## SOLID STATE

## Jee Main And Advanced

1. A metal crystallises in a face centred cubic structure. If the edge length of its unit cell is 'a' the closest approach between two atoms in metallic crystal will be
A. 2 a
B. $2 \sqrt{2} a$
C. $\sqrt{2} a$
D. $\frac{a}{\sqrt{2}}$

## Answer: D

## - Watch Video Solution

2. Sodium metal crystallises in body centred cubic lattic with cell edge $4.29 \AA$.What is the radius of sodium atom ?
A. $1.86 \AA$
B. $3.22 \AA$
C. $5.72 \AA$
D. $0.93 \AA$

## Answer: A

## - Watch Video Solution

3. $C s C l$ crystallizes in body centred cubic lattice. If ' $a$ ' is its edge length then which of the following expressions is correct ?
A. $r_{C s}+r_{C I^{-}}=3 a$
B. $r_{C s}+r_{C I^{-}}=\frac{3 a}{2}$
C. $r_{C s}+r_{C I^{-}}=\frac{\sqrt{3}}{2} a$
D. $r_{C s^{+}}+r_{C I^{-}}=\sqrt{3} a$

## Answer: C

## - Watch Video Solution

4. The arrangement of $X^{\ominus}$ ions around $A^{\oplus}$ ion in solid $A X$ is given in the figure (not drawn to scale). If the radius of $X^{\theta}$ is $250 \pm$, the radius of

A. 104 pm
B. 125 pm
C. 183 pm
D. 57 pm

Answer: A
5. Experimentally it was found that a metal oxide in formula $M_{0.98} O$. Metal $M$ is present as $M^{2+}$ and $M^{3+}$ in its oxide ,Fraction of the metal which exists as $M^{3+}$ would be
A. $7.01 \%$
B. $4.08 \%$
C. $6.05 \%$
D. $5.08 \%$

## Answer: B

## - Watch Video Solution

6. Which of the following exists as covalent crystals in the solid state?
A. lodine
B. Silicon
C. Sulphur
D. Phoshorus

## Answer: B

## - Watch Video Solution

7. A compound $M_{p} X_{q}$ has cubic close packing (p) arrangement of $X$. Its unit cell structure is shown below. The empirical formula of the compound is

M $\square$
$\mathrm{X} \bigcirc$
A. $M X$
B. $M X_{2}$
C. $M_{2} X$
D. $M_{5} X_{14}$

## Answer: B

## - Watch Video Solution

8. The packing efficiency of a two-dimensional square unit cell shown below is

A. $39.27 \%$
B. $68.02 \%$
C. $74.05 \%$
D. $78.54 \%$

Answer: D
9. A substance $A_{x} B_{y}$ crystallizes in a face-centred cubic lattice in which atoms $A$ occupy the centres of each face of the cube. Identify the correct composition of the substance $A_{x} B_{y}$.
A. $A B_{3}$
B. $A_{4} B_{3}$
C. $A_{3} B$
D. composition cannot be specified

## Answer: A

## - Watch Video Solution

10. In a solid $A B$ having the NaCl structure, A atom occupies the corners of the cubic unit cell. If all the face-centred atoms along one of the axes are removed, then the resultant stoichiometry of the solid is
B. $A_{2} B$
C. $A_{4} B_{3}$
D. $A_{3} B_{4}$

## Answer: D

## - Watch Video Solution

11. The coordination number of a metal crystallizing in a hexagonal closepacked structure is
A. 12
B. 4
C. 8
D. 6

## Answer: A

12. The correct statement (s) for cubic close packed (ccp) three dimensional structure is (are)
A. The number of the nearest neighbours of an atom present in the topmost layer is 12
B. The packing efficiency of atom is $74 \%$
C. The number of octahedral and tetrahedral voids per atom are 1 and

2, respectively
D. The unit cell edge length is $2 \sqrt{2}$ times the radius of the atom

## Answer: B::C::D

## - Watch Video Solution

13. If the unit cell of a mineral has cubic close packed (ccp) array of oxygen atoms with m fraction of octahedral holes occupied by aluminium ions
and n fraction of tetrahedral holes occupied by magnesiums ions, m and n respectively, are
A. $\frac{1}{2}, \frac{1}{8}$
B. $1, \frac{1}{4}$
C. $\frac{1}{2}, \frac{1}{2}$
D. $\frac{1}{4}, \frac{1}{8}$

## Answer: A

## - Watch Video Solution

14. The correct statement regarding defects in crystalling solids.
A. Frenkel defect is usually favoured by a very small difference in the sizes of cation and anion
B. Frenkel defect is a dislocation defect
C. Trapping of an electron in the lattice leads to the formation of F centre
D. Schottky defect have no effect on the physical properties of solids

## Answer: B::C

## - Watch Video Solution

15. Which of the following statements) is/are correct ?
A. The coordination number of each type of ion in $C s C I$ crystal is 8
B. A metal that crystallises in bcc structure has a coordination number
of 12
C. A unit cell of an ionic crystal shares some of its ions with other unit
cells
D. The length of the unit cell in $N a C I$ is 552 pm .

$$
\left(r_{N a^{+}}=95 \mathrm{pm}, r_{C I^{-}}=181 \mathrm{pm}\right)
$$

## Answer: A::C::D

## - Watch Video Solution

16. Statement I: In any ionic solid $[M X]$ with Schottky defect, the number of positive and negative ions are same.

Statement II: An equal number of cation and anion vacancies is present.

## - Watch Video Solution

17. In a hexaonal system system of cycstals, a frequently encountered arrangement of atoms is described as a hexagonal prism. Here, the top and bottom of the cell are refular hexagons, and three atoms are sandwiched in between them. A space-cilling model of this structure, called hexagonal close-paked is constituted of a sphere on a flat surface surrounded in the same plane by six identical spheres as closely as possible. Three spherres are then placed overt the first layer so that they toych each other and represent the second layer so that they toych each
other and present the second layer. Each one of the three spheres touches three spheres of the bottom layer. Finally, the second layer is convered with a third layer identical to the bottom layer in relative position. Assume the radius of every sphere to be $r$.

The number of atom in this hcp unit cell is
A. 4
B. 6
C. 12
D. 17

## Answer: B

## - Watch Video Solution

18. In a hexaonal system system of cycstals, a frequently encountered arrangement of atoms is described as a hexagonal prism. Here, the top and bottom of the cell are refular hexagons, and three atoms are sandwiched in between them. A space-cilling model of this structure,
called hexagonal close-paked is constituted of a sphere on a flat surface surrounded in the same plane by six identical spheres as closely as possible. Three spherres are then placed overt the first layer so that they toych each other and represent the second layer so that they toych each other and present the second layer. Each one of the three spheres touches three spheres of the bottom layer. Finally, the second layer is convered with a third layer identical to the bottom layer in relative position. Assume the radius of every sphere to be $r$.

The empty space in this hcp unit cell is
A. $74 \%$
B. $47.6 \%$
C. $32 \%$
D. $26 \%$

## Answer: D

## - Watch Video Solution

19. Match the crystal system/unit cells mentioned in Column I with their characteristic features mentioned in Column II.
A.

ColumnI
ColumnII
Simple cubic and face centred cubic $p$. have these cell parameters $a=$
B.

ColumnI ColumnII
Cubic and rhombohedral $q$. are two crystal systems
C.

ColumnI ColumnII
Cubic and tetragonal $r$. have only two crystallographic angles of $90^{\circ}$
ColumnI ColumnII
D. Hexagonal and monoclinic
$s$. belong to same crystal system

## Answer: A::B::C::D

## - Watch Video Solution

20. A crystalline solid of a pure substance has a face-centred cubic structure with a cell edge of 400 pm . If the density of the substance in
the crystal is $8 \mathrm{gcm}^{-3}$, then the number of atoms present in 256 g of the crystal is $N \times 10^{24}$. The value of $N$ is

## - Watch Video Solution

21. The number of hexagonal faces that are present in a truncated octahedron is

## - Watch Video Solution

22. Silver (atomic weight $108 \mathrm{gmol}^{-1}$ ) has a density of $10.5 \mathrm{gcm}^{-3}$. The number of silver atoms on a surfaces of area $10^{-12} \mathrm{~m}^{2}$ can be expressed in scientific notation as $Y \times 10^{-x}$, The value of $x$ is .......

## - Watch Video Solution

23. The edge length of unit cell of a metal having molecular weight
$75 \mathrm{gmol}^{-1}$ is $5 \AA$ which crystallizes in cubic lattice. If the density is
$2 g^{\wedge}(-1)$, then find the radius of metal atom $\left(N_{A}=6 \times 10^{23}\right)$. Give the answer in pm .

## - Watch Video Solution

24. An element crystallizes in fcc lattice having edge length $400 \pm$ Calculate the maximum diameter of an atom which can be place in interstitial site without distorting the structure.

## - Watch Video Solution

25. The crystal $A B$ (rock salt structure) has molecular weight $6.023 Y u$, where $Y$ is an arbitrary number in $u$. If the minimum distance between cation and anion is $\frac{Y^{1}}{3} \mathrm{~nm}$ and the observed density is $20 \mathrm{kgm}^{-3}$. Find
a. The density in $\mathrm{kgm}^{-3}$. and
b. The type of defect

## - Watch Video Solution

26. You are given marbles of diameter 10 mm . They are to be placed such that their centres are laying in a square bound by four lines each of length 40 mm . What will be the arrangements of marbles in a plane so that maximum number of marbles can be placed inside the area? Sketch the diagram and derive expression for the number of molecules per unit area.

## - Watch Video Solution

27. The figure below show the locations of atoms in three crystallographic planes in an fcc lattice. Draw the unit cells for these structure and identify
these planes in your diagrams.

## - Watch Video Solution

28. A metal crystallizes into two cubic phases, face-centred cubic and body-centred cubic, which have unit cell lengths 3.5 and $3.0 A$, respectively. Calculate the ration of densities of fcc and bcc.

## - Watch Video Solution

29. Chromium metal crystallizes with a body-centred cubic lattice. The length of the unit cell edge is found to be 287pm. Calculate the atomic radius. What woulds be the density of chromium in $\mathrm{gcm}^{-3}$ ?

## - Watch Video Solution

30. A metallic crystal cystallizes into a lattice containing a sequence of layers $A B A B A B . .$. Any packing of spheres leaves out voids in the lattice. What percentage by volume of this lattice is empty spece?

## - Watch Video Solution

31. Sodium metal crystallises in body centred cubic lattic with cell edge
$4.29 \AA$.What is the radius of sodium atom ?

## - Watch Video Solution

1. Which of the following fc c structure contains cations in alternate tetrahedral voids?
A. $N a C I$
B. $Z n S$
C. $\mathrm{Na}_{2} \mathrm{O}$
D. $C a F_{2}$

## Answer: B

## - View Text Solution

## Passage

1. In hexagonal systems of crystals, a frequently encountered arrangement of atoms is described as a hexagonal prism. Here, the top and bottom of the cell are regular hexagons and three atoms are sandwiched in between them. A space-filling model of this structure,
called hexagonal close-packed (hcp), is constitued of a sphere on a flat surface surrounded in the same plane by six identical spheres as closely as possible. Three spheres are then placed over the first layer so that they touch each other and represent the second layer. Each one of these three spheres touched three spheres of the bottom layer. Finally, the second layer is convered with a third layer that is identical to the bottom layer in relative position. Assume radius of every sphere to be 'r'.

The volume of this hcp unit cell is
A. $24 \sqrt{2} r^{3}$
B. $16 \sqrt{2} r^{3}$
C. $12 \sqrt{2} r^{3}$
D. $\frac{64 r^{3}}{3 \sqrt{3}}$

## Answer: A
