BOOKS - DC PANDEY PHYSICS (HINGLISH)

GRAVITATION

1. The gravitational force acting on a particle, due to a solid sphere of uniform density and radius R, at a distance of 3R from the centre of the sphere is F_1 . A spherical hole of radius (R/2) is now made in the sphere as shown in diagram. The sphere with hole now exerts a force F_2 on the

A.
$$\frac{9}{50}$$

B. $\frac{41}{50}$
C. $\frac{3}{25}$
D. $\frac{22}{25}$

Answer: B

1. If a smooth tunnel is dug across a diameter of earth and a particle is released from the surface of earth, the particle oscillate simple harmonically along it

Time period of the particle is not equal to

A.
$$2\pi\sqrt{\frac{R}{g}}$$

B. $\frac{2\pi}{\sqrt{GM}}R^{3/2}$

C. 84.6 min

D. None of these

Answer: D

Watch Video Solution

D Matrix Matching Type Questions

1. On the surface of earth acceleration due to gravity is g and

gravitational potential is V. Match the following.

Table-1	*************	
I duie- I		Table-2
(A) At height h = R, value of g	(P)	decreases by a factor 1/4
(B) At depth $h = R/2$, value of g	(Q)	decreases by a factor 1/2
(C) At height h = R, value of V	(R)	increases by a factor 11/8
(D) at depth <i>h</i> = <i>R</i> /2, value of <i>V</i>	(S)	increases by a factor 2
	(T)	None

Watch Video Solution

E Integer Type Questions

1. The orbital angular momentum of a satellite revolving at a distance r from the centre is L . If the distance is increased to 16 r, then the new angular momentum will be

1. An infinite number of particles each of mass m are placed on the positive X-axis of 1m, 2m, 4m, 8m, ... from the origin. Find the magnitude of the resultant gravitational force on mass m kept at the origin.

A. -8Gm

B.-3Gm

- C.-4Gm
- D.-2Gm

Answer: D

2. A body starts from rest from a point distant r_0 from the centre of the earth. It reaches the surface of the earth whose radius is R. The velocity

acquired by the body is

A.
$$GM\left(\frac{1}{R} - \frac{1}{R_0}\right)$$

B. $2GM\left(\frac{1}{R} - \frac{1}{R_0}\right)$
C. $\sqrt{2GM\left(\frac{1}{R} - \frac{1}{R_0}\right)}$
D. $2GM\sqrt{\left(\frac{1}{R} - \frac{1}{R_0}\right)}$

Answer: C

Watch Video Solution

3. A hollow spherical shell is compressed to half its radius. The gravitational potential at the centre

A. increases

B. decreases

C. remains same

D. it will depend on the mass of shell

Answer: B

Watch Video Solution

4. A satellite revolves in the geostationary orbit but in a direction east to west. The time interval between its successive passing about a point on the equator is:

A. 4h

B. 6h

C. 12h

D. 24h

Answer: C

5. Two point masses of mass 4m and m respectively separated by d distance are revolving under mutual force of attraction. Ration of their kinetic energies will be:

A. 1: 4 B. 4: 1 C. 1: 1

D. 1:16

Answer: A

Watch Video Solution

6. A planet revolves about the sun in elliptical orbit. The arial velocity $\left(\frac{dA}{dt}\right)$ of the planet is $4.0 \times 10^{16} m^2/s$. The least distance between planet and the sun is $2 \times 10^{12} m$. Then the maximum speed of the planet in km/s is -

A. 10	
B. 20	
C. 40	
D. 80	

Answer: C

7. Binding energy of a particle on the surface of earth is E. Kinetic energy grater than E is given to this particle. Then total energy of particle will become

A. zero

B. infinite

 $\mathsf{C.} > 0$

 $\mathsf{D.}\ < 0$

Answer: C

Watch Video Solution

8. When a satellite in a circular orbit around the earth enters the atmospheric region, it encounters small air resistance to its motion. Then

A. its kinetic energy increases

B. its kinetic energy decreases

C. its angular momentum about the earth decreases

D. its period of revolution around the earth increases

Answer: A

9. A particel of mass M is placed at the centre of a inform spherical shell

of mass 2M and radius R. The gravitational potential on the surface of the

shell is

$$A. - \frac{GM}{R}$$
$$B. - \frac{3GM}{R}$$
$$C. - \frac{2GM}{R}$$

D. zero

Answer: B

Watch Video Solution

10. A particle on earth's surface is given a velocity euqal to its escape velocity. Its total mechanical energy with zero potential energy reference at infinite separation will be:

A. negative

B. positive

C. zero

D. infinite

Answer: C

11. At what height from the surface of the earth, the total energy of satellite is equal to its potential energy at a height 2R from the surface of the earth (R=radius of earth)

A. 2RB. $\frac{R}{2}$ C. $\frac{R}{4}$

D. 4R

Answer: B

12. Two earth-satellite are revolving in the same circular orbit round the centre of the earth. They must have the same

A. mass

B. angular momentum

C. kinetic enrgy

D. velocity

Answer: D

Watch Video Solution

13. A hole is drilled from the surface of earth to its centre. A particle is dropped from rest in the surface of earth in terms of its escape velocity on the surface of earth v_e is :

A.
$$rac{v_e}{2}$$

B. v_e

C.
$$\sqrt{2}v_e$$

D.
$$rac{v_e}{\sqrt{2}}$$

Answer: D

Watch Video Solution

14. Three particles of equal mass 'm' are situated at the vertices of an equilateral triangle of side L. The work done in increasing the side of the triangle to 2L is

A.
$$5.0 imes10^{-12}J$$

B. $2.25 imes 10^{-10}J$

C.
$$4.0 imes x 10^{-11} J$$

D.
$$6.0 imes10^{-15}J$$

Answer: A

15. A planet has a mass of eight time the mass of earth and denisity is also equal to eight times a the average density of the earth. If g be the acceleration due to earth's gravity on its surface, then acceleration due to gravity on planet's surface will be

A. 2g

B. 4g

C. 8g

D. 16g

Answer: C

Watch Video Solution

16. The work done in slowly lifting a body from earth's surface to a height R (radius of earth) is equal to two times the work done in lifting the same body from earth's surface to a height h. Here h is equal to

A.
$$\frac{R}{4}$$

B. $\frac{R}{3}$
C. $\frac{R}{6}$
D. $\frac{R}{2}$

Answer: B

17. The magnitude of gravitational potential energy of the moon earth system is U with zero potential energy at infinite separation. The kinetic energy of the moon with respect to the earth is K.

A.
$$K = 2U$$

B. $K = \frac{U}{2}$
C. $K = U$
D. $K = 4U$

Answer: B

18. Three uniform spheres each of mass m and diameter D are kept in such a way that each touches the other two, then magnitudes of the gravitational force on any one sphere due to the other two is

A.
$$\frac{\sqrt{3}}{4} \frac{GM^2}{R^2}$$

B. $\frac{3}{2} \frac{GM^2}{R^2}$
C. $\frac{\sqrt{3}GM^2}{R^2}$
D. $\frac{\sqrt{3}}{2} \frac{GM^2}{R^2}$

Answer: A

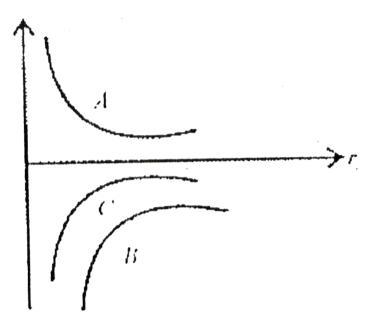

19. Consider a thin uniform spherical layer of mass M and radius R. The potential energy of gravitational interaction of matter forming this shell is :

$$A. - \frac{GM^2}{R}$$
$$B. - \frac{GM^2}{2R}$$
$$C. - \frac{3}{5} \frac{GM^2}{R}$$
$$D. - \frac{GM^2}{4R}$$

Answer: B

Watch Video Solution

20. Figure shows the variation of energy with the orbit radius r of a satellite in a circular motion. Mark the correct statement.

A. C shows the total energy, B the kinetic energy and A the potential

energy of the satellite

B. A shows the kinetic energy, B the total energy and C the potential

energy of the satellite

- C. A and B are the kinetic and potential energies and C the total energy of the satellite
- D.C and A are the kinetic and potential energies respectively and B

the total energy of the satellite

Answer: C

21. If the radius of the earth were increased by a factor of 2 keeping the mass constant, by what factor would its density have to be changed to keep g the same?

A. $\frac{1}{8}$ B. 4 C. $\frac{1}{2}$ D. $\frac{1}{4}$

Answer: C

22. A satellite of mass m moves along an elliptical path arouned the earth.

The areal velocity of the satellite is proportional to

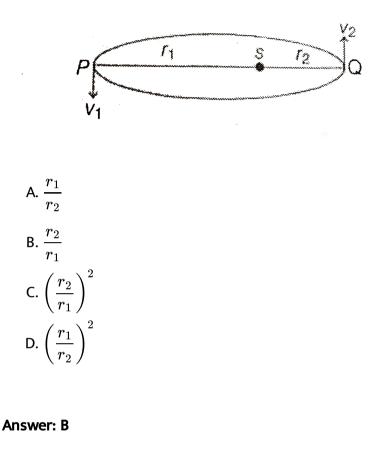

A. m B. m^{-1} C. m^{0} D. $m^{1/2}$

Answer: C

Watch Video Solution

23. A planet is moving in an elliptical path around the sun as shown in figure. Speed of planet in positions P and Q are V_1 and V_2 respectively

with $SP=r_1$ and $SQ=r_2$, then v_1/v_2 is equal to

View Text Solution

24. The period of revolution of an earth satellite close to surface of earth is 90min. The time period of aother satellite in an orbit at a distance of three times the radius of earth from its surface will be

A. $90\sqrt{8}$ min

B. 360 min

C. 720 min

 $\mathsf{D.}\,270\,\min$

Answer: C

25. The acceleration due to gravity on the moon is only one sixth that of earth. It the earth and moon are assume to have the same density, the ratio of the radii of moon and earth will be

A.
$$\frac{1}{6}$$

B. $\frac{1}{(6)^{1/3}}$
C. $\frac{1}{36}$
D. $\frac{1}{(6)^{2/3}}$

Answer: A

26. The acceleration due to gravity near the surface of a planet of radius R

and density d is proportional to

A. $R^{1/2}$ B. $R^{3/2}$ C. $R^{-1/2}$ D. R^0

Answer: D

27. A geo-stationary stellite orbits around the earth in a circular orbit of

radius 36,000km. Then, the time period of a spy stellite orbitting a few

hundred km above the earth's surface $(R_{earth}=6400km)$ will approximately be

A. 1/2h

 $\mathsf{B.}\,1h$

 $\mathsf{C.}\,2h$

 $\mathsf{D.}\,4h$

Answer: C

Watch Video Solution

28. A person brings a mass 2kg from A to B. The increase in kinetic energy of mass is 4J and work done by the person on the mass is -10J. The potential difference between B and A isJ/kg

A. 4J/kg

B. 7J/kg

 ${\sf C.}-3J/kg$

D. -7J/kg

Answer: D

29. If the angular velocity of a planet about its own axis is halved, the distance of geostationary satellite of this planet from the centre of the centre of the planet will become

A.
$$(2)^{1/2}$$
 times
B. $(2)^{3/2}$ times

C. $(2)^{2/3}$ times

D. 4 times

Answer: C

30. A planet of mass m is the elliptical orbit about the sun $(m < < M_{
m sun})$ with an orbital period T. If A be the area of orbit, then its angular momentum would be:

A.
$$\frac{2mA}{A}$$

B. mAT

C.
$$\frac{mA}{2T}$$

D. 2nAT

Answer: A

31. If the radius of the earth were to shrink by one percent its mass remaining the same, the acceleration due to greavity on the earth's surface would

A. decreases

B. remain unchanged

C. increases

D. it will depend on the mass of earth

Answer: C

Watch Video Solution

32. If g is the acceleration due to gravity on the earth's surface, the gain in the potential energy of an object of mass m raised from the surface of the earth to a height equal to the radius R of the earth, is

A.
$$\frac{1}{2}mgR$$

B. 2mgR

C. ngR

D.
$$rac{1}{4}mgR$$

Answer: A

33. A simple pendulam has time period T_1 when on the earth's surface and T_2 when taken to a height R above the earth's surface where R is the radius of the earth. The value of $\frac{T_2}{T_1}$ is-

A. 1

B. $\sqrt{2}$

C. 4

D. 2

Answer: D

Watch Video Solution

34. If the distance between the earth and the sun were half its present value, the number of days in a year would have been

B. 129

C. 182.5

D. 730

Answer: B

Watch Video Solution

35. A satellite S is moving in an elliptical orbit around the earth. The mass of the satellite is very small compared to the mass of the earth.

- A. the acceleration of S is always directed towards the centre of the earth
- B. the angular momentum of S about the centre of the earth changes

in direction, but its magnitude remain constant

- C. the total mechanical energy of S varies periodically with time
- D. the linear momentum of S remain constant in magnitude

Answer: A

Watch Video Solution

36. Two identical spherical masses are kept at some distance. Potential energy when a mass m is taken from the surface of one sphere to the other

A. increases continuously

B. decreases continuously

C. first increases then decreases

D. first decreases then increases

Answer: C

37. A body of mass m is kept at a small height h above the ground. If the radius of the earth is R and its mass is M, the potential energy of the body and earth system (with $h = \infty$ being the reference position) is

A.
$$\frac{GMm}{R} + mgh$$

B. $\frac{-GMm}{R} + mgh$
C. $\frac{GMm}{R} - mgh$
D. $\frac{-GMm}{R} - mgh$

Answer: B

Watch Video Solution

38. The ratio of the energy required to raise a satellite upto a height h above the surface of earth to that the kinetic energy of the satellite into the orbit there is (R=radius of earth)

B.8:1

C.4:1

D. 2:3

Answer: D

Watch Video Solution

39. The gravitational field due to a mass distribution is $E = \frac{A}{x^2}$ in x-direction. Here, A is a constant, Taking the gravitational potential to be zero at infinity, potential at x is

A.
$$\frac{2A}{x}$$

B. $\frac{2A}{x^3}$
C. $\frac{A}{x}$
D. $\frac{A}{2x^2}$

Answer: C

40. A uiform ring of mass M and radius R is placed directly above a uniform sphere of mass 8M and same radius R. The centre of the sphere. The gravitational atraction between the sphere and the ring is

A.
$$\frac{8GM^2}{R^2}$$

B. $\frac{2GM^2}{\sqrt{3}R^2}$
C. $\frac{3GM^2}{2R^2}$
D. $\frac{\sqrt{3}}{2}\frac{GM^2}{R^2}$

Answer: D

41. The gravitational field in a in region is given by $\vec{g} = \left(4\hat{i} + \vec{j}\right)N/kg$. What done by this field is zero when the particle is moved along the line :

A. y + 4x = 2B. 4y + x = 6C. x + y = 5D. All of these

Answer: A

42. A thin spherical shell of mass M and radius R has a small hole. A particle of mass m released at its mouth. Then

A. the particle will execute simple harmonic motion inside the shell

B. the particle will oscillate inside the shell, but the oscillation are not

harmonic

C. the particle will not oscillate, but the speed of the particle will go

on increasing

D. None of the above

Answer: D

43. A particle is fired upword with a speed of $20 km \, / \, s$. The speed with which it will move in interstellar space is

A. 8.8 km/s

 $\mathsf{B.}\,16.5km\,/\,s$

 $\mathsf{C.}\,4.6km\,/\,s$

D. 10 km/s

Answer: B

44. Two bodies of mass m_1 and m_2 are initially at rest placed infinite distance apart. They are then allowed to move towards each other under mutual gravitational attaction. Show that their relative velocity of approach at separation r betweeen them is

$$v=rac{\sqrt{2G(m_1+m_2)}}{r}$$
A. $\sqrt{rac{2G(m_1+m_2)}{r}}$ B. $\sqrt{rac{2G(m_1+m_2)}{r}}$ C. $\sqrt{rac{G(m_1+m_2)r}{r}}$ D. $\sqrt{rac{G(m_1+m_2)}{r}}$

Answer: A

45. If the period of revolution of an artificial satellite just above the earth's surface is T and the density of earth is p, then pT^2 is

A. a universal constant whose value is $\frac{3\pi}{G}$ B. a universal constant whose value is $\frac{3\pi}{2G}$

C. proportional to radius of earth R

D. proportional to square of the radius of earth R^2 Here, G=universal

gravitational constant

Answer: A

Watch Video Solution

46. A satellite is revolving round the earth with orbital speed v_0 if it is imagined to stop suddenly the speed with which it will strike the surface of the earth would be (v_e - escape speed of a body from earth s surface)

A. $\displaystyle rac{v_e^2}{v_0}$ B. v_0 C. $\displaystyle \sqrt{v_e^2-v_0^2}$ D. $\displaystyle \sqrt{v_e^2-2v_0^2}$

Answer: D

Watch Video Solution

47. The ratio of the energy required to raise a satellite upto a height h above the surface of earth to that the kinetic energy of the satellite into the orbit there is (R=radius of earth)

A. h:R

B. R:2h

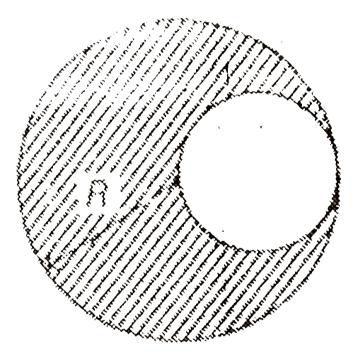

C. 2h:R

D. R:h

Answer: C

Watch Video Solution

48. A spherical hole is made in a solid sphere of radius R. The mass of the sphere before hollowing was M. The gravitational field at the centre of the hole due to the remaining mass is

A. zero

B.
$$\frac{GM}{8R^2}$$

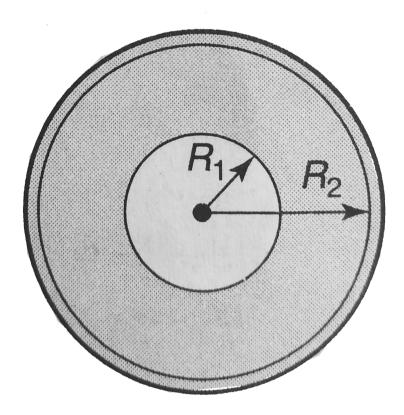

C. $\frac{GM}{2R^2}$

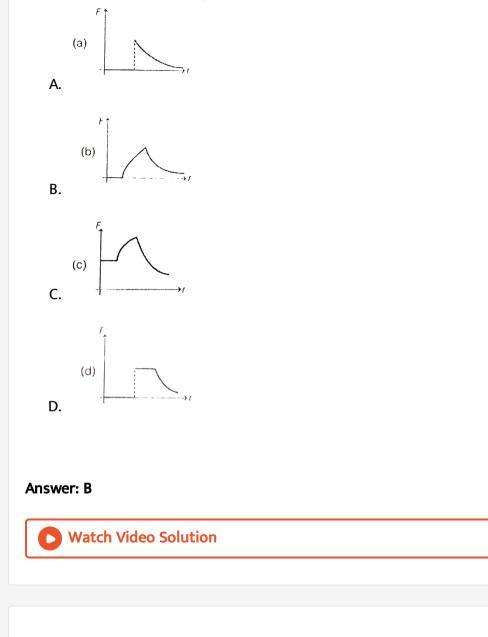

$$R^2$$

Answer: C

Watch Video Solution

49. A sphare of mass M and $radiusR_2$ has a concentric cavity of radius R_1 as shown in figure The force F exerted by the sphere on a particle of mass m located at a distance r from the centre of sphere veries as $(0 \le r \le \infty)$.

50. Imagine a light planet revolving around a very massive star in a circular orbit of radius R with a period of revolution T. if the gravitational force of attraction between the planet and the star is proportational to

 $R^{\,-\,5\,/\,2}$, then

- (a) T^2 is proportional to R^2
- (b) T^2 is proportional to $R^{7/2}$
- (c) T^2 is proportional to $R^{3/3}$
- (d) T^2 is proportional to $R^{3.75}$.

A. R^3

 $\mathsf{B.}\,R^{7\,/\,2}$

C. $R^{3/2}$

D. `R^(9//2

Answer: B

Watch Video Solution

51. If G is the uciversal gravitational constant and p is the uniform density of a spherical planet. Then shortest possible period o0f rotation around a planet can be

A.
$$\sqrt{\frac{\pi G}{2p}}$$

B. $\sqrt{\frac{3\pi GP}{p}}$
C. $\sqrt{\frac{\pi}{6Gp}}$
D. $\sqrt{\frac{3\pi}{Gp}}$

Answer: D

52. Speed of a planet in an ellioptical orbit with semimajor axis a about

sun of mass M at a distance r from sun is

A.
$$\sqrt{GM\left(\frac{2}{r}-\frac{1}{a}\right)}$$

B. $\sqrt{GM\left(\frac{1}{r}-\frac{1}{a}\right)}$
C. $\sqrt{GM\left(\frac{1}{r}-\frac{2}{a}\right)}$
D. $\sqrt{\frac{GMr}{2a^2}}$

Answer: A

53. The magnitude of potential energy per unit mass of the object at the surface of earth is E. Then escape velocity of the object is

A.
$$\sqrt{2E}$$

B. $4E^2$

C.
$$\sqrt{E}$$

D.
$$\sqrt{E/2}$$

Answer: A

54. The radius of a planet is R. A satellite revolves around it in a circle of

radius r with angular velocity ω_0 . The acceleration due to the gravity on

planet's surface is

A.
$$\frac{r^3\omega}{R}$$

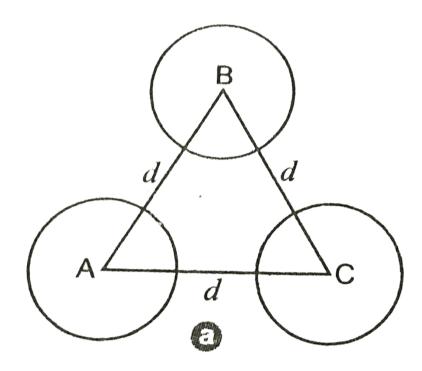

B. $\left(\frac{r^2}{\omega^3}/(R)\right)$
C. $\frac{r^3\omega^3}{R^2}$
D. $\frac{r^2\omega^2}{R}$

Answer: C

Watch Video Solution

55. Three solid spheres each of mass m and radius R are released from the position shown in Fig. What is the speed of any one sphere at the

time of collision?

A.
$$\sqrt{Gm\left(rac{1}{d}-rac{3}{R}
ight)}$$

B. $\sqrt{Gm\left(rac{3}{d}-rac{1}{R}
ight)}$
C. $\sqrt{Gm\left(rac{2}{R}-rac{1}{d}
ight)}$
D. $\sqrt{Gm\left(rac{1}{R}-rac{2}{d}
ight)}$

Answer: D

56. A satellite is moving in a circular orbit round the earth with a diameter of orbit 2R. At a certain point a rocket fixed to the satellite is fired such that it increases the velocity of the satellite tangentially. The resulting orbit of the satellite would be

A. same as before

B. circular orbit with diameter greater than R

C. elliptical orbit with minimum distance from the centre of eart5h

equal to R

D. elliptical orbit with maximum distnace form the centre of earth

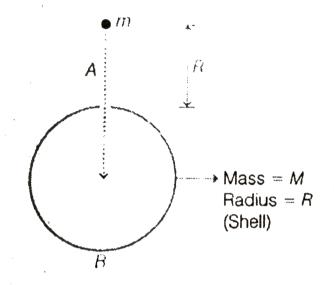

equal to R

Answer: C

Watch Video Solution

57. A particle of mass m is moved from A to B as show in figure. Then

potential energy of the the particle

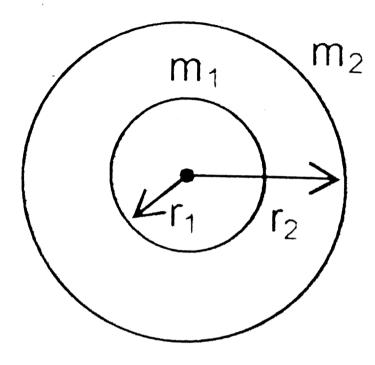

- A. will continuously increases
- B. will continuously decreases
- C. will first increase and then become constant
- D. will first decreases and then become constant

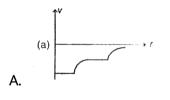

Answer: D

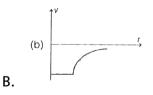

View Text Solution

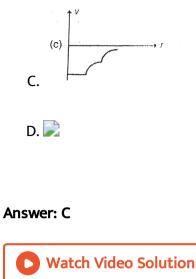

58. Two concentric spherical sheels are as shown in figure. The V-r

graph will be as

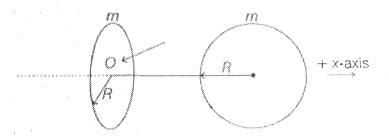

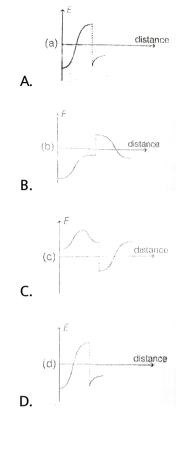

59. One ring of radius R and mass m and one solid sphere of same mass m and same radius R are placed with their centres on positive x-axis. We are moving from some finite distance on negative x-axis towards positive x-axis plane of the ring is perpendicular to x-axis. How will the net gravitational field vary with distance moved on x-axis We move only up to surface of solid sphere. O is the origin.

Answer: C

60. A mass is taken from surface to a height h. The change in potential energy in this process is equal to the change in potential energy if it is now taken from that point to infinity. What is the value of h?

A.
$$h=R$$

B. $h=2R$
C. $h=rac{3R}{2}$
D. $h=4R$

Answer: A

61. If radius of a solid sohere is decreases to half, keeping density of sphere unchanged, the slope of E-r graph inside the sphere will

A. remain unchanged

B. become two times

C. become four times

D. remain $\frac{1}{8}$ th

Answer: A

62. A particle of mass m is moving along the line y-b with constant acceleration a. The areal velocity of the position vector of the particle at time t is (u = 0)

A. constant

B.
$$\frac{abt}{2}$$

C. $\frac{abt}{2m}$
D. $\frac{a^2bt}{2m}$

Answer: B

View Text Solution

63. A particle of mass m is projected upword with velocity $v = \frac{v_e}{2}$ (v_e) escape of the particle is

$$A. - \frac{GMm}{2R}$$
$$B. - \frac{GMm}{4R}$$
$$C. - \frac{3GMm}{4R}$$
$$D. - \frac{2GMm}{3R}$$

Answer: C

View Text Solution

64. Two particles each of mass m are revolving in circular orbits of radius r = 5R in opposite directions with orbital speed v_0 . They collide perfectly inelastically and fall to the ground. The speed of combined mass on triking the ground will be

A. $2\sqrt{2}v_0$

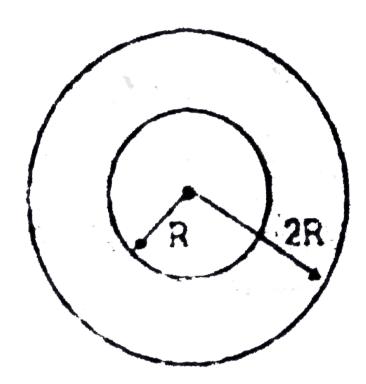

B. $\sqrt{2}v_0$

C. $2v_0$

 $\mathsf{D}.v_0$

Answer: A

Watch Video Solution

65.

There is a concentric hole of radius R in a solid sphere of radius 2R. Mass of the remaining portional is M. What is the gravitational potential at centre?

$$\mathsf{A.}-\frac{5G}{7R}$$

$$B. - \frac{5G}{14R}$$
$$C. - \frac{3G}{7R}$$
$$D. - \frac{9G}{14R}$$

Answer: D

Watch Video Solution

66. A particle is projected from the surface of earth with velocity equal to its escape velocity , at 45° with horizontal . What is the angle of its velocity with horizontal at height h = R . (Here horizontal at some point means a line parallel to tangent on earth just below that point .)

A. 30°

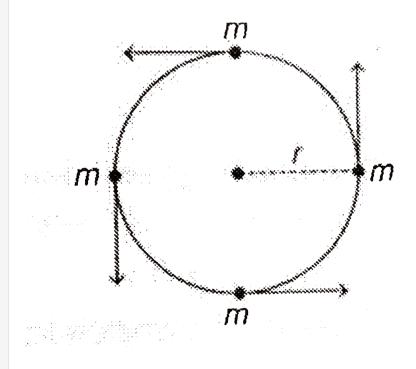

B. 60°

$$\mathsf{C.}\cos^{-1}\left(\frac{1}{3}\right)$$
$$\mathsf{D.}\cos^{-1}\left(\frac{1}{4}\right)$$

Answer: B

67. Four similar particles of mass m are orbiting in a circle of radius r in the same direction and same speed because of their mutual gravitational attractive force as shown in the figure . Speed of a particle is given by

A.
$$\sqrt{rac{Gm}{4r}ig(1+2\sqrt{2}ig)}$$

B. $\sqrt{rac{Gm}{r}ig(1+\sqrt{2}ig)}$

C.
$$\sqrt{rac{Gm}{r}ig(1+2\sqrt{2}ig)}$$

D. $\sqrt{rac{Gm}{4r}ig(2+\sqrt{2}ig)}$

Answer: A

Watch Video Solution

68. The gravitational potential of two homogeneous spherical shells A and B of same surface density at their respective centres are in the ratio 3:4. If the two shells collapse into a single one such that surface charge density remains the same, then the ratio of potential at an internal point of the new shell to shell A is equal to

A. 3:5

B.4:5

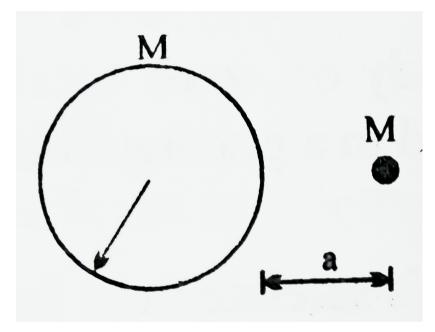

C.5:3

 $\mathsf{D}.\,5\!:\!4$

Answer: C

69. A particle of mass M is at a distance a from surface of a thin spherical

shell of equal mass and having radius a.

A. Gravitational field and potential both are zero at centre of the shell

B. Gravitational field is zero not only inside the shell but at a point

outside the shell also

C. Inside the shell , gravitational field alone is zero

D. Neither gravitational field nor gravitational potential is zero inside

the shell

Answer: D

Watch Video Solution

70. A projectile is launched from the surface of the earth with a very high speed u at an angle θ with vertical . What is its velocity when it is at the farthest distance from the earth surface . Given that the maximum height reached when it is launched vertically from the earth with a velocity v =

$$\sqrt{\frac{GM}{R}}$$

~ -

A.
$$\frac{u\cos\theta}{2}$$

B. $\frac{u\sin\theta}{2}$
C. $\sqrt{\frac{GM}{2R}}$
D. $\sqrt{\frac{GM}{3R}}$

Answer: B

71. A system consists of two stars of equal masses that revolve in a circular orbit about their centre of mass . Orbital speed of each star is v and period is T . Find the mass M of each star . (G is gravitational constant)

A.
$$\frac{2Gv^3}{\pi T}$$

B.
$$\frac{v^3T}{\pi G}$$

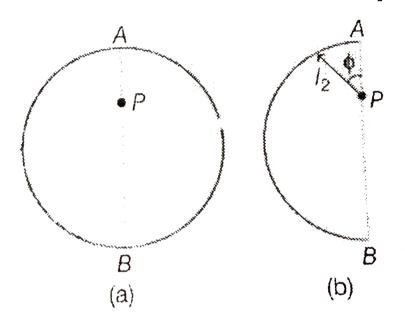

C.
$$\frac{v^3T}{2\pi G}$$

D.
$$\frac{2Tv^3}{\pi G}$$

Answer: D

Watch Video Solution

72. Figure (a) shows a ring of mass m and figure (b) shows half portion of the same ring . Gravitational field at point P in figure (b) is I_2 in magnitude and makes an angle ϕ with line . AB. Gravitational field at point P in figure (a) is I_1 in magnitude . The ratio of $\frac{I_1}{2I_2}$ is

A. sec ϕ

B. $\cos \phi$

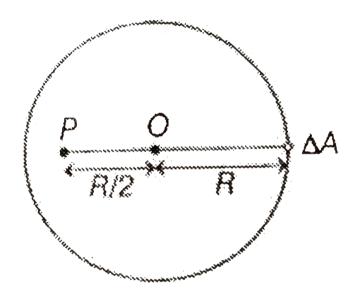

C. tan ϕ

D. sin ϕ

Answer: B

73. A small section of area ΔA is removed from a uniform spherical shell with surface mass density σ and radius R as shown in the figure . Find the magnitude of gravitational field intensity at point P due to the remaining mass .

A.
$$\frac{4\sigma\Delta AG}{9R^2}$$

B. $\frac{4\sigma\Delta AG}{R^2}$

C.
$$\frac{\sigma \Delta AG}{R^2}$$

D. zero

Answer: A

Watch Video Solution

74. A projectile is projected tangentially from the surface of a planet of radius R. If it is at a height of 3R at the farthest point of its trajectory, then the velocity of projection V_0 is given by (acceleration due to gravity on surface=g)

A.
$$v_0=\sqrt{1.5gR}$$

B. $v_0=\sqrt{0.5gR}$
C. $v_0=\sqrt{1.6gR}$
D. $v_0=\sqrt{2gR/3}$

Answer: C

75. A solid sphere of mass M and radius R has a spherical cavity of radius R/2 such that the centre of cavity is at a distance R/2 from the centre of the sphere. A point mass m is placed inside the cavity at a distance R/4 from the centre of sphere. The gravitational force on mass m is

A.
$$\frac{11GMm}{R^2}$$

B.
$$\frac{14GMm}{R^2}$$

C.
$$\frac{GMm}{2R^2}$$

D.
$$\frac{GMm}{4R^2}$$

Answer: C

76. Two stars of masses m_1 and m_2 distance r apart, revolve about their

centre of mass. The period of revolution is :

A.
$$2\pi \sqrt{\frac{r^3}{2G(m_1 + m_2)}}$$

B. $2\pi \sqrt{\frac{r^3(m_1 + m_2)}{2Gm_1m_2}}$
C. $2\pi \sqrt{\frac{2r^3}{G(m_1 + m_2)}}$
D. $2\pi \sqrt{\frac{r^3}{G(m_1 + m_2)}}$

Answer: D

77. A binary star system is revolving in a circular path with angular speed ' ω ' and mass of the stars are 'm' and '4m' respectively. Both stars stop suddenly, then the speed of havirer star when the separation between the stars when the separation between the stars becomes half of initial value is :

A.
$$\sqrt{2\left[\frac{\left(Gm\omega\right)^2}{2}\right]^{1/3}}$$

B.
$$\sqrt{\frac{2}{5}\left[\frac{\left(Gm\omega\right)^2}{5}\right]^{1/3}}$$

C.
$$\sqrt{\left[\frac{(Gm\omega)^2}{5}\right]^{1/3}}$$

D. $\sqrt{2\left[\frac{(Gm\omega)^2}{5}\right]^{1/3}}$

Answer: B

View Text Solution

78. Consider a planet moving in an elliptical orbit around the Sun. The work done on the planet by the gravitational force of the Sun

A. in some parts of the orbit

B. in any part of the orbit

C. in no part of the orbit

D. in one complete revolution

Answer: A::D

Watch Video Solution

79. Two smooth tunnels are dug from one side of earth's surface to the other side, one along a diameter are dropped from one end of each of the tunnels. Both time particles oscillate simple harmonically along the tunnels. Let T_1 and T_2 be the particle along the diameter and along the chord respectively. Then:

A. $T_1 = T_2$

 ${\sf B.}\,T_1 > T_2$

 $\mathsf{C}.\,v_1=v_2$

D. $v_1 > v_2$

Answer: A::D

80. Two objectes of mass m and 4m are at rest at and infinite seperation. They move towards each other under mutual gravitational attraction. If G is the universal gravitational constant. Then at seperation r A. the total energy of the two objects is zero

B. their relative velocity of approach is $\left(\frac{10GM}{r}\right)^{1/2}$ in magnitude C. the total kinetic energy of the objects is $\frac{4Gm^2}{r}$

D. net angular momentum of both the particles is zero about any

point

Answer: A::B::C::D

Watch Video Solution

81. Let V and E be the gravitational potential field. Then select the correct alternative(s) :

A. The plot of E against r (distance form centre) is discontinuous for a

spherical shell

B. The plot of V against r is continuous for a spherical shell

C. The plot of E against r is discontinuous for a solid sphere

D. The plot of V against r is continuous for a solid sphere

Answer: A::B::D

82. In circular orbit of a satellite

A. orbital speed is
$$\sqrt{rac{GM}{r}}$$

B. time period $T^2 \propto r^3$

C. kinetic energy is
$$\displaystyle \frac{GMm}{2r}$$

D. potential energy is $\displaystyle -\frac{GMm}{2r}$

Answer: A::B::C

83. Due to a solid sphere, magnitude of

A. gravitational potential is maximum at centre

B. gravitational potential is minimum at centre

C. field strength is maximum at centre

D. field strength is minimum at centre

Answer: A::D

Watch Video Solution

84. In elliptical orbit of a planet

A. angular momentum about centre of sun is constant

B. potential energy is constant

C. kinetic energy is constant

D. total mechanical energy is constant

Answer: A::D

85. At the surface of earth, potential energy of a particle is U and potential is V.Change in potential energy and potential at height h=R are suppose ΔU and ΔV .Then

A.
$$\Delta U = -U/2$$

- B. $\Delta U = U/2$
- $\mathsf{C.}\,\Delta V=V\,/\,2$
- D. $\Delta V = -V/2$

Answer: A::D

Watch Video Solution

86. satellite revolving in circular orbit suppose V_0 is the orbital speed, T its time period, u its potential energy and K the kinetic energy. Now value of G is decreasesd. Then

A. V_0 will decreases

B. T will decrease

C. U will decrease

D. K will decrease

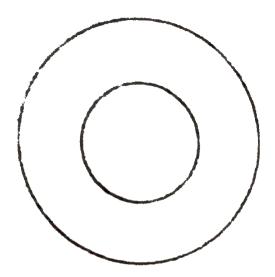

Answer: A::D

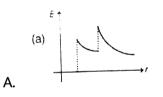

Watch Video Solution

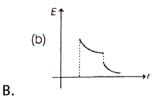

87. Two concentric speherical shells are as shown in figure. The magnitude

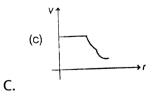

of gravitational potential (V) and field strength (E) vary with distance (r)

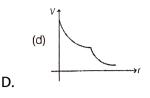

from centre as

Answer: A::C

Watch Video Solution

88. For a satellite to apper satationery to an observer on earth.

A. It must be rotating about the earth's axis

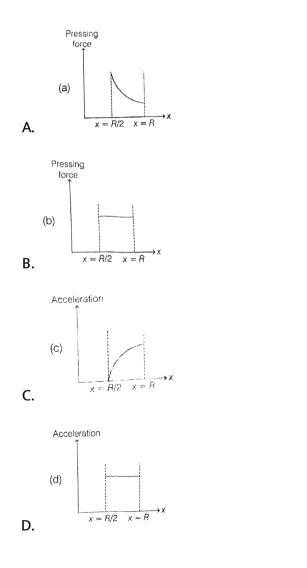

B. It must be rotating in the equatrial plane

C. It should rotate from west to east

D. Its time period must be 24 hours

Answer: A::B::C::D

89. A tunnel is dug along a chord of the earth at a perpendicular distance R/2 from the earth's centre. The wall of the tunnel may be assumed to be frictionless. A particle is released from one end of the tunnel. The pressing force by the particle on the wall, and the acceleration of the particle vary with x (distance of the particle from the centre) according to

90. If a body is projected with a speed lesser than escape velocity, then

A. the body can reach a certain height and may fall down following a

straight line path.

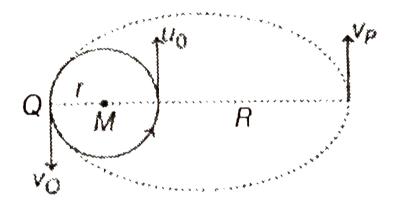

B. the body can reach a certain height and may fall down following an

approximately parabolic path

- C. the body may orbit the earth in a circular orbit
- D. the body may orbit the earth in a elliptic orbit

Answer: A::B::C::D

91. A light satellite is initially rotating around a planet in a circular orbit of radius r. Its speed in this circular orbit was u_0 . It is put in an elliptical orbit by increasing its speed form u_0 to v_Q (instantaneously). In the elliptical orbit, the satellite reaches the farthest point P, which is at a distance R from the planet. Satellite's speed at farthest point is v_P . At point Q, the speed required by satellite to escape the planet's gravitational pull is v_{esc}

A.
$$v_{
m esc}=2u_0$$

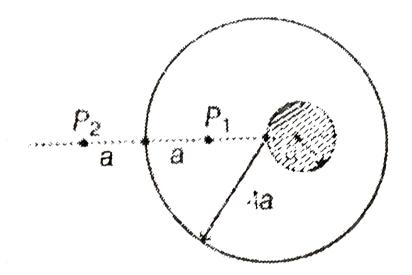

B.
$$v_Q=u_0r\sqrt{rac{2}{R(r+R)}}$$

C. $v_Q=u_0\sqrt{rac{2R}{(r+R)}}$
D. $v_P=u_0r\sqrt{rac{2}{R(r+R)}}$

Answer: C::D

92. A uniform metal sphere of radius a and mass M is surrounded by a thin uniform spherical shell of equal mass and redius 4a. The centre of the shell falls on the surface of the iner sphere

A. The gravitational field intensity at P_1 is $\frac{GM}{16a^2}$ B. The gravitational field intensity at P_2 is $\frac{61GM}{900a^2}$

C. The gravitational potential at $P_1=0$

D. The gravitational potential at $P_2=0$

Answer: A::B

93. If a smooth tunnel is dug across a diameter of earth and a particle is released from the surface of earth, the particle oscillate simple harmonically along it

Maximum speed of the particle is

A.
$$\sqrt{\frac{2GM}{R}}$$

B. $\sqrt{\frac{GM}{R}}$
C. $\sqrt{\frac{3GM}{2R}}$
D. $\sqrt{\frac{GM}{2R}}$

Answer: B

94. When a particle is projected from the surface of earth its mechanical energy and angular momentum about center of earth at all time are constant.

Q. A particle of mass m is projected from the surface of earth with velocity v_0 at angle θ with horizontal suppose h be the maximum height of particle from surface of earth and v its speed at that point then v is $v_0 \cos \theta$

A. $v_0 \cos heta$

B. $> v_0 \cos \theta$

 $\mathsf{C.}\ < v_0\cos\theta$

D. zero

Answer: C

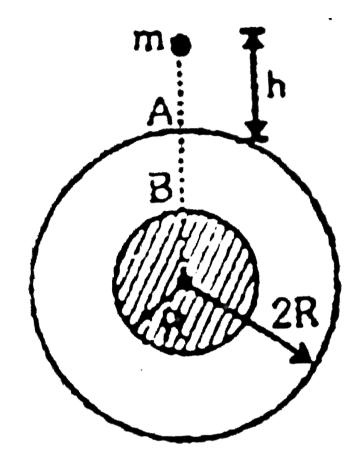

95. When a particle is projected from the surface of earth its mechanical energy and angular momentum about center of earth at all time are constant.

Q. Maximum height h of the particle is

$$egin{aligned} \mathsf{A.} &= rac{v_0^2 \sin^2 heta}{2g} \ \mathsf{B.} &> rac{v_0^2 \sin^2 heta}{2g} \ \mathsf{C.} &< rac{v_0^2 \sin^2 heta}{2g} \end{aligned}$$

D. can be greater than or less than $\displaystyle rac{v_0^2 \sin^2 heta}{2g}$

Answer: B

A solid sphere of mass M and radius R is surrounded by a spherical shell of same mass and radius 2R as shown. A small particle of mass m is relased from rest from a height h(< R) above the shell. There is a hole in the shell.

Q. In what time will it enter the hole at A

A.
$$2\sqrt{rac{hR^2}{GM}}$$

96.

B.
$$\sqrt{\frac{2hR^2}{GM}}$$

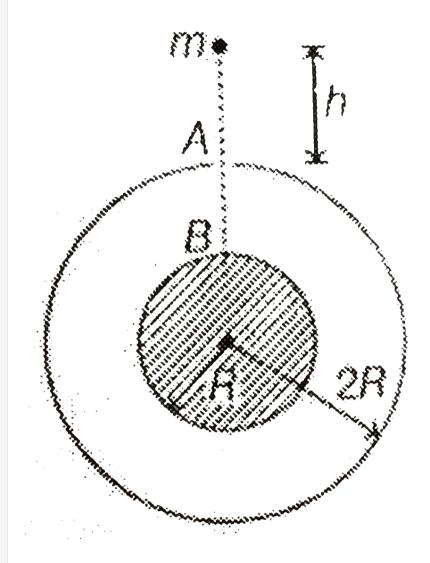

C. $\sqrt{\frac{hR^2}{GM}}$

D. None of these

Answer: A

Watch Video Solution

97. A solid sphere of mass M and radius R is surrounded by a spherical shell of same mass M and radius 2R as shown. A small particle of mass m is released from rest from a height h(< R) above the shell. There is a hole in the shell.

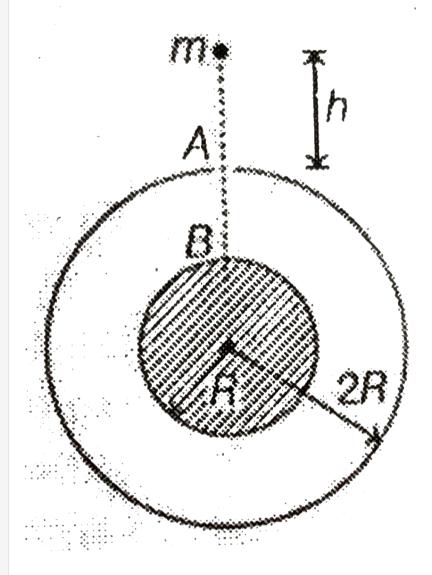

What time will it take to move from A to B?

D. None of these

Answer: C

98. A solid sphere of mass M and radius R is surrounded by a spherical shell of same mass M and radius 2R as shown. A small particle of mass m is released from rest from a height h(< R) above the shell. There is a hole in the shell.

What speed will it collide at B?

A.
$$\sqrt{\frac{2GM}{R}}$$

B. $\sqrt{\frac{GM}{2R}}$
C. $\sqrt{\frac{3GM}{2R}}$

D. 4

Answer: D

View Text Solution

99. A planet is revolving round the sun is elliptical orbit. Velocity at perigee position (nearest) is v_1 and at apogee position (farthest) is v_2 . Both these velocities are perpendicular to the line joining centre of sun and planet. r_1 is the minimum distance and r_2 the maximum distance. When the planet is at perigee position, it wants to revolve in a circular orbit by itselff. For this, value of G

A. should increase

B. should decrease

C. will not depends on the value of G

D. data is insufficient

Answer: A

100. A planet is revolving round the sun is elliptical orbit. Velocity at perigee position (nearest) is v_1 and at apogee position (farthest) is v_2 . Both these velocities are perpendicular to the line joining centre of sun and planet. r_1 is the minimum distance and r_2 the maximum distance. At apogee position suppose speed of planet is slightly decreased from v_2 , then what will happen to minimum distance r_1 and maximum distance r_2 in the subsequent motion.

A. r_1 and r_2 both will decrease

B. r_1 and r_2 both will increase

C. r_2 will remain as it is while r_1 will increase

D. r_2 will remain as it is while r_1 will decrease

Answer: D

View Text Solution

101. Three equal masses each of mass 'm' are palced at the three corners

of an equilateral of side a

If a fourth particle of equal mass is placed at the centre of triangle then net force acting on it is equal to .

A.
$$\frac{Gm^{2}}{a^{2}}$$

B. $\frac{4Gm^{2}}{3a^{2}}$
C. $\frac{3Gm^{2}}{a^{2}}$

D. zero

Answer: D

Watch Video Solution

102. Three equal masses each of mass 'm' are palced at the three corners

of an equilateral of side a

If a fourth particle of equal mass is placed at the centre of triangle then

net force acting on it is equal to .

A.
$$\frac{Gm^2}{a^2}$$

B. $\frac{4Gm^2}{3a^2}$
C. $\frac{3Gm^2}{a^2}$

D. zero

Answer: B

103. Three equal masses each of mass 'm' are palced at the three corners of an equilateral of side a

If a fourth particle of equal mass is placed at the centre of triangle then net force acting on it is equal to .

A.
$$\frac{3Gm^2}{a}$$
B.
$$\frac{3Gm^2}{2a}$$
C.
$$\frac{4Gm^2}{3a}$$
D.
$$\frac{Gm^2}{a}$$

Answer: B

104. Three equal masses each of mass 'm' are placed at the three-corner of an equilateral triangle of side 'a' In the above system, if two particles are kept fixed and third particle is released, then speed of the particle when it reaches to the mid point of the side connectiong other two masses is

A.
$$\sqrt{\frac{2GM}{a}}$$

B. $\sqrt{\frac{4GM}{a}}$
C. $\sqrt{\frac{GM}{a}}$
D. $\sqrt{\frac{GM}{2a}}$

Answer: B

105. An artificial satellite is moving in circular orbit around the earth with speed equal to half the magnitude of escape velocity from the surface of earth. R is the radius of earth and g is acceleration due to gravity at the surface of earth (R = 6400 km)

Then the distance of satelite from the surface of earth is .

A. 3200 km

B. 6400 km

C. 12800 km

D. 4800 km

Answer: B

> Watch Video Solution

106. An artificial satellite is moving in a circular orbit around the earth with a speed equal to half the magnitude of escape velocity from the surface of earth. R is the radius of earth and g is acceleration due to

gravity at the surface of earth. (R=6400 km).

The time period of revolution of satellite in the given orbit is

A.
$$2\pi \sqrt{\frac{2R}{g}}$$

B. $2\pi \sqrt{\frac{4R}{g}}$
C. $2\pi \sqrt{\frac{8R}{g}}$
D. $2\pi \sqrt{\frac{6R}{g}}$

Answer: C

107. An artificial satellite is moving in a circular orbit around the earth with a speed equal to half the magnitude of escape velocity from the earth.

(i) Determine the height of the satellite above the earth's surface.

(ii) If the satellite is stopped suddenly in its orbit and allowed to fall freely

onto the earth, find the speed with which it hits the surface of the earth.

A.
$$\sqrt{gR}$$

B. $\sqrt{1.5gR}$
C. $\sqrt{\frac{gR}{2}}$

D.
$$\sqrt{\frac{gR}{\sqrt{2}}}$$

Answer: A

108. A pair of stars rotates about their centre of mass One of the stars has a mass M and the other has mass m such that M = 2m The distance between the centres of the stars is d (d being large compared to the size of either star).

The period of rotation of the stars about their common centre of mass (in time of d ,m ,G) is .

A.
$$\sqrt{\frac{4\pi^2}{Gm}d^3}$$

B. $\sqrt{\frac{8\pi^2}{Gm}d^3}$

C.
$$\sqrt{rac{2\pi^2}{3Gm}d^3}$$

D. $\sqrt{rac{4\pi^2}{3Gm}d^3}$

Answer: D

Watch Video Solution

109. A pair of stars rotates about their centre of mass One of the stars has a mass M and the other has mass m such that M = 2m The distance between the centres of the stars is d (d being large compared to the size of either star).

The ratio of the angular momentum of the two stars about their common centre of mass $\left(L_m/L_m
ight)$ is .

A. 1 B. 2

C. 4

D. 9

Answer: B

> Watch Video Solution

110. A pair of stars rotates about their centre of mass One of the stars has a mass M and the other has mass m such that M = 2m The distance between the centres of the stars is d (d being large compared to the size of either star).

The ratio of kinetic energies of the two stars $\left(K_m/K_M
ight)$ is .

A. 1 B. 2 C. 4

D. 9

Answer: B

111. Consider a spherical planet of radius R . Its density varies with the distance of its centre t as $\rho = A - Br$, where A and B are positive constants. Now answer the following questions.

Acceleration due to gravity at a distance r(r < R) from its centre is

A.
$$\frac{4}{3}\pi Gr(A - Br)$$

B. $(4)\pi Gr(A - Br)$
C. $\frac{4}{3}\pi Gr\left(A - \frac{3}{4}Br\right)$
D. $\frac{4}{3}\pi Gr\left(A - \frac{3}{2}Br\right)$

Answer: C

Watch Video Solution

112. Consider a spherical planet of radius R . Its density varies with the distance of its centre t as $\rho = A - Br$, where A and B are positive constants. Now answer the following questions.

For B=O , pressure due to gravitation force at a distance $r(\,< R)$ from the centre of the planet is

A.
$$rac{2}{3}\pi GA^2 (R^2 - r^2)$$

B. $rac{1}{3}\pi GA^2 (R^2 - r^2)$
C. $rac{3}{2}\pi GA^2 (R^2 - r^2)$
D. $rac{4}{3}\pi GA^2 (R^2 - r^2)$

Answer: A

View Text Solution

113. A particle is projected from the surface of earth of mass M and radius R with speed v. Suppose it travels a distance x(< R) when its speed becomes v to v/2 and y(< R) when speed changes from v/2 to 0. Similarly, the corresponding times are suppose t_1 and t_2 . Then

	Column-I		Column-II
(A)	x/y	(p)	= 1
(B)	t_1/t_2	(r)	> 1
		(r)	< 1

	Table-1	Table-2
(A)	Acceleration due to gravity on this planet's surface	(P) Half
(B)	Gravitational potential on the surface	(Q) Same
(C)	Gravitational potential at centre	(R) Two times
(D)	Gravitational field strength at centre	(S) Four times

115. In elliptical orbit of a planet, as the planet moves from apogee position to perigee position to perigee position, match the following columns

Column-I

- (A) Speed of planet
- $(B) \quad Distance \ of \ planet \ from \ centre \ of \ sun$
- (C) Potential energy
- (D) Angular momentum about centre of sun

Column-II

- (p) Remains same
- (q) Decreases
- (r) Increase
- (s) Cannot say

116. Match the following

	Table-1		Table-2
(A)	Newton's law of Gravitation	(P)	Law of conservation of angular momentum
(B)	Kepler's second law	(Q)	$T^2 \propto r^{3/2}$
(C)	Kepler's first law	(R)	Inverse square law
(D)	Kepler's third law	(S)	Orbit of planet is elliptical

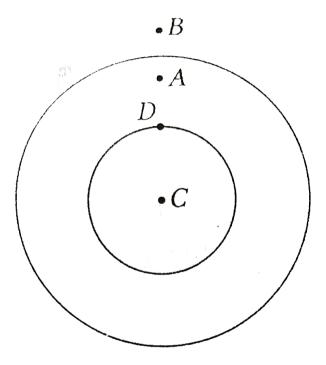

117. Let V and E denote the gravitational potential and gravitational field

at a point. Then, match the following columns

Column-IColumn-II(A) E = 0, V = 0(p) At centre of spherical shell(B) $E \neq 0, V = 0$ (q) At centre of solid sphere(C) $V \neq 0, E = 0$ (r) At centre of circular ring(D) $V \neq 0, E \neq 0$ (s) At cetre of two point masses of equal magnitude(t) None

118. Two concentric spherical shells are as shown in figure. Match the

following columns

Column-I

- (A) Potential at A
- (B) Gravitational field at A
- (C) As one moves from C to D
- $(D) \quad As one moves from D to A$

Column-II

- (p) greater than B
- (q) less than B
- (r) Potential remains constant
- (s) Gravitational field decreases
- (t) None

119. Match the following

	Table-1	Table-2
(A)	Kinetic energy of a particle in gravitational field is increasing	(P) work done by gravitational force should be positive
(B)	Potential energy of a particle in gravitational field is increasing	(Q) work done by external force should be non zero
(C)	Mechanical energy of a particle in gravitational field is increasing	 (R) work done by gravitational force should be negative (S) Cannot say anything

View Text Solution

120. Match the following

	Table-1		Table-2
(A)	Time period of an earth satellite in	(P)	Independent of mass of satellite
(B)	circular orbit Orbital velocity of satellite	(Q)	Independent of radius of orbit
(C)	Mechanical energy of satellite	(R)	Independent of mass of earth
		(S)	None

121. If earth decreases its rotational speed without changing other

factors. Match the following.

Table-1	Table-2
(A) Value of g at pole	(P) will remain same
(B) Value of g at equator	(Q) will increase
(C) Distance of geostationary satellite	(R) will decrease
(D) Energy of geostationary satellite	(S) Cannot say

View Text Solution

122. Match the following columns. (for a satellite in circular orbit)

Column-I

Column-II

- (A) Kinetic energy (p) $-\frac{GMm}{2r}$
- (B) Potential energy (q) $\sqrt{\frac{GM}{r}}$
- (C) Total energy (r) $-\frac{GMm}{r}$
- (D) Orbital speed (s) $\frac{GMm}{2r}$

123. The diameters of two planets are in the ratio 4 : 1 and their mean densities in the ratio 1 : 2. The acceleration due to gravity on the planets will be in ratio

124. A mass is taken to a height R from the surface of earth and then is given horizontal velocity v. The minimum value of v so that mass escapes to infinity is $\sqrt{\frac{GM}{nR}}$. Find the value of n.

Watch Video Solution

125. The density of the core of a planet is x and that of outer shell is y. The radii of the core and that of the planet are R and 2R. The acceleration due to gravity at the surface of planet is same as at a depth R. The ratio of x and y is n/3. Find the value of n.

126. Energy required to launch a satellite of mass m from earth's surface in a circular orbit at an altitude of 2R (R=radius of th earth) is $\frac{5}{n}$ mgR. Find value of n.

Watch Video Solution

127. A body is projected vertically upwards from the surface of earth with a velocity equal to half the escape velocity. If R be the radius of earth, maximum height attained by the body from the surface of earth is $\frac{R}{n}$. Find the value of n.

Watch Video Solution

128. Pertaining to two planets, the ratio of escape velocities from respective surfaces is 1:2, the ratio of the time period of the same simple pendulum at their respective surfaces is 2:1 (in same order). Then the ratio of their average densities is

129. Two particles of equal masses m go round a circle of radius R under the action of their mutual gravitational attraction. The speed of each particle is $v = \sqrt{\frac{Gm}{nR}}$. Find the value of n.

Watch Video Solution

130. Energy of a satellite in circular orbit is E_0 . The energy required to move the satellite to a circular orbit of 3 time the radius of the initial orbit is $\frac{x}{3}E_0$. Find the value of x.

Watch Video Solution

131. An artificial satellite is moving in a circular orbit around the earth with a speed equal to half the magnitude of escape velocity from the earth. The height of the satellite above the surface of the earth is x R. Find the value of x.

132. A solid sphere of radius R and mass density ρ is surrounded by another outer sphere of density 2ρ . Let E_P is gravitational field at P and E_Q is at Q. If the ratio of $E_Q/E_P = 3k/4$. Find the value of k.
