

CHEMISTRY

BOOKS - OSWAAL CHEMISTRY (KANNADA ENGLISH)

SOLVED PAPER SSLC KARNATAKA APRIL 2019

Questions

1. The change that occurs in the eye to see the distant object clearly is
- A. focal length of the eye lens decreases
 - B. curvature of the eye lens increases
 - C. focal length of the eye lens increases
 - D. ciliary muscles of the eye contract

Answer: C

Watch Video Solution

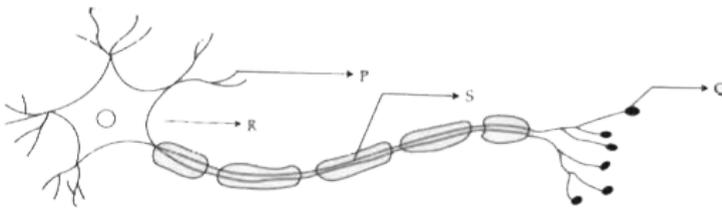

2. The functional groups present in propanol and propanal respectively are.

- A. $-OH$ and $-CHO$
- B. $-OH$ and $-COOH$
- C. $-CHO$ and $-COOH$
- D. $-CHO$ and $-CO$

Answer: A

 Watch Video Solution

3. The correct path of the movement of nerve impulses in the following diagram is

A. $Q \rightarrow S \rightarrow R \rightarrow P$

B. $P \rightarrow Q \rightarrow R \rightarrow S$

C. $S \rightarrow R \rightarrow Q \rightarrow P$

D. $P \rightarrow R \rightarrow S \rightarrow Q$

Answer: D

View Text Solution

4. The resistance of a conductor is 27Ω . If it is cut into three equal parts and connected in parallel, then its total resistance is

A. 6Ω

B. 3Ω

C. 9Ω

D. 27Ω

Answer: B

 [Watch Video Solution](#)

5. The chemical equation that represents neutralization reaction among the following is

Answer: C

 [Watch Video Solution](#)

6. By constructing Khadin check-dams in level terrains.

A. underground water level decreases

B. underground water level increases

C. vegetation in the nearby areas are destroyed due to excess moisture

D. underground water gets polluted

Answer: B

[Watch Video Solution](#)

7. To obtain a diminished image of an object from a concave mirror, position of the object should be

A. between C and F

B. beyond C

C. between P and F

D. at F

Answer: B

[Watch Video Solution](#)

8. The electronic configuration of element x is 2, 8, 8, 1 and the electronic configuration of element Y is 2, 8, 7. Then the type of bond formed between these two element is

- A. covalent bond
- B. hydrogen bond
- C. metallic bond
- D. ionic bond

Answer: D

[Watch Video Solution](#)

9. Part of the flower that develops into fruit and part of the seed that develops into root respectively are

- A. ovary and plumule
- B. plumule and radicle
- C. ovary and radicle
- D. ovary and ovule

Answer: C

 [Watch Video Solution](#)

10. A pure dominant pea plant producing round - yellow seeds is crossed with pure recessive pea plant producing wrinkled - green seeds, The numbers of plants bearing round - green seeds in the F_1 generation of Mendel's experiment is

- A. 0
- B. 1

C. 3

D. 9

Answer: A

[Watch Video Solution](#)

11. The functions of hormones are given in Column-A and the names of the hormones are given in Column-B. Match them and write the answer along with its letters :

Column-A

- (A) Prepares the body to deal with the situation
- (B) Regulates metabolism for body growth.
- (C) Regulates blood sugar levels
- (D) Regulates the growth and development of the body

Column-B

- (i) Growth
- (ii) Testote
- (iii) Adrena
- (iv) Progest
- (v) Insulin
- (vi) Thyrox
- (vii) Oestro

12. Name the acid present in the stinging hairs of nettle leaves.

[Watch Video Solution](#)

13. What are fossils ?

[Watch Video Solution](#)

14. Convex mirror is commonly used as rear view mirror in vehicles. Why?

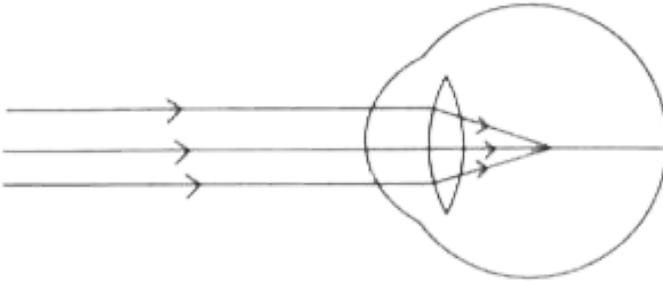

[Watch Video Solution](#)

15. What is roasting in metallurgy ?

[Watch Video Solution](#)

16. Observe the given figure. Name the eye defect indicated in the figure and also mention the lens used to correct this defect.

[View Text Solution](#)

17. What is Tyndall effect ?

[Watch Video Solution](#)

18. Under what condition lactic acid is produced in the muscle cells ?

[Watch Video Solution](#)

19. Draw the diagram of an electric circuit in which the resistors R_1 , R_2 and R_3 are connected in parallel including an ammeter and a voltmeter and mark the direction of the current.

 [Watch Video Solution](#)

20. Name the brown fumes liberated when lead nitrate is heated. Write the balanced chemical equation for this reaction.

 [Watch Video Solution](#)

21. Explain the process of translocation of food materials in plants.

 [Watch Video Solution](#)

22. Explain the process of digestion in the small intestine of man.

Digestion of food in small intestine :

[Watch Video Solution](#)

23. Draw the diagram of a simple electric generator. Label the following parts :

[i] Brushes [ii] Rings.

[Watch Video Solution](#)

24. What are structural isomers? Name the first member of alkanes that shows structural isomerism.

[Watch Video Solution](#)

25. Draw the diagram of arrangement of the apparatus to show the reaction of zinc granules with blue sulphuric acid and testing hydrogen gas by burning. Label the following parts :

(i) Test tube (ii) Soap solution.

[Watch Video Solution](#)

26. What are the advantages of connecting electrical devices in parallel with the battery instead of connecting them in series?

 [Watch Video Solution](#)

27. According to Joule's law of heating, mention the factors on which heat produced in a resistor depends.

According to this law write the formula used to calculate the heat produced.

 [Watch Video Solution](#)

28. List the disadvantages of using fossil fuels.

 [Watch Video Solution](#)

29. List the advantages of 'reduce and reuse' to save environment.

[Watch Video Solution](#)

30. The focal length of a concave lens is 30 cm. At what distance should the object be placed from the lens so that it forms an image at 20cm from the lens?

[Watch Video Solution](#)

31. Draw the diagram of the apparatus used in the electrolysis of water. Label the following parts.

(i) Graphite rod (ii) Cathode.

[View Text Solution](#)

32. Growth of thread like structures along with the gradual spoilage of tomato can be observed when a cut tomato is kept aside for four days. Interpret the causes for this change.

[Watch Video Solution](#)

33. An electric refrigerator rated 400 W is used for 8 hours a day. An electric iron box rated 750 W is used for 2 hours a day. Calculate the cost of using these appliances for 30 days, if the cost of 1 kWh is Rs 3/-.

 [Watch Video Solution](#)

34. There is no change in the colour of red litmus and blue litmus paper when introduced into an aqueous solution of sodium chloride. After passing direct current through the same solution, red litmus changes to blue colour. Which product is responsible for this change ? Mention any two uses of this product.

 [Watch Video Solution](#)

35. A food chain in a polluted aquatic ecosystem is given. Observe it and answer the following questions.

Fresh water → Algae → Fishes → Birds.

- (i) Which organisms are disturbed more due to biomagnification? Why?
- (ii) This ecosystem will be destroyed gradually due to biomagnification. Why?

 [Watch Video Solution](#)

36. A student places a piece of cucumber a glass piece, a banana peel and a plastic pen in a pit and closes it. What changes can be observed in these materials after a month ? Give scientific reason for these changes.

 [Watch Video Solution](#)

37. What is dispersion of light? Mention the colour that bends the least and the colour that bends the most when light undergoes dispersion through a prism.

 [Watch Video Solution](#)

38. Mention any four phenomena that can be observed due to atmospheric refraction of light on the earth.

 [Watch Video Solution](#)

39. Draw the ray diagrams for the image formation in a convex lens when an object is placed

(i) at focus F_1

(ii) beyond $2F_1$

 [View Text Solution](#)

40. (i) Write the differences between saturated and unsaturated hydrocarbons.

(ii) Write the molecular formula and structural formula of an alkene having five carbon atoms.

 [Watch Video Solution](#)

41. (i) Carbon atom does not form C^{4-} anion and C^{4+} cation. Why ?

(ii) How can ethanol be converted into ethanoic acid?

 [Watch Video Solution](#)

42. Draw the diagram showing the sectional view of the human heart.

Label the following parts.

(i) Aorta

(ii) Chamber of the heart that receives deoxygenated blood.

 [Watch Video Solution](#)

43. Name the major constituent of biogas. Write the properties of biogas which make it a good fuel.

ii. Name the two devices that work using heat energy of the sun.

 [Watch Video Solution](#)

44. (i) Write the advantages of solar cells.

(ii) Write any two hazards of nuclear power generation.

 [Watch Video Solution](#)

45. Observe the given table and answer the following question :

Elements	<i>A</i>	<i>B</i>	<i>C</i>	<i>D</i>	<i>E</i>
Atomic number	11	4	2	7	19

Identify the two elements that belong to the same period and the two elements that belong to the same group. Give reason for your conclusion.

 [Watch Video Solution](#)

46. (i) How does overload and short-circuit occur in an electric circuit ?

Explain . What is the function of fuse during this situation ?

(ii) Mention two properties of magnetic field lines .

 [Watch Video Solution](#)

47. Give reason :

(i) Ionic compounds in solid state do not conduct electricity, whereas in molten state are good conductors of electricity.

(ii) Silver articles when exposed to air gradually turn blackish.

(iii) Chemical reaction does not take place when copper is added to iron sulphate solution.

 [Watch Video Solution](#)

48. Give reasons: (i) "Alloys of iron are more useful when compared to pure iron."

(ii) Copper loses its brown layer gradually when exposed to air.

(iii) Aluminium oxide is called amphoteric oxide.

 [Watch Video Solution](#)

49. Write the differences between homologous organs and analogous organs.

(ii) Write the differences between the sex chromosomes of man and sex chromosomes of woman.

(iii) Sex of a child is determined by the father. How?
