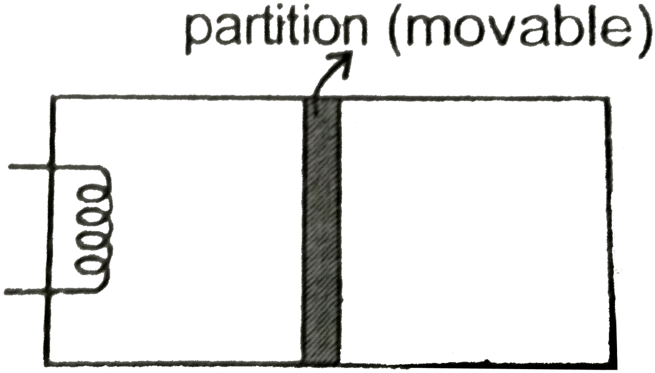
(b) The vessel is next thermally insulated and moves with a constant speed v_0. It is then suddenly stoppes. The process results in a rise of temperature of the gas by $1^{\circ} C$. Calculate the speed v_0. $\left[k = 1.38 \times 10^{-23} J / K \text{ and } N_A = 6.02 \times 10^{23} / mol\right]$.

Watch Video Solution

109. A rectangualr box (shown in figure) has a movable and smooth portion which can slide along the length of the box. Both chambers contains 1 mole of monoatomic gas $(\gamma = \frac{5}{3})$ at a pressure walls of box and partition are thermally insulated. Due to heating, gas in left chamber expands until pressure in both chambers become $32P_0$ determine

(a) The final temperature of gas in each chamber

(b) The work done by the gas in the right chamber.



Watch Video Solution

110. Two glass bulbs of equal volume are connected by a narrow tube and are filled with a gas at $0^\circ C$ and a pressure of 76cm of mercury. One of the bulbs is then placed in melting ice and the other is placed in a water bath maintained at $62^\circ C$. What is the new value of the pressure inside the bulbs? The volume of the connecting tube is negligible.

Watch Video Solution

111. A thin tube of uniform cross section is sealed at both ends. It lies horizontally, the middle $5cm$ containing mercury and the parts on its two sides containing air at the same pressure p. When the tube is held at and angle of 60° with the vertical, the length of the air column above and below the mercury pellet are $46cm$ and $44.5cm$ respectively. Calculate the pressure in centimeters of mercury, The temperature of the system is kept at $30^\circ C$.

Watch Video Solution

112. An ideal gas has a specific heat at constant pressure $C_P = \frac{5R}{2}$. The gas is kept in a closed vessel of volume $0.0083m^3$, at a temperature of 300K and a pressure of $1.6 \times 10^6 N/m^2$. An amount of 2.49×10^4 Joules of heat energy is supplied to the gas. Calculate the final temperature and pressure of the gas.

Watch Video Solution

113. Two moles of helium gas$(\lambda = 5/3)$ are initially at temperature $27^{\circ} C$ and occupy a volume of 20 litres. The gas is first expanded at constant pressure until the volume is doubled. Then it undergoes an adiabatic change until the temperature returns to its initial value.

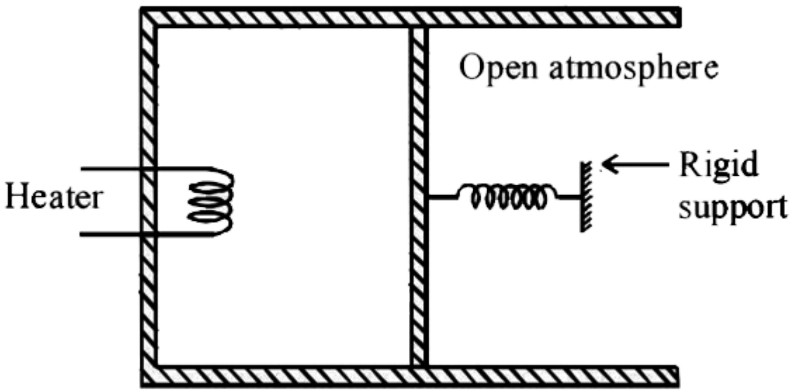
(i) Sketch the process on a p-V diagram.

(ii) What are the final volume and pressure of the gas?

(iii) What is the work done by the gas ?

Watch Video Solution

114. An ideal monatomic gas is confined in a cylinder by a spring-loaded piston of cross-section $8.0 \times 10^{-3} m^2$. Initially the gas is at 300K and occupies a volume of $2.4 \times 10^{-3} m^3$ and the spring is in its relaxed (unstretched, unompressed) state, fig. The gas is heated by a small electric heater until the piston moves out slowly by 0.1m. Calculate the final temperature of the gas and the heat supplied (in joules) by the heater. The force constant of the spring is $8000 N/m$, atmospheric pressure is $1.0 \times 10^5 Nm^{-2}$. The cylinder and the piston are thermally insulated. The piston is massless and there is no friction between the piston and the cylinder. Neglect heat loss through lead wires of the heater. The heat capacity of the heater coil is negligible. Assume the spring to be massless.



Watch Video Solution

115. An ideal gas having initial pressure P, volume V and temperature T is allowed to expands adiabatically until its volume becomes 5.66V while its temperature falls to T/2.

(i) How many degrees of freedom do the gas molecules have?

Obtain the work done by the gas during the expansion as a function of the initial pressure P and volume V.

Watch Video Solution

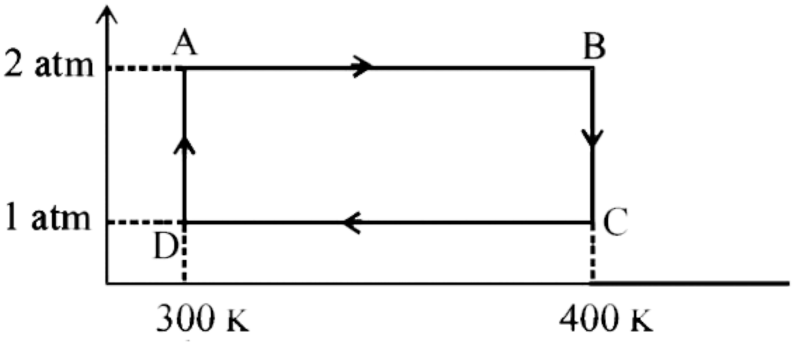
116. Three moles of an ideal gas $\left(C_p = \frac{7}{2}R\right)$ at pressure, P_A and temperature T_A is isothermally expanded to twice its initial volume. It is then compressed at constant pressure to its original volume. Finally gas is compressed at constant volume to its original pressure P_A.

(a) Sketch P-V and P-T diagrams for the complete process.

(b) Calculate the net work done by the gas, and net heat supplied to the gas during the complete process.

Watch Video Solution

117. Two moles of helium gas undergo a cyclic process as shown in Fig. Assuming the gas to be ideal, calculate the following quantities in this process



(a) The net change in the heat energy

(b) The net work done

(c) The net change in internal energy

Watch Video Solution

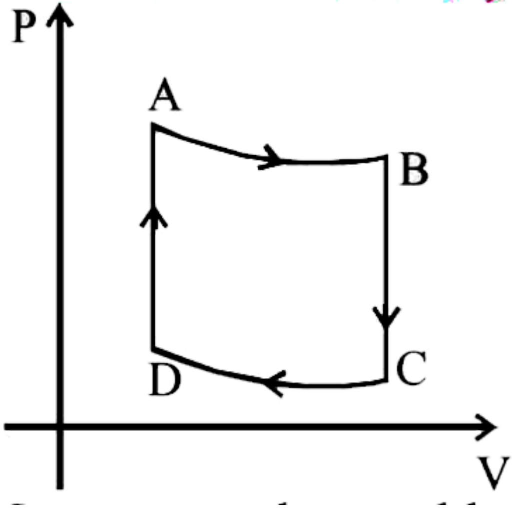
118. One mole of a monoatomic ideal gas is taken through the cycle shown in Fig:

$A \rightarrow B$: adiabatic expansion

$B \rightarrow C$: cooling at constant volume

$C \rightarrow D$: adiabatic compression

$D \rightarrow A$: heating at constant volume



The pressure and temperature at A,B,etc. are denoted by P_A, T_A, P_B, T_B etc. respectively. Given that $T_A = 1000K$, $P_B = (2/3)P_A$ and $P_C = (1/3)P_A$, calculate the following quantities:

(i) The work done by the gas in the process $A \to B$

(ii) The heat lost by the gas in the process $B \to C$.

(iii) The temperature T_D. [Given :$(2/3)^{2/5} = 0.85$]

Watch Video Solution

119. An ideal gas is taken through a cyclic thermodynamic process through four steps. The amounts of heat involved in these steps are $Q_1 = 5960J, Q_2 = -5585J, Q_3 = -2980J$ and $Q_4 = 3645J$, respectively. The corresponding quantities of work involved are $W_1 = 2200J, W_2 = -825J, W_3 = -1100J$ and W_4 respectively.

(1) Find the value of W_4.

(2) What is the efficiency of the cycle

Watch Video Solution

120. A closed container of volume $0.02m^3$ contains a mixture of neon and argon gases, at a temperature of $27^\circ C$ and pressure of $1 \times 10^5 Nm^{-2}$. The total mass of the mixture is 28g. If the molar masses of neon and argon are 20 and $40gmol^{-1}$ respectively, find the masses of the individual gasses in teh container assuming them to be ideal (Universal gas constant $R = 8.314J/mol - K$).

Watch Video Solution

121. A gaseous mixture enclosed in a vessel of volume V consists of one mole of a gas A with $\gamma = (C_p/C_v) = 5/3$ and another gas B with $\gamma = 7/5$ at a certain temperature T. The relative molar masses of the gasses A and B are 4 and 32, respectively. The gases A and B do not react with each other and are assumed to be ideal. The gaseous mixture follows the equation $PV^{19/13} = cons\tan t$, in adiabatic processes.

(a) Find the number of moles of the gas B in the gaseous mixture.

(b) Compute the speed of sound in the gaseous mixture at $T = 300K$.

(c) If T is raised by 1K from 300K, find the $\%$ change in the speed of sound in the gaseous mixture.

(d) The mixtrue is compressed adiabatically to $1/5$ of its initial volume V. Find the change in its adaibatic compressibility in terms of the given quantities.

Watch Video Solution

122. At $27^{\circ}C$ two moles of an ideal monoatomic gas occupy a volume V. The gas expands adiabatically to a volume 2V. Calculate (i) the final temperature of the gas, (ii) change in its internal enegy, and (iii) the work done by the gas during this process.

Watch Video Solution

123. The temperature of 100g of water is to be raised from $24^{\circ}C$ to $90^{\circ}C$ by adding steam to it. Calculate the mass of the steam required for this purpose.

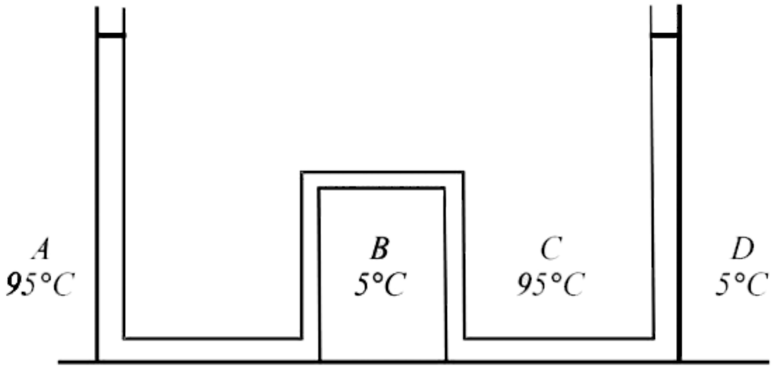
Watch Video Solution

124. One mole of a diatomic ideal gas $(\gamma = 1.4)$ is taken through a cyclic process starting from point A. The process $A \rightarrow B$ is an adiabatic compression, $B \rightarrow C$ is isobaric expansion, $C \rightarrow D$ is an adiabatic expansion, and $D \rightarrow A$ is isochoric. The volume ratios are $V_A / V_B = 16$ and $V_C / V_B = 2$ and the temperature at A is $T_A = 300K$. Calculate the temperature of the gas at the points B and D and find the efficiency of the cycle.

Watch Video Solution

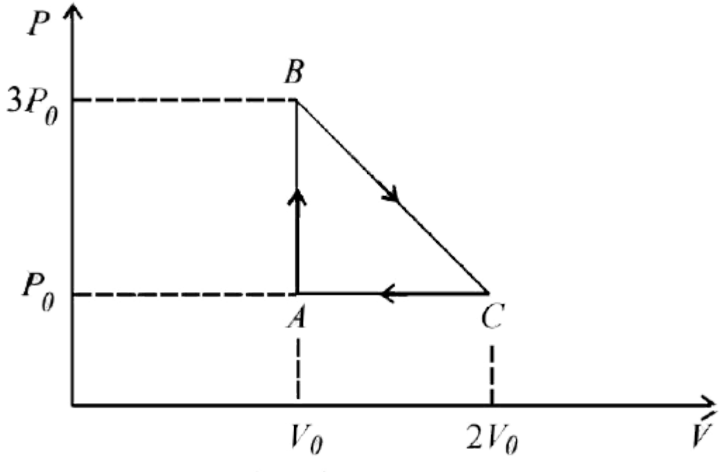
125. The apparatus shown in the figure consists of four glass columns connected by horizontal section. The height of two central column B and

C are 49 cm each. The two outer columns A and D are open to the temperature. A and C are maintained at a temperature of $95^\circ C$ while the columns B and D are maintained at $5^\circ C$. The height of the liquid in A and D measured from the base the are 52.8 cm and 51cm respectively. Determine the coefficient of thermal expansion of the liquid



Watch Video Solution

126. One mole of an ideal monatomic gas is taken round the cyclic process ABCA as shown in figure. Calculate



(a) the work done by the gas.

(b) the heat rejected by the gas in the path CA and the heat absorbed by the gas in the path AB,

(c) the net heat absorbed by the gas in the path BC,

(d) the maximum temperature attained by the gas during the cycle.

Watch Video Solution

127. A solid body X of heat capacity C is kept in an atmosphere whose temperature is $T_A = 300K$. At time $t = 0$ the temperature of X is $T_0 = 400K$. It cools according to Newton's law of cooling. At time t_1, its temperature is found to be 350K. At this time (t_1), the body X is connected to a large box Y at atmospheric temperature is T_4, through a conducting rod of length L, cross-sectional area A and thermal conductivity K. The heat capacity Y is so large that any variation in its temperature may be neglected. The cross-sectional area A of hte connecting rod is small compared to the surface area of X. Find the temperature of X at time $t = 3t_1$.

Watch Video Solution

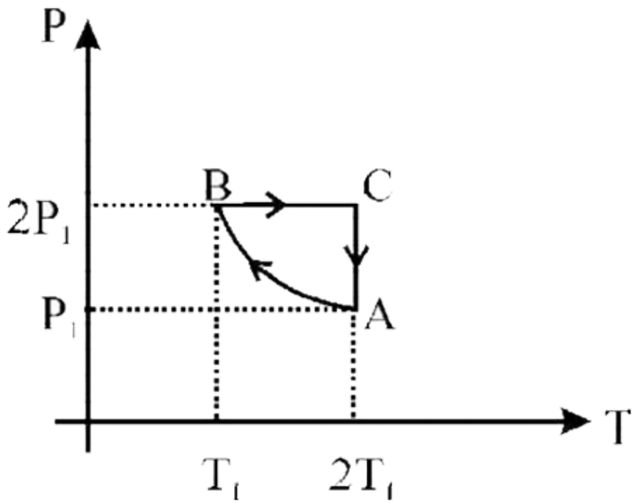
128. Two moles of an ideal monatomic gas, initially at pressure p_1 and volume V_1, undergo an adiabatic compression until its volume is V_2. Then the gas is given heat Q at constant volume V_2.

(i) Sketch the complete process on a p-V diagram.

(b) Find the total work done by the gas, the total change in its internal energy and the final temperature of the gas. [Give your answer in terms of p_1, V_1, V_2, Q and R]

Watch Video Solution

129. Two moles of an ideal monatomic gas is taken through a cycle ABCA as shown in the P-T diagram. During the process AB , pressure and temperature of the gas very such that $PT = Cons\tan t$. It $T_1 = 300K$, calculate



(a) the work done on the gas in the process AB and

(b) the heat absorbed or released by the gas in each of hte processes.

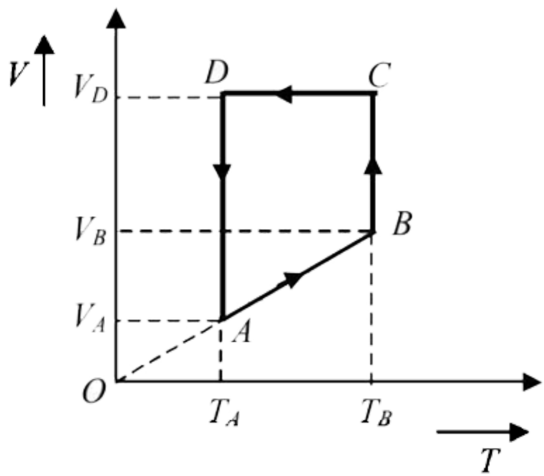
Give answer in terms of the gas constant R.

Watch Video Solution

130. An ice cube of mass 0.1kg at $0^\circ C$ is placed in an isolated container which is at $227^\circ C$. The specific heat S of the container varies with temperature T according to the empirical relation $S = A + BT$, where $A = 100cal/kg - K$ and $B = 2 \times 10^{-2} cal/kg - K^2$. If the final temperature of the container is $27^\circ C$, determine the mass of the container. (Latent heat of fusion of water =$8 \times 10^4 cal/kg$, Specific heat of water=$10^3 cal/kg - K$).

Watch Video Solution

131. A monoatomic ideal gas of two moles is taken through a cyclic process starting from A as shown in figure. The volume ratios are $\frac{V_B}{V_A} = 2$ and $\frac{V_D}{V_A} = 4$. If the temperature T_A at A is $27^\circ C$.



Calculate,

(a) the temperature of the gas at point B,

(b) heat absorbed or released by the gas in each process,

(c) the total work done by the gas during the complete cycle. Express your answer in terms of the gas constant R.

Watch Video Solution

132. A cubical box of side 1 meter contains heluim gas (atomic weight 4) at a pressure of $100N/m^2$. During and obervation time of 1 second, an atom travelling with the root-mean-square speed parallel to one of the edges of the cube, was found to make 500 hits with a particular wall, without any collision with other atoms. Take $R = \frac{25}{3} Jmo \leq -K \text{ and } k = 1.38 \times 10^{-23} J/K$

(a) Evalute the temperature of the gas.

(b) Evalute the average kinetic energy per atom.

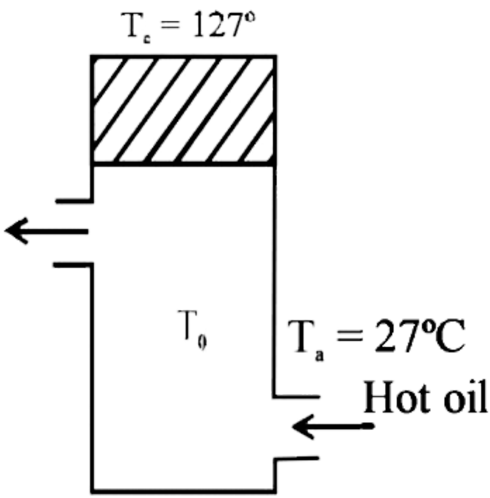
(c) Evalute the total mass of helium gas in the box.

Watch Video Solution

133. An insulated container containing monoatomic gas of molar mass s is moving with a velocity v_0. If the container is suddenly stopped, find the change in temperature.

Watch Video Solution

134. Hot oil is circulated thorugh an insulated container with a wooden lid at the top whose conductivity $K = 0.149 J/(m - {}^{\circ} C - \sec)$, thickness $t = 5mm, emissivity = 0.6$ Temperature of the top of the lid is maintaining at $T_l = 127^{\circ} C$. If the ambient temperature $T_a = 27^{\circ} C$.



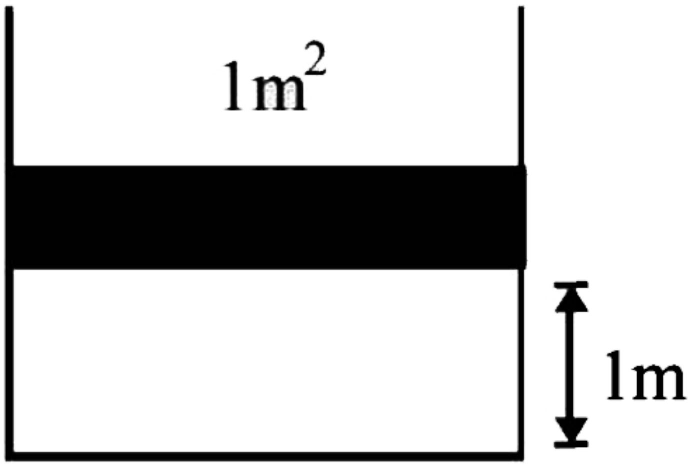
Calculate:

(a) rate of heat loss per unit area due to radiation from the lid.

(b) temperature of the oil. $\left(Given\sigma = \frac{17}{3} \times 10^{-8} Wm^{-2} K^{-4}\right)$

Watch Video Solution

135. A diatomic gas is enclosed in a vessel fitted with massless movable piston. Area of cross section of vessel is $1m^2$. Initial height of the piston is 1m (see the figure). The initial temperature of the gas is 300K. The temperature of the gas is increased to 400K, keeping pressure constant, calculate the new height of the piston. The piston is brought to its initial position with no heat exchange. Calculate the final temperature of the gas. You can leave answer in fraction.



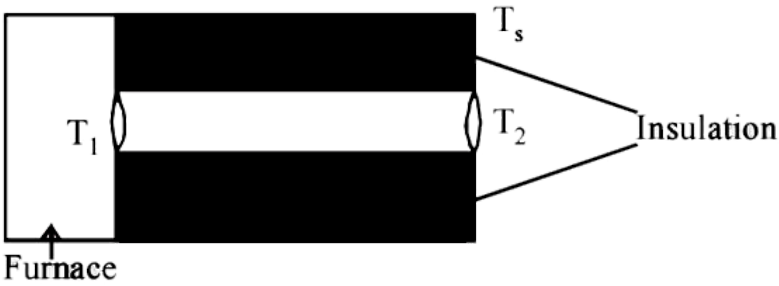
Watch Video Solution

136. A small spherical body of radius r is falling under gravity in a viscous medium. Due to friction the meduim gets heated. How does the rate of heating depends on radius of body when it attains terminal velocity?

Watch Video Solution

137. A cylinder rod of length 1, thermal conductivity K and area of cross section A has one end in the furnace at temperature T_1 and the other end in surrounding at temperature T_2. Surface of the rod exposed to the surrounding has emissivity e. Also $T_2 = T_s + \Delta T$ and $T_s > > \Delta T$. If

$T_1 - T_s \propto \Delta T$,find the proportionality constant.



Watch Video Solution

138. A cubical block of co-efficient of linear expansion α_s is submerged partially inside a liquid of co-efficient of volume expansion γ_l. On increasing the temperature of the system by ΔT, the height of the cube inside the liquid remains unchanged. Find the relation between α_s and γ_l.

Watch Video Solution

139. A cylinder of mass 1kg is given heat of 20,000J at atmospheric pressure. If initially the temperature of cylinder is $20^{\circ}C$, find

(a) final temperature of the cylinder.

(b) work done by the cylinder.

(c) change in internal energy of the cylinder

(Given that specific heat of cylinder=$400Jkg^{-1}\hat{\ } \circ C^{-1}$, Atmospheric pressure= $10^5 N/m^2$ and Density of cylinder=$9000kg/m^3$)

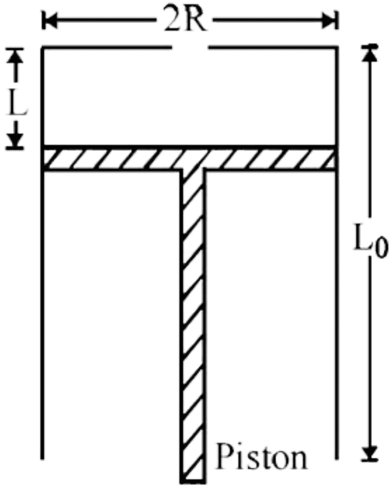
Watch Video Solution

140. 0.05 kg steam at 373K and 0.45kg of ice at 253K are mixed in an insultated vessel. Find the equilibrium temperature of the mixture. Given,

$L_{fusion} = 80cal/g = 336J/g, L_{vap \text{ or } ization} = 540cal/g = 2268J/g, C_{ice} =$

Watch Video Solution

141. A fixed thermally conducting cylinder has a radius R and height L_0. The cylinder is open at ita bottom and has a small hole at its top. A piston of mass M is held at a distance L from the top surface, as shown in the figure. The atmospheric pressure is P_0.



The piston is now pulled out slowly and held at a distance 2L from the top. The pressure in the cylinder between its top and the piston will then be

A. P_0

B. $\frac{P_0}{2}$

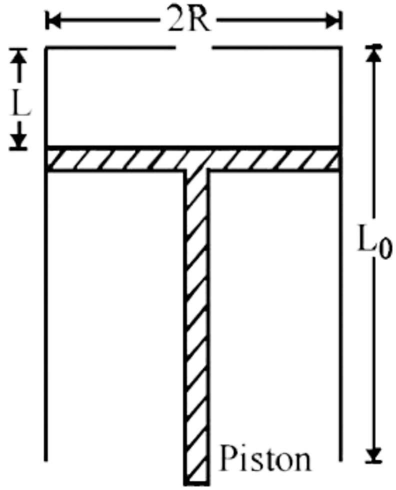
C. $\frac{P_0}{2}+\frac{Mg}{\pi R^2}$

D. $\frac{P_0}{2}-\frac{Mg}{\pi R^2}$

Answer: A

Watch Video Solution

142. A fixed thermally conducting cylinder has a radius R and height L_0. The cylinder is open at ita bottom and has a small hole at its top. A piston of mass M is held at a distance L from the top surface, as shown in the figure. The atmospheric pressure is P_0.



While the piston is at a distance 2L from the top, the hole at the top is sealed. The piston is then released, to a position where it can stay in equilibrium. In this condition, the distance of the piston from the top is

A. $\left(\frac{2P_0\pi R^2}{\pi R^2 P_0 + Mg}\right)(2L)$

B. $\left(\frac{P_0\pi R^2 - Mg}{\pi R^2 P_0}\right)(2L)$

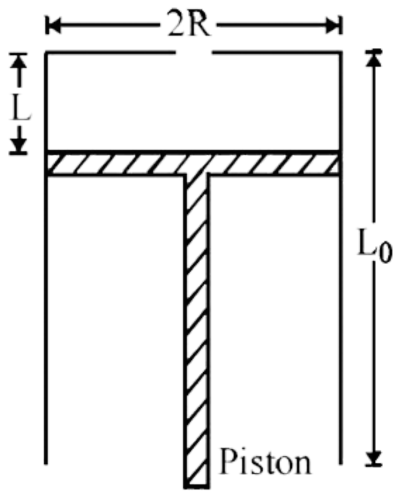
C. $\left(\frac{P_0 \pi R^2 + Mg}{\pi R^2 P_0}\right)(2L)$

D. $\left(\frac{P_0 \pi R^2}{\pi R^2 P_0 - Mg}\right)(2L)$

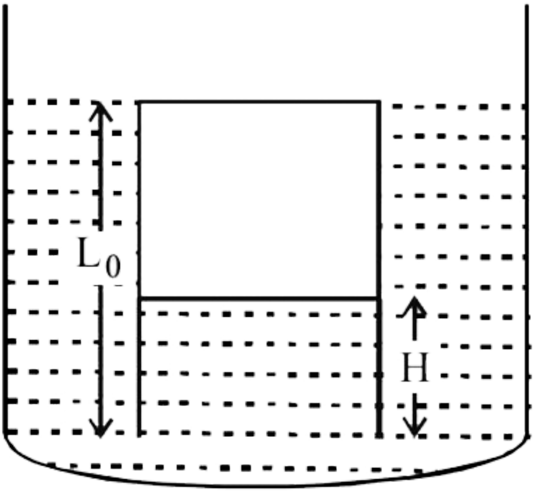
Answer: D

Watch Video Solution

143. A fixed thermally conducting cylinder has a radius R and height L_0. The cylinder is open at ita bottom and has a small hole at its top. A piston of mass M is held at a distance L from the top surface, as shown in the figure. The atmospheric pressure is P_0.



The piston is taken completely out of the cylinder. The hole at the top is sealed. A water tank is brought below the cylinder and put in a position so that the water surface in the tank is at the same level as the top of the cylinder as shown in the figure. The density of the water is ρ. In equilibrium, the height H of the water coulmn in the cylinder satisfies



A. $\rho g(L_0 - H)^2 + P_0(L_0 - H) + L_0 P_0 = 0$

B. $\rho g(L_0 - H)^2 - P_0(L_0 - H) - L_0 P_0 = 0$

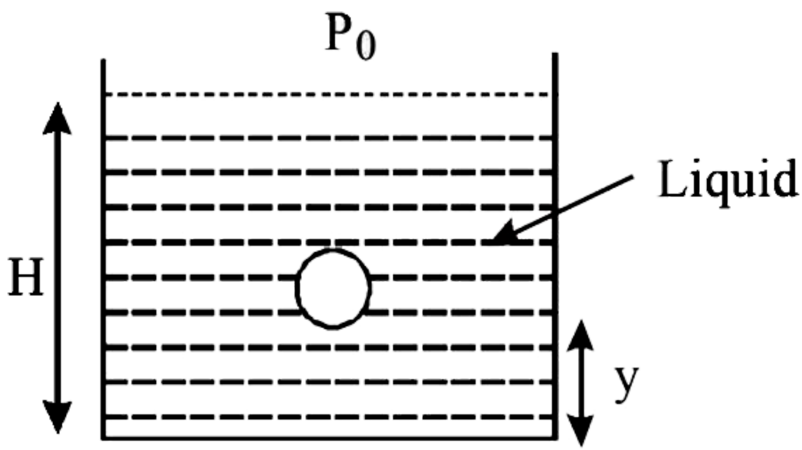
C. $\rho g(L_0 - H)^2 + P_0(L_0 - H) - L_0 P_0 = 0$

D. $\rho g(L_0 - H)^2 - P_0(L_0 - H) + L_0 P_0 = 0$

Answer: C

Watch Video Solution

144. A small spherical monoatomic ideal gas bubble $(\gamma = 5/3)$ is trapped inside a liquid of density ρ (see figure). Assume that the bubble does not exchange any heat with the liquid. The bubble contains n moles of gas. The temperature of the gas when the bubble is at the bottom is T_0, the height of the liquid is H and the atmospheric pressure P_0 (Neglect surface tension).



As the bubble moves upwards, besides the buyoncy force the following forces are acting on it

A. Only the force of gravity

B. The force due to gravity and the force due to the pressure of the liquid

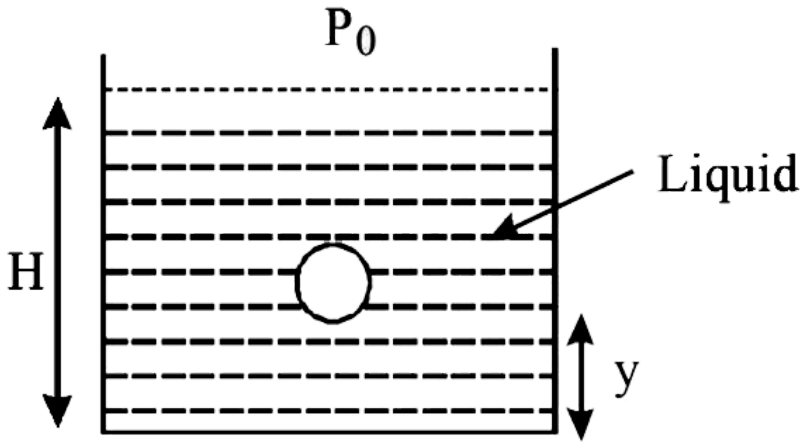
C. The force due to gravity, the force due to the pressure of the liquid and the force due to viscocity of the liquid

D. The force due to gravity and the force due to viscocity of the liquid

Answer: D

Watch Video Solution

145. A small spherical monoatomic ideal gas bubble $(\gamma = 5/3)$ is trapped inside a liquid of density ρ (see figure). Assume that the bubble does not exchange any heat with the liquid. The bubble contains n moles of gas. The temperature of the gas when the bubble is at the bottom is T_0, the height of the liquid is H and the atmospheric pressure P_0 (Neglect surface tension).



When the gas bubble is at a height y from the bottom, its temperature is-

A. $T_0\left(\frac{P_0+\rho_l gH}{P_0+\rho_l gy}\right)^{2/5}$

B. $T_0\left(\frac{P_0+\rho_l g(H-y)}{P_0+\rho_l gH}\right)^{2/5}$

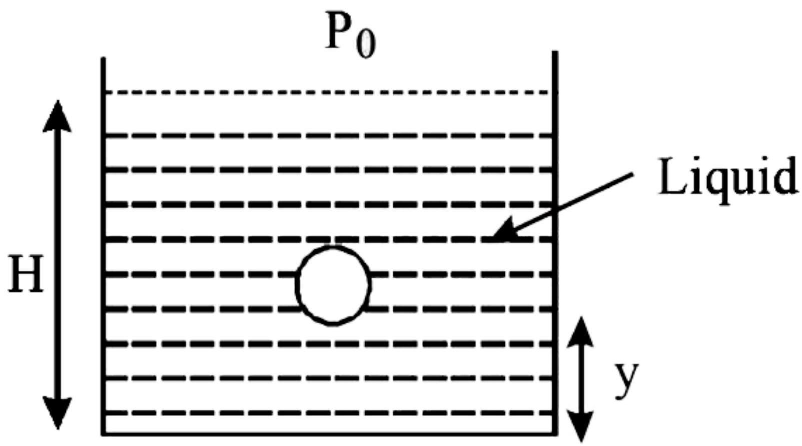
C. $T_0\left(\frac{P_0+\rho_l gH}{P_0+\rho_l gy}\right)^{3/5}$

D. $T_0\left(\frac{P_0+\rho_l g(H-y)}{P_0+\rho_l gH}\right)^{3/5}$

Answer: B

Watch Video Solution

146. A small spherical monoatomic ideal gas bubble $(\gamma = 5/3)$ is trapped inside a liquid of density ρ (see figure). Assume that the bubble does not exchange any heat with the liquid. The bubble contains n moles of gas. The temperature of the gas when the bubble is at the bottom is T_0, the height of the liquid is H and the atmospheric pressure P_0 (Neglect surface tension).



The buyoncy force acting on the gas bubble is (Assume R is the universal gas constant)

A. $\rho_l nRgT_0 \dfrac{(P_0 + \rho_l gH)^{2/5}}{[P_0 + \rho_l gy]^{7/5}}$

B. $\dfrac{\rho_l nRgT_0}{(P_0 + \rho_l gH)^{2/5}[P_0\rho_l g(H - y)]^{3/5}}$

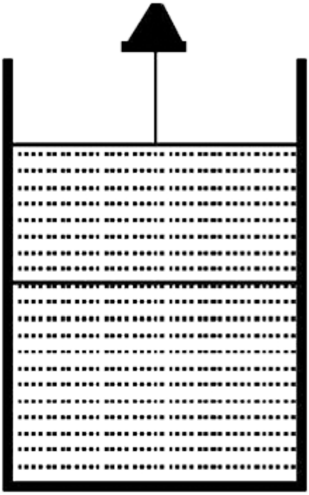
C. $\rho_l n R g T_0 \frac{(P_0 + \rho_l g H)^{3/5}}{[P_0 + \rho_l g y]^{8/5}}$

D. $\frac{\rho_l n R g T_0}{(P_0 + \rho_l g H)^{3/5} [P_0 \rho_l g (H - y)]^{2/5}}$

Answer: B

Watch Video Solution

147. In the figure, a container is shown to have a movable (without friction) piston on top. The container and the piston are all made of perfectly insulated material allowing no heat transfer between outside and inside the container. The container is divided into two compartments by a rigid partition made of a thermally conducting material that allows slow transfer of heat. The lower compartment of the container is filled with 2 moles of an ideal monatomic gas at 700K and the upper compartment is filled with 2 moles of an ideal diatmoic gas at 400K. The heat capacities per mole of an ideal monatomic gas are $C_V = \frac{3}{2}R, C_P = \frac{5}{2}R,$ and those for an ideal diatomic gas are $C_V = \frac{5}{2}R, C_P = \frac{7}{2}R,$



Consider the partition to be rigidly fixed so that it does not move. When equilibrium is achieved, the final temperature of the gasses will be

A. $550K$

B. $525K$

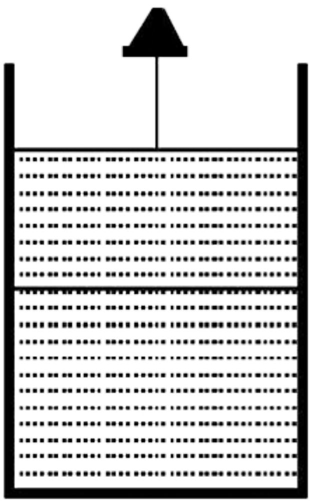
C. $513K$

D. $490K$

Answer: B

Watch Video Solution

148. In the figure, a container is shown to have a movable (without friction) piston on top. The container and the piston are all made of perfectly insulated material allowing no heat transfer between outside and inside the container. The container is divided into two compartments by a rigid partition made of a thermally conducting material that allows slow transfer of heat. The lower compartment of the container is filled with 2 moles of an ideal monatomic gas at 700K and the upper compartment is filled with 2 moles of an ideal diatmoic gas at 400K. The heat capacities per mole of an ideal monatomic gas are $C_V = \frac{3}{2}R, C_P = \frac{5}{2}R,$ and those for an ideal diatomic gas are $C_V = \frac{5}{2}R, C_P = \frac{7}{2}R,$



Now consider the partition to be free to move without friction so that the pressure of gasses in both compartments is the same. The total work done by the gases till the time they achives equilibrium will be

A. $-200K$

B. $200R$

C. $100R$

D. $-100R$

Answer: D

Watch Video Solution

149. Statement-1: The total translational kenetic energy of fall the molecules of a given mass of an ideal gas is 1.5 times the product of its pressure and its volume because.

Statement-2: The molecules of a gas collide with each other and the velocities of the molecules change due to the collision.

A. Statement-1 is True,Statement-2 is True, Statement-2 is a correct explanation for Statement-1

B. Statement-1 is True, Statement-2 is True, Statement-2 is NOT a correct explanation for Statement--1

C. Statement-1 is True, Statement-2 is False

D. Stement-2 is False, Statement-2 is True

Answer: B

Watch Video Solution

150. A metal rod AB of length 10x has its one end A in ice at $0^\circ C$, and the other end B in water at $100^\circ C$. If a point P one the rod is maintained at $400^\circ C$, then it is found that equal amounts of water and ice evaporate and melt per unit time. The latent heat of evaporation of water is $540cal/g$ and latent heat of melting of ice is $80cal/g$. If the point P is at a distance of λx from the ice end A, find the value λ. [Neglect any heat loss to the surrounding.]

Watch Video Solution

151. A piece of ice (heat capacity=$2100Jkg^{-1} \hat{\ } \circ C^{-1}$ and latent heat $= 3.36 \times 10^5 Jkg^{-1}$) of mass m grams is at $-5^\circ C$ at atmospheric pressure. It is given 420J of heat so that the ice starts melting. Finally when the ice-water mixture is in equilibrium, it is found that 1gm of ice has melted. Assuming there is no other heat exhange in the process, the value of m is

Watch Video Solution

152. Two spherical bodies, A(radius 6cm) and B(radius 18cm) are at temperature T_1 and T_2, respectively. The maximum intensity in the emission spectrum of A is at 500nm and in that of B is at 1500nm. Considering them to be black bodies, what will be the ratio of the rate of total energy radiated by A to that of B?

Watch Video Solution

153. A diatomic ideal gas is compressed adaibatically to 1/32 of its initial volume. If the initial temperature of the gas is T_i (in Kelvin) and the final temperature is a T_i, the value of a is

166. 1 mole of a gas with $\gamma = 7/5$ is mixed with 1 mole of a gas with $\gamma = 5/3$, then the value of γ for the resulting mixture is

A. $7/5$

B. $2/5$

C. $24/16$

D. $12/7$

Answer: C

Watch Video Solution

167. Two spheres of the same material have radii 1m and 4m and temperatures 4000K and 2000K respectively. The ratio of the energy radiated per second by the first sphere to that by the second is

A. $1:1$

B. $16:1$

C. $4:1$

D. $1:9$

Answer: A

Watch Video Solution

168. "Heat cannot by itself flow from a body at lower temperature to a body at higher temperature" is a statement or consequence of

A. second law of thermodynamics

B. conservation of momentum

C. conservation of mass

D. first law of thermodynamics

Answer: A

Watch Video Solution

169. During an adiabatic process, the pressure of a gas is found to be proportional to the cube of its absolute temperature. The ratio C_P / C_V for the gas is

A. $\frac{4}{3}$

B. 2

C. $\frac{5}{3}$

D. $\frac{3}{2}$

Answer: D

Watch Video Solution

170. Which of the following parameters does not characterize the thermodynamic state of matter?

A. Temperature

B. pressure

C. Work

D. Volume

Answer: C

Watch Video Solution

171. A Carnot engine takes $3 \times 10^6 cal.$ of heat from a reservoir at $62^\circ C$, and gives it to a sink at $27^\circ C$. The work done by the engine is

A. $4.2 \times 10^6 J$

B. $8.4 \times 10^6 J$

C. $16.8 \times 10^6 J$

D. zero

Answer: B

Watch Video Solution

172. The earth radiates in the infra-red region of the spectrum. The spectrum is correctly given by

A. Rayleigh Jeans law

B. Plank's law of radiation

C. Stefan's law of radiation

D. Wien's law

Answer: D

Watch Video Solution

173. According to Newton's law of cooling, the rate of cooling of a body is proportional to $(\Delta\theta)^n$, where $\Delta\theta$ is the difference of the temperature of the body and the surroundings, and n is equal to

A. two

B. three

C. four

D. one

Answer: D

Watch Video Solution

174. One mole of ideal monoatomic gas $(\gamma = 5/3)$ is mixed with one mole of diatomic gas $(\gamma = 7/5)$. What is γ for the misture? γ Denotes the ratio of specific heat at constant pressure, to that at constant volume

A. $35/23$

B. $23/15$

C. $3/20$

D. $4/3$

Answer: C

Watch Video Solution

175. If the temperature of the sun were to increase form T to 2T and its radius from R to 2R, then the ratio of the radiant energy received on earth to what it was previously will be

A. 32

B. 16

C. 4

D. 64

Answer: D

Watch Video Solution

176. Which of the following statements is correct for any thermodynamic system?

A. The change in entropy can never be zero

B. Inernal energy and entropy and state functions

C. The internal energy changes in all process

D. The work done in an adiabatic process is always zero.

Answer: B

Watch Video Solution

177. Two thermally insulated vessel 1 and 2 are filled with air at temperature $(T_1 T_2), volume(V_1 V_2)$ and pressure $(P_1 P_2)$ respectively. If the valve joining the two vessels is opened, the temperature inside the vessel at equilibrium will be

A. $T_1 T_2 (P_1 V_1 + P_2 V_2) / (P_1 V_1 T_2 + P_2 V_2 T_1)$

B. $(T_1 + T_2) / 2$

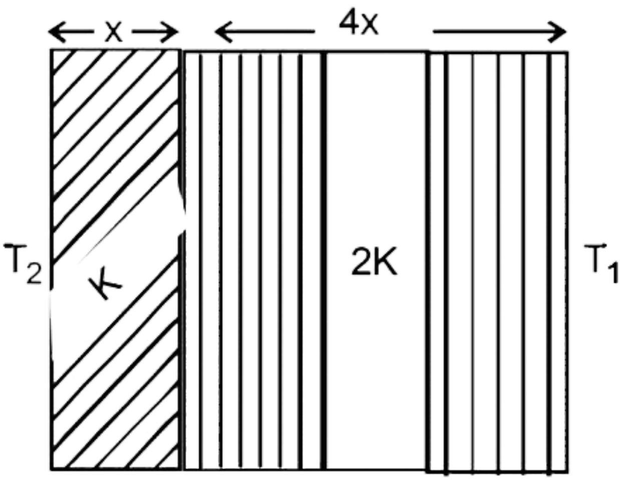
C. $T_1 + T_2$

D. $T_1 T_2 (P_1 V_1 + P_2 V_2) / (P_1 V_1 T_1 + P_2 V_2 T_2)$

Answer: A

Watch Video Solution

178. The temperature of the two outer surfaces of a composite slab, consisting of two materails having coefficients of two materails having coefficients of termal conductivity K and 2K and thickness x and 4x, respectively, are T_2 and $T_1 (T_1 > T_1)$. The rate of heat transfer through the slab, in a steady state is $\left(\frac{A(T_2 - T_1)K}{2}\right)f$, with f equal to



A. $\frac{2}{3}$

B. $\frac{1}{2}$

C. 1

D. $\frac{1}{3}$

Answer: D

Watch Video Solution

179. Which of the following is incorrect regarding the first law of thermodynamics?

A. It is a restatement of the principle of conservation of energy

B. It is not applicable to any cyclic process

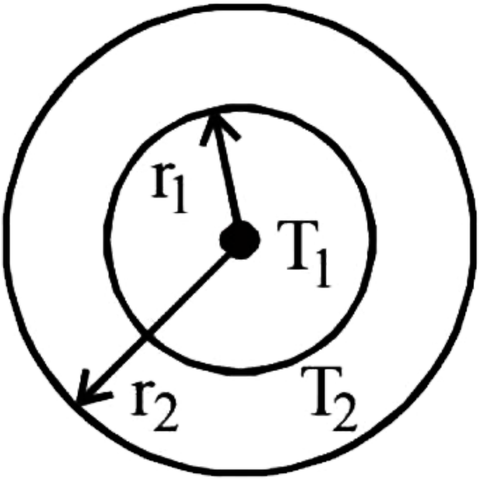
C. It introduces the concept of the internal energy

D. It introduces the concept of the internal energy

Answer: B::C

Watch Video Solution

180. The figure shows a system of two concentric spheres of radii r_1 and r_2 are kept at temperature T_1 and T_2, respectively. The radial rate of flow of heat in a substance between the two concentric spheres is proportional to



A. $In\left(\frac{r_2}{r_1}\right)$

B. $\frac{r_2 - r_1}{r_1 r_2}$

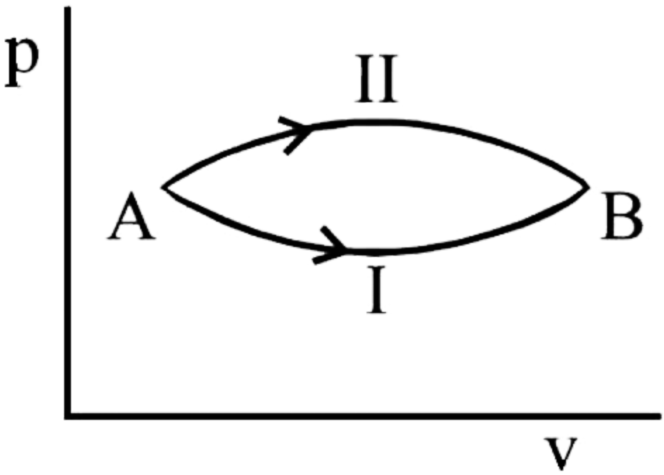
C. $(r_1 - r_2)$

D. $\frac{r_1 r_2}{r_2 - r_1}$

Answer: D

Watch Video Solution

181. A system goes from A and B via two processes. I and II as shown in figure. If ΔU_1 and ΔU_2 are the changes in internal enregies in the processes I and II respectively, then



A. relation between $\Delta U_1$and Δu_2 can not be determined

B. $\Delta U_1 = \Delta U_2$

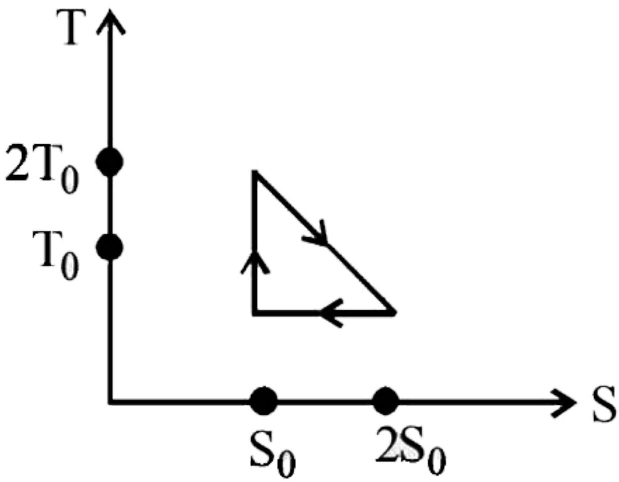
C. $\Delta U_2 < \Delta U_1$

D. $\Delta U_2 > \Delta U_1$

Answer: B

Watch Video Solution

182. The temperature -entropy diagram of a reversible engine cycle is given in the figure. Its efficiency is



A. $\frac{1}{4}$

B. $\frac{1}{2}$

C. $\frac{2}{3}$

D. $\frac{1}{3}$

Answer: D

Watch Video Solution

183. A gaseous mixture consists of 16g of helium and 16 g of oxygen. The ratio $\frac{C_p}{C_v}$ of the mixture is

A. 1.62

B. 1.59

C. 1.54

D. 1.4

Answer: A

Watch Video Solution

184. Assuming the Sun to be a spherical body of radius R at a temperature of TK, evalute the total radiant powerd incident of Earth at a distance r from the sun

where r_0 is the radius of the Earth and σ is Stefan's constant.

A. $4\pi r_0^2 R^2 \sigma \frac{T^4}{r^2}$

B. $\pi r_0^2 R^2 \sigma \frac{T^4}{r^2}$

C. $r_0^2 R^2 \sigma \frac{T^4}{4\pi r^2}$

D. $R^2 \sigma \frac{T^4}{r^2}$

Answer: B

Watch Video Solution

185. Two rigid boxes containing different ideal gases are placed on a table. Box A contains one mole of nitrogen at temperature T_0, while Box contains one mole of helium at temperature $\left(\frac{7}{3}\right)T_0$. The boxes are then put into thermal contact with each other, and heat flows between them until the gasses reach a common final temperature (ignore the heat capacity of boxes). Then, the final temperature of the gasses, T_f in terms of T_0 is

A. $T_f = \frac{3}{7}T_0$

B. $T_f = \frac{7}{3}T_0$

C. $T_f = \frac{3}{2} T_0$

D. $T_f = \frac{5}{2} T_0$

Answer: C

Watch Video Solution

186. The work of 142kJ is performed in order to compress one kilo mole of gas adiabatically and in this process the temperature of the gas increases by $7^\circ C$. The gas is $(R = 8.3 J mol^{-1} K^{-1})$

A. diatomic

B. triatomic

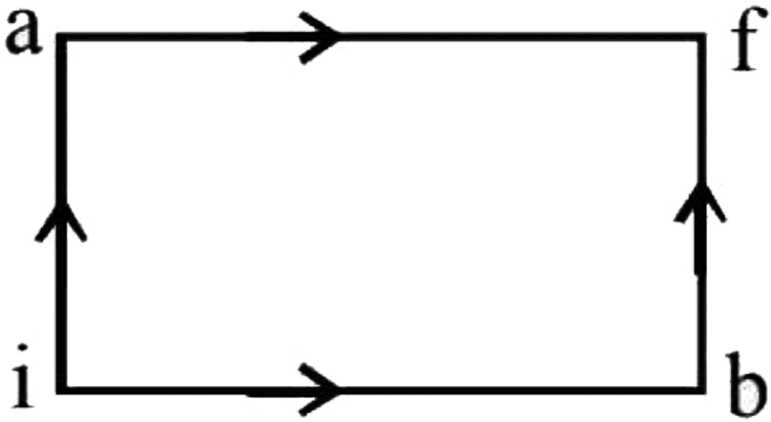
C. a mixture of monoatomic and diatomic

D. monoatomic

Answer: A

Watch Video Solution

187. When a system is taken from state i to state f along the path iaf, it is found that $Q = 50cal$ and $W = 20cal$. Along the path ibf $Q = 36cal$. W along the path ibf is



A. $14cal$

B. $6cal$

C. $16cal$

D. $66cal$

Answer: B

Watch Video Solution

188. A Carnot engine, having an efficiency of $\eta = 1/10$ as heat engine, is used as a refrigerator. If the work done on the system is 10J, the amount of energy absorbed from the reservoir at lower temperature is

A. $100J$

B. $99J$

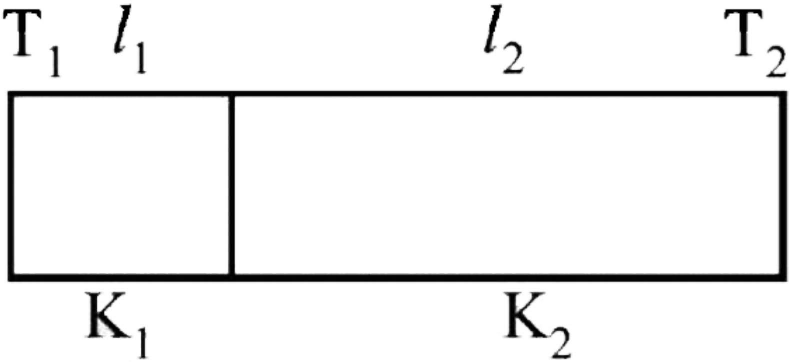
C. $90J$

D. $1J$

Answer: C

Watch Video Solution

189. One end of a thermally insulated rod is kept at a temperature T_1 and the other at T_2. The rod is composed of two sections of length l_1 and l_2 and thermal conductivities K_1 and K_2 respectively. The temperature at the interface of the two section is



A. $\frac{K_1 l_1 T_1 + K_2 l_2 T_2}{K_1 l_1 + K_2 l_2}$

B. $\frac{K_2 l_2 T_1 + K_1 l_1 T_2}{K_1 l_1 + K_2 l_2}$

C. $\frac{K_2 l_1 T_1 + K_1 l_2 T_2}{K_2 l_1 + K_1 l_2}$

D. $\frac{K_1 l_2 T_1 + K_2 l_1 T_2}{K_1 l_2 + K_2 l_1}$

Answer: D

Watch Video Solution

190. If C_P and C_v denote the specific heats nitrogen per unite mass at constant pressure and constant volume respectively, then

(1) $C_P - C_v = \frac{R}{28}$ (2) $C_P - C_v = \frac{R}{14}$

(3) $C_P - C_v = R$ (4) $C_P - C_v = 28R$

A. $C_P - C_V = 28R$

B. $C_P - C_V = R/28$

C. $C_P - C_V = R/14$

D. $C_P - C_V = R$

Answer: B

Watch Video Solution

191. The speed of sound in oxygen (O_2) at a certain temperature is $460ms^{-1}$. The speed of sound in helium (He) at the same temperature will be (assume both gases to be ideal)

A. $1421ms^{-1}$

B. $500ms^{-1}$

C. $650ms^{-1}$

D. $330ms^{-1}$

Answer: A

Watch Video Solution

192. An insulated container of gas has two chambers separated by an insulating partition. One of the chmabers has volume V_1 and contains ideal gas at pressure P_1 and temperature T_1.The other chamber has volume V_2 and contains ideal gas at pressure P_2 and temperature T_2. If the partition is removed without doing any work on the gas, the final equilibrium temperature of the gas in the container will be

A. $\left(T_1T_2\frac{P_1V_1+P_2V_2}{P_1V_1T_2+P_2V_2T_1}\right.$

B. $\frac{P_1V_1T_1+P_2V_2T_2}{P_1V_1+P_2V_2}$

C. $\dfrac{P_1V_1T_2 + P_2V_2T_1}{P_1V_1 + P_2V_2}$

D. $\dfrac{T_1T_2(P_1V_1 + P_2V_2)}{P_1V_1T_1 + P_2V_2T_2}$

Answer: A

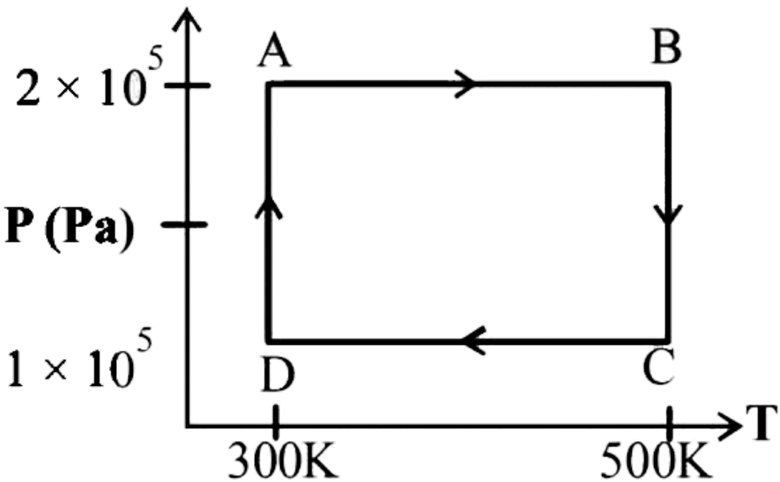
Watch Video Solution

193. A long metallic bar is carrying heat from on eof its ends to the other end under steady-state. The variation of temperature θ along the length x of the bar from its hot end is best described by which of the following figures?

A. 
B. 
C. (c) 
D. (d) 
Answer: A

Watch Video Solution

194. Two moles of helium gas are taken over the cycle ABCDA, as shown in the P-T diagram



Assuming the gas to be ideal the work done on the gas in taking it form A to B is :

A. $300R$

B. $400R$

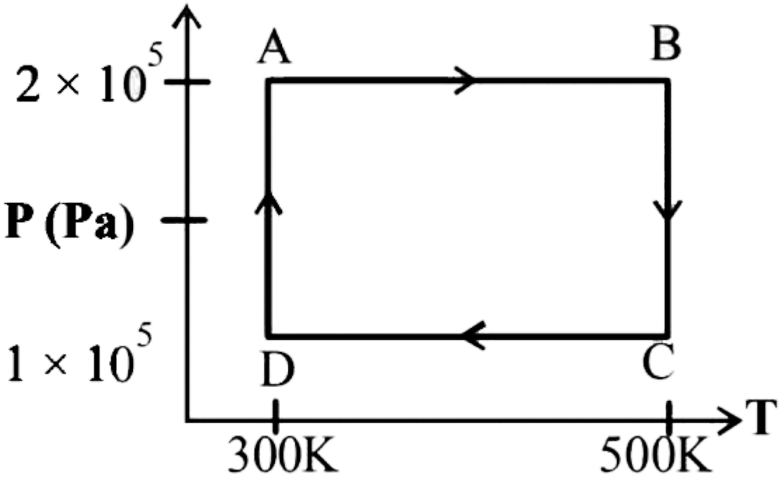
C. $500R$

D. $200R$

Answer: B

Watch Video Solution

195. Two moles of helium gas are taken over the cycle ABCDA, as shown in the P-T diagram



The work done on the gas in taking it from D to A is :

A. $+414R$

B. $-690R$

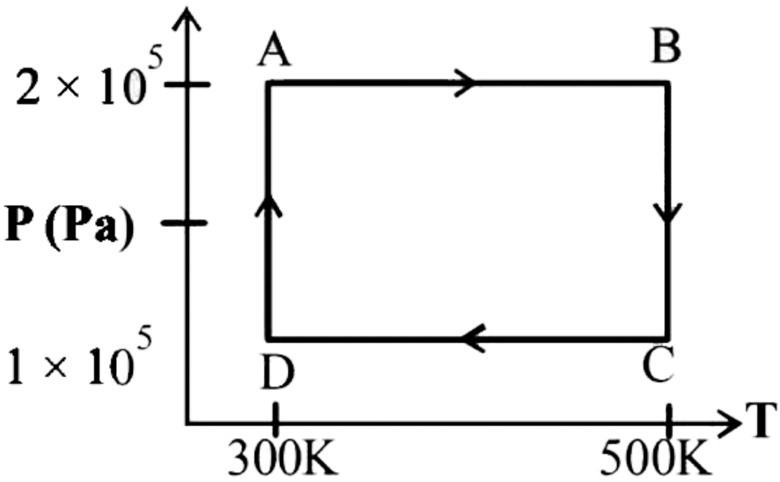
C. $+690R$

D. $-414R$

Answer: A

Watch Video Solution

196. Two moles of helium gas are taken over the cycle ABCDA, as shown in the P-T diagram



The net work done on the gas in the cycle ABCDA is :

A. $276R$

B. $1076R$

C. $1904R$

D. zero

Answer: A

Watch Video Solution

197. One kg of a diatomic gas is at pressure of $8 \times 10^4 N/m^2$. The density of the gas is $4kg/m^3$. What is the energy of the gas due to its thermal motion?

A. $5 \times 10^4 J$

B. $6 \times 10^4 J$

C. $7 \times 10^4 J$

D. $3 \times 10^4 J$

Answer: A

Watch Video Solution

198. Statement-1: The temperature dependence of resistance is usually given as $R = R_0(1 + \alpha \Delta T)$. The resistance of a wire changes from $100\Omega \rightarrow 150\Omega$ when its temperature is increased from $27^\circ C \rightarrow 227^\circ C$. This implies that $\alpha = 2.5 \times 10^{-3} / ^\circ C$.

Statement 2: $R = R_0(1 + \alpha \Delta T)$ is valid only when the change in the temperature ΔT is small and $\Delta R = (R - R_0) < \; < R_0$.

A. Statement-1 is True,Statement-2 is True, Statement-2 is a correct explanation for Statement-1

B. Statement-1 is True, Statement-2 is True, Statement-2 is not a correct explanation for Statement--1

C. Statement-1 is False, Statement-2 is True

D. Stement-1 is True, Statement-2 is False.

Answer: C

Watch Video Solution

199. A diatomic ideal gas is used in a Carnot engine as the working substance. If during the adiabatic expansion part of the cycle the volume of the gas increase from V to 32V, the efficencey of the engine is

A. 0.5

B. 0.75

C. 0.99`

D. 0.25

Answer: B

Watch Video Solution

200. A themallly insulated vessel contains an ideal gas of molecular mass M and ratio of specific heats γ. It is moving with speed v and it's suddenly brought to rest. Assuming no heat is lost to the surroundings, Its temperature increases by:

A. $\frac{\gamma - 1}{2\gamma R} M v^2 K$

B. $\frac{\gamma M v^2}{2R} K$

C. $\frac{\gamma - 1}{2R} M v^2 K$

D. $\frac{\gamma - 1}{2(\gamma + 1)R} M v^2 K$

Answer: C

Watch Video Solution

201. Three perfect gases at absolute temperature $T_1, T_2,$ and T_3 are mixed. The masses of molecules are n_1, n_2 and n_3 respectively. Assuming to loss of energy, the final temperature of the mixture is:

A. $\dfrac{n_1T_1 + n_2T_2 + n_3T_3}{n_1 + n_2 + n_3}$

B. $\dfrac{n_1T_1^2 + n_2T_2^2 + n_3T_3^2}{n_1T_1 + n_2T_2 + n_3T_3}$

C. $\dfrac{n_1^2T_1^2 + n_2^2T_2^2 + n_3^2T_3^2}{n_1T_1 + n_2T_2 + n_3T_3}$

D. (T_1+T_2+T_3)/3`

Answer: A

Watch Video Solution

202. A Carnot engine operating between temperature T_1 and T_2 has efficiency 1/6. When T_2 is lowered by 62K its efficiency increase to 1/3. Then T_1 and T_2 are, respectively:

A. $372K$ and $330K$

B. $330K$ and $268K$

C. $310K$ and $248K$

D. $372K$ and $310K$

Answer: D

Watch Video Solution

203. 100g of water is heated from $30^{\circ}C \rightarrow 50^{\circ}C$. Ignoring the slight expansion of the water, the change in its internal energy is (specific heat of water is $4184J/kg/K$):

A. $8.4kJ$

B. $84kJ$

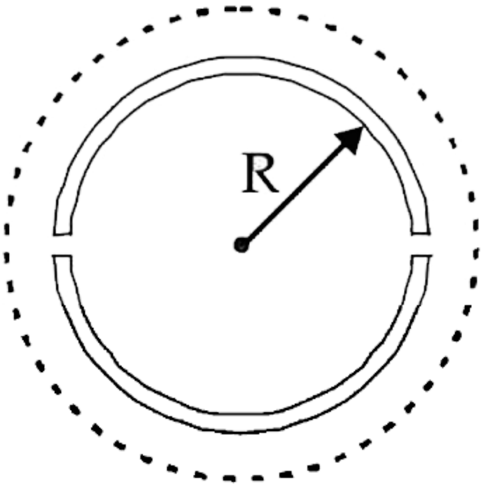
C. $2.1kJ$

D. $4.2kJ$

Answer: A

Watch Video Solution

204. A wooden wheel of radius R is made of two semicircular part . The two parts are held together by a ring made of a metal strip of cross sectional area S and length L. L is slightly less than $2\pi R$. To fit the ring on the wheel, it is heated so that its temperature rises by $\Delta T$and it just steps over the wheel. As it cools down to surrounding temperature, it process the semicircle parts together. If the coefficient of linear expansion of the metal is α, and it Young's modulus is Y, the force that one part of the wheel applies on the other part is :



A. $2\pi SY\alpha\Delta T$

B. $SY\alpha\Delta T$

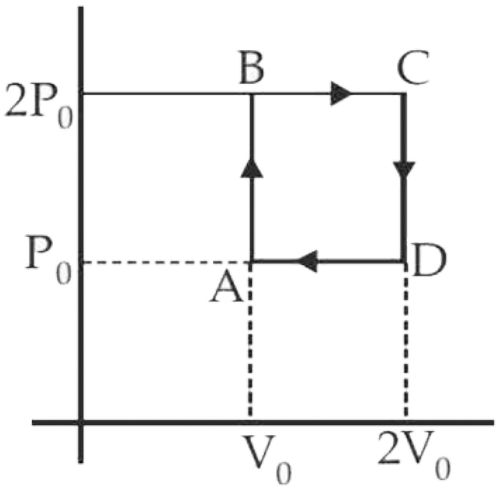
C. $\pi SY\alpha\Delta T$

D. $2SY\alpha\Delta T$

Answer: D

Watch Video Solution

205. Helium gas goes through a cycle ABCDA (consisting of two isochoric and isobaric lines) as shown in figure Efficiency of this cycle is nearly: (Assume the gas to be close to ideal gas)



A. $15.4\ \%$

B. $9.1\ \%$

C. $10.5\ \%$

D. $12.5\ \%$

Answer: A

Watch Video Solution

206. A liquid in a beaker has temperature $\theta(t)$ at time t and θ_0 is temperature of surroundings, then according to Newton's law of cooling the correct graph between $\log_e(\theta - \theta_0)$ and t is :

A. 
B. 
C. 
D. 
Answer: A

Watch Video Solution

207. A Carnot engine, whose efficiency is 40%, takes in heat from a source maintained at a temperature of 500K. It is desired to have an engine of efficiency 60%. Then, the intake temperature for the same exhaust (sink) temperature must be:

A. efficiency of Carnot engine cannot be made larger than 50%

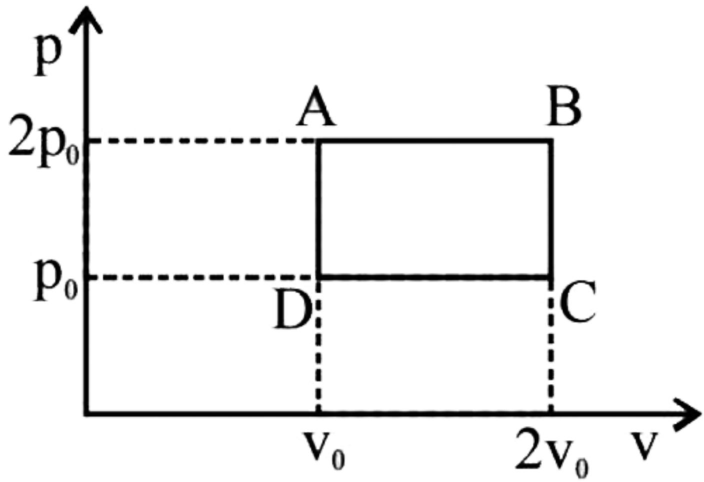
B. $1200K$

C. $750K$

D. $600K$

Answer: C

Watch Video Solution



208.

The above p-v diagram represents the thermodymic cycle of an engine, operating with an ideal monatomic gas. The amount of heat, extracted from the source in a single cycle is

A. p_0v_0

B. $\left(\frac{13}{2}\right)p_0v_0$

C. $\left(\frac{11}{2}\right)p_0v_0$

D. $4p_0v_0$

Answer: B

Watch Video Solution

209. If a piece of metal is heated to temperature θ and the allowed to cool in a room which is at temperature θ_0, the graph between the temperature T of the metal and time t will be closet to

A. 
B. 
C. 
D. 
Answer: C

Watch Video Solution

210. The pressure that has to be applied to the ends of a steel wire of length 10cm to keep its length constant when its temperature is raised by $100^\circ C$ is : (For steel Young's modulus is $2 \times 10^{11} Nm^{-2}$ and coefficient of thermal expansion is $1.1 \times 10^{-5} K - 1$)

A. $2.2 \times 10^8 Pa$

B. $2.2 \times 10^9 Pa$

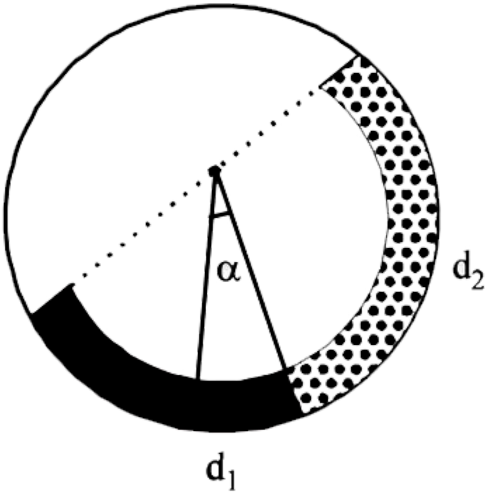
C. $2.2 \times 10^7 Pa$

D. $2.2 \times 10^6 Pa$

Answer: A

Watch Video Solution

211. There is a circular tube in a vertical plane. Two liquids which do not mix and of densities d_1 and d_2 are filled in the tube. Each liquid substends 90° angle at centre. Radius joining their interface make an angle α with vertical. Ratio $\frac{d_1}{d_2}$ is :



A. $\frac{1+\sin aplha}{1-\sin\alpha}$

B. $\frac{1+\cos aplha}{1-\cos\alpha}$

C. $\frac{1+\tan aplha}{1-\tan\alpha}$

D. $\frac{1+\sin aplha}{1-\cos\alpha}$

Answer: C

Watch Video Solution

212. Three rods of Copper, Brass and Steel are welded together to from a Y shaped structure. Area of cross-section of each rod $= 4cm^2$. End of copper rod is maintained at $100^\circ C$ where as ends of brass and steel are kept at $0^\circ C$. Lengths of the copper, brass and steel rods are 46, 13 and 12 cm respectively. The rods are thermally insulated from surroundings excepts at ends. Thermal cunductivities of copper, brass and steel are 0.92, 0.26 and 0.12 CGS units respectively. Rate of heat flow through copper rod is :

A. $1.2cal/s$

B. $2.4cal/s$

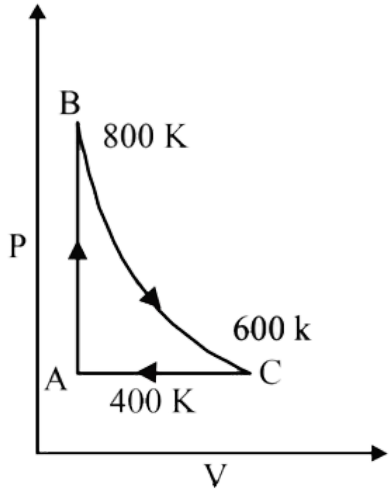
C. $4.8cal/s$

D. $6.0cal/s$

Answer: C

Watch Video Solution

213. One mole of a diatomic ideal gas undergoes a cyclic process ABC as shown in figure. The process BC is adiabatic. The temperature at A,B and C are 400K, 800K and 600K respectively. Choose the correct statement:



A. The change in internal energy in whole cyclic process is 250R.

B. The change in internal process CA is 700R.

C. The change in internal energy in the process AB is -350R.

D. The chang in internal energy in the process BC is -500R.

Answer: D

Watch Video Solution

214. A solid body of constant heat capacity $1J/^{\circ}C$ is being heated by keeping it contact with reservoirs in two ways:

(i) Sequentially keeping in contact with 2 reservoirs such that each reservoir supplies same amount of heat.

(ii) Sequentially keeping in contact with 8 reservoir such that each reservoir supplies same amount of heat.

In both the cases body is brought from initial temperature 100^{C} to final temperature $200^{\circ}C$. Entropy change of the body in the tow cases respectively is :

A. $\ln 2, 2\ln 2$

B. $2\ln 2, 8\ln 2$

C. $\ln 2, 4\ln 2$

D. $\ln 2, \ln 2$

Answer: D

Watch Video Solution

215. Consider a spherical shell of radius R at temperature T. The black body radiation inside it can be considered as an ideal gas of photons with internal energy per unit volume $u = \frac{U}{V} \propto T^4$ and pressure $P = \frac{1}{3}\left(\frac{U}{V}\right)$. If the shell now undergoes an adiabatic expansion the relation between T and R is :

A. $T \propto \frac{1}{R}$

B. $T \propto \frac{1}{R^3}$

C. $T \propto e^{-R}$

D. $T \propto e^{-3R}$

Answer: A

Watch Video Solution

216. Consider an ideal gas confined in an isolated closed chamber. As the gas undergoes an adiabatic expansion, the average time of collision between molecules increase as V^q, where V is the volume of the gas. The value of q is : $\left(\gamma = \frac{C_p}{C_v}\right)$

A. $\frac{\gamma + 1}{2}$

B. $\frac{\gamma - 1}{2}$

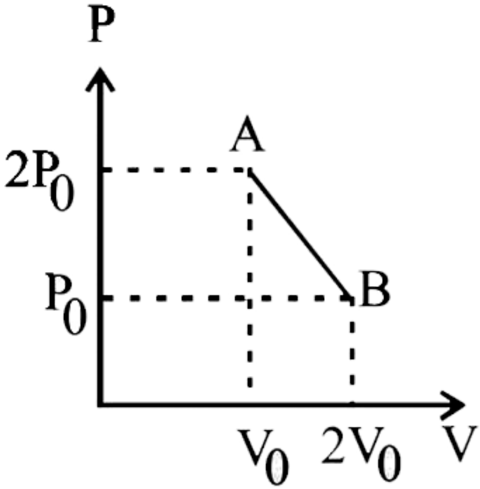
C. $\frac{3\gamma + 5}{6}$

D. $\frac{3\gamma - 5}{6}$

Answer: A

Watch Video Solution

217. n' moles of an ideal gas undergoes a process $A \rightarrow B$ as shown in the figure. The maximum temperature of the gas during the process will be:



A. $\frac{9P_0V_0}{2nR}$

B. $\frac{9P_0V_0}{nR}$

C. $\frac{9P_0V_0}{4nR}$

D. $\frac{3P_0V_0}{2nR}$

Answer: C

Watch Video Solution

218. A pendulam clock loses 12s a day if the temperature is $40^\circ C$ and gains 4s a day if the temperature is $20^\circ C$, The temperature at which the clock will show correct time, and the co-efficient of linear expansion (α) of the metal of the pendulam shaft are respectively:

A. $30^{\circ} C : \alpha = 1.85 \times 10^{-3} / ^{\circ} C$

B. $55^{\circ} C : \alpha = 1.85 \times 10^{-2} / ^{\circ} C$

C. $25^{\circ} C : \alpha = 1.85 \times 10^{-5} / ^{\circ} C$

D. $60^{\circ} C : \alpha = 1.85 \times 10^{-4} / ^{\circ} C$

Answer: C

Watch Video Solution

219. An ideal gas under goes a quasi static, reversible process in whichh its molar heat capacity C remains constant. If during this process the relation of pressure P and volume V is given by $PV^{n} = cons\tan t$, then n is given by (Here C_P and C_V are molar specific heat at constant pressur and constant volume, respectively):

A. $n = \dfrac{C_P - C}{C - C_V}$

B. $n = \frac{C - C_V}{C - C_P}$

C. $n = \frac{C_P}{C_V}$

D. $n = \frac{C - C_P}{C - C_V}$

Answer: D

Watch Video Solution
