LINEAR AND ANGULAR SIMPLE HARMONIC MOTION

Illustration

1. What is the time - period of $x = A\sin(\omega t + \alpha)$?

▶ **Watch Video Solution**

2. Find time period of the function,

$$y = \sin \omega t + \sin 2\omega t + \sin 3\omega t$$

3. Identify which of the following function represent simple harmonic motion.

(i) $Y = Ae^{I\omega t}$ (ii) $Y = ae^{-\omega t}$

(iii) $y = a \sin^2 \omega t$ (iv) $y = a \sin \omega t + b \cos \omega t$

(v) $y = \sin \omega t + b \cos 2\omega t$

4. A partical excutes SHM with an angular frequency $\omega = 4\pi rad/s$. If it is at its extereme position initially, then find the transition when it is at a distance $\sqrt{2}/2$ times its amplitude from the mean position.

5. A partical excutes SHM with an angular an amplitude $8cm$ and a frequency $4cm$ initially, in the possitive direction , determine its displecement equation and the maximum velocity and acceleration.

6. A particle executing SHM oscillates be between two fixed points separated by $20cm$. If its maximum velocity be $30cm/s$. Find its velocity when its displacement is $5cm$ from its mean position.
7. A partical excuting SHM with time period of $2s$: Find the time taken by it to move from one amplitude t half the amplitude posituion.

8. Write the equation of SHM for the situations show below:

a.

$t = 0$

$x = -A$ $x = 0$ $x = A$

$t = 0$

b.

$x = -A$ $x = 0$ $x = A$

$t = 0$

c.

$x = -A$ $x = 0$ $A/2$ $x = A$

▶ Watch Video Solution

9. A partical of $mass\, m = 1kg$ oscillates simple harmonically with angular frequency $1rad/s$. Find the

phase of the partical at $t = 1s$ and $2s$. Start calculating time when the partical moves up passing through the mean position.
10. If $x = A/2att = 0$, Find phase constant $(\alpha$ in$x = A\sin(\omega t + \alpha)$, $att = 0$, a partical excuting SHM is going along

11. Shows the displacement time graph of a particle executing SHM with a time period T. Four points $1, n2, 3$ and 4 are market on the graph where the displacement is

half that of the amplitude.

a. Identify the point of same displacement but with opposite direction of motion . Find the time difference between them.

b. Identify the point where the particles move in the same difference. Find the time difference between them.

12. A partical excutes SHM with same frequency and amplitude along the same straight line. They cross each other , at a point midway between the mean and the exterme position. Find the Phase difference between them.

13. A particle executes SHM with amplitude A and angular frequency ω. At an instant the particle is at a distance $A/5$ from the mean position and is moving away from it. Find the time after which it will come back to this position again and also find the time after which it will pass through the mean position.

14. two particle executing SHM with same frequency and amplitudes A and $2A$ on same straight line with same mean position cross each other in opposite direction at a distance $A/3$ from mean position. Find the phase difference in the two SHM s.

15. A particle of mass 0.50 kg executes a simple harmonic motion under a force $F = -\left(50 Nm^{-1}\right)x$. If it crosses the centre of oscillation with a speed of $10 ms^{-1}$, find the amplitude of the motion.

16. A $20g$ partical is oscillating simple barmonically with a period of $2\sec ond$ and maximum kinetic energy $2J$. The total machanical energy of the partical is zero , find

a Amplitude of oscillation

b. potential energy as a punction of displacement x relative to mean position.

17. A body is executing SHM under action of the a force of whose maximum is $50N$. magnitude of force acting on the particle at the time when its energy is half kinetic

energy and half potential is (Assume potential energy to be zero at mean position).

18. A point particle if mass $0.1kg$ is executing SHM of amplitude $0.1m$. When the particle passes through the mean position, its kinetic energy is $8 \times 10^{-3}J$. Write down the equation of motion of this particle when the initial phase of oscillation is $45°$.

19. If a particle moves in a potential energy held $U = U_0 - ax + bx^2$, where are a and b particle constants

obtain an expression for the force acting on if as a function of position. At what point does the force vanish? Is this a point of stable equilibrium ?

Calculate the force constant and frequency of the particle.

20. A partical executes SHM with an amplltude of $10cm$ and friquency $2Hz$, $at t = 0$, the partical is at point where potential energy and kinetic energy are same. Find the equation of displacement of partical.

21. A particle of mass $0.2kg$ undergoes SHM according to the equation $x(t) = 3\sin(\pi t + \pi/4)$.

i. What is the total energy of the particle if potential energy of zero at mean position ?

ii. What are the kinetic and potential energies of particle at time $t = 1s$?

iii. At what time instants is the particles energies purely kinetic?

▶ **Watch Video Solution**

22. A particle of mass $0.2kg$ executes simple harmonic motion along a path of length $0.2m$ at the rate of 600 oscillations per minute. Assume at $t = 0$. The particle

start SHM in positive direction. Find the kinetic potential

energies in joules when the displacement is $x = A/2$

where, A stands for the amplitude.

23. A point particle if mass $0.1kg$ is executing SHM of

amplitude $0.1m$. When the particle passes through the

mean position, its kinetic energy is $8 \times 10^{-3} J$. Write

down the equation of motion of this particle when the

initial phase of oscillation is $45°$.

24. A particle of mass m is located in a unidimensional potential field where potential energy of the particle depends on the coordinates $xas: U(x) = U_0(1 - \cos Ax)$, U_0 and A constants. Find the period of small oscillation that the particle performs about the equilibrium position.

▶ Watch Video Solution

25. Find the amplitude of the simple harmonic motion obtasined by combining the motions

$x_1 = (2.0cm)\sin \omega t$

and $x_2 = (2.0cm)\sin\left(\omega t + \dfrac{\pi}{3}\right)$

▶ Watch Video Solution

26. $x_1 = 3\sin\omega t \Rightarrow x_2 = 4\cos\omega t$. Find (i) amplitude of resultant SHm, (ii) equation of the resultant SHm.

▶ **Watch Video Solution**

27. Two partical A and B execute simple harmonic motion according to the equation $y_1 = 3\sin\omega t$ and $y_2 = 4\sin[\omega t + (\pi/2)] + 3\sin\omega t$. Find the phase difference between them.

▶ **Watch Video Solution**

28. If the displacement of a moving point at any time is givenby an equation of the form $y(t) = a\cos\omega t + b\sin\omega t$, shown that the motion is simple harmonic . If $a = 3m, b = 4m$ and $\omega = 2$: determine the period , amplitude, maximum velocity and maximum acceleration.

▶ Watch Video Solution

29. If two SHMs are repersented by $y_1 = 10\sin(4\pi + \pi/2)$ and $y_2 = 5(\sin 2\pi t + \sqrt{8}\cos 2\pi t)$, compare their amplitudes .

▶ Watch Video Solution

30. A force $F = -10x + 2$ acts on a particle of mass $0.1kg$ where x is in m and F in newton. If is released from rest at $x = 0$, find:

a. Amplitude:

b. Time period:

c. Equation of motion.

31. A person normally weighing $60kg$ stands on a plateform which oscillates up and down har monically at a frequency $2.0 \sec^{-1}$ and an amplitude $5.0cm$. If a machine on the plateform gives the person's weight
against time deduce the maximum and minimum reading it will shown, $Takeg = 10m/\sec^2$.

32. A spring of stiffness constant k and natural length l is cut into two parts of length $3l/4$ and $l/4$, respectively, and an arrangement is made as shown in figure . If the mass is slightly displaced , find the time period of
oscillation.

(3/4)l ⎯⎯ww⎯ m ⎯⎯ww⎯ $l/4$

(a)

$k_1 = (4/3)k$ ⎯⎯ww⎯ m ⎯⎯ww⎯ $k_2 = 4k$

(b)

▶ Watch Video Solution

---

33. A particle of mass m is attached with three springs

A, B and C of equal force constancts k as shown in

figure. The particle is pushed slightly against the spring C

and released. Find the time period of oscillation.

34. Two light spring of force constants k_1 and k_2 and a block of mass m are in the line AB on a smooth horizontal table such that one end of each spring is fixed on right supports and the other and is free as shown in figure
The distance CD between the free ends of the spring is 60cm. If the block $(k_1 = 1.8N/m, k_2 = 3.2N/m$ and $m = 200g)$. Is the motion simple harmonic?

▶ Watch Video Solution

35. figure shown a partical mass $m = 100g$ attaches with four identical spring , each of length $l = 10cm$. Initical tension in each spring is $F_0 = 25N$. Neglecting gravity , Calculate the period of small obscillation of the article along a line perpenducular to the plane of the figure .
36. Find the time period of m if pulley P is light and small.

Fig. 4.43

Watch Video Solution

37. A solid cylinder of mass m is attached to a horizontal spring with force constant k. The cylinder can roll without slipping along the horizontal plane. (See the accompanying figure.) Show that the center of mass of the cylinder executes simple harmonic motion with a period $T = 2\pi\sqrt{\dfrac{3m}{2k}}$, if displaced from mean position.

38. figure (a) and (b) represent spring- block system. If m is displacement slightly , find the time period of oscillation of the system.

(a)   (b)
39. Two identical balls A and B eavh of mass $0.1kg$ are attached to two identical mass less is springs. The spring-mass system is consetrained to move inside a right smooth pipe bent in the form of a circle as shown in

figure . The pipe is fixed in a horigental plane. The center

of the balls can move in a circle of radius $0.06m$. Each

spring has a natural length of $0.06\pi m$ and force constant

$0.1N/m$. Initially, both the balls are displaced bu an

angle $\theta = \pi/6$ dadius withrespect to diameter PQ of the

circle and released from rest.

a. Calculate the frequency of oscillation of the ball B.

b. What is the total energy of the system ?

c. Find the speed of the bal A when A and B are at the two

ends of the diameter PQ.

40. The system shown in the figure can move on a smooth surface. They are initially compressed by $6cm$ and then released, then choose the correct options.

$$k = 800 \text{ N/m}$$

(a) The system performs, SHM with time period $\dfrac{\pi}{10} s$

(b) The block of mass $3kg$ perform SHM with amplitude $4cm$

(c) The block of mass $6kg$ will have maximum momentum of $2.40kg - m/s$

(d) The time periods of two blocks are in the ratio of $1: \sqrt{2}$

▶ Watch Video Solution

41. A simple pendulum of length 40 cm oscillates with an angular amplitude of 0.04 rad. Find a. the time period b.

the linear amplitude of the bob, c. The speed of the bob

when the strig makes 0.02 rad with the vertical and d. the

angular acceleration when the bob is in moemntary rest.

Take $g = 10ms^{-2}$.

42. A ball is suspended by a thread of length l at the point

O on an incline wall as shown. The inclination of the wall

with the vertical is (a)the thread is displacement through

a small angle away from the vertical and (b) the ball is

released. Find the period of oscillation of pendulum.

Consider   both   cases
a. $\alpha > \beta$

b. $\alpha < \beta$

Assuming that any impact between the wall and the ball is elastic.

▶ Watch Video Solution

43. figure show the identical simple pendulums of length. One is tilled at an angle α and imparted an initial velocity v_1 towards mean position and at a velocity v_2 at an initial angular displacement β. Find the phase difference in oscillations of these two pendulums

(i)

(ii)

Fig 4

▶ **Watch Video Solution**
44. In previous question, if the second pendulum bob is thrown at velocity v_2 at an angle β from mean position, but on other side of mean position , find the phase diffrence in the two SHMs now as show in the figure.

48. Assume that a tunnel is dug across the earth (radius=R) passing through its centre. Find the time a particle takes to cover the length of the tunnel if (a) it is projected into the tunnel with a speed of $\sqrt{(gR)}$ (b) it is released from a height R above the tunnel (c) it is thrown

vertically upward along the length of tunnel with a speed

of $\sqrt{gR}$.

49. Consider a solid cylinder of the density ρ_s cross section area A and h ploating in a liquid of density ρ_l as shown in figure $(\rho_l > \rho_s)$. It is depressed sligtly and allowed to oscillation.
Fig. 4.76

50. A V-shaped glass tube of uniform cross section is kept in a vertical plane as shown. A liquid is poured in the tube. In equilibrium the level of liquid in both limbs of tube are equal. Find the angular frequency of small oscillation of liquid.
Fig. 4.77

A. $\pi\sqrt{\dfrac{2h}{g\sin\alpha.\ \sin\beta}}$

B. $2\pi\sqrt{\dfrac{h}{g\sin\alpha.\ \sin\beta}}$

C. $2\pi\sqrt{\dfrac{h}{2g\sin\alpha.\ \sin\beta}}$

D. None of these

Answer: B

51. Find the amplitude and initial phase of a partical in SHM, whose motion equation is given as

$$y = A \sin \omega t + B \cos \omega t$$

52. Two simple harmonic motion are represent by the following equations

$$y_1 = 10 \sin(\pi/4)(12t + 1)$$

$$y_2 = 5\left(\sin 3\theta t + \sqrt{3}\cos 3\theta t\right)$$

Here t is in seconds.

Find out the ratio of their amplitudes.What are the time period of the two motion?

▶ **Watch Video Solution**

Solved Example

1. A uniform horizontal plank is resting symmetrically in a horizontal position on two cylindrical droms , which are apinning in in opposite direction about their horizontal axes with equal angular velocity . The distance between the axes with equal angular velocity. The distance between the axes is $2L$ and the coefficient of friction

between the plank and cylender is μ . If the plank is displaced slightly from the equilibrium position along its length and released, show that it performs simple horizontal motion. Caculate also the time period of motion.

2. A uniform plank of mass m, free to move in the horizontal direction only , is placed at the top of a solid cylinder of mass $2m$ and radius R. The plank is attached to a fixed wall by mean of a light spring constant k. There is no slipping between the cylinder and the plank , and between the cylinder and the ground. Find the time

period of small oscillation of the system.
3. A block of mass m hangs by means of a string which goes over a pulley of mass m and moment of inertia I, as shown in the diagram. The string does not relative to the

pulley. Find the frequency of small oscillations.
4. The pulley shown in figure has a moment of inertias I about its xis and mss m. find the tikme period of vertical oscillastion of its centre of mass. The spring has spring constant k and the string does not slip over the pulley.
5. An L-shaped bar of mass M is pivoted at one of its end so that it can freely rotate in a vertical plane, as shown in the figure

a. Find the value of θ_0 at equilibrium

b. If it is slightly displacement from its equilibrium position, find the frequency of oscillation.
6. A certain of a perfect gas is enclosed in a cylinder of volume V_0 fitted with a smooth heavy piston of mass m and area a. The piston is displaced through a small distance downwards so as to compress the gas isothermally , and find its period . Take the atmospheric pressure as $P_{a \to m}$.

▶ **Watch Video Solution**

7. A spherical ball of mass m and radius r rolls without slipping on a rough concave surface of large radius R. It makes small oscillations about the lowest point. Find the time period.

▶ **Watch Video Solution**

8. A simple pendulum of length L and mass m has a spring of force constant k connected to it at a distance h below its point of suspension. Find the frequency of vibrations of the system for small values of amplitude.

9. One end of an ideal spring is fixed to a wall at origin O and axis of spring is parallel to x-axis. A block of mass $m = 1kg$ is attached to free end of the spring and it is performing SHM. Equation of position of the block in co-ordinate system shown in figure is $x = 10 + 3\sin(10t)$. Here, t is in second and x in cm. Another block of mass $M = 3kg$, moving towards the origin with velocity $30cm/s$ collides with the block performing SHM at $t = 0$ and gets stuck to it. Calculate

(a) new amplitude of oscillations,

(b) neweqution for position of the combined body,

(c) loss of energy during collision. Neglect friction.

> ▶ **Watch Video Solution**

10. A circular spring of natural length l_0 is cut and weided with two beads of masses m_1 and $m_2$each that the such that the ratio of the original spring is k find the frequency of oscillation of the heads in a smooth horizontal rigid tube. Assume m_(1) = m and m_(2) = 3 m`.
Fig. 4.110

▶ **Watch Video Solution**

11. A uniform cylinder of mass m and radius R is in equilibrium on an inclined by the action of a light spring of stiffness, gravity and reaction force acting on it .If the angle of inclination of the plane is ϕ , find the angular frequency of small oscillation of the cylinder
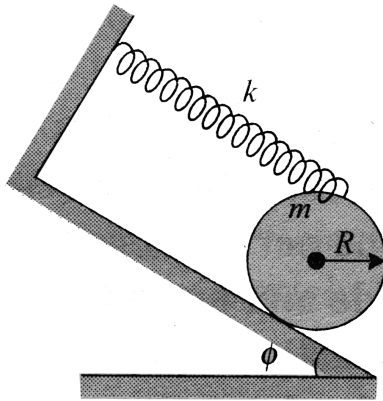

12. A $2kg$ mass is attached to a spring of force constant $600N/m$ and rests on a smooth horizontal surface. A second mass of $1kg$ slides along the surface toward the first at $6m/s$.

(a) Find the amplitude of oscillation if the masses make a perfectly inelastic collision and remain together on the spring. what is the period of oscillation ?

(b) Find the amplitude and period of oscillation if the collision is perfectly elastic.

(c) For each case , write down the position x as a function of time t for the mass attached to the spring, assuming that the collision occurs at time $t = 0$. What is the impulse given to the `2kg mass in each case ?

13. A spring block pendulum is shown in figure . The system is hanging in equilibrium. A bullet of mass $m/2$ moving at a speed u bites the block from downwards direction and gets embedded in it. Find the amplitude of oscillation of the block now. Also find the time taken by the block to reach its upper extreme position after hit by bullet.

Natural length of spring

h

m
14. Figure shown a spring block system hanging in equilibrium. The block of system is pulled down by the distance x and imparted a velocity v in downward direction as shown in figure. Find the time it will take to reach its mean position. Also find the maximum distance to which if will move before returning back towards mean

position.

Equilibrium
position

(a)

(b)
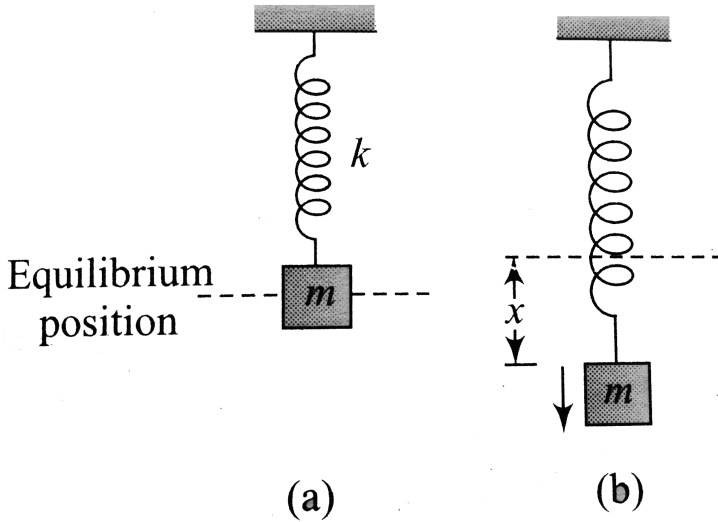

15. Figure shown a block P of mass m resting on a smooth

horizontal surface, attached to a spring of force constant

k which is rigidly fixed on the wall on left side, shown in

the figure . At a distance l to the right of the block there is

a rigid wall. If block is pushed towards loft so that spring

is compressed by a distance $5l/3$ and when released, if will starts its oscillations. If collision of block with the wall is considered to be perfectly elastic. Find the time period of oscillation of the block.
Exercise 4.1

1. i.The acceleration versus time graph of a partical SHM is shown in the figure . Plot the displacement versus time

graph

(A)
ii. The frection of oscillation is.........

iii. The displacement amplitude is ....

iv. At $t = 0$, the velocity of the partical is ......

v. The kinetic energy of the partical is maximum at $t = $ ....

and t = ...

vi. The potential energy is maximum at t = ... : t = ... ans t

= ....

▶ Watch Video Solution

2. A partical slides back and forth between two inclined friction lessplanes.
Fig. 4.28

a. If h is the initial height of the partical, the period of oscillation......

b. Is the motion oscillatory? Is it SHM?

> ▶ **Watch Video Solution**

3. The equation of displacement of two waves are given as

$$y_1 = 10\sin\left(3\pi t + \frac{\pi}{3}\right), \, y_2 = 5\left[\sin 3\pi t + \sqrt{3}\cos 3\pi t\right]$$

Then what is the ratio of their amplitudes

▶ **Watch Video Solution**

4. Suppose a tunnel is dug along a diameter of the earth. A particle is dropped from a point a distance h directly above the tunnel. The motion of the particle as seen from the earth is

▶ **Watch Video Solution**

5. The equation of motion of a particle started at $t = 0$ is given by $x = 5\sin(20t + \pi/3)$ where x is in centimeter and t in second. When does particle

(a) first come to rest

(b) first have zero acceleration

(c) first have maximum speed?

▶ Watch Video Solution

6. A partical starts SHM frommean position O executing SHM A and B are the two point at which its velocity is zero . It passes through a cartain point O at time $t_1 = 0.5$ and $t_2 = 1.5s$ with a speed of $3m/s$.
i. The maximum speed ....

ii. ratio AP/PB .....

▶ **Watch Video Solution**

7. If the maximum speed and acceleration of a partical executing SHM is $20cm/s$ and $100cm/s$, find the time period od oscillation.

▶ **Watch Video Solution**

8. A partical is performing SHM of amplitude 'A' and time period 't'. Find the time taken by the partical to go from $0 \rightarrow A/2$.

9. A particle of mass $2kg$ is moving of a straight line under the actin force $F = (8 - 2x)N$. It is released at rest from $x = 6m$.

a. Is the particle moving simple hormonically.

b. Find the equilibrium position of the particle.

c. Write the equation of motion of the particle.

d. Find the time period of SHM.

10. A partical executing simple harmonic motion has amplitude of $1m$ and time period $2s At t = 0$, net force on the partical is zero. Find the equation of displacement of the partical.

11. In the previous question, find maximum velocity and maximum acceleration.

12. A partical in SHM ha a period of 4s .It takes time t_1 to start from mean position and reach half the amplitude. In another case it taken a time t_2 to start from mean position and reach half the amplitude. Find the ratio t_1 / t_2

13. A particle is subjected to two simple harmonic motion in the same direction having equal amplitudes and equal frequency. If the resultant amplitude is equal to the amplitude of the individual motions. Find the phase difference between the individual motions.

14. A particle executes SHM of period $1.2s$ and amplitude $8cm$. Find the time it takes to travel $3cm$ from the positive extremity of its oscillation. $\left[\cos^{-1}(5/8) = 0.9rad\right]$

15. A cylinder of mass M and radius R is resting on a horizontal platform (which is parallel to the x-y plane) with its axis fixed along the y-axis and free to rotate about its axis. The platform is given a motion in the x-direction given by $x = A\cos(\omega t)$. There is no slipping between the cylinder and platform. The maximum torque acting on the cylinder during its motion is ....

16. The figure shows the displacement-time graph of a particle executing SHM. If the time period of oscillation is $2s$, then the equation of motion is given by

$X = $ _____
17. A boby excuting SHM has its velocity its $10cm/see$ and $7cm/see$ when its displacement from

the mean position are $3cm$ and $4cm$, respectively. Calculate the length of the path.

18. A body undergoing SHM about the origin has its equation is given by $X = 0.2\cos 5\pi t$. Find its average speed from $t = 0 \rightarrow t = 0.7\,\text{sec}$.

19. The acceleration-displacement $(a - X)$ graph of a particle executing simple harmonic motion is shown in

the figure. Find the frequency of oscillation.
20. A block is kept on a horizontal table. The stable is undergoing simple harmonic motion of frequency $3Hz$ in a horizontal plane. The coefficient of static friciton between block and the table surface is 0.72. find the

maximum amplitude of the table at which the block does not slip on the surface.

> ▶ **Watch Video Solution**

21. A linear harmonic oscillator has a total mechanical energy of $200J$. Potential energy of it at mean position is $50J$. Find

(i) the maximum kinetic energy,

(ii) the minimum potential energy,

(iii) the potential energy at extreme positions.

> ▶ **Watch Video Solution**

22. The potential energy of a particle oscillating along x-axis is given as

$$U = 20 + (x - 2)^2$$

Here, U is in joules and x in meters. Total mechanical energy of the particle is $36J$.

(a) State whether the motion of the particle is simple harmonic or not.

(b) Find the mean position.

(c) Find the maximum kinetic energy of the particle.

▶ **Watch Video Solution**

---

23. $x_1 = 3 \sin \omega t$

$x_2 = 5 \sin(\omega t + 53°)$

$$x_3 = -10\cos \omega t$$

Find amplitude of resultant SHM.

Exercise 4.2

1. A block of mass m is suspended from the ceiling of a stationary standig elevator through a spring of spring constant k. Suddenly, the cable breaks and the elevator starts falling freely. Show that the bklock now executes a simple harmonic motion of amplitude $m\dfrac{g}{k}$ in the elevator

2. The left block in filgure collides inelastically with the right block and sticks to it. Find the amplitude of the resulting simple harmonic motion.
3. A ball of a mass m is connected to two rubber bands of length L, each under tension T as shown in figure . The ball is displaced by a small distance y perpendicular to the length of the rubber band. Assuming the tension does not change , shown that (a) the restoring force is

$-(2T/L)y$ and (b) the system exhibits simple harmonic motion with an angular frequency $\omega = \sqrt{2T/mL}$s.
▶ Watch Video Solution

4. A mass M attached to a spring oscillation with a period of $2s$. If the mass is increased by $2kg$, the period increases by 1s, find the initial mass m assuming that Hooke's low is obeyed.

▶ Watch Video Solution

Fig
5.

A horizontal rod of mass m and length L is pivoted at one end The rod's other end is supported by a spring of force constant k. The rod is displaced by a small angle θ from its horizontal equilibrium position and released. The angular frequency of the subsequent simple harmonic motion is

6. A pendulum has a period T for small oscillations. An obstacle is placed directly beneath the pivot, so that only the lowest one - quarter of the string can follow the pendulum bob when it swings to the left of its resting position. The pendulum is released from rest at a certain point. How long will it take to return to that point again ? In answering this question, you may assume that the angle between the moving string and the vertical stays

small throughout the motion.
7. A horizontal spring block system of mass M executes

simple harmonic motion. When the block is passing

through its equilibrium position, an object of mass m is put on it and the two move together. Find the new amplitude and frequency of vibration. Given, k is the spring constant of the system.

8. A spring of spring constant $200N/m$ has a block of mass $1kg$ hanging at its one end and form the other and the spring is attached to a celling of an elevator. The elevator rises upwards with an acceleration of $g/3$.

When acceleration is suddenly ceased , then what should be the angular frequency and elongation during the time

when the elevator is accelerating?

$\uparrow g/3$

m
9. With the assumption of no slipping, determine the mass m of the block which must be placed on the top of a $6kg$ cart in order that the system period is $0.75s$. What is

the minimum coefficient of static friction μ_s for which the block will not slip relative to the cart is displaced $50mm$ from the equilibrium position and released? Take $(g = 9.8m/s^2)$.
10. A simple pendulum of length l swings from a small angle θ . Its swinging is constrained by the smooth inclined planes OP and PC. Assuming elastic collision of the bob with the plane PC, find

a. angular amplitude for the motion of the bob in the left hand side of its mean position.

b. time period for a complete cycle of motion of the bob.
11. A uniform rod of length l is pivoted distance x from the top of the rod . Neglecting friction find the (a) value of x for minimum period of oscillation, (b) minimum period of oscillation of the rod.
12. The period of oscillation of a spring pendulum is T. If the spring is cut into four equal parts, then find the time period corresponding to each part.

13. A uniform stick of length l is hinged so as to rotated about a harmonic axis perpendicular to the stick, at a distance from the center . Find the value of x, for which the time period is minimum.

14. A ball is released in a smooth dimetrical tunnel of earth

a. After how much time will it pass through the center of earth?

b. With what speeed will the ball pass the center earth?

15. A body is in SHM with period T when oscillated from a freely suspended spring. If this spring is cut in two parts of length ratio $1:3$ & again oscillated from the two the two parts separatedly, then the periods are $T_1 \& T_2$ then find T_1/T_2.

16. A point mass m is suspended at the end of a massless wire of length l and cross section. If Y is the Young's modulus for the wire, obtain the frequency of oscillation for the simple harmonic motion along the vertical line.

17. In the figure shown, the block A of mass m collides with the identical block B and after collision they stick

together. Calculate the amplitude of resulatant vibration.
18. Figure shown a block P of mass m resting on a smooth floor at a distance l from a regid wall. Block is pushed towards right by a distance $3/2$ and released. When block passes from its mean position another block of mass m_1

so that the combined block just collides with the left wall.
19. Figure shown a block P of mass m resting on a smooth horizontal ground, attached to one and a spring of force constant k in netural length. If another block od same mass and moving with a velocity u towards right is placed on the block on which stick to it due to friction ,find the time it will take to reach its exterme position. Also find the

amplitude of oscillation of the combined mass $2m$.
20. Figure shown a spring block system hanging in equilibrium. If a velocity v_0 is imparted to the block in downwards direction . Find the amplitude of SHM of the block and the time after which it will reach a point at half

the amplitude of block

l_1
6. In the shown arrangement, both the spring are in their natural lengths. The coefficient of friction between m_2 and m_1 is μ. There is no friction between m_1 and the surface. If the blocks are displaced slightly, they together perform simple harmonic motion. Obtain
(a) Frequency of such oscillations.

(b) The condition if the friction force on clock m_2 is to act in the direction of its displacement from mean position.

(c) If the condition obtained in (b) is met, what can be maximum of their oscillations ?

7. A uniform dise of mass m and radius R is connected with two light springs 1 and 2. The springs are connected at the highest point M and the CM 'N' of the dise. The other ends of the springs are rigidly attached with vertical walls. If we shift the CM in horizontalby a small distance , the discoscillates simple harmonically. Assuming a perfect rolling of the dise on the horizontal surface , find the angular frequency of oscillation.

Fig
8. Consider a liquid which fills a uniform U - tube uniform U- tube, as shown in figure , up to a height h. Find angular the frequency of small oscillation of th eliquid in the U - tube.
Fig. 4.130

9. A particle of mass m is located in a unidimensional potential field where potential energy of the particle depends on the coordinates x as $U(x) = \dfrac{A}{x^2} - \dfrac{B}{x}$ where A and B are positive constant.

Find the time period of small oscillation that the particle perform about equilibrium position.

10. A particle of mass $2kg$ is moving of a straight line under the actin force $F = (8 - 2x)N$. It is released at rest from $x = 6m$.

a. Is the partical moving simple harmonically.

b.Find the equilibrium position of the particle.

c. Write the equation of motion of the partical.

d. Find the time period of SHM.

11. A body of mass m hangs from a smooth fixed pulley P_1 by the inextensible string fitted with the springs of stiffness k_1 and k_2 . The string passes over the smooth light pulley P_2 which is connected with another ideal spring of stiffness k_2. Find the period of oscillation of the

body.
12. A block of mass m connected with a smooth prismatic wedge of mass m is released from rest when the spring is relaxed. Find the angular frequency of oscillation.
13. A stepped pulley having mass m redius of gyration k is connected with two ideal springs of stiffnesws k_1 and k_2 as shown in figure. If the pulley shown in the figure . If the

pulley rolls without sliding, find the angular frequency of its oscillation.
14. A stepped dies of mass M and radius R is pivoted at its center C smoothly. An inextensible string connected with a light spring of stiffness k passes over the pulley. One end of the string is rigidly connected with the ground and the other end is attached to a body of mass

m . If the string does not slide on the pulley, find the angularfrequency of oscillation of the syytem
> Watch Video Solution

15. A disc of mass m hanged by a string is attached at P and a spring of stiffness k is attached at O. Find the frequency of small angular oscillation of the disc if the

string does not slide over the pulley. Assume $l_0 = Ml$ of the disc about O.
16. A uniform cylinder of length (L) and mass (M) having cross sectional area (A) is suspended, with its length vertical, from a fixed point by a massless spring, such that it is half - submerged in a liquid of density (rho) at equilibrium position. When the cylinder is given a small downward push and released it starts oscillating vertically with small amplitude. If the force constant of the spring is (k), the prequency of oscillation of the cylindcer is.

20. If velocity of a partical moving along a straight line changes sinusoidally with time as shown in given graph. Find the average speed over time interval $t = 0$ to

$t = 2(2n - 1)$ second, n being any positive interget.
21. In the figure shown, mass $2m$ connected with a spring

of force constant k is at rest and in equilibrium. A partical

of mass m is released from height $4.5mg/k$ from $2m$.

The partical stick to the block. Neglecting the duration of

collision find time from the release of m to the moment

when the spring has maximum compression.
Fig. 4.141

1. While a particle executes linear simple harmonic motion

   A. its linear velocity and acceleration pass through their maximum and minimum values once in each oscillation.

   B. Its linear velocity and acceleration pass through their maximum and minimum values twice in each oscillation.

   C. its linear velocity and acceleration pass through their maximum and minimum values four times in each oscillation.

D. its linear velocity and acceleration always attain

their peak values simlataneaously.

Answer: B

2. While a particle executes simple harmonic motion, the

rate of change of acceleration is maximum and minimum

respectively at

    A. the mean position and extreme positions

    B. the extreme positions and mean position

    C. the mean position alternatively

D. the extreme positions alternatively.

Answer: A

3. A hollow sphere filled with water through a small body in it is then hung by a long thread and made to oscillation As the water slowly force end of the hole at the bottom the period of oscillation will

    A. go on increasing

    B. go on decreasing

    C. first increases and then decreases

    D. first decreases and then increases

Answer: D

4. A simple pendulum oscillates slightly above a large horizontal metal plate. The bob is given a charge. The time period

    A. has no reffect, whatever be the nature of charge

    B. always decreases, whatever be the nature of charge

    C. always increases, whatever be the nature of charge

    D. a increases or decreases depending upon the nature of charge.

Answer: B

5. A block is resting on a piston which executes simple harmonic motion in vertical plain with a period of $2.0s$ in vertical plane at an amplitude just sufficient for the block to separate from the piston. The maximum velocity of the piston is

A. $\dfrac{5}{\pi} \dfrac{m}{s}$

B. $\dfrac{10}{\pi} \dfrac{m}{s}$

C. $\dfrac{\pi}{2} \dfrac{m}{s}$

D. $\dfrac{20}{\pi} \dfrac{m}{s}$

Answer: B

6. The number of independent constituent simple harmonic motions yielding a resultant displacement equation of the periodic motion as $y = 8\sin^2\left(\dfrac{t}{2}\right)\sin(10t)$ is

A. 8

B. 6

C. 4

D. 3

Answer: D
7.

The diagram below shows a sinusoidal curve. The equation of the curve will be

A. $y = 10\sin\left(16t + \dfrac{\pi}{4}\right) cm$

B. $y = 10\sin\left(16t + \dfrac{\pi}{3}\right) cm$

C. $y = 10 \sin\left(16t - \dfrac{\pi}{4}\right) cm$

D. $y = 10 \cos\left(16t + \dfrac{\pi}{4}\right) cm$

Answer: C

The following figure shows the displacement versus time graph for two particles A and B executing simple

harmonic motions. The ratio of their maximum velocities

is

A. $3:1$

B. $1:3$

C. $1:9$

D. $9:1$

Answer: A

 Watch Video Solution

9.

The variation of velocity of a particle executing SHM with time is shown is fig. The velocity of the particle when a phase change of $\dfrac{\pi}{6}$ takes place from the instant it is at one of the extreme positions will be

A. $3.53\dfrac{m}{s}$

B. $2.5\dfrac{m}{s}$

C. $4.330\dfrac{m}{s}$

D. none of these

Answer: B

10. In the previous problem, the displacement of the particle from the mean position corresponding to the instant mentioned is

A. $\dfrac{5}{\pi} m$

B. $\dfrac{5\sqrt{3}}{\pi} m$

C. $\dfrac{10\sqrt{3}}{\pi} m$

D. $\dfrac{5\sqrt{3}}{2\pi} m$

Answer: B

11. In problem 9 , the acceleration of the particle is

A. $\dfrac{5\sqrt{3}\pi}{2}\dfrac{m}{s}$

B. $\dfrac{5\pi^2}{2}\dfrac{m}{s^2}$

C. $\dfrac{5\sqrt{3}\pi}{4}\dfrac{m}{s^2}$

D. $5\sqrt{3}\dfrac{m}{s^2}$

Answer: C

▶ Watch Video Solution

12. In problem 9 the acceleration of the particle is

A. $\dfrac{10}{\pi}m$ and $5\pi\dfrac{m}{s^2}$

B. $\dfrac{5}{\pi}m$ and $\dfrac{5\pi}{2}\dfrac{m}{s^2}$

C. $\dfrac{10}{\pi}m$ and $\dfrac{5\pi}{2}\dfrac{m}{s^2}$

D. $\dfrac{5}{\pi}m$ and $\dfrac{5\pi}{4}\dfrac{m}{s^2}$

Answer: C

23. A block of mass 4 kg hangs from a spring constant $k = 400\dfrac{N}{m}$. The block is pulled down through 15 cm below and released. What is its kinetic energy when the block is 10 above the equilibrium position.?

A. $5J$

B. $2.5J$

C. $1J$

D. $1.9J$

Answer: B

24. A body of mass 100 g attached to a spring executed SHM of period 2 s and amplitude 10 cm. How long a time is required for it to move from a point 5 cm below its equilibrium position to a point 5 cm above it, when it makes simple harmonic vertical oscillation (take $g = 10\frac{m}{s^2}$)?

A. 0.6 s

B. $\frac{1}{3}s$

C. $1.5s$

D. $2.2s$

Answer: B

> ▶ Watch Video Solution

25. A particle executing SHM has velocities u and v and $ae \le rationa$ and b` in two of its position. Find the distance between these two positions.

A. $\dfrac{u^2 - v^2}{a + b}$

B. $\dfrac{v^2 + u^2}{a - b}$

C. $\dfrac{v^2 + u^2}{a + b}$

D. $\dfrac{v^2 - u^2}{a - b}$

Answer: A

26. Two particles are executing identical simple harmonic motions described by the equations $x_1 = a\cos\left(\omega t + \left(\frac{\pi}{6}\right)\right)$ and $x_2 = a\cos\left(\omega t + \frac{\pi}{3}\right)$. The minimum interval of time between the particles crossing the respective mean positions is $\frac{\pi}{2\omega}$

A. $\dfrac{\pi}{2\omega}$

B. $\dfrac{\pi}{3\omega}$

C. $\dfrac{\pi}{4\omega}$

D. $\dfrac{\pi}{6\omega}$

Answer: D

27. The KE and PE , at is a particle executing SHM with amplitude A will be equal when its displacement is

A. $A\sqrt{2}$

B. $\dfrac{A}{2}$

C. $\dfrac{A}{\sqrt{2}}$

D. $A\sqrt{\dfrac{2}{3}}$

Answer: C

28. A body is performing simple harmonic motion with amplitude a and line period T variation of its acceleration (f) with time(t) is shown in figure If a line x velocity of the body is x which of the following graph is correct?

A. a.

32. Two masses (m_1) and (m_2) are suspended together by a massless spring of spring constant (k). When the masses are in equilibrium, (m_1) is removed without disturbing the system. Find the angular frequency and amplitude of oscillation of (m_2).
A. $\dfrac{m_1 g}{k}$

B. $\dfrac{m_2 g}{k}$

C. $\dfrac{(m_1 + m_2)g}{k}$

D. $\dfrac{(m_2 - m_1)g}{k}$

Answer: A

33. A body of mass m is released from a height h to a scale pan hung from a spring. The spring constant of the spring is k, the mass of the scale pan is negligible and the body does not bounce relative to the pan, then the amplitude of vibration is

A. $\dfrac{mg}{k}\sqrt{1-\dfrac{2hk}{mg}}$

B. $\dfrac{mg}{k}$

C. $\dfrac{mg}{k}+\dfrac{mg}{k}\sqrt{1+\dfrac{2hk}{mg}}$

D. $\dfrac{mg}{k}-\dfrac{mg}{k}\sqrt{1-\dfrac{2hk}{mg}}$

Answer: C

34. Frequency of a particle executing SHM is 10 Hz. The particle is suspended from a vertical spring. At the highest point of its oscillation the spring is unstretched. Maximum speed of the particle is $\left(g = 10\dfrac{m}{s} \right)$

A. $2\pi\dfrac{m}{s}$

B. $\pi\dfrac{m}{s}$

C. $\dfrac{1}{\pi}\dfrac{m}{s}$

D. $\dfrac{1}{2\pi} / \dfrac{m}{s}$

Answer: D

35. The potential energy of a particle of mass $1kg$ in motion along the x- axis is given by: $U = 4(1 - \cos 2x)$, where x in meters. The period of small oscillation (in sec) is

A. 2π

B. π

C. $\dfrac{\pi}{2}$

D. $\sqrt{2}\pi$

Answer: C

▶ **Watch Video Solution**

36. An object of mass $0.2kg$ executes simple harmonic oscillation along the $x - a\xi s$ with a frequency of $(25/\pi)Hz$. At the position $x = 0.04$, the object has Kinetic energy of $0.5J$ and potential energy `0.4 J. The amplitude of oscillations is......m.

A. $0.05m$

B. $0.06m$

C. $0.01m$

D. none of these

Answer: B

39.
Two springs with negligible masses and force constants

$k_1 = 200\dfrac{N}{m}$ and $K_2 = 160\dfrac{N}{m}$ are attached to the block

of mass $m = 10kg$ as shown in the fig. Initially the block

is at rest, at the equilibrium position which both springs

are neither stretched nor compressed. At time $t = 0$,

sharp impulse of $50Ns$ is given to the block with a

hammer along the spring.

A. Period of oscillations for the mass m is $\dfrac{\pi}{6}$ s.

B. Maximum velocity of the mass m during its oscillation is $10\dfrac{m}{s}$

C. Data are insufficient to determine maximum velocity.

D. Amplitude of oscillation is $0.83m$.

Answer: D

▶ **Watch Video Solution**
Fig. 4.153

40.

A thin uniform vertical rod of mass m and length I pivoted at point O is shown is Fig. The combined stiffness of the springs is equal to k. The mass of the spring is negligible. The frequency of small oscillation is .

A. $\sqrt{\dfrac{3k}{2m} + \dfrac{g}{l}}$

B. $\sqrt{\dfrac{3k}{2m} + \dfrac{3g}{l}}$

C. $\sqrt{\dfrac{3k}{m} + \dfrac{3g}{2l}}$

D. $\sqrt{\dfrac{3k}{m} + \dfrac{2g}{3l}}$

Answer: C

41. A particle executes SHM with time period 8 s. Initially, it is at its mean position. The ratio of distance travelled by it in the 1st second to that in the 2nd second is

A. $\sqrt{2} : 1$

B. $1 : \left(\sqrt{2} - 1\right)$

C. $\left(\sqrt{2} + 1\right) : \sqrt{2}$

D. $\left(\sqrt{2} - 1\right) : 1$

Answer: B

42. A particle executed S.H.M. starting from its mean position at $t = 0$, If its velocity is $\sqrt{3}b\omega$, when it is at a distance b from the mean positoin, when $\omega = \dfrac{2\pi}{T}$, the time taken by the particle to move from b to the extreme position on the same side is

A. $\dfrac{5\pi}{6\omega}$

B. $\dfrac{\pi}{3\omega}$

C. $\dfrac{\pi}{2\omega}$

D. $\dfrac{\pi}{4\omega}$

Answer: B

43. In a certain oscillatory system (particle is performing SHM), the amplitude of motion is 5 m and the time period is 4 s. the minimum time taken by the particle for passing betweens points, which are at distances of 4 m and 3 m from the centre and on the same side of it will approximately be

A. $\dfrac{16}{45} s$

B. $\dfrac{7}{45} s$

C. $\dfrac{8}{45} s$

D. $\dfrac{13}{45} s$

Answer: C

44. A particle of mass m moving along x-axis has a potential energy $U(x) = a + bx^2$ where a and b are positive constant. It will execute simple harmonic motion with a frequency determined by the value of

    A. b alone

    B. b and a alone

    C. b and m alone

    D. b,a and m alone

Answer: C

45. The instantaneous displacement x of a particle executing simple harmonic motion is given by $x = a_1 \sin \omega t + a_2 \cos \left(\omega t + \dfrac{\pi}{6} \right)$. The amplitude A of oscillation is given by

A. $\sqrt{a_1^2 + a_2^2 + 2a_1 a_2 \cos \left(\dfrac{\pi}{6} \right)}$

B. $\sqrt{a_1^2 + a_2^2 + 2a_1 a_2 \cos \left(\dfrac{\pi}{3} \right)}$

C. $\sqrt{a_1^2 + a_2^2 - 2a_1 a_2 \cos \left(\dfrac{\pi}{6} \right)}$

D. $\sqrt{a_1^2 + a_2^2 - 2a_1 a_2 \cos \left(\dfrac{\pi}{3} \right)}$

Answer: D

46. A simple harmonic motion along the x-axis has the following properties: amplitude $= 0.4m$ the time to go from one extreme position to other is $2s$ and $x = 0.3m$ at $t = 0.5a$. the general equation of the simple harmonic motion is

A. $x = (0.5m)\sin\left[\dfrac{\pi t}{2} + 8°\right]$

B. $x = (0.5m)\sin\left[\dfrac{\pi t}{2} - 8°\right]$

C. $x = (0.5m)\cos\left[\dfrac{\pi t}{2} + 8°\right]$

D. $x = (0.5m)\cos\left[\dfrac{\pi t}{2} - 8°\right]$

Answer: B

47. A spring balance has a scale that can read from 0 to 50 kg. The length of the scale is 20 cm. a body suspended from this balance when displaced and released oscillated harmonically with a time period of 0.6 s. The mass of the body is (take $g = 10\dfrac{m}{s^2}$)

    A. 10 kg

    B. 25 kg

    C. 18 kg

    D. 22.8 kg

Answer: D

▶ **Watch Video Solution**
48.

A soil cylinder of mass M and radius R is connected to a spring as shown in fig. The cylinder is placed on a rough horizontal surface. All the parts except the cylinder shown in the figure are light. If the cylinder is displaced slightly from its mean position and released, so that it performs pure rolling back and forth about its equilibrium position, determine the time period of oscillation?

A. $2\pi\sqrt{\dfrac{M}{k}}$

B. $2\pi\sqrt{\dfrac{3M}{2k}}$

C. $2\pi\sqrt{\dfrac{3M}{k}}$

D. none of these

Answer: B

▶ **Watch Video Solution**
49.

A block A is connected to spring and performs simple

harmonic motion with a time period of 2 s. Another block

B rests on A. The coefficient of static friction between A

and B is $\mu_S = 0.6$. The maximum amplitude of oscillation

which the system can have so that there is no relative

motion between A and B is (take $\pi^2 = g = 10$)

A. 0.3 m

B. 0.6 m

C. 0.4 m

D. 0.52 m

Answer: B

50. A block of mass m is suspended from the ceiling of a

stationary standig elevator through a spring of spring

constant k. Suddenly, the cable breaks and the elevator

starts falling freely. Show that the bklock now executes a

simple harmonic motion of amplitude $m\dfrac{g}{k}$ in the elevator

A. the block executes simple harmonic motion with

time period $2\pi\sqrt{\dfrac{m}{k}}$

B. the block excutes simple harmonic motion with

amplitude $\dfrac{mg}{k}$

C. the block executes simple harmonic motion about

its mean position and the mean position is the

position When the spring acquires its natural

length.

D. all of the above.

Answer: D

51. A mass m attached to a spring of spring constant k is stretched a distance x_0 from its equilibrium position and released with no initial velocity. The maximum speed attained by mass in its subsequent motion and the time at which this speed would be attained are, respectively.

A. $\sqrt{(k)(m)}x_0, \pi\sqrt{\dfrac{m}{k}}$

B. $\sqrt{\dfrac{k}{m}}\dfrac{x_0}{2}, \dfrac{\pi}{2}\sqrt{\dfrac{m}{k}}$

C. $\sqrt{\dfrac{k}{m}}x_0, \dfrac{\pi}{2}\sqrt{\dfrac{m}{k}}$

D. $\sqrt{\dfrac{k}{m}}\dfrac{x_0}{2}, \pi\sqrt{\dfrac{m}{k}}$

Answer: C
12 kg

52.

A plank of mass 12 kg is supported by two identical

springs as shown is Fig. The plank always remains

horizontal. When the plank is pressed down and released

it performs simple harmonic motion with time period 3 s.

When a block of m is attached to the plank the time priod

changes to 6 s. The mass of the block is

A. 48 kg

B. 36 kg

C. 24 kg

D. 12 kg

Answer: B

54. Two springs are made to oscillate simple harmonically due to the same mass individually. The time periods obtained are T_1 and T_2. If both the springs are connected in series and hten made to oscillate by the same mass, the resulting time period will be

A. $T_1 + T_2$

B. $\dfrac{T_1 T_2}{T_1 + T_2}$

C. $\sqrt{T_1^2 + T_2^2}$

D. $\dfrac{T_1 + T_2}{2}$

Answer: C

▶ **Watch Video Solution**
55.

A thin-walled tube of mass m and radius R has a rod of

mass m and vry small cross section soldered on its inner surface. The side-view of the arrangement is as shown in the following figure. The entire arrangement is placed on a rough horizontal surface. The system is given a small angular displacement from its equilibrium position, as a result, the system performs oscillations. The time period of resulting oscillations if the tube rolls without slipping is

A. $2\pi \sqrt{\dfrac{4R}{g}}$

B. $2\pi \sqrt{\dfrac{2R}{g}}$

C. $2\pi \sqrt{\dfrac{R}{g}}$

D. none of these

Answer: B

56. A thin uniform rod of mass 1 kg and length 12 cm is suspended by a wire that passes through its centre and is perpendicular to its length.The wire is twisted and the rod is set oscillating. Time period of oscillation is found to be 3 s. When a flat triangular plate is suspended in same way through its centre of mass, the time period is found to be 6 s. The moment of inertia of the tringular plate about this axis is

A. $0.12kg - m^2$

B. $0.24kg - m^2$

C. $0.48kg - m^2$

D. information insufficient

Answer: C

57. A particle performs SHM about $x = 0$ such that at $t = 0$ it is at $x = 0$ and moving towards positive extreme. The time taken by it to go from $x = 0$ to $x = \dfrac{A}{2}$ is time the time taken to go from $x = \dfrac{A}{2}$ to a. The most suitable option for the blank space is

A. 2

B. $\dfrac{1}{2}$

C. $\dfrac{3A}{T}$

D. $\dfrac{A}{2T}$

Answer: B

58. A particle performs SHM with a period T and amplitude a. The mean velocity of particle over the time interval during which it travels $a/2$ from the extreme position is

A. $\dfrac{A}{T}$

B. $\dfrac{2A}{T}$

C. $\dfrac{3A}{T}$

D. $\dfrac{A}{2T}$

Answer: C

59. A particle performs simple harmonic motion about O with amplitude A and time period T. The magnitude of its acceleration at $t = \dfrac{T}{8}$ s after the particle reaches the extreme position would be

A. $\dfrac{4\pi^2 A}{\sqrt{2T^2}}$

B. $\dfrac{4\pi^2 A}{T^2}$

C. $\dfrac{2\pi^2 A}{\sqrt{2T^2}}$

D. none of these

Answer: A

60. In the previous question, the magnitude of velocity of particle at the mentioned instant is

A. $\dfrac{\pi A}{T}$

B. $\dfrac{\sqrt{2}\pi A}{T}$

C. zero

D. $\sqrt{\dfrac{7}{8}} \times \dfrac{2\pi A}{T}$

Answer: B

61. An object of mass 4 kg is attached to a spring having spring constant $100\frac{N}{m}$. It performs simple harmonic motion on a smooth horizontal surface with an amplitude of 2 m. A 6 kg object is dropped vertically onto the 4 kg object when it crosses the mean position, and sticks to it. the change in amplitude of oscillation due to collision is

A. $1m$

B. $zero$

C. $2\left[1 - \sqrt{\frac{2}{5}}\right]$

D. $2\left[1 - \frac{1}{\sqrt{5}}\right]$

Answer: C

▶ **Watch Video Solution**

62. A cork floating on the pond water executes a simple harmonic motion, moving up and down over a range of 4 cm. The time period of the motion is 1 s. at $t = 0$, the cork is at its lowest position of oscillation, the position and velocity of the cork at $t = 10.5s$, would be

A. 2 cm above the mean position, $0\dfrac{m}{s}$

B. 2 cm below the mean position $0\dfrac{m}{s}$

C. 1 cm above the mean position $2\sqrt{3}\pi\dfrac{m}{s}$ up

D. 1 cm below the mean position, $2\sqrt{3}\pi\dfrac{m}{s}$ up

Answer: A

▶ Watch Video Solution

63. A spring is placed in vertical position by suspending it from a hook at its top. A similar hook on the bottom of the spring is at 11 cm above a table top. A mass of 75 g and of negligible size is then suspended from the bottom hook, which is measured to be 4.5 cm above the table top. The mass is then pulled down a distance of 4 cm and released. Find the approximate. Position of the bottom hook after 5 s? Take $g = 10\dfrac{m}{s^2}$ and hook's mass to be negligible.

   A. 5 cm above the table top

   B. 4.5 cm above the table top

   C. 9 cm above the table top

   D. 0.5 cm above the table top

Answer: D

64. A particle is performing SHM according to the equation $x = (3cm)\sin\left(\dfrac{2\pi}{18} + \dfrac{\pi}{6}\right)$, where t is in seconds. The distance travelled by the particle in 39 s is

A. $24cm$

B. $1.5cm$

C. $25.5cm$

D. none of these

Answer: C
65.

Two springs, each of unstretched length 20 cm but having

different spring constant $k_1 = 1000\dfrac{N}{m}$ and $k_2 = 3000\dfrac{N}{m}$

are attached to two opposite faces of a small block of

mass $m = 100g$ kept on a smooth horizontal surface as

shown in fig. The outer ends of the two springs are now

attached to two pins P_1 and P_2 whose locations are

shown in the figure. as a result of this, the block acquires

a new equilibrium position. The block has been displaced

by small amount from its equilibrium position and

released to perform simple harmonic motion: then

A. new equilibrium position is at 35 cm from P_1 and time period of simple harmonic motion is $\dfrac{\pi}{100}$ s.

B. New equilibrium position is at 20 cm from P_1 and time period of simple harmonic motion is $\dfrac{\pi}{100}$ s

C. new equilibrium position is at 35 cm from P_1 and time period of simple harmonic motion is $\dfrac{\pi}{25}$ s

D. new equilibrium position is at 30 cm from P_1 and time period of simple harmonic motion is $\dfrac{\pi}{26}$ s

Answer: A

▶ **Watch Video Solution**

66. A particle of mass m is present in a region where the potential energy of the particle depends on the x-coordinate according to the expression $U = \dfrac{a}{x^2} - \dfrac{b}{x}$, where a and b are positive constant. The particle will perform.

A. oscillatory motion but not simple harmonic motion about its mean position for small displacements

B. simple harmonic motion with time period $2\pi\sqrt{\dfrac{8a^2m}{b^4}}$ about its mean position for small displacements

C. neither simple harmonic motion nor oscillatory about its mean position for small displacements

D. none of the above

Answer: D

▶ Watch Video Solution

67. A particle performing simple harmonic motion having time period 3 s is in phase with another particle which also undergoes simple harmonic motion at $t = 0$. The time period of second particle is T (less that 3s). If they are again in the same phase for the third time after 45 s, then the value of T will be

A. 2.8 s

B. 2.7 s

C. 2.5 s

D. none of these

Answer: C

---

68. A particle performs SHM on x- axis with amplitude A and time period period T .The time taken by the particle to travel a distance $A/5$ string from rest is

A. $\dfrac{T}{20}$

B. $\dfrac{T}{2\pi} \cos^{-1}\left(\dfrac{4}{5}\right)$

C. $\dfrac{T}{2\pi} \cos^{-1}\left(\dfrac{1}{5}\right)$

D. $\dfrac{T}{2\pi}\sin^{-1}\left(\dfrac{1}{5}\right)$

Answer: B

and the minimum separation ...
Fig. 4.164

78.

A block A of mass m is placed on a smooth horizontal

platform P and between two elastic massless springs S_1 and S_2 fixed horizontally to two fixed vertical walls. The elastic constants of the two springs are equal to k and the equilibrium distance between the two springs both in relaxed states is d. The block is given a velocity v_0 initially towards one of the springs and it then oscillated between the springs. The time period T of oscillations and the minimum separation d_m of the spring will be

A. $T = 2\left(\dfrac{d}{v} + \pi\sqrt{\dfrac{m}{k}}\right), d_m = d$

B. $T = 2\left(\dfrac{d}{v} + 2\pi\sqrt{\dfrac{m}{k}}\right), d_m = d - v\sqrt{\dfrac{m}{k}}$

C. $T = 2\left(\dfrac{d}{v} + 2\pi\sqrt{\dfrac{m}{k}}\right), d_m = d - 2v\sqrt{\dfrac{m}{k}}$

D. $T = 2\pi\sqrt{\dfrac{m}{k}}, d_m = d$

Answer: A

79. A certain simple harmonic vibrator of mass 0.1 kg has a total energy of 10 J. Its displacement from the mean position is 1 cm when it has equal kinetic and potential energies. The amplitude A and frequency n of vibration of the vibrator are

A. $A = \sqrt{2}cm, n = \dfrac{500}{\pi}Hz$

B. $A = \sqrt{2}cm, n = \dfrac{1000}{\pi}Hz$

C. $A = \dfrac{1}{\sqrt{2}}cm, n = \dfrac{500}{\pi}Hz$

D. $A = \dfrac{1}{\sqrt{2}}cm, n = \dfrac{1000}{\pi}Hz$

Answer: A

80. A simple pendulum of length l and mass m is suspended in a car that is moving with constant speed v around a circle of radius r. Find the period of oscillation and equilibrium position of the pendulum.

A. $\dfrac{1}{2\pi}\sqrt{\dfrac{g}{l}}$

B. $\dfrac{1}{2\pi}\sqrt{\dfrac{g}{R}}$

C. $\dfrac{1}{2\pi}\sqrt{\dfrac{\left(g^2 + \frac{v^4}{R^2}\right)}{l}}$

D. $\dfrac{1}{2\pi}\sqrt{\dfrac{v^2}{Rl}}$

87. The velocity v of a particle of mass is moving along a straight line change with time t as $\dfrac{d^2v}{dt^2} = -Kv$ where

K is a particle constant which of the following statement is correct?

A. the particle does not perform SHM.

B. The particle performs SHM with time period $2\pi\sqrt{\dfrac{m}{K}}$

C. The particle performs SHM with frequency $\dfrac{\sqrt{K}}{2\pi}$

D. The particle performs SHM with time period $\dfrac{2\pi}{K}$.

Answer: C
88.

The oscillations represented by curve 1 in the graph are

expressed by equation $x = A \sin \omega t$. The equation for the

oscillation represented by curve 2 is expressed as

A. $x = 2A \sin\left(\omega t - \dfrac{\pi}{2}\right)$

B. $x = 2A \sin\left(\omega t + \dfrac{\pi}{2}\right)$

C. $x = -2A \sin\left(\omega t - \dfrac{\pi}{2}\right)$

D. $x = A \sin\left(\omega t - \dfrac{\pi}{2}\right)$

Answer: A
Fig. 4.170

89.

Graph shows the $x(t)$ curves for the three experiments

involving a particular spring block system oscillating in

SHM. The kinetic energy of the system is maximum at

$t = 4\,\text{s}$. For the situation.

A. 1

B. 2

C. 3

D. same in all

Answer: A

94. A small mass executes linear SHM about O with amplitude a and period T. Its displacement from O at time $T/8$ after passing through O is:

A. $\dfrac{a}{8}$

B. $\dfrac{a}{2\sqrt{2}}$

C. $\dfrac{a}{2}$

D. $\dfrac{a}{\sqrt{2}}$

Answer: D

95. Time period of a particle executing SHM is 8 sec. At $t = 0$ it is at the mean position. The ratio of the distance covered by the particle in the $1st$ second to the $2nd$ second is:

A. $\dfrac{1}{\sqrt{2}+1}$

B. $\sqrt{2}$

C. $\dfrac{1}{\sqrt{2}}$

D. $\sqrt{2}+1$

Answer: D

96. A particle performs SHM with a period T and amplitude a. The mean velocity of particle over the time interval during which it travels $a/2$ from the extreme position is

A. $\dfrac{a}{T}$

B. $\dfrac{2A}{T}$

C. $\dfrac{3A}{T}$

D. $\dfrac{A}{2T}$

Answer: C

97. A graph of the square of the velocity against the square of the acceleration of a given simple harmonic motion is

a. v^2

A.

b. v^2

B.

c. v^2

C.

d. v^2

D.
Answer: D

98. A plank with a small block on top of it is under going

vertical SHM. Its period is $2\,\text{sec}$. The minimum amplitude

at which the block will separate from plank is :

A. $\dfrac{10}{\pi^2}$

B. $\dfrac{\pi^2}{10}$

C. $\dfrac{20}{\pi^2}$

D. $\dfrac{20}{\pi^2}$

Answer: A

99. The potential energy of a simple harmonic oscillator of

mass 2 kg in its mean position is 5 J. If its total energy is 9

J and its amplitude is 0.01 m, its time period would be

A. $\dfrac{\pi}{10} s$

B. $\dfrac{\pi}{20} s$

C. $\dfrac{\pi}{50} s$

D. $\dfrac{\pi}{100} s$

Answer: D

100. A spring mass system preforms $S.H.M$ if the mass is doubled keeping amplitude same, then the total energy of $S.H.M$ will become :

    A. double

    B. half

    C. inchanged

    D. 4 times

Answer: C

▶ **Watch Video Solution**

101. A particle of mass m moves in a one dimensional potential energy $U(x) = -ax^2 + bx^4$, where a and b are positive constant. The angular frequency of small oscillation about the minima of the potential energy is equal to

A. $\pi\sqrt{\dfrac{a}{2b}}$

B. $2\sqrt{\dfrac{a}{m}}$

C. $\sqrt{\dfrac{2a}{m}}$

D. $\sqrt{\dfrac{a}{2m}}$

Answer: B

▶ **Watch Video Solution**

102. A particle of mass m moves in the potential energy U shoen above. The period of the motion when the particle has total energy E is

A. $2\pi\sqrt{\dfrac{m}{k}} + 4\sqrt{\dfrac{2E}{mg^2}}$

B. $2\pi\sqrt{\dfrac{m}{k}}$

C. $\pi\sqrt{\dfrac{m}{k}} + 2\sqrt{\dfrac{2E}{mg^2}}$

D. $2\sqrt{\dfrac{2E}{mg^2}}$

Answer: C

103. The displacement of a body executing SHM is given by $x = A\sin(2\pi t + \pi/3)$. The first time from $t = 0$ when the velocity is maximum is

A. 0.33 s

B. 0.16 s

C. 0.25 s

D. 0.5 s

Answer: A

▶ Watch Video Solution

104. Two particles are in SHM in a straight line about same equilibrium position. Amplitude A and time period T of both the particles are equal. At time $t = 0$, one particle is at displacement $y_1 = +A$ and the other at $y_2 = -A/2$, and they are approaching towards each other. after what time they cross each other?

A. $\dfrac{T}{3}$

B. $\dfrac{T}{4}$

C. $\dfrac{4T}{6}$

D. $\dfrac{T}{6}$

Answer: D

▶ **Watch Video Solution**

105. A system of two identical rods (L-shaped) of mass m and length l are resting on a peg P as shown in the figure. If the system is displaced in its plane by a small angle θ,find the period of oscillations:
A. $2\pi\sqrt{\dfrac{\sqrt{2}l}{3g}}$

B. $2\pi\sqrt{\dfrac{2\sqrt{2}l}{3g}}$

C. $2\pi\sqrt{\dfrac{2l}{3g}}$

D. $3\pi\sqrt{\dfrac{l}{3g}}$

Answer: C

> ▶ **Watch Video Solution**

106. A particle is subjected to two mutually perpendicular simple harmonic motions such that its X and y coordinates are given by $X = 2\sin\omega t$, $y = 2\sin\left(\omega + \dfrac{\pi}{4}\right)$

The path of the particle will be:

A. an ellipse

B. a straight line

C. a parabola

D. circle

Answer: A

▶ **Watch Video Solution**

---

107. Two simple harmonic motions $y_1 = A \sin \omega t$ and $y_2 = A \cos \omega t$ are supre imposed on a particle of mass m.

A. $\dfrac{1}{2} m\omega^2 A^2$

B. $m\omega^2 A^2$

C. $\dfrac{1}{4} m\omega^2 A^2$

D. zero

Answer: B

Multiple Correct

1. A coin is placed on a horizontal platform which undergoes vertical simple harmonic motion of angular frequency ω. The amplitude of oscillation is gradually increased. The coin will leave contact with the platform for the first time

A. at the highest position of the platform

B. at the mean position of the platform

C. for an amplitude of $\dfrac{g}{\omega^2}$

D. for and amplitude of $\sqrt{\dfrac{g}{\omega}}$

Answer: A::C

2. For a simple harmonic motion with given angular frequency ω, two arbitrary initial conditions are necessary and sufficient to determine the motion completely. These initial conditions may be

    A. initial position and initial velocity

    B. amplitude and initial phase

    C. total energy of oscillation and amplitude

    D. total energy of oscillation and initial phase.

Answer: A::B::D

3. The potential energy U of a body of unit mass moving in one dimensional conservative force field is given by $U = x^2 - 4x + 3$. All units are is SI. For this situation mark out the correct statement (s).

A. The body will perform simple harmonic motion about $x = 2$ units.

B. The body will perform oscillatory motion but not simple harmonic motion.

C. The body will perform simple harmonic motion with time period $\sqrt{2}\pi s$.

D. If speed of the body at equilibrium position is $4\dfrac{m}{s}$,

then the amplitude of oscillation would be $2\sqrt{2}m$

Answer: A::C::D

4.

For the spring pendulum shown in fig. the value of spring

constant is $3 \times 10^4 \dfrac{N}{m}$ and amplitude of oscillation is 0.1m. The total mechanical energy of oscillating system is 200 J. Mark out the correct option (s).

A. Minimum PE of the oscillating system is 50 J

B. Maximum PE of the oscillating system is 200J

C. maximum KE of the oscillating system is 200 J

D. minimum KE of the oscillating system is 150 J.

Answer: A::B

 Watch Video Solution

Fig.
5.

An object of mass m is performing simple harmonic motion on a smooth horizontal surface as shown in Fig. just as the oscillating object reaches its extreme position, another object of mass 2 m is dropped on to oscillating object, which sticks to it. For this situation mark out the correct statement (s).

A. Amplitude of oscillations remains unchanged.

B. time period of oscillation remains unchages.

C. The total mechanical energy of the system does not

change.

D. The maximum speed of oscillating object changes.

Answer: A::C::D

6.

A simple pendulum consists of a bob of mass m and a

light string of length l as shown in the fig. another identical ball moving with the small velocity v_0 collides with the pendulum's bob and sticks to it. For this new pendulum of mass 2 m, mark out the correct statements (s).

A. Time period of the pendulum is $2\pi\sqrt{\dfrac{l}{g}}$.

B. The equation of motion for this pendulum is

$$\theta = \dfrac{v_0}{2\sqrt{gl}}\sin\left[\sqrt{\dfrac{g}{l}}t\right]$$

C. The equation of motion for this pendulum is

$$\theta = \dfrac{v_0}{2\sqrt{gl}}\cos\left[\sqrt{\dfrac{g}{l}}t\right].$$

D. Time period of the pendulum is $2\pi\sqrt{\dfrac{2l}{g}}$.

Answer: A::B

7. A particle performing simple harmonic motion undergoes unitial displacement of $\frac{A}{2}$ (where A is the amplitude of simple harmonic motion) in 1 s. At $t = 0$, the particle may be at he extreme position or mean position the time period of the simple harmonic motion can be

A. 6s

B. 2.4s

C. 12s

D. 1.2s

Answer: A::C

8. A particle is subjected to two simple harmonic motions along x and y directions according to $x = 3\sin 100\pi t$, $y = 4\sin 100\pi t$.

   A. Motion of particle will be on ellipse travelling in clockwise direction.

   B. Motion of particle will be on a straight line with slope $\dfrac{4}{3}$

   C. Motion will be simple harmonic motion with amplitude 5.

   D. Phase difference between two motions is $\dfrac{\pi}{2}$

Answer: B::C

9. The speed v of a particle moving along a straight line, when it is at a distance (x) from a fixed point of the line is given by $v^2 = 108 - 9x^2$ (all equation are in CGS units):

A. The motion is uniformly accelerated along the straight line

B. the magnitude of the acceleration at a distance 3 cm from the point is $27\dfrac{cm}{s^2}$

C. the motion is simple harmonic about the given fixed point

D. the maximum displacement from the fixed point is 4

cm

Answer: B::C

▶ Watch Video Solution

10. A horizontal plank has a rectangular block placed on it. The plank starts oscillating vertically and simple harmonically with an amplitude of 40 cm. The block just loses contact with the plank when the latter is at momentary rest Then.

A. the period of oscillation is $\left(\dfrac{2\pi}{5} \right)$

B. `the block weighs double its actual weght, then the plank is at one of the positions of momentary rest.

C. the block weighs 1.5 times its weight on the plank halfway down

D. the block weghs its true weight on the plank when the later moves fastest.

Answer: A::B::C::D

11. A 20g particle is subjected to two simple harmonic motions $x_1 = 2\sin 10t, x_2 = 4\sin\left(10t + \dfrac{\pi}{3}\right)$. Where x_1 and x_2 are in metres and t is in seconds.

A. the displacement of the particle at $t = 0$ will be

$2\sqrt{3}$ m

B. maximum speed of the particle will be $20\sqrt{7}\dfrac{m}{s}$

C. Magnitude of maximum acceleration of the particle

will be $200\sqrt{7}\dfrac{m}{s^2}$

D. Energy of the result motion will be 28 J

Answer: A::B::C::D
Fig. 4.176

12.

A spring block system undergoes SHM on a smooth horizontal surface, the block is now given some charge and a uniform horizontal electric field E is switched on as shown in Fig. As a result

A. Time period of oscillation will increase

B. Time period of oscillation will decrease

C. Time period of oscillation will remain unaffected

D. the mean position of SHM will shift to the right.

Answer: C::D

13. The potential energt of a particle of mass 0.1 kg, moving along the x-axis, is given by $U = 5x(x - 4)J$, where x is in meter. It can be concluded that

    A. the particle is acted upon by a constant force

    B. the speed of the particle is maximum at $x = 2m$

    C. the particle executes SHM

    D. the period of oscillation of the particle $\left(\dfrac{\pi}{5}\right)$ s

Answer: B::C::D

14. The time period of a particle in simple harmonic motion is T. Assume potential energy at mean position to be zero. After a time of $\dfrac{T}{6}$ it passes its mean position its,

    A. velocity will be half its maximum velocity

    B. displacement will be half its amplitude

    C. acceleration will be nearly 86% of its maximum

    D. $KE = PE$

Answer: A::C

(a)
15.

Figure. (a) shows a spring of force constant k fixed at one end and carrying a mass m at the other end placed on a horizontal frictionless surface. The spring is stretched by a force F. Figure. (b) shows the same spring with both endsf free and a mass m fixed at each free end Each of the spring is streched by the same force F. The mass in case (a) and the masses in case (b) are then released. Which of the following statements are true?

A. While oscillating the maximum extension of the

spring is more in case (a) than in case (b).

B. The maximum extension of the spring is same in

both cases.

C. The time period of oscillation is the same in both

cases.

D. The time period of oscillation in case (a) is $\sqrt{2}$ time

that in case (b).

Answer: B::D

16. When the point of suspendion of pendulum is moved, its period of oscillation

A. decreaes when it moves vertically upwards with an acceleration a

B. decreases when it moves vertcally downwards with acceleration greater than 2 g.

C. Increases when it moves horizontally with acceleration a

D. all of the above.

Answer: A::B

17. The displacement time relation for a particle can be expressed as $y = 0.5\left[\cos^2(n\pi t) - \sin^2(n\pi t)\right]$ This relation shows that

A. the particle executing a SHM with amplitude 0.5m

B. the particle is executing a SHM with frequency n time that of a second's pedulum

C. the particle is executing a SHM and the velocity in its mean position is $(n\pi)\dfrac{m}{s}$

D. the paritcle is not executing a SHM at all

Answer: A::C

▶ **Watch Video Solution**

18. At two particular closest instant of time t_1 and t_2 the displacements of a particle performing SHM are equal. At these instant

    A. instantaneaous speed are equal

    B. instantaneous acceleration are equal

    C. phase of the motion are unequal

    D. kinetic energies are equal

Answer: A::B::C::D

19.

Two blocks connected by a spring rest on a smooth

horizontal plane as shown in Fig. A constant force F start

acting on block m_2 as shown in the figure. Which of the

following statements are not correct?

A. Length of the spring increases continuously if

$m_1 > m_2$.

B. Blocks start performing SHM about centre of mass

of the system, which moves rectilinearly with

constant acceleration.

C. Blocks start performing oscillation about centre of

mass of the system with incresing amplitude.

D. Acceleration of m_2 is maximum at initial moment of

time only.

Answer: A::C::D

20. A block of mass m is suspended by a rubber cord of

natural length $l = \dfrac{mg}{k}$, where k is force constant of the

cord. The block is lifted upwards so that the cord becomes

just tight and then block is released suddently. Which of

the following will not be true?

A. Block performs periodic motion with amplitude greater than l.

B. Block performs SHM with amplitude equal to l.

C. Blocks will never return to the position from where it was released.

D. Angular frequency ω is equal to $1\dfrac{rad}{s}$

Answer: A::C::D

21. The displacement (x) of a particle as a function of time (t) is given by

$$x = a\sin(bt + c)$$

Where a,b and c are constant of motion. Choose the correct statemetns from the following.

A. The motion repeats itself in a time interval of $\dfrac{2\pi}{b}$

B. The energy of the particle remains constant.

C. The velocity of the particle zero at $x = \pm a$

D. The acceleration of the particle is zero at $x = \pm a$

27. Three simple harmonic motions in the same direction each of amplitude a and periodic time T, are superposed. The first and second and the second and third differ in

phase from each other by $\dfrac{\pi}{4}$, with the first and third not being identical . Then.

A. the resultant motion is not simple harmonic

B. the resultant amplitude is $\left(\sqrt{2}+1\right)a$

C. the phase difference between the second SHM and the resultant motion is zero.

D. the energy in the resultant motion is three times the energy in each separate SHM.

Answer: B::C
28.

A horizontal platform with a mass m placed on it is executing SHM slong y-axis. If the amplitude of oscillation is 2.5 cm, the minimum period of the motion for the mass not to be detached from the platform $\left(g = 10\dfrac{m}{s^2} \right)$

A. $\dfrac{10}{\pi} s$

B. $\dfrac{\pi}{10} s$

C. $\dfrac{\pi}{\sqrt{10}} s$

D. $\dfrac{1}{\sqrt{10}} s$

Answer: B::D

29. The speed v of a particle moving along a straight line, when it is at a distance (x) from a fixed point of the line is given by $v^2 = 108 - 9x^2$ (all equation are in CGS units):

A. The motion is uniformly accelerated along the straight line

B. the magnitude of the acceleration at a distance 3 cm from the point is $27\dfrac{cm}{s^2}$

C. the motion is simple harmonic about the given fixed point

D. the maximum displacement from the fixed point is 4

cm

30. For a body executing SHM with amplitude A, time period T, maximum velocity v_{max} and phace constant zero, which of the following statements are correct for $0 \leq t \leq \dfrac{T}{4}$ (y is displacement from mean position)?

A. At $y = \left(\dfrac{A}{2}\right), v > \left(\dfrac{v_{max}}{2}\right)$

B. For $v = \left(\dfrac{v_{max}}{2}\right), y = \; < \left(\dfrac{A}{2}\right)$

C. For $t = \left(\dfrac{T}{8}, y > \left(\dfrac{A}{2}\right)\right.$

D. for $y = \left(\dfrac{A}{2}\right), y < \left(\dfrac{T}{8}\right)$.

Answer: A::B::C::D

▶ **Watch Video Solution**

31. If y, v and a represent displacement velocity and acceleration at any instant for a particle executing SHM, which of the following statements are true?

A. v and y may have same direction.

B. v and a may have same direction.

C. a and y may have same direction.

D. a and v may have opposite direction.

Answer: A::B::D

32. The time period of a particle in simple harmonic motion is T. Assume potential energy at mean position to be zero. After a time of $\dfrac{T}{6}$ it passes its mean position its,

A. velocity will be one half its mean position, its

B. displacement will be one half its amplitude

C. acceleration will be nearly 85% of its maximum acceleration

D. $KE = PE$

Answer: A::C

33. The potential energt of a particle of mass 0.1 kg, moving along the x-axis, is given by $U = 5x(x - 4)J$, where x is in meter. It can be concluded that

    A. the particle is acted upon by a constant force

    B. the speed of the particle is maximum at $x = 2m$

    C. the particle executes SHM

    D. the period of oscillation of the particle $\left(\dfrac{\pi}{5}\right)$ s

Answer: B::C::D

34. A horizontal plank has a rectangular block placed on it. The plank starts oscillating vertically and simple harmonically with an amplitude of 40 cm. The block just loses contact with the plank when the latter is at momentary rest Then.

A. the period of oscillation is $\left(\dfrac{2\pi}{5} \right)$

B. the block weight double its weight, when the plank is at one of the positions of momentary rest.

C. the block weighs 0.1 times its weight on the plank halfway up.

D. the block weighs 1.5 times its weight on the plank

halfway down.

2. One end of an ideal spring is fixed to a wall at origin O

and axis of spring is parallel to x-axis. A block of mass

$m = 1kg$ is attached to free end of the spring and it is performing SHM. Equation of position of the block in co-ordinate system shown in figure is $x = 10 + 3\sin(10t)$. Here, t is in second and x in cm. Another block of mass $M = 3kg$, moving towards the origin with velocity $30cm/s$ collides with the block performing SHM at $t = 0$ and gets stuck to it. Calculate

(a) new amplitude of oscillations,

(b) neweqution for position of the combined body,

(c) loss of energy during collision. Neglect friction.

A. 3 cm

B. 20 cm

C. 10 cm

D. 100 cm

Answer: A

3. One end of an ideal spring is fixed to a wall at origin O and axis of spring is parallel to x-axis. A block of mass $m = 1kg$ is attached to free end of the spring and it is performing SHM. Equation of position of the block in co-ordinate system shown in figure is $x = 10 + 3\sin(10t)$. Here, t is in second and x in cm. Another block of mass $M = 3kg$, moving towards the origin with velocity $30cm/s$ collides with the block performing SHM at $t = 0$

and gets stuck to it. Calculate

(a) new amplitude of oscillations,

(b) neweqution for position of the combined body,

(c) loss of energy during collision. Neglect friction.
    A. $(10 + 3\sin 5t)\,cm$

    B. $(10 - 3\sin 5t)\,cm$

    C. $(10 + 3\cos 10t)\,cm$

    D. $(10 - 3\cos 10t)\,cm$

9.

In physical pendulum, the time period for small oscillation

is given by $T = 2\pi\sqrt{\dfrac{I}{Mgd}}$ where I is the moment of

inertial of the body about an axis passing through a

pivoted point O and perpendicular to the plane of

oscillation and d is the separation point between centre

of gravity and the pivoted point. In the physical pendulum a speacial point exists where if we concentrate the entire mass of body, the resulting simple pendulum (w.r.t. pivot point O) will have the same time period as that of physical pendulum This point is termed centre of oscillation.

$$T = 2\pi\sqrt{\frac{I}{Mgd}} = 2\pi\sqrt{\frac{L}{g}}$$ Moreover, this point possesses two other important remarkable properties:

Property I: Time period of physical pendulum about the centre of oscillation (if it would be pivoted) is same as in the original case.

Property II: If an impulse is applied at the centre of oscillatioin in the plane of oscillation, the effect of this impulse at pivoted point is zero. Because of this property, this point is also known as the centre of percussion. From the given information answer the following question:

Q. A uniform rod of mass M and length L is pivoted about point O as shown in Figgt It is slightly rotated from its mean position so that it performs angular simple harmonic motion. For this physical pendulum, determine the time period oscillation.

A. $2\pi\sqrt{\dfrac{L}{g}}$

B. $\pi\sqrt{\dfrac{7L}{3g}}$

C. $2\pi\sqrt{\dfrac{2l}{3g}}$

D. none of these

Answer: B

10. In physical pendulum, the time period for small oscillation is given by $T = 2\pi\sqrt{\dfrac{I}{Mgd}}$ where I is the moment of inertial of the body about an axis passing through a pivoted point O and perpendicular to the plane of oscillation and d is the separation point between centre of gravity and the pivoted point. In the physical pendulum a speacial point exists where if we concentrate the entire mass of body, the resulting simple pendulum (w.r.t. pivot point O) will have the same time period as that of physical pendulum This point is termed centre of oscillation.

$$T = 2\pi\sqrt{\frac{I}{Mgd}} = 2\pi\sqrt{\frac{L}{g}}$$ Moreover,   this   point

possesses two other important remarkable properties:

Property I: Time period of physical pendulum about the

centre of oscillation (if it would be pivoted) is same as in the original case.

Property II: If an impulse is applied at the centre of oscillatioin in the plane of oscillation, the effect of this impulse at pivoted point is zero. Because of this property, this point is also known as the centre of percussion. From the given information answer the following question:

Q. For the above question, locate the centre of oscillation.
A. $\dfrac{L}{4}$ from O (down)

B. $\dfrac{L}{4}$ from O (up)

C. $\dfrac{2L}{3}$ from O (down)

D. $\dfrac{7L}{12}$ from O (down)

Answer: D

11. In physical pendulum, the time period for small oscillation is given by $T = 2\pi \sqrt{\dfrac{I}{Mgd}}$ where I is the moment of inertial of the body about an axis passing through a pivoted point O and perpendicular to the plane of oscillation and d is the separation point between centre of gravity and the pivoted point. In the physical pendulum a speacial point exists where if we concentrate the entire mass of body, the resulting simple pendulum (w.r.t. pivot point O) will have the same time period as that of physical pendulum This point is termed centre of

Bob

l l
Fig. 4.207

4.

A weightless rigid rod with a small iron bob at the end is hinged at point A to the wall so that it can rotate in all directions. The rod is kept in the horizontal position by a vertical inextensible string of length $20cm$, fixed at its midpoint. The bob is displaced slightly perpenducular to the plane of the rod and string. Find period of small oscillations of the system in the form $\dfrac{\pi X}{10}$ s and fill the value of X.

▶ **Watch Video Solution**
5.

A rod of mass m and length l hinged at one end is connected by two springs of spring constant k_1 and k_2 so that it is horizontal at equilibrium What is the angular frequency of the system? (in $\dfrac{rad}{s}$) (Take $l = 1m, b = \dfrac{1}{4}m$, $K_1 = 16\dfrac{N}{m}, K_2 = 61\dfrac{N}{m}$.

▶ Watch Video Solution

6.
A block of mass m is tied to one end of a spring which

passes over a smooth fixed pulley A and under a light

smooth movable pulley B. The other end of the string is

attached to the lower end of a spring of spring constant

K_2. Find the period of small oscillation of mass m about

its equilibrium position (in second). (Take $m = \pi^2 kg$,

$K_2 k = 4K_1, K_1 = 17\dfrac{N}{m}$.)

> ▶ **Watch Video Solution**
7.

A uniform disc of mass m and radius R is pivoted smoothly at its centre of mass. A light spring of stiffness k is attached with the dics tangentially as shown in the Fig. Find the angular frequency in $\dfrac{rad}{s}$ of torsional oscillation of the disc. (Take $m = 5kg$ and $K = 10\dfrac{N}{m}$.)
8.

A uniform disc of mass m and radius $R = \dfrac{80}{23\pi^2}$ m is

pivoted smoothly at P. If a uniform disc of mass m and

radius R is welded at the lowest point of the disc, find the

period of SHM of the system (disc + ring). (in seconds)
9.

In the arrangement shown if Fig. Pulleys are small and light and spring are ideal and $K_1 = 25(\pi^2)\dfrac{N}{m}$, $K_2 = 2K_1, K_3 = $ and $K_4 = 4K_1$ are the force constant of the spring. Calculate the period of small vertical oscillation of block of mass $m = 3kg$.

▶ Watch Video Solution

10.

A small body of mass m is connected to two horizontal spring of elastic constant k, natural length $\dfrac{3d}{4}$. In the equilibrium position botgh springs are stretched to length d, as shown in Fig. What will be the ratio of perod of the motion $\left(\dfrac{T_b}{T_a}\right)$ If the body is displaced horizontally by a small distance where T_a is the time period when the particle owscillates along the line of spring T_b is time plane of the figure? Neglect effect of gravity.

> ▶ **Watch Video Solution**

1. Describe the motion of a particle acted upon by the force:

A. $F = 3x + 3$

B. $F = -3x - 3$

C. $F = -3x + 3$

D. $F = -3x - 3$

Answer: A::B::C::D

2. The potential energy (U) of a body of unit mass moving in a one-dimension foroce field is given by

$U = \left(x^2 - 4x + 3\right)$. All untis are in S.L

A. Find the equilibrium position of the body

B. Show that oscilliations of the body about this

equilibrium positon in sample harmonic motion and

find its time period

C. Find the amplitude of oscilliations if speed of the

body at equilibrium position is $2\sqrt{6}m/s$

D. Find the amplitude of oscillators if speed of the

body at equlibrium position is $2\sqrt{6}m/s$.

Answer: A::B::C

Single correct Answer Type

1. A boby is moving in a room with a velocity of $20m/s$ perpendicular to the two walls separated by 5 meters .There is no friction and the collisionnn with the walls are elastic.

    A. Not periodic

    B. Periodic but not smple harmonic

    C. Periodic and simple harmonic

    D. Periodic with variable time period

Answer: B

2. The equation of motion of a particle is $x = a\cos(\alpha t)^2$

.The motion is

    A. periodic but not oscillatory

    B. periodic and oscillatory

    C. oscillatory but not periodic

    D. neither periodic nor oscillatory

Answer: C

3. As the expression in ivolving sine function , which of the following equations does not represent a simple harmonic motion ?

    A. $y = a \sin \omega t$

    B. $y = a \tan \omega t$

    C. $y = a \cos \omega t$

    D. $y = a \sin \omega t + b \cos \omega t$

Answer: D

4. The displament of a particular is respresented by the equation $y = \sin^3 \omega t$. The motion is

    A. non-periodic

    B. periodic but not simple harmonic

    C. simple harmoic with period $2\pi/\omega$

    D. simple harmoic with period π/ω

Answer: B

▶ **Watch Video Solution**

5. Value of the acceleration A of a particle moving in sample harmonic motion as a function of its displacement

x are given in the table below .

$A(\text{mm s}^{-2})$	16	8	0	-8	-16
$x(mm)$	-4	-2	0	2	4

The period of the motion is

A. $\dfrac{1}{\pi} s$

B. $\dfrac{2}{\pi} s$

C. $\dfrac{\pi}{2} s$

D. πs

Answer: D

▶ Watch Video Solution

6. The time taken by a particle performing SHM on a straight line to pass from point A to B where its velocities are same is 2 seconds . After another 2 second it returns to B .The time peroid of oscillation is (in seconds):

A. 2

B. 4

C. 6

D. 8

Answer: D

▶ **Watch Video Solution**

7. A particle is perfroming simple harmoic motion along $x-$ axis with amplitude 4 cm and time period $1.2\,\text{sec}$. The minimum time taken by the particle to move from x=2 cm to $x = +4cm$ and back again is given by

    A. $0.6\,\text{sec}$

    B. $0.4\,\text{sec}$

    C. $0.3\,\text{sec}$

    D. $0.2\,\text{sec}$

Answer: B

▶ **Watch Video Solution**

8. Two particle P and Q describe $S.H.M.$ of same amplitude a same frequency f along the same straight line .The maximum distance between the two particles is $a\sqrt{2}$ The phase difference between the two particle is

A. zero

B. $\dfrac{\pi}{2}$

C. $\dfrac{\pi}{6}$

D. $\dfrac{\pi}{3}$

Answer: B

▶ **Watch Video Solution**

9. A particle executing SHM of amplitude 4 cm and $T = 4s$ .The time taken by it to move from position to half the amplitude is

    A. $1 \sec$

    B. $1/\sec$

    C. $2/3 \sec$
    D. $\sqrt{3/2} \sec$

Answer: C

10. Two particle undergoes SHM along parallel line with the same time period (T) and equal amplitude At a particular instant , one particle is at its extereme position while the other is at its mean position .They move in the same direction .They will cross each other after a further time

A. $T/8$

B. $3T/8$

C. $T/6$

D. $4T/3$

Answer: B

11. Two particles execute SHM of same amplitude of $20cm$ with same period along the same line about the same equilibrium position. If phase difference is $\pi/3$ then the maximum distance between these two will be

A. $10cm$

B. $20cm$

C. $10\sqrt{2}cm$

D. $20\sqrt{2}cm$

Answer: A

12. The maximum acceleration of a particle un SHM is made two times keeping the maximum speed to be constant. It is possible when .

A. amplitude of oscillation is double while frequncey reamins constant

B. amplitude is doubled while frequency is halved

C. frequency is double while amplitude is halved

D. frequency is double while amplitude remains constant

Answer: C

13. A particles is SHM is described by the displacement function $x(t) = a\cos(\omega t + \theta)$. If the initinal $(t = 0)$ position of the particle is 1 cm and its initinal velcotiy is $\pi cm/s$. The angular frequncy of the particle is $\pi rad/s$. Then is amplitude is

A. 1 cm

B. $\sqrt{2}cm$

C. $2cm$

D. $2.5cm$

Answer: B

14. Two particle P and Q describe harmonic , motions of same period , same amplitude along the same line about the same equilibrium position O when P and Q are an appose sides of O at the same distance from O they have the same speed of $1.2 m/s$ in the same direction when their displacement are the same they have the same speed at $1.6 m/s$ in apposite direction .The maximum velocity in m/s of either particle is

A. 2.8

B. 2.5

C. 2.4

D. 2

Answer: D

15. A particle executes simple harmonic motion with an amplitude of 4 cm. At the mean position, the veloocity of the particles is 10 cm/s. The distance of the particles from the mean position when its speed becomes 5 cm/s is

A. $\sqrt{3}$ cm

B. $\sqrt{5}$ cm

C. $2(\sqrt{3})$ cm

D. $2(\sqrt{5})$ cm

Answer: C

16. A particle is executing SHM acccording to the equation

x=A cos ωt. Average speed of theparticle during the

interval $0 \le t \le \dfrac{\pi}{6\omega}$

A. $\dfrac{\sqrt{3}A\omega}{2}$

B. $\dfrac{\sqrt{3}A\omega}{4}$

C. $\dfrac{3A\omega}{\pi}$

D. $\dfrac{3A\omega}{\pi}\left(2 - \sqrt{3}\right)$

Answer: D

17. The total enefgy of the boby executing S.H.M is E.Then .

The kinetic enegry when the displament half of the amplitude is

A. $\dfrac{E}{2}$

B. $\dfrac{E}{4}$

C. $\dfrac{3E}{4}$

D. $\dfrac{\sqrt{3}}{4}E$

Answer: C

18. A body is executing siniple Harmonic Motion . At displament its potenial energy is E_1 and at a displacement y its potenial energy is E_2 . The potenial energy E at displament $(x +)$ is

A. $\sqrt{E} = \sqrt{E_1} - \sqrt{E_2}$

B. $\sqrt{E} = \sqrt{E_1} + \sqrt{E_2}$

C. $E = E_1 + E_2$

D. $E = E_1 - E_2$

Answer: B

▶ **Watch Video Solution**

19. An object of mass $0.2kg$ execurtes Simple harmonic along X-axis with frequncey of $\dfrac{25}{\pi}Hz$. At the position `x=0.04 m, the object has kinetic energy of oscillation in meter is equal to

A. 0.05

B. 0.06

C. 0.01

D. None of these

Answer: B

▶ **Watch Video Solution**

20. A particle of mass (m) is executing oscillations about the origin on the (x) axis. Its potential energy is $V(x) = k|x|^3$ where (k) is a positive constant. If the amplitude of oscillation is a, then its time period (T) is.
A. Propertional to $\dfrac{1}{\sqrt{a}}$

B. Independent of a.

C. Propertional to $\sqrt{a}$

D. Propertional to $a^{3/2}$

Answer: A

▶ **Watch Video Solution**

**21.** The variation of potenial energy of harmoic oscillartor is as show in figure . The spring constant is

A. $1 \times 10^2 N/m$

B. $150 N/m$

C. $0.667 \times 10^2 N/m$

D. $3 \times 10^2 N/m$

Answer: B

22. A particle is executing SHM between points- X_m and X_m, as shown in figure(i). The velocity V(t) of the particle is partially graphed and shown in figure (ii). Two points A and B corresponding to time t_1 and time t_2 respectively are marked on the V(t) curve.

(i)   (ii)
A. At time t_1, it ios going towards X_m.

B. At time t_1, its speed is decreasing

C. At time t_2, its position lies in between $-X_m$ and O

D. The phase difference $\Delta\phi$ between points A and B must be expressed as $90° < \Delta\phi < 180°$.
Answer: B::C

▶ **Watch Video Solution**

23. One end of a spring of force constant k is fixed to a vertical wall and the other to a blcok of mass m resting on a smooth horizontal surface. There is another wall at distance x_0 from the block. The spring is then compressed

by $2x_0$ and released. The time taken to strike the wall is

$$2x_{()} \qquad x_0$$

A. $\dfrac{1}{6}\pi\sqrt{\dfrac{k}{m}}$

B. $\sqrt{\dfrac{k}{m}}$

C. $\dfrac{2\pi}{3}\sqrt{\dfrac{k}{m}}$
D. $\dfrac{\pi}{4}\sqrt{\dfrac{k}{m}}$

Answer: C

▶ **Watch Video Solution**

24. Three masses 700g, 500g, and 400 g are suspended at the end of a spring a shown and are in equilibrium. When the 700 g mass is removed, the system oscillacts with a period of 3 seconds, when the 500 gm mass is also

removed, it will oscillate with a period of

A. 1 s

B. 2 s
C. 3 s

D. $\sqrt{\dfrac{12}{5}} s$

Answer: B

> ▶ **Watch Video Solution**

---

25. Four massless springs whose force constants are 2k,2k,

k and 2k, respectively, are attached to a mass M kept on a

frictionless plane (as shown in figure), If the mass M is

displaced in the horizontal direction, then the frequency

of oscillation of the system is

A. $\dfrac{1}{2\pi}\sqrt{\dfrac{k}{4M}}$

B. $\dfrac{1}{2\pi}\sqrt{\dfrac{4k}{M}}$

C. $\dfrac{1}{2\pi}\sqrt{\dfrac{k}{7M}}$

D. $\dfrac{1}{2\pi}\sqrt{\dfrac{7k}{M}}$

Answer: B

▶ Watch Video Solution

26. A body at the end of a spring executes SHM with a period t_1, while the corresponding period for another spring is t_2, If the period of oscillation with the two spring in series is T, then

A. $T = t_1 + t_2$

B. $T^2 = t_1^2 + t_2^2$

C. $\dfrac{1}{T} = \dfrac{1}{t_1} + \dfrac{1}{t_2}$

D. $\dfrac{1}{T^2} = \dfrac{1}{t_1^2} + \dfrac{1}{t_2^2}$

Answer: B

▶ **Watch Video Solution**

27. Two identical springs are attached to a small block P. The other ends of the springs are fixed at A and B, When P is in equilibrium the extension of bottom spring is 10 cm. The period of small vertical oscillations of P about is

equilibrium position is $\left(use\, g = 9.8m/s^2\right)$

A. $\dfrac{2\pi}{7}\sec$

B. $\dfrac{\pi}{7}\sec$

C. $\dfrac{2\pi}{5}\sec$

D. none of these

Answer: B

▶ **Watch Video Solution**

28. Figure shows a system consisting of a massless pulley, a spring of force constant k and a block of mass m. If the block is slightly displaced vertically down from its equilibrium position and then released, the period of its vertical oscillation is

A. $2\pi\sqrt{\dfrac{m}{K}}$

B. $\pi\sqrt{\dfrac{m}{4K}}$

C. $\pi\sqrt{\dfrac{m}{K}}$

D. $4\pi\sqrt{\dfrac{m}{K}}$
Answer: D

▶ **Watch Video Solution**

---

29. A block of mass m is at rest on the another blcok of same mass as shown in figure. Lower block is attached to

the spring then the maximum amplitude of motion so

that both the blcok will remain in contact is

A. $\dfrac{mg}{2k}$

B. $\dfrac{mg}{k}$

C. $\dfrac{2mg}{k}$

D. $\dfrac{3mg}{2k}$

Answer: C

▶ **Watch Video Solution**

30. The displacement of a particle from its mean position

(in metre) is given by

$$y = 0.2\sin(10\pi t + 1.5\pi)\cos(10\pi t + 0.5\pi).$$

The motion of particle is

A. Periodic but not S.H.M.

B. Non-periodic

C. Simple harmonic motion with period 0.1 s

D. Simple harmonic motion with period 0.2 s

Answer: C

▶ **View Text Solution**

31. The displacement of a particle varies with time as

$x = 12\sin\omega t - 16\sin^2\omega t$ (in cm) it is motion is

$S.\,H.\,M.$ then its maximum acceleration is

A. 12 ω^2

B. 36 ω^2

C. 144 ω^2

D. $\sqrt{192}\omega^2$

Answer: B

▶ **Watch Video Solution**

---

32. A particle is acted simultaneously by mutually perpendicular simple harmonic motions $x = a\cos\omega t$ and $y = a\sin\omega t$. The trajectory of motion of the particle will be

A. an ellipse

B. a parabola

C. a circle

D. a straight line

Answer: C

▶ **Watch Video Solution**

---

33. A disc of radius R and mass M is pivoted at the rim and it set for small oscillations. If simple pendulum has to have the same period as that of the disc, the length of the simple pendulum should be

A. $\dfrac{5}{4}R$

B. $\dfrac{2}{3}R$
C. $\dfrac{3}{4}R$

D. $\dfrac{3}{2}R$

Answer: D

▶ Watch Video Solution

34. A particle of mass $m = 2kg$ executes SHM in xy-plane between point A and B under action of force $\overrightarrow{F} = F_x\hat{i} + F_y\hat{j}$. Minimum time taken by particle to move from A to B is 1 sec. At $t = 0$ the particle is at $x = 2$

and $y = 2$. Then F_x as function of time t is

A. $-4\pi^2 \sin \pi t$

B. $-4\pi^2 \cos \pi t$

C. $4\pi^2 \cos \pi t$

D. None of these

Answer: B

Multiple Correct Answer Type

1. A particles starts from point $x = -\dfrac{\sqrt{3}}{2}A$ and move towards negative extrene as shown . If the time period of oscillation is T , them
A. The equation of the SHM is $x = A\sin\left(\dfrac{2\pi}{T} + \dfrac{4\pi}{3}\right)$

B. The time taken by the particle tto go directly from its initial position to negative extreme is $\dfrac{T}{12}$

C. The time taken by the particle to reach at mean

position is $\dfrac{T}{3}$

D. The equation of the SHM is $x = A\sin\left(\dfrac{2\pi}{T} + \dfrac{\pi}{3}\right)$

Answer: A::B::C

▶ **Watch Video Solution**

2. A particle is in linear simple harmonic motion between

two points A and $B 10cm$ apart (figure). Take the direction

form A to B as positive direction and choose the correct

statements.

$AO = OB = 5cm$

$BC = 8cm$

B   O   C   A

A. The sign of velocity , acceleration and force on the

   particle when it is 3 cm away from A going towards

   B are positive

B. The sign of velocity of the particle at C given

   towards B is negative

C. The sign of velocity , accelecration and force on the

   particle when it sis 4 cm away from B going towards

   A are negative

D. The sign of acceleration and from ao nt particle

   when it si at ponts B is negative

Answer: A::C::D

3. The displacment versus timecurves for a particle executing SHM is show in figure . Choose the correct statement (s)
A. Phases of the oscillator is same at $t = 0s$ and $t = 2s$

B. Phases of the oscillator is same at $t = 2s$ and

$t = 6s$

C. Phases of the oscillator is same at $t = 1s$ and

$t = 7s$

D. Phases of the oscillator is same at $t = 1s$ and

$t = 5s$

Answer: B::D

---

2. A spring has natural length $40cm$ and spring constant $500N/m$. A block of mass $1kg$ is attached at one end of the spring and other end of the spring is attached to a ceiling. The block is relesed from the position, where the spring has length $45cm$.

A. the block will perform SHM of amplitude 5 cm.

B. the block will have maximum velocity $30\sqrt{5}.\ cm/\sec.$

C. the block will have maximum acceleration 15 m/s^2,

D. the minimum potential energy of the spring will be zero.

Answer: B::C::D

3. A 1kg block is eecuting simpe hrmonic motion of ampliltude 0.1 m m on a smooth horizontal surface under the restoring force of a spring of sprign constant

$100Nm^{-1}$. A block of mass 3 kg is gently placed on it at the instant it pases through the mean position. Assuming that the two blocks move together, find the frequency and the amplitude of the motion.
A. amplitude of the motion is 5 cm

B. the oscillation frequency is $\dfrac{5}{2\pi}Hz$

C. amplitude of the motion is 10 cm
D. the oscillation frequency is $\dfrac{5}{\pi}Hz$

Answer: A::B

4. A mass M is in static equilibrium on a massless vertical spring as shown in the figure. A ball of mass m dropped from certain height sticks to the mass M after colliding with it.

The oscillations they perform reach to height'a' above the original level of scales & depth $'b'$ below it.

(a) Find the constant of force of the spring.,

(b) Find the oscillation frequency.

(c) What is the height above the initial level from which the mass m was dropped?

   A. the force constant of the spring is $\dfrac{2mg}{b-a}$

   B. the oscillation frequency is $\dfrac{1}{2\pi}\sqrt{\dfrac{2mg}{(b-a)(M+m)}}$

   C. the force constant of the spring is $\dfrac{mg}{b-a}$

   D. the oscillation frequency is $\dfrac{1}{2\pi}\sqrt{\dfrac{mg}{(b-a)(M+m)}}$

Answer: A::B

▶ **Watch Video Solution**

---

5. Two blocks A (5kg) and B (2kg) attached to the ends of a spring constant 1120 N/m are placed on a smooth horizontal plane with the spring unreformed.

Simulataneously velocities of 3 m/s and 10 m/s along the line of the spring in the same direction are imparted to A and B then

3 m/s

10 m/s

A 5 2 B
A. the maximum extension of the spring is 0.25 m

B. the first maximum compression occurs after start at $\dfrac{3\pi}{56}\,s$

C. the maximum extension of the spring is 0.50 m

D. Time period of oscillation is $\dfrac{\pi}{14}\,s$

Answer: B::D

6. The displacement of a particle varies with time according to the relation $y = a\sin\omega t + b\cos\omega t$.

    A. The motion is SHM

    B. The motion is SHM with amplitude a+b

    C. The motion is SHM with amplitude $a^2 + b^2$

    D. The motion is SHM with amplitude $\sqrt{a^2 + b^2}$

Answer: A::D

7. Three simple harmonic motions in the same direction having each of amplitude "a" and the same period are superposed. If each differs in phase from the next by $\pi/4$ then

A. the resultant amplitude is $(1 + \sqrt{2})$ a.

B. the phase of the resultant motion relative to first is $90°$.

C. The energy associated with the resultant motion is $(3 + 2\sqrt{2})$ times the energy associated with any single motion.

D. the resulting motion is not simple harmonic.

Answer: A::C

8. Funcation $x = A \sin^2 \omega t + B \cos^2 \omega t + C \sin \omega t \cos \omega t$

Represents SHM.

A. For any value of A, B and C (except C = 0).

B. If A=B,C=2B and amplitude= $\left| B\sqrt{2} \right|$

C. If A=B,C=0

D. If A=B,C=2B amplitude=|B|.

Answer: B::D

9. The x-coordinate of a particle moving on x-axis is given by $x = 3\sin 100t + 8\cos^2 50t$, where x is in cm and t is time in seconds. Which of the following is/are correct about this motion

    A. the motion of the particle is not S.H.M.

    B. the amplitude of the S.H.M. of the particle is 5 units

    C. the amplitude of the resultant S.H.M. is $\sqrt{73}$ units

    D. the maximum displacement of the particle from the origin is 9 units.

Answer: B::D

2. A uniform square plate at side a is hinged at one at its comes it is suspended such than it can rotate about horizontal axis. The time period of small oscillation about its equilibrium position.

3. A particle of mass 'm' is moving in the x-y plane such that its x and y coordinate vary according to the law x= a sin ωt and y= a cos ωt where 'a' and 'omega' are positive constants and 't' is time. Find

(a) equation of the path. Name the trajectory (path).

(b) whether the particle moves in clockwise or anticlockwise direction
(c) magnitude of the force on the particle at any time t.

Single correct anwer type

1. The period of a simple pendulum whose bob is hollow metallic sphere is T. The period is T_1 when the bob is filled with sand, T_2 where it is filled with mercury and T_3 when it is half filled with mercury Which of the following is true?

A. $T = T_1 = T_2 > T_3$

B. $T_1 = T_1 = T_3 > T$

C. $T > T_3 > T_1 = T_2$

D. $T = T_1 = T_2 < T_3$

Answer: D

2. A pendulum has time period T in air when it is made to oscillate in water it acquired a time period $T = \sqrt{2}T$ The density of the pendulum bob is equal to (density) of water $= 1)$

   A. $\sqrt{2}$

   B. 2

   C. $2\sqrt{2}$

   D. none of these

Answer: B

3. A sphere of radius r is kept on a concave mirror of radius of curation R. The arrangement is kept on a horizontal surface (the surface of concave mirror is friction less and sliding not rolling). If the sphere is displaced from its equilibrium position and left, then it executes $S.\ h.\ M.$ The period of oscillation will be

A. $2\pi\sqrt{\left(\dfrac{(R-r)1.4}{g}\right)}$

B. $2\pi\sqrt{\left(\dfrac{R-r}{g}\right)}$

C. $2\pi\sqrt{\left(\dfrac{rR}{a}\right)}$

D. $2\pi\sqrt{\left(\dfrac{R}{gr}\right)}$

Answer: B

4. Two simple pendulums of length $0.5m$ and $0.2m$ respectively are given small linear displacement in one direction at the same time. They will again be in the same phase when the pendulum of shorter length has completed oscillations

A. 5

B. 1

C. 2

D. 3

Answer: C

5. The bob of a simple pendulum is displaced from its equilibrium position 'O' to a position 'Q' which is at a height 'h' above 'O' and the bob is then released. Assuming the mass of the bob to be 'm' and time period of oscillation to be $2.0s$, the tension in the string when the bob passes through 'O' is

A. $m\left(g + \pi\sqrt{2gh}\right)$

B. $m\left(g + \sqrt{\pi^2 gh}\right)$

C. $m\left(g + \sqrt{\dfrac{\pi^2}{2}gh}\right)$

D. $m\left(g + \sqrt{\dfrac{\pi^2}{3}gh}\right)$

Answer: A

6. Two simple pandulum whose lengths are $100cm$ and $121cm$ are suspended side by side. Then bobs are pulled together and then released. After how many minimum oscillations of the longer pendulum will two be in phase again. ?

A. 11

B. 10

C. 21

D. 20

Answer: B

7. Two pendulums having time period T and $\dfrac{5T}{4}$. They

start$S.\,H.\,M.$ at the same time from mean position.

what will be the phase difference between them after the

bigger pendulum has completes one oscillation ?

A. $45°$

B. $90°$

C. $60°$

D. $30°$

Answer: B

8. Two simple pendulum first of bob mass M_1 and length L_1 second of bob mass M_2 and length $L_2 M_1 = M_2$ and L_1 = 2L_(2)`. if the vibrational energy of both is same which is correct?
    A. Amplitude of B greater than A

    B. Amplitude of B smaller than A

   C. Amplitudes will be same
    D. none of these

Answer: B

9. In case of a simple pendulum, time period versus length
is depicted by

A.

B.

C.

D.

Answer: B

10. A U tube pf uniform born of cross sectional area A has been set up vertically with open ends facing up Now mgm of a liquid of density d is poured into it. The column of liquid in this tube will oscillation with a period T such that

A. $T = 2\pi\sqrt{\dfrac{M}{g}}$

B. $T = 2\pi\sqrt{\dfrac{MA}{gd}}$

C. $T = 2\pi\sqrt{\dfrac{M}{gdA}}$

D. $T = 2\pi\sqrt{\dfrac{M}{2Agd}}$

Answer: D

11. A horizontal platform with an object placed on it is executing S.H.M. in the vertical direction. The amplitude of oscillation is 3.92×10^{-3} m. what must ve the least period of these oscillations. So that the object is not detached from the platform

A. 0.1256 sec

B. 0.1356 sec

C. 0.1456 sec

D. 0.1556 sec

Answer: A

12. The matallic bob of a simple pendulum has the relative density ρ. The time period of this pendulum is T it the metallic bob is immersed in water the new time period is given by

A. $T \dfrac{\rho - 1}{\rho}$

B. $T \dfrac{\rho}{\rho - 1}$

C. $T\sqrt{\dfrac{\rho-1}{\rho}}$

D. $T\sqrt{\dfrac{\rho}{\rho-1}}$

Answer: D

13. A brass cube of side a and density σ is floating in mercury of density ρ. If the cube is displaced a bit vertically, it executes S.H.M. Its time period will be

A. $2\pi\sqrt{\dfrac{\sigma a}{\rho g}}$

B. $2\pi\sqrt{\dfrac{\rho a}{\sigma g}}$

C. $2\pi\sqrt{\dfrac{\rho g}{\sigma a}}$

D. $2\pi\sqrt{\dfrac{\sigma g}{\rho a}}$

Answer: A

14. A man weighing $60kg$ stands on the horizontal platform of a spring balance. The platform starts executing simple harmonic motion of amplitude $0.1m$ and frequency $\dfrac{2}{\pi}$. its which of the following statement is

correct ?

A. The spring balance reads the weight of man as 60 kg

B. The spring balance reading fluctuates between 60 kg and 70 kg.

C. The spring balance reading fluctuates between 50 kg and 60 kg.

D. The spring balance reading fluctuates between 50 kg and 70 kg.

Answer: D
