- 1. How can you distinguish between
- (i)  $CO_3^{-2}$  and  $SO_3^{-2}$  ions?
- (ii)  $NO_3^-$  ion and  $NO_2^-$  ion ?

2. Complete the following reaction.

(i) 
$$CaCO_3 \xrightarrow{\Delta} [A] + [B]_{gas}$$

(ii) 
$$[A] + H_2O \rightarrow [C]$$
  
(iii)  $[C] + [B] \rightarrow CaCO_3 + H_2O$   
(iv)  $NH_4Cl + [C] \xrightarrow{\Delta} [E] + CaCl_2 + H_2O$   
(v)  $E + H_2O + [B] \rightarrow [F]$   
(vi)  $NaCl + [F] \rightarrow [G] + NH_4Cl$   
(vii)  $[G] \xrightarrow{\Delta} Na_2CO_3 + H_2O + [B]$

**7.** A certain compound (A) is used in the laboratory for analysis, its aqueous solution gives the following reactions:

a. On addition to copper sulphate, a brown precipitate is obtained which turns white on addition of excess of the  $Na_2S_2O_3$  solution.

b. On addition to the  $Ag^{\,\oplus}$  ion solution, a yellow curdy precipitate is

obtained which is insoluble in ammonium hydroxide. Identify (A) and give equations for the reactions at steps (a) and (b).

**8.** A compound (A) when treated with Kl gives a Scarlet red ppt. (B) which dissolves in excess of Kl. This solution is made alkaline with NaOH and gave brown precipitate (C) when  $NH_3$  gas is passed through it. When (A) is added with small amount of  $SnCl_2$  it gives a white ppt (D) but gives grey precipitate with excess amount of  $SnCl_2$ . When  $H_2S$  gas is passed through an acidic solution of (A) a black precipitate (E) is obtained. Identify (A) to (E). Write the reactions involved.

Assignment Section G

**1.** STATEMENT - 1 :  $NaNO_2$  on treatment with dil. HCl gives brown coloured gas directly.

STATEMENT – 2 :  $\left[Fe(CN)_5NO
ight]^{+2}$  is used for the detection of of  $S^{-2}$ .

STATEMENT - 3 : Precipitate of Agl are of yellow colour

A. FTF

B. FTT

C. TTF

D. TTT

Answer: B

**2.** STATEMENT - 1 :  $H_2S$  in acidic medium is the group reagent for  $II^{nd}$  group in basic radical.

STATEMENT - 2 :  $K_{sp}$  of suphides of  $II^{nd}$  group ions is less.

STATEMENT - 3 : All sulphides of  $II^{nd}$  group element are coloured.

A. FTF

B. TTT

C. FFF

D. TTF

### Answer: B

**3.** STATEMENT - 1 : solubility of sulphide is higher in acidic medium than pure water.

STATEMENT - 2 : Aq. Solution of metal sulphides is neutral.

STATEMENT - 3 : Metal sulphides are salt of strong base and weak acid.

A. TFF

B. FTT

C. TFT

D. TTF

Answer: A

**4.** STATEMENT - 1 : All  $Pb^{+2}$  form white ppt with dil. HCl in estimation.

STATEMENT - 2 :  $Al^{+3}$  form white ppt with  $NH_4OH/NH_4Cl$ .

STATEMENT - 3 :  $Fe(OH)_3$  is soluble in excess NaOH.

A. TTF

B. TTT

C. FTT

D. FTF

### Answer: C

5. STATEMENT - 1 :  $NaNO_2$  and  $NaNO_3$  gives brown ring test.

STATEMENT - 2 : Both gives blue coloured gas with conc.  $H_2SO_4$ .

STATEMENT - 3 :  $NO_3^-$  gives ammonia with NaOH in presence of Cu.

A. TFT

B. TTT

C. FTF

D. TTF

Answer: B

**Assignment Section H** 

**1.** When a white powder (A) is strongly heated, it gives of a colourless, odourless gas (B) which turns lime water milky (C) and if the passage of this gas is continued the milkiness disappears and gives a solution (D). The solid residue (E) is yellow when hot, but turns white on cooling. Idnetify (A) to (E) with help of the equations.

**2.** A solid laboratory reagent (A) give following reactions.

(i) It impart green colour of flame :

(ii) Its solution does not give ppt. on passong  $H_2S$ .

(iii) When it is heated with  $K_2 C r_2 O_7$  and conc.  $H_2 S O_4$ , a red gas (B) is

evolved. The gas when passed in aq. NaOH solution turns it yellow (C).

Identify (A), (B), (C) giving chemical reactions.

**3.** An aqueous of a gas (X) shows the following reactions :

(a) It turns red litmus blue.

(b) When added in excess to a copper sulphate solution, a deep blue coloured solution is obtained.

(c) On addition to  $FeCl_3$  solution, a brownish precipitate is formed, which is solution in  $HNO_3$ .

Identify (X) and give an explanation for step (a), (b) and (c).

**4.** A black mineral (A) on heating in presence of air gives a gas (B). The mineral (A) on reaction with dilute  $H_2SO_4$  gives a gas (C) and a solution of a compound (D) on passing the gas (C) into an aqueous solution of (B), a white turbidity is obtained. The aqueous solution of (D) on reaction with potassium ferricyanide gives a blue compound (E). Identify (A) to (E) and give chemical equations for the reaction involved.

5. When gas A is passed through dry KOH at low temperature, a deep red coloured compound, B and a gas care obtained. The gas A, on reaction with but-2-ene, followed by treatment with  $Zn/H_2O$  yields acetaldehyde. Identify A, B and C.

**6.** The gas liberated on heating a mixture of two salts with NaOH, gives a reddish brown precipitate with an alkaline solution of  $K_2Hgl_4$ . The aqueous solution of the mixture on treatment with  $BaCl_2$  gives a white precipitate which is sparingly soluble in conc. HCl. On heating the mixture of  $K_2Cr_2O_7$  and conc  $H_2SO_4$  red vapours (A) are produced. The aqueous solution of the mixture gives a deep blue colouration (B) with potassium ferricyanide solution. Idnetify the radicals in the given mixture and write the balanced equations for the formation of (A) and (B).

7. A certain salt (X) gives the following tests :

- (a) Its aqueous solution is alkaline to litmus.
- (b) On strong heating. It sweels to give a glassy bead.
- ( c) When conc  $H_2SO_4$  is added to a hot concentrated solution of (X),

white crystals of a weak acid separates out. Identify (X) and write down the chemical equations for reaction at steps a, b and c.

8. An unknown inorganic compound (X) loses it water of crystallisation on

heating and its aqueous solution gives the following reaction.

(i) It gives a white turbidity with dilute hydrochloric acid solution.

(ii) It decolourises a solution of iodine in potassium iodide.

(iii) It gives a white precipitate with silver nitrate solution which turns black on standing. Identify the compound (X) and give chemical equations for the reaction at step (i) to (iii). **9.** A compound (X) on heating with an excess of NaOH solution gives a gas (Y) which gives white fumes on exposure to HCl. Heating is continued to expel the gas completely. The resultant alkaline solution again liberates the same gas (Y) when heated with Zn powder. However, when the compound (X) is heated alone does not give nitrogen. Identify (X) and (Y).
