BIOLOGY

BOOKS - TRUEMAN'S BIOLOGY (ENGLISH)

BIOMOLECULES

Multiple Choice Questions

1. The four elements called "big-four" which make up 95% of all elements found in a living system are

A. C, H, O, N

B. C, H, O , P

C. C, H, O, S

D. C, N, O , P

Answer: A

Watch Video Solution

2. What is common between NAD and FAD ?

A. Both are coenzymes.

B. Both are derived from proteins

C. Both act as oxygen carriers

D. All of the above

Answer: A

Watch Video Solution

3. Macromolecules are

A. nucleic acids, proteins and polysac- charides

B. nucleic acids and monosaccharides

C. amino acids and polysaccharides

D. amino acids, lipids and nucleotides

Answer: A

Watch Video Solution

4. In ATP, the high energy bond is the one which links

A. adenine with ribose

B. adenine with phosphate

C. phosphate to phosphate

D. ribose with phosphate

Answer: C

Watch Video Solution

5. Every carbohydrate is

A. aldose or ketose

B. ribose or deoxyribose

C. hexose or pentose

D. trioses or tetroses

Answer: A

Watch Video Solution

6. Glucose is

A. aldose hexose sugar

B. ketose hexose sugar

C. pyranose pentose sugar

D. furanose pentose sugar

Answer: A

Watch Video Solution

7. Oligosaccharides contain

A. two monosaccharides

B. 2-9 monosaccharides

C. numerous monosaccharides

D. no monosaccharides.

Answer: B

Watch Video Solution

8. Reducing sugars are

A. glucose, fructose, galactose, maltose and lactose

B. glucose, sucrose and cellulose

C. lactose, starch, glycogen and trehalose

D. all of the above

Answer: A

Watch Video Solution

9. Reducing sugars like glucose in Fehling solution reduce

A. Fe^{++} to Fe^{+++}

B. Cu^{++} to Cu^{+}

C. Hg^{++} to Hg^{+}

D. Cu^{+} to Cu^{++}

Answer: B

Watch Video Solution

10. If deoxyribose sugar is supplemented with oxygen at second carbon atom, which one of these is formed ?

A. Erythrose

B. Heptose

C. Ribulose

D. Ribose

Answer: D

Watch Video Solution

11. Which of the following is the sweetest sugar?

A. fructose

B. glucose

C. sucrose

D. monellin

Answer: A

Watch Video Solution

12. Deoxyribose is

A. $C_5H_{10}O_5$

B. $C_5H_{10}O_4$

C. $C_6H_{12}O_6$

D. $C_6H_{12}O_5$

Answer: B

Watch Video Solution

13. General formula of monosaccharides is

A. $C_nH_{2n}O_5$

B. $(CH_2O)_{n+1}$

C. $C_n(H_2O)_{n-1}$

D. All of these

Answer: D

Watch Video Solution

14. General formula for disaccharide is

A. $C_nH_{2n}O_n$

B. $C_n(H_2O)_{n+1}$

C. $C_n(H_2O)_{n-1}$

D. $C_{12}H_{22}O_{11}$

Answer: C

Watch Video Solution

15. The commonest disaccharide has the molecular formula?

A. $C_{10}H_8O_9$

B. $C_{12}H_{24}O_{12}$

C. $C_{18}H_{22}O_{12}$

D. $C_{12}H_{22}O_{11}$

Answer: D

Watch Video Solution

16. The reagent used to detect sugar in the urine is

A. Ninhydrin solution

B. Benzene

C. Benedict's solution

D. All of the above

Answer: C

Watch Video Solution

17. Lactose is a disaccharide of

A. glucose only

B. glucose and fructose

C. glucose and galactose

D. all of the above

Answer: C

Watch Video Solution

18. Maltose is hydrolysed in the presence of mal- tase to

A. glucose

B. glucose & fructose

C. fructose

D. glucose & galactose

Answer: A

Watch Video Solution

19. Iodine test is used to detect

A. fats

B. malaria

C. typhoid

D. carbohydrates

Answer: D

Watch Video Solution

20. Fructose is a ketose sugar and also called

A. an aldose

B. fruit sugar

C. cane sugar

D. corn sugar

Answer: B

Watch Video Solution

21. Before a carbohydrate is utilized as an energy source, it gets first converted into

A. disaccharide

B. oligosaccharide

C. tirose sugars

D. monosaccharide

Answer: D

Watch Video Solution

22. How many atoms are there in pyaranose ring ?

A. 5

B. 3

C. 6

D. 7

Answer: C

Watch Video Solution

23. Which of the following are all disaccharides ?

A. Maltose, Sucrose, Lactose

B. Maltose, Lactose, Glucose

C. Glycogen, Lactose, Sucrose

D. All of the above

Answer: A

Watch Video Solution

24. Invert sugar is mixture of

A. maltose and fructose

B. glucose and galactose

C. glucose and fructose

D. all of the above

Answer: C

Watch Video Solution

25. A solution of d-glucose in water rotates the plane polarised light

A. towards right

B. towards left

C. towards either side

D. none of the above

Answer: A

Watch Video Solution

26. $\alpha -$ and $\beta -$ Glucose differ in the orientation of the $(-OH)$ group around:

A. C_3

B. C_1

C. C_5

D. C_2

Answer: 2

Watch Video Solution

27. A sugar of animal origin is

A. fructose

B. lactose

C. DHAP

D. PGA

Answer: B

Watch Video Solution

28. Monosaccharide found in nucleolus is

A. pentose

B. tetrose

C. erythrose

D. hexose

Answer: A

Watch Video Solution

29. Why sucrose and not glucose is used to preserve fruit products ?

A. Glucose is reactive as it has free CHO group

B. Sucrose is more common in nature

C. Sucrose is easily available and has both glucose and fructose

D. None of the above

Answer: A

Watch Video Solution

30. In ATP sugar is

A. ribose

B. deoxyribose

C. glucose

D. trioses

Answer: A

Watch Video Solution

31. Honey has three sugars. They are

A. glucose, fructose and lactose

B. glucose, galactors and inulin

C. dextrose, laevulose and sucrose

D. dextrose, lactose and ribose

Answer: C

Watch Video Solution

32. non-reducing sugars have

A. free CHO group and free CO group

B. neither free CO nor free CHO group

C. free CHO and bound CO group

D. free CO group and bound CHO group.

Answer: B

Watch Video Solution

33. Milk tastes sour when kept in the open for sometime due to formation of

A. carbonic acid

B. citric acid

C. lactic acid

D. malic acid

Answer: C

Watch Video Solution

34. Which should be given to an athlete for instant energy ?

A. Carbohydrates

B. Proteins

C. Fats

D. Vitamins

Answer: A

Watch Video Solution

35. Prior to absorption, grape sugar is hydrolyzed by the enzyme.

A. lactase

B. maltase

C. sucrose

D. none of these

Answer: D

Watch Video Solution

36. Choose the correct molecule for glucose.

A. 
B. 
C. 
D. 
Answer: A

Watch Video Solution

37. A fat molecule has

A. 3 glycerol and one fatty acid molecule

B. one glycerol and 3 fatty acid molecules

C. one glycerol and one fatty acid molecule

D. 3 glycerol and 3 fatty acid molecule

Answer: B

Watch Video Solution

38. A Skeleton of four interlocking carbon rings is found in

A. steroids

B. waxes

C. fats

D. glycerol

Answer: A

Watch Video Solution

39. A fat molecule has three fatty acids. A Phos- pholipid molecule has how many fatty acids?

A. 3

B. 2

C. 1

D. 0

Answer: B

Watch Video Solution

40. Most abundant Lipid in cell membrane is

A. phospholipid

B. steroid

C. cholesterol

D. waxes

Answer: A

Watch Video Solution

41. Amphipathy means

A. presence of polar and non polar end in same molecule

B. water containing land habitat

C. presence of dipolar Zwitter ions

D. all wrong.

Answer: A

Watch Video Solution

42. Essential fatty acids are

A. not sythesized in plants

B. not synthesized in animals

C. five in number

D. both (2) and (3)

Answer: B

Watch Video Solution

43. $C_nH_{2n}O_2$ is the general formula of

A. carbohydrate

B. fatty acid

C. fat

D. nucleic acid

Answer: B

Watch Video Solution

44. in Brain , most common types of lipids are

A. glycolipids

B. lipoproteins

C. cholesterol

D. steroids

Answer: A

Watch Video Solution

45. A saturated fatty acid is

A. Oleic acid

B. Linoleic acid

C. Stearic acid

D. All

Answer: C

Watch Video Solution

46. Which one is Tetraeonic (four double bond) fatty acid?

A. Arachidonic acid

B. Linoleic acid

C. Oleic acid

D. Palmitic acid.

Answer: A

Watch Video Solution

47. Which one is absent in wood ?

A. Cellulose

B. Lignin

C. Pectin

D. Fat

Answer: D

Watch Video Solution

48. Essential fatty acids are present in large amount in

A. butter

B. hydrogenated fats

C. vegetable oils

D. desi ghee

Answer: C

Watch Video Solution

49. Cholesterol is the precursor of

A. progesterone

B. testosterone

C. estradiol & cortisol

D. all of these

Answer: D

Watch Video Solution

50. Waxes are esters of higher fatty acids with long chain of

A. monohydric alcohols

B. dihydric alcohols

C. trihydric alcohols

D. all of these

Answer: A

Watch Video Solution

51. Lecithin and cephalins are

A. nucleic acid

B. phospholipid

C. carbohydrate

D. sphingolipids

Answer: B

Watch Video Solution

52. Bee wax mainly consists of

A. myricyl palmitate

B. myricyl cerotate

C. cetyl palmitate

D. none of these

Answer: A

Watch Video Solution

53. Which of the following gives maximum energy in metabolic process?

A. Proteins

B. Nucleic acids

C. Fats

D. Carbohydrates

Answer: C

Watch Video Solution

54. A fatty acid or amino acid is called essential when

A. cell is unable to synthesize it on its own

B. cell requires it badly and so make it on its own

C. cell badly needs it but does not make it on its own.

D. cell needs it and gets it from adjacent cells

Answer: C

Watch Video Solution

55. Cholesterol is a

A. simple lipid

B. phospholipid

C. derived lipid

D. glycolipd

Answer: C

Watch Video Solution

56. $CH_3(CH_2)_7CH = CH(CH_2)_7.COOH$ is

A. oxalousuccinate

B. oleic acid

C. linolenic acids

D. α-ketoglutarate

Answer: B

Watch Video Solution

57. Lipids are translocated through blood by

A. glycolipids

B. sulpholpids

C. lipo proteins

D. phospholids

Answer: C

Watch Video Solution

58. Which of the followig pick up excess cholestrol form plasma and transports it io the liver for disposal?

A. LDL

B. HDL

C. Both (1) & (2)

D. glycolipids

Answer: B

Watch Video Solution

59. Which amino acid has no asymmetic carbon atom ?

A. Glycine

B. Alanine

C. Proline

D. Threonime

Answer: A

Watch Video Solution

60. Which of the following sets have combination of an acidic, basic and netural amino acids repestively?

A. Glutamate- Lysine- Glycine

B. Arg-Asp-Val

C. Asp-Val-Phe

D. Phe-Lys-Arg.

Answer: A

Watch Video Solution

61. The first amino acids taking part in protein synthesis is .

A. Met

B. Val

C. Arg

D. Tryp

Answer: A

Watch Video Solution

62. Sulphur containing amino acids are

A. valine,lysine and cystine

B. tryptophan, glutamic acid, aspratic acid

C. citrulline, methionine and glumaric acid

D. cysteine, homocysteine, methionine

Answer: D

Watch Video Solution

63. Essential amino acids are those which our body can not synthesize and, therefore, we take them from diet . These are usually seven in number and are .

A. leucine, lysine, isoleucine ,valine , tryptophan, phenylalanine , methionine

B. leucine-lysin-isoleucine-valine-tryptophan-phenylalanine -glycine.

C. gly-ala-val-his-try-asp-met

D. none of the above

Answer: A

Watch Video Solution

64. An amino acid which is precursor of Indole 3-acetic acid (Auxin) is

A. glycine

B. valine

C. glutamic

D. tryptophan

Answer: D

Watch Video Solution

65. Living organisim have

A. α -amino acids and L-sugars

B. L-amino acids and D-surgar

C. D-amino acids and L-sugar

D. α- amino acids and α-sugars.

Answer: B

Watch Video Solution

66. Which one is an amino acids?

A. $CH_3 - \overset{\overset{NH_2}{|}}{CH} - \overset{\overset{O}{||}}{C} - OH$

B. $CH_3 - CH_2 - \overset{\overset{O}{||}}{C} - O - NH_4$

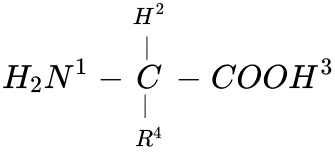
C. $CH_3 - CH_2 - \overset{\overset{O}{||}}{C} - NH_2$

D. $CH_3 - CH - NH_2 - \overset{\overset{O}{||}}{C} - Cl$

Answer: A

Watch Video Solution

67. Which two groups of the following formula are involved in peptide linkage between different amino acids?



A. 2 and 3

B. 1 and 3

C. 1 and 4

D. 2 and 4

Answer: B

Watch Video Solution

68. Amino acids usually exist in the form of Zwitter ions. This mean that they consist of

A. the basic NH_2 groups and acidic COOH group

B. the basic NH_3^+ group and the acidic COO^- group

C. basic COO^- group & acidic NH_3^- group

D. None of the above

Answer: B

Watch Video Solution

69. Peptide linkage is

A. $COHN_2$

B. $-CO.NH$

C. $-COONH_2$

D. $-CH-NH$

Answer: B

Watch Video Solution

70. Precursor of niacin is

A. lysine

B. theronine

C. tryptophan

D. glycoine

Answer: C

Watch Video Solution

71. The following one is smallest.

A. maltose

B. Cellulose

C. Glycine

D. Cellbiose

Answer: C

Watch Video Solution

72. Two of the following amino are needed for growth only and are not essential for adults.

A. Cysteine and cystine

B. Lecucine and Valine

C. Tryptophan and isolecucine

D. Arginine and histidine

Answer: D

Watch Video Solution

73. Glycosidic linkage at place of branching in starch and glycogen is

A. $\alpha - 1 - 4$

B. $\beta, 1 - 4$

C. $\beta, 1 - 6$

D. $\alpha, 1 - 6$

Answer: D

Watch Video Solution

74. In amylose units are linked by.

A. $\alpha - 1 - 4$ linkages

B. $\alpha - 1 - 6$ linkage

C. both α -1-4 and α,1-4 linkage

D. all of the above

Answer: A

Watch Video Solution

75. Which is an unbranched glucan

A. Cellulose

B. Starach

C. Glycogen

D. All the above

Answer: A

Watch Video Solution

76. The monomer units in starch are

A. Pyarnose frucotose

B. Furannose

C. β-D-Glucose

D. α- D-Glucose

Answer: D

Watch Video Solution

77. Chitin forming exoskeleton in arthropods is seconds most abundant carbohydrate on this earth. It is a

A. Storage sulphur containing polysaccharide

B. nitrogen containing structural homopolysaccharid

C. mucopolysaccharide

D. strutural oligosaccharide

Answer: B

Watch Video Solution

78. Which of the following carbohydrates gives a dark blue colour with iodine?

A. Amylopectin

B. Cellulose

C. Starch

D. none of these

Answer: C

Watch Video Solution

79. The starch and glycogen are two most suitable storage polysaccharides because

A. they occupy less space

B. they do not disturb ph of cell

C. they cannot pass through cell

D. all of the above

Answer: D

Watch Video Solution

80. Hyaluronic acid is a heteropolysaccharide and has actyl glucosamine + gulcoronic acid. In is a cementing material and found in

A. ovum and synovial fuild

B. vitreous humour

C. skin

D. all of the above

Answer: D

Watch Video Solution

81. A polysaccharide used as solidyfying agent is

A. pectin

B. silica gel

C. pepton

D. agar

Answer: D

Watch Video Solution

82. Which of incorrect regarding glycogen

A. Glycohen is analgous to starch

B. It is non reducing sugar

C. It is a structual polysaccharide

D. It given red colour with iodine solution

Answer: C

Watch Video Solution

83. Which is a worng statement?

A. Cellulose is the most abundant homopolysaccharide

B. Waxes are simple lipids

C. Glycogen and glucose are two common carbohydrates in animals.

D. Steroid is a fatty acid

Answer: D

Watch Video Solution

84. The polysaccharide used in evaluting the function of human nephron is attined form the ____of Dahlia plant.

A. root

B. stem

C. seeds

D. fruit

Answer: A

Watch Video Solution

85. A polysaccharide of cartilage is

A. chondritin

B. ossein

C. chondritin sulphate

D. cartilagin

Answer: C

Watch Video Solution

86. Nucleoprotein is

A. structural protein

B. simple protein

C. conjugated protein

D. fibrous protein

Answer: C

Watch Video Solution

87. P' protein refers to

A. phloem protein

B. plasma protien

C. platelet protein

D. primary protein

Answer: A

Watch Video Solution

88. Primary structure of protein is due to

A. hydrogen bonds

B. peptide bonds

C. $-s-s$ linkages

D. ionic bonds

Answer: B

Watch Video Solution

89. A storgae protein is

A. keratin

B. collage

C. haemogolbin

D. glutelin

Answer: D

Watch Video Solution

90. Which chemical characterstic is not common to all living beings?

A. Types of protein present in the body

B. Similar triplet code for amino acids

C. Energy is stored in high phosphate bonds

D. None of the above

Answer: A

Watch Video Solution

91. The most abundant protein in the plant world is found in

A. chloroplasts

B. mitochondria

C. viruses

D. roots

Answer: A

Watch Video Solution

92. That proteins are made up of amino acids/sequence of amino acids in protein was determined by a two time Nobel laureate

A. Sanger

B. Summer

C. Pauling

D. Wilkinds

Answer: A

Watch Video Solution

93. Immunoglobulins (antibodies) of the blood plasma are

A. glycoproteins

B. lipoproteins

C. flavoproteins

D. all of these

Answer: A

Watch Video Solution

94. Which makes the protein active and globular /Which structure provides specific shape and function to the protein?

A. Primary structure

B. Secondary Structure

C. Tertiary structure

D. Suphide bonds and peptide bonds

Answer: C

Watch Video Solution

95. Most abundant protein on earth is

A. keratin

B. rubisco

C. RuBP

D. fibrinogen

Answer: B

Watch Video Solution

96. Two types of secondary structures of proteins are

A. α- helix and β -helix

B. α - helix and β-helix

C. α-helix and β- pleated sheet

D. Helix and rod.

Answer: C

Watch Video Solution

97. The most diverse chemical is

A. phosphopild

B. Cellulose

C. proteins

D. carbohydrates

Answer: C

Watch Video Solution

98. The enormous diversity of protien moleucles is due to the diversity of

A. amino groups in amino acids

B. R group in amino acids

C. amino acids sequences

D. peptide bonds

Answer: C

Watch Video Solution

99. In β- pleated protein, polypeptide chains lie parallely and held together by

A. S-S bond

B. CONH bond

C. H-bond

D. none of these

Answer: C

Watch Video Solution

100. The major fibrous protien of conncetive tissue is

A. myosin

B. myoglobin

C. collage

D. keratin

Answer: C

Watch Video Solution

101. The protein of red muscles to store oxygen is

A. haemoglobin

B. myoglobin

C. myosin

D. actin

Answer: B

Watch Video Solution

102. The helical structure of protein is stabilised by:

A. glycosidic bonds

B. dipeptide bonds

C. hydrogen bonds

D. all of these

Answer: C

Watch Video Solution

103. The sequence in which amino acids are linked to one another in a protein molecule is called its:

A. Primary structure

B. Secondary Structure

C. tertiray structure

D. all of these

Answer: A

Watch Video Solution

104. Formation of proteins is a type of

A. dehydration synthesis

B. dehydrogenation

C. hydration synthesis

D. hydrogenation

Answer: A

Watch Video Solution

105. Point out the incorrect statemet regarding proteins.

A. Most of enzymes and may hormones are proteins

B. Proteins are stuctural components of membrane.

C. Proteins are high energy yieldin compounds.

D. Immunglobulins are proteins.

Answer: C

Watch Video Solution

106. Denaturation of proteins changes its

A. structure and properties

B. structure and not property

C. property but not sturcture

D. neither structure not property.

Answer: A

Watch Video Solution

107. Natural silk fibre is

A. polyester

B. protein

C. lipids

D. polysaccharide

Answer: B

Watch Video Solution

108. Keratin and chitin are chemically

A. carbohydrates& are functionally similar

B. carbohydrates but functionally different

C. proteins and functionally similar

D. different but functionally similar.

Answer: D

Watch Video Solution

109. Which of the following gropus is present invariably at the two terminals of protein ?

A. Methyl and ethyl

B. Aldehyde and ketone

C. Amino and carboxylic

D. Acid and alcohol

Answer: C

Watch Video Solution

110. The spider webs are built of

A. fat

B. fibroin protein

C. protamines

D. proteoglycans

Answer: B

Watch Video Solution

111. Structural proteins are usually

A. fibrous

B. globular

C. enzymatic

D. soluble

Answer: A

Watch Video Solution

112. Biochemical reagents are widely used for detection of biomolecules. A reagent that specifically detects a carbonyl group (C=0) in a biomolecule will yield a positive test with

A. protein

B. carbohydrate

C. Fats

D. all of these

Answer: B

Watch Video Solution

113. Sulphur is needed for

A. glucose formation

B. ATP synthesis

C. DNA duplication

D. protein synthesis

Answer: D

Watch Video Solution

114. Glycosidic bond is

A. $C - O - C$

B. CONH

C. $> C - O$

D. CHO

Answer: A

Watch Video Solution

115. Cellulose in plant cell wall is made up of

A. unbranched chain of glucose molecules linked by $\alpha \ 1 \rightarrow 6$ glycosidic bond

B. unbranched chain of glucose molecules linked by $\beta, 1 \rightarrow 4$ glycosidic molecule

C. branched chain of glucose molecules linked by $\alpha, \rightarrow 6$ glycosidic bond in straight chain & $\beta \rightarrow 1,4$ at the site of branching.

D. branched chains have $\alpha \rightarrow 1,4$ bond and $\beta \rightarrow 1,6$ glycosidic bonds both

Answer: B

Watch Video Solution

116. A carbohydrate unique to arthropods is

A. chitin

B. hyaluronic acid

C. chondriotion sulphate

D. waxes

Answer: A

Watch Video Solution

117. Which one of the following has no free aldehyde or ketone group ?

A. Fructose

B. Maltose

C. Sucrose

D. Galactose

Answer: C

Watch Video Solution

118. EFA is

A. linolenic acid

B. oleic acid

C. palmitic acid

D. caproic acid

Answer: A

Watch Video Solution

119. Phospholipids are

A. amphipathic

B. amphibolic

C. hydrophobic

D. none of these

Answer: A

Watch Video Solution

120. Select the odd from the following

A. Glutamic acid

B. Stearic acid

C. Butyric acid

D. Oleic acid

Answer: A

Watch Video Solution

121. Excess of amino acids are stored in

A. kidney

B. liver

C. spleen

D. none

Answer: D

Watch Video Solution

122. The difference between one amino acid and another is found on the

A. Carboxyl Group

B. Amino group

C. R group

D. peptide bonds

Answer: C

Watch Video Solution

123. Relationship between amino acid and protein is similar to one found between

A. glucose and fructose

B. nucleotides and nucleic acid

C. nucleosides and nucleic acid

D. purines and pyrimidines

Answer: B

Watch Video Solution

124. Non essential amino acid is

A. not needed in the diet

B. not essential for growth

C. not synthesised in body

D. not repuired for portein synthesis

Answer: A

Watch Video Solution

125. If the molecular mass of an amino acid is 150 daltoms, the molecular mass of a tripeptide will be

A. 450

B. 486

C. 504

D. 414

Answer: D

Watch Video Solution

126. α-helix is stabilized by H-bonds between the

A. NH and CO group of side chain

B. NH and CO group of main chain

C. NH and NH group of same chain

D. NH and COOH group of all chain

Answer: B

Watch Video Solution

127. Largest macromolecule in cell is

A. DNA

B. cellulose

C. chitin

D. glycogen

Answer: A

Watch Video Solution

128. Histones are

A. basic proteins

B. glycoproteins

C. acid proteins

D. mucoproteins

Answer: A

Watch Video Solution

129. All enzymes are

A. proteins

B. lipids

C. fats

D. inorganic catalysts

Answer: A

Watch Video Solution

130. Quarternary structure of protein is

A. arrangement of amino acids in polypeptide chain

B. inter-relationship of amino in a polypeptide chain

C. inter-relation between polypeptide chains of a protein having more than two polypeptide chains

D. all of the above

Answer: C

Watch Video Solution

131. Which of the following is nutritionally essential amino acid for humans

A. Arginine

B. Aspartic acid

C. Glycine

D. Phenylalanine

Answer: D

Watch Video Solution

132. Enzymes (Biocatalysts) were discovered accidentally in yeast cell extract by a biochemist for which he was awarded Nobel Prize was

A. Kuhne

B. Pasteur

C. Buchner

D. Sumner

Answer: C

Watch Video Solution

133. Most of the enzymes when secreted are in inactive form (called proenzymes or zymogens) otherwise they will mainly destroy

A. cell proteins

B. cell DNA

C. cell mitochondriane

D. cell wall and membrane

Answer: A

Watch Video Solution

134. Enzymes are required in traces because they

A. have high turnover number

B. remain unused at the end of reaction and are reused

C. show cascade effect

D. all correct

Answer: D

Watch Video Solution

135. An enzyme extract when subject to electric field, Sepatrated into two fractions each catalysing the same reaction. These fractions are

A. allsoteric enzyme

B. isoenzyme

C. apoenzyme

D. activator

Answer: B

Watch Video Solution

136. The inorgainc part of enzyme is known as

A. holoenzyme

B. coenzyme

C. apoenzyme

D. activator

Answer: D

Watch Video Solution

137. All enzymes are not proteins. Which of the following enzyme is not a protein?

A. Ribozyme discovered by Cech (1981)

B. Ribonuclease discovered by Altman (1983)

C. Both correct

D. DNA/RNA polymerase.

Answer: C

Watch Video Solution

138. The digestive enzymes are

A. oxidoreductases

B. transferases

C. hydrolases

D. ligases

Answer: C

Watch Video Solution

139. Coenzyme is

A. always a protein

B. often a vitamin

C. hydrolases

D. often a metal

Answer: B

Watch Video Solution

140. Why is heat used to sterilize nonliving objects in tissue culture ?

A. Proteins are denatured at tempretures above $55^{\circ} C$

B. Proteins lose their primary strutures due to break down of hydrogen bonds

C. Both correct

D. Only (1) is corret

Answer: A

Watch Video Solution

141. A high fever is dangerous to a human because

A. proteins are used up qucikly

B. fats are oxidised

C. enzymes are denatured

D. BMR is Lowered

Answer: C

Watch Video Solution

142. According to IUB system, isomerases belong to which class?

A. I

B. III

C. V

D. IV

Answer: C

Watch Video Solution

143. IUB has divied enzymes into how many classes?

A. 6

B. 5

C. 8

D. 4

Answer: A

Watch Video Solution

144. Enzymes which breakdown compounds without using H_2O are called.

A. lyases

B. ligases

C. hydroleases

D. proteases

Answer: A

Watch Video Solution

145. Which part of enzyme in a holoenzyme (conjugated enzyme) determines specificity of enzyme ?

A. Aponezyme

B. Prosthetic group

C. Metal activator

D. None of these

Answer: A

Watch Video Solution

146. The function of an enzyme is to

A. cause chemical reaction

B. change the rate of chemical reaction

C. change the equailibrum

D. change the directions of reactions

Answer: B

Watch Video Solution

147. Which of the following is correct in an enzyme-controlled reaction ?

A. $E + S \Leftrightarrow E + P$

B. $E + S \Leftrightarrow ES \Leftrightarrow EP \Leftrightarrow E + P$

C. $E + S \Leftrightarrow ES \Leftrightarrow E$

D. $E + S \Leftrightarrow P \Leftrightarrow E + P$

Answer: B

Watch Video Solution

148. Enzyme have

A. same pH and tempeature optiam

B. same ph but different temperature optima

C. different ph but same temperature optima

D. all wrong.

Answer: D

Watch Video Solution

149. Feed back term refers to

A. effect of subdtrate on rate of enzymatic reaction.

B. effect of end product on rate of reaction

C. effect of enzyme conncentration on rate of reaction

D. effect of external compound on rate of reaction.

Answer: B

Watch Video Solution

150. Enzymes increase rate of chemical reaction by

A. lowering energy of activation

B. increasing energy of activation

C. maintaining energy of activation

D. without affecting activation energy but increasing reaction time.

Answer: A

Watch Video Solution

151. Enzymes get denatured (killed) due to

A. sudden changes in pH

B. decrease in temperature

C. decrease in hydration

D. all of the above

Answer: A

Watch Video Solution

152. Cyanide kills animlas by inhibiting cytochrome oxidase (an enzyme of respiration) by binding irreversibly with copper. It does not bind with active site. This is an example of

A. competitive inhinition

B. non competitive inhibition

C. feed back inhibition

D. all of the above

Answer: B

Watch Video Solution

153. In competitive inhibition

A. inhibitor resembles the substrate in molecular structure

B. inhibitor binds to allosteric site and block it

C. inhibitor has no effect on active site

D. all correct

Answer: A

Watch Video Solution

154. prosthetic group is a part of holoenzyme it is

A. inorganic part loosely attached

B. accessory non prtoein organic substance attached firmly

C. organic part attached loosely

D. none of these

Answer: B

Watch Video Solution

155. Coenzyme is a part of enzyme

A. inorganic metal activator

B. nonprotein organic part attached firmly

C. nonprotein orgainc part attached lossely

D. vitamin A

Answer: C

Watch Video Solution

156. Which inactivates an enzyme by occupying its active site ?

A. competitive inhinition

B. allosteric inhibitor

C. non-competitive inhibitor

D. all of these above

Answer: A

Watch Video Solution

157. Which one inactivates an enzyme by changing the enzyme shape ?

A. Allosteric inhibitor

B. Competitve inhibitor

C. Conezyme

D. Irreversible inhibitor

Answer: A

Watch Video Solution

158. Turn over number of an enzyme means

A. number of substrate molecules acted upon by one molecule of an enzyme per second.

B. number of enzyme molecules acting on one molecule of substrate per mintue.

C. number of molecules of product produced by an enzyme in one minute.

D. number of subsrate molecules acted upon by an enzyme per second.

Answer: A

Watch Video Solution

159. The value of K_m (Michaelis-Meten constant) varies form 10^6 to 10^{-6} M but for allosteric enzyme, there is no constant k_m value. This K_m is .

A. substrate concentration at which the enzymatic reaction attains half its maximum vleocity $\left(\frac{1}{2}V_{\max}\right)$

B. enzyme concentration at which the reaction attaines $\frac{1}{2}V_{\max}$.

C. end prouduct concentration at which reaction attains $\frac{1}{2}V_{\max}$.

D. none of the above statements is correct.

Answer: A

Watch Video Solution

160. The lower value of K_m means

A. higher susbtrate affinity of enzyme

B. higher enzyme activity

C. no effect on reaction

D. lower the affinity of enzyme with substrate.

Answer: A

Watch Video Solution

161. In a diluated starch solution , α-salivary amylase is added at ph 1.6 and kept at $35^\circ C$ for half an hour and then iodine solution is added, what would be the result?

A. There will be a red colour

B. There will be bule solution

C. Solution will be clear and colourless

D. The solution will be sweet

Answer: B

Watch Video Solution

162. Some enzyme when secreated are inactive state. Such enzyme in inactive state are called.

A. isonzymes

B. conezymes

C. zymogens

D. apenzyme

Answer: C

Watch Video Solution

163. Which is best evidence for Lock and key theory (Template theroy)?

A. Competitve inhibition

B. Feed back inhibition

C. Allosteric competition

D. Non-competitive inhibition

Answer: A

Watch Video Solution

164. which is an enzyme that joins two segments of replicated DNA?

A. Ligases

B. Lyase

C. Endonuclease

D. Topoisomerases

Answer: A

Watch Video Solution

165. Apoenzyme and coenzyme collectively produce

A. holoenzyme

B. enzyme-product complex

C. cofactor

D. prosthetic group

Answer: A

Watch Video Solution

166. Which vitamins is incorporated into the structure of NAD/NADP?

A. Riboflavin

B. Vitamin PP

C. Nicotinic acid

D. All correct

Answer: C

Watch Video Solution

167. Mutases and epimerases are

A. isomerases

B. hydrolases

C. lyases

D. ligases

Answer: A

Watch Video Solution

168. The enzymatic function of a protein is due to

A. Primary structure

B. tertiary structure

C. secondary structure

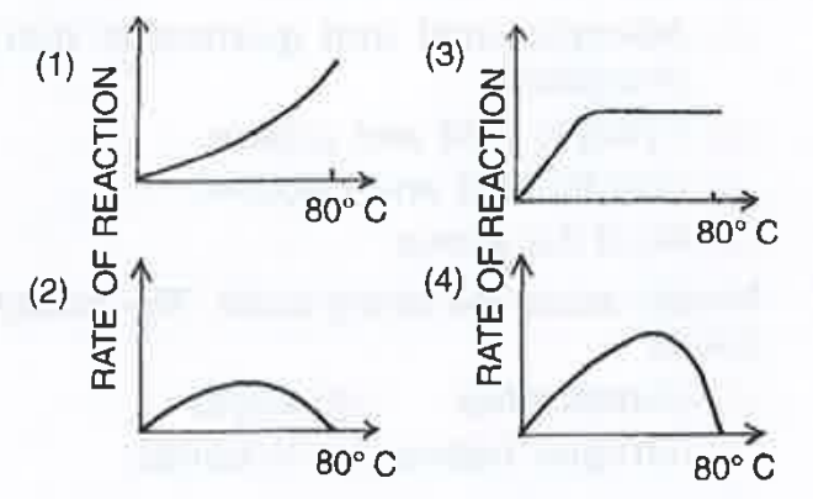
D. helix structure

Answer: B

Watch Video Solution

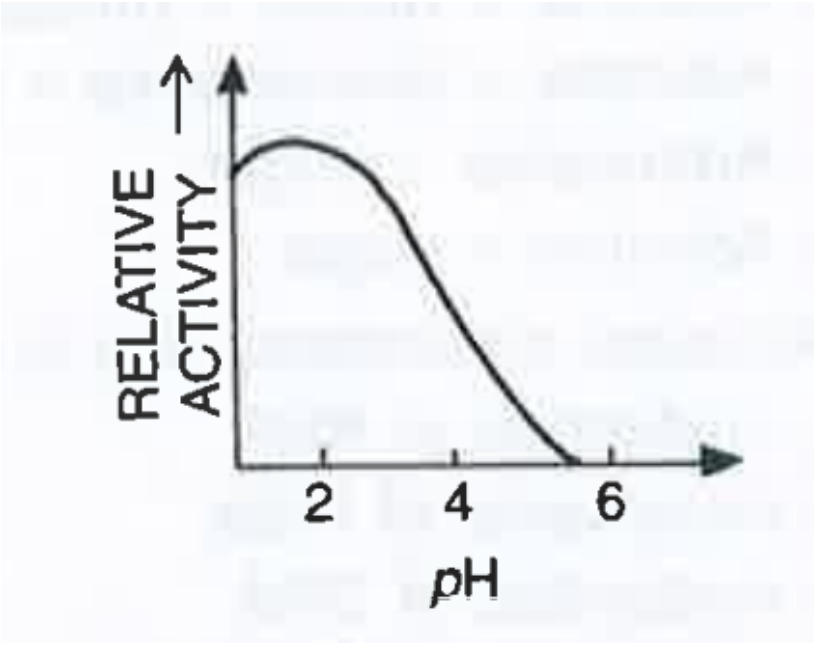
169. Which one of the following diagrams represents the most common relationships between temperature and enzyme activity, when the

temperature is raised gradually from 0- 80° C?



Watch Video Solution

170. The enzyme depicted in the below graph is



A. amylase

B. pepsin

C. trypsin

D. alchol dehydrogenease

Answer: B

Watch Video Solution

171. Lipase acting of fats breaks

A. ester bond

B. peptide bond

C. hydrogen bonds

D. glyosidic bond

Answer: A

Watch Video Solution

172. Earliest known enzyme was

A. sucrase

B. zymases

C. diastase

D. ureases

Answer: B

Watch Video Solution

173. No cell could live without

A. enzymes

B. cytochromes

C. cholroplast

D. phytochromes

Answer: A

Watch Video Solution

174. The protein part of a conjugated enzyme is

A. holoenzyme

B. conezymes

C. prothetic group

D. apoenzyme

Answer: D

Watch Video Solution

175. Enzyme that catalyse endergoinc synthesis coupled with exergonic hydrolysis of ATP are

A. Ligases

B. Lyases

C. Hydrolases

D. Oxidoreductase

Answer: A

Watch Video Solution

176. Cofactors are

A. non-protein organic molecules

B. vitamins

C. metallic ions

D. all of the above

Answer: D

Watch Video Solution

177. The region that contains the binding and catalytic sites is termend as

A. active site

B. apoenzyme

C. holoenzyme

D. allosteric site

Answer: A

Watch Video Solution

178. Enzyme/Proteins contian regulatory sites called

A. allosteric sites

B. active sites

C. folding sites

D. buttressing site

Answer: A

Watch Video Solution

179. Exnzyme concerned with the transfer of electrons is

A. oxidoreductases

B. cytochrome oxidase

C. dehydrogenase

D. all of these

Answer: D

Watch Video Solution

180. Substance which bring about changes in allosteric sites are called.

A. activators

B. inhibitors

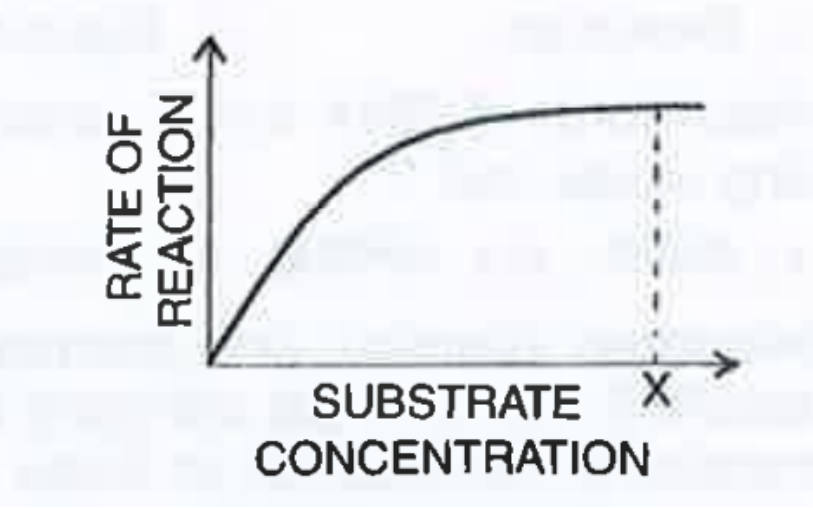
C. promoters

D. modulators

Answer: D

Watch Video Solution

181. The given graph is showing the relationship between the rate of enzyme reaction and concentration of substrate. At concentration of substrate greater than X, the



A. rate of reaction is limited by the enzyme concentration

B. substrate has an inhibitory effect

C. rate of reaction tends towards zero

D. product of the reaction has an inhibitory effect.

Answer: A

Watch Video Solution

182. In case of competitive inhibition of an enzyme,

A. $V_{\max}$ is increased

B. k_m increased

C. Extent of inhibition remains the same in high substrate concentrations

D. None of the above

Answer: B

Watch Video Solution

183. Which of the following remains unchanged in reversible competitive inhibition?

A. $V_{\max}$

B. K_m

C. Both

D. None of these

Answer: A

Watch Video Solution

184. Which is common among Amylase, rennin and tryosin?

A. All are proteins

B. All act at a pH lower than 7

C. All are proteolytic enzymes

D. All are produced in stomach

Answer: A

Watch Video Solution

185. Silph drugs/sulphanilamide kill bacteria by inhibting of which of the following ?

A. Para-aminobenzoic acid

B. Felic acid

C. Phenylalanine

D. Methionin

Answer: B

Watch Video Solution

186. One molecule of an enzyme is able to catalyse conversion of two molecules of substrate into products in 5 mintutes. Ten molecules of enzyme and 25 molecules of substrate are mixed in a test tube. At the end of 10 minutes the test tube will have

A. products only

B. products and 5 molecules of unreacted substrate

C. products, enzyme and 5 molecules of unreacted substrate

D. products and enzyme

Answer: D

Watch Video Solution

187. ATP was discovered by

A. Lipmann

B. Karl Lohman

C. Bowman

D. Blackman

Answer: B

Watch Video Solution

188. Which form of RNA has a structure resembling clover leaf ?

A. tRNA

B. mRNA

C. hnRNA

D. rRNA

Answer: A

Watch Video Solution

189. Enzymes, vitamins and hormones can be classified into a single category of biological chemicals, because all of these

A. are exclusively synthesized in the body of a living organism as at present

B. help in regulating metabolism

C. enhance oxidative metabolism

D. are conjugated proteins

Answer: B

Watch Video Solution

190. Which one of the following statements regarding enzyme inhibition is correct?

A. Competitive inhibition is seen when a substrate competes with an enzyme for binding to an inhibitor protein.

B. Non-competitive inhibitors often bind to the enzyme irreversibly.

C. Non-compeititve inhibtitve of an enzyme can be overcome by adding large amount of substrate.

D. Competitive inhibition is seen when the substrate and the inhibitor compelte the active site on the enzyme

Answer: D

Watch Video Solution

191. The catalytic efficiency of two different enzymes can be compared by the

A. the ph of optimium value

B. formation of the porduct

C. the K_m value

D. molecular size of the enzyme

Answer: C

Watch Video Solution

192. Which one is a nucleotide ?

A. Adenylic acid and guanosine mono- phosphate

B. Cytidylic acid and uridine

C. Uridylic acid and cytosine

D. All of the above

Answer: A

Watch Video Solution

193. Adenosine monophosphate is a

A. nucleotide of RNA

B. nucleoside of RNA

C. nucleotide of DNA

D. nucleoside of DNA

Answer: A

Watch Video Solution

194. In DNA model of Watson & Crick, the major grooves are site of

A. binding of histone proteins

B. binding of acidic proteins

C. binding of RNA molecules

D. binding of glycoproteins

Answer: B

Watch Video Solution

195. At $82 - 92^{\circ} C$ the H-bonds between nitrogen bases of complementary strands of DNA break to uncoil and separate two strands. This is called

A. denaturation (melting)

B. renaturation (reannealing)

C. recombination DNA

D. DNA finger printing

Answer: A

Watch Video Solution

196. On cooling the two separated strands of DNA again recoil. It is called

A. Chain reaction

B. annealing

C. both (1)&(2)

D. palindrome

Answer: B

Watch Video Solution

197. If DNA has 10 spirals, the length of DNA will be

A. 34Å

B. 340Å

C. 640Å

D. 64Å

Answer: B

Watch Video Solution

198. What would be the length of DNA containing 10000 base pairs?

A. 68000Å

B. 34000Å

C. 10000Å

D. Im

Answer: B

Watch Video Solution

199. How many nucleotides are found in one spiral of B-DNA?

A. 5

B. 10

C. 20

D. 25

Answer: C

Watch Video Solution

200. How many spirals (twins or helices) a DNA of 2000 base pairs will have?

A. 2000

B. 4000

C. 200

D. 45.5

Answer: C

Watch Video Solution

201. How many nucleotides will be present in a DNA of 20000 base pairs

A. 4000

B. 40000

C. 20000

D. 2000

Answer: B

Watch Video Solution

202. RNA differs from DNA in nature of

A. sugar and purines

B. sugar and pyrimidines

C. purines and phosphate

D. sugar and phosphate

Answer: B

Watch Video Solution

203. A condensation product of nitrogen base and pentose sugar is

A. nucleotide

B. nucleic acid

C. nucleoside

D. None of these

Answer: C

Watch Video Solution

204. In nucleoside, nitrogen base is attached to pentose sugar at

A. 1

B. 2

C. 3

D. 5

Answer: A

Watch Video Solution

205. Basic unit (monomer) of DNA molecule is

A. nitrogenous base

B. deoxyribose nucleotide

C. deoxyribose-nucleoside

D. pentose sugar

Answer: B

Watch Video Solution

206. The bases of RNA are of

A. 4 types

B. 6 types

C. 1 type

D. 2 types

Answer: A

Watch Video Solution

207. Which one is covalent bond ?

A. Peptide bond

B. Phosphodiester bond

C. Both correct

D. Both wrong

Answer: C

Watch Video Solution

208. DNA was first discovered by-

A. Miescher

B. Altman

C. Watson

D. Wilkins

Answer: A

Watch Video Solution

209. A molecule of ATP is structurally most similar to a molecule of

A. RNA nucleotide

B. DNA nucleotide

C. Amino acid

D. RNA nucleoside

Answer: A

Watch Video Solution

210. Adenosine is :

A. nucleoside

B. nucleotide

C. a purine

D. a pyrimdine

Answer: A

Watch Video Solution

211. Thymine differs from uracil in having

A. CH_3 group

B. $C = O$ group

C. CHO group

D. COOH group

Answer: A

Watch Video Solution

212. The difference in deoxyribose and ribose sugar is in the

A. first carbon

B. second carbon

C. 4th carbon

D. 5th carbon

Answer: B

Watch Video Solution

213. In purines, N is at position _____in its two rinigs.

A. 1,3,7,9

B. 1,5

C. 7,9

D. 1&9

Answer: A

Watch Video Solution

214. In pyrimidines, N is at _____position in its new ring.

A. 1,3

B. 7,9

C. 1

D. 1&9

Answer: A

Watch Video Solution

215. The similarity between DNA and RNA is that both are

A. are double-stranded

B. have similar sugars

C. are polymers of nucleotides

D. have similar pyrimidines

Answer: C

Watch Video Solution

216. Two strands of a molecule of DNA are linked sidewise by

A. ester bonds

B. glycosidic bonds

C. purine-pyrimidine hydrogen bonds

D. all the above

Answer: C

Watch Video Solution

217. The smallest RNA is :-

A. tRNA

B. mRNA

C. rRNA

D. genetic RNA

Answer: A

Watch Video Solution

218. In double helix of DNA, the two DNA strands are

A. coiled upon itself around a common axis

B. coiled around each other

C. coiled differently

D. coiled over protein sheath

Answer: A

Watch Video Solution

219. The type of RNA responsible for proper se- quence of amino acids in protein synthesis is

A. rRNA

B. tRNA

C. mRNA

D. hnRNA

Answer: C

Watch Video Solution

220. Which of the following RNAs have clover leaf structure?

A. transfer RNA

B. messenger RNA

C. ribosomal RNA

D. heterogenous RNA

Answer: A

Watch Video Solution

221. DNA strands are termed antilparallel be cause of

A. H-bonds

B. phospho-diester bonds

C. disulphide (S-S bonds)

D. none of the above

Answer: B

Watch Video Solution

222. In the double helix modle of DNA , how far is each base pair from the next base pair

A. 0.034nm

B. 3.4 nm

C. 0.34 nm

D. 34 nm

Answer: C

Watch Video Solution

223. The base sequence for a nucleic acid segment is given as GAG AGG GGA CCA. From this it can be cocluded that it is a segment of a

A. DNA strand

B. mRNA strand

C. tRNA strand

D. data insufficient

Answer: D

Watch Video Solution

224. Which is correct sequence according to increasing molecular weight ?

A. tRNA- DNA- rRNA

B. tRNA - rRNA - DNA

C. rRNA- DNA- tRNA

D. DNA- tRNA - rRNA

Answer: B

Watch Video Solution

225. The area of DNA rich in A - T base pairs is called

A. high melting area

B. low melting area

C. microsatellite

D. pallindrome

Answer: B

Watch Video Solution

226. Purines of RNA are

A. guanine & adenine

B. uracil & thymine

C. adenine & cytosine

D. uracil & guanine

Answer: A

Watch Video Solution

227. Deoxyribose sugar in DNA is

A. $C_5H_{10}O_5$

B. $C_5H_{10}O_4$

C. $C_6H_{12}O_6$

D. $C_6H_{14}O_5$

Answer: B

Watch Video Solution

228. The double stranded helical structure of DNA is maintained by

A. amide bonds

B. H-bonds

C. covalent bonds

D. phosphodiester bonds

Answer: B

Watch Video Solution

229. if A=120 and C120, then a piece of DNA will have _____nucleotides.

A. 240

B. 280

C. 480

D. data insufficient

Answer: C

Watch Video Solution

230. In E. coli DNA has 18% of bases of cytosine. What will be the fraction of adenine?

A. 0.18

B. 0.32

C. 0.36

D. data insufficient

Answer: B

Watch Video Solution

231. In 'B' model of DNA,the diameter is 20Å. It is _____in Z DNA.

A. 23Å

B. 18Å

C. 21Å

D. 26Å

Answer: B

Watch Video Solution

232. Which statement is wrong about DNA ?

A. Some viruses have SsDNA

B. Some viruses have dsRNA

C. Z' DNA has 12 base pairs per helix

D. Length of one helix in 'B' DNA is 45Å and 'Z' DNA is 34Å

Answer: D

Watch Video Solution

233. The helical model for DNA given by Watson and Crick was

A. B type right handed

B. Z type left handed

C. B type left handed

D. Z type right handed

Answer: A

Watch Video Solution

234. Which one of the following ratios is variable but constant for a species?

A. $\frac{[A+T]}{[G+C]}$

B. $\frac{[A+G]}{[T+C]}$

C. $\frac{[A+U]}{[G+C]}$

D. None of these

Answer: A

Watch Video Solution

235. if one chain of a DNA molecule has the base order 5'ATTGACGT3' . . . . .

Then the base order of its complementary chain will be

A. 3' ATTGACGT 5'

B. 5' TGCAGTTA 3'

C. 5' TUUCTGCU 3'

D. 3' TAACTGCA 5'

Answer: D

Watch Video Solution

236. The amino acid attaches to the tRNA at its

A. 5 end where OH is present

B. 3' end where OH is present

C. recognition site

D. loop I

Answer: B

Watch Video Solution

237. Which is recognition site of tRNA?

A. Anticodon

B. Loop I

C. Loop IV

D. 5'-OH end

Answer: A

Watch Video Solution

238. tRNA attached to mRNA by its

A. I loop

B. II loop

C. III loop

D. IV loop

Answer: B

Watch Video Solution

239. The ribosomal binding loop of tRNA is

A. DHU loop

B. anticodon loop

C. T ΨC loop

D. III loop

Answer: C

Watch Video Solution

240. RNA is synthesized on

A. both strands of DNA

B. on sense strand of DNA

C. on anti sense strand of DNA

D. on cDNA

Answer: C

Watch Video Solution

241. Which one of the following has minimum life span?

A. mRNA

B. rRNA

C. tRNA

D. DNA

Answer: A

Watch Video Solution

242. Which one of the following is not given by Erwin Chargaff ?

A. Base composition of DNA varies from one species to another

B. The base composition of DNA does not change with age, nutrition or changes in the environment

C. Molar amounts of adenine are equal to the molar amounts of thymine

D. DNA can transcribe RNA

Answer: D

Watch Video Solution

243. Genetic information in a DNA molecule is coded in the

A. sequence of nucleotides

B. base pairing

C. turning pattern of helix

D. distance between base pairs

Answer: A

Watch Video Solution

244. The two polynucleotide chains of DNA are complementary, means

A. if one starts with 5' end the other must start with 3' end

B. if the sequence of bases of one chain is known, that of other can be determined

C. two chains are held up by hydrogen bonds

D. all of the above

Answer: B

Watch Video Solution

245. DNA is present in

A. E.R. and ribosomes

B. ribosomes and chloroplasts

C. ribosomes and mitochondria

D. mitochondria and chloroplastis

Answer: D

Watch Video Solution

246. Which of the following nitrogenous base is double ringed?

A. Guanine

B. Uracil

C. Thymine

D. Cytosine

Answer: A

Watch Video Solution

247. In a 3.2 Kbp long piece of DNA , 820 adenine bases were found. What would be number of cyosine bases

A. 1560

B. 1480

C. 780

D. 740

Answer: C

Watch Video Solution

248. Match the following

(1)	Abrin	- (P) Anti-cancer drug
(2)	Vinblastin	- (Q) Alkloid
(3)	Gums	-(R) Toxin
(4)	Morphine	-(S) Protein
(5)	GLUT - 4	- (T) Polymeric secondary metabolite

A. (1)-(R), (2)-(P), (3)-(T), (4)-(Q), (5)-(S)

B. (1)-(P), (2) -(R), (3) -(T), (4) - (Q), (5)- (S)

C. (1)-(R), (2)-(P), (3)-(Q), (4) - (T), (5)- (S)

D. (1)-(Q), (2)-(T), (3)-(P), (4)-(R), (5)- (S)

Answer: A

Watch Video Solution

249. Go through the following statements.

(i) In proteins, right handed and left handed helices are observed

(ii) In B-DNA, at each step of ascent, the strand turns 36°.

(iii) Living process is a steady - state in equilibrium.

(iv) The rate of reaction doubles or decreas- es by half for every 10° C change in ei- ther direction.

Find out the correct statement ?

A. (i), (iii) & (iv)

B. (ii) & (iv)

C. (i) & (iv)

D. All are correct

Answer: B

Watch Video Solution

250. Go through the following statements.

(i) Lipids are not strictly macromolecules.

(ii) In a polysaccharide , the left end is called the non-reducing chain, the right end called the reducing end.

(iii) Cellulose contains complex helices and hence cannot hold I_2.

(iv) Collagen is the most abundant protein in the whole of the biosphere.

Find out the correct statements .

A. (i), (ii) & (iii)

B. (i), (iii) & (iv)

C. (i) ,(ii) &(iv)

D. (i) & (iv)

Answer: D

Watch Video Solution

251. Match the following .

(1) Valine	(A) Aromatci essential amino acid
(2) Tyrosine	(B) Fatty acid with 20 carbon atoms
(3) Arachidonic acids	(C) Netural amino acids
(4) Lysine	(D) Fatty acid with 16 carbon atoms
(5) Palmitic acid	(E) Aromatic amino acid
	(F) Basic amino acid

A. $(1)-(E),(2)-(A),(3)-(D),(4)-(F),(5)-(D)$

B. $(1)-(E),(2)-(A),(3)-(D),(4)-(F),(5)-(B)$

C. $(1)-(C),(2)-(A),(3)-(B),(4)-(F),(5)-(B)$

D. $(1)-(C),(2)-(E),(3)-(B),(4)-(F),(5)-(D)$

Answer: D

Watch Video Solution

252. Given below is a comparision of elements present in non-living and living matter. Which of these is incorrect:

A.

Element	% weight of Earth's crust	% weight of Human body
(1) Silicon	27.7	Negligible

B.

Element	% weight of Earth's crust	% weight of Human body
(2) Carbon	0.03	18.5

C.

Element	% weight of Earth's crust	% weight of Human body
(3) Calcium	10	15

D.

Element	% weight of Earth's crust	% weight of Human body
(4) Nitrogen	Very little	3.3

Answer: C

Watch Video Solution

253. All the following statement describing lipids are ture except:

A. Oxygen content may be more than carbon and hydrogen

B. They are poorly soluble in water

C. They are structural components of membranes

D. They are intracellur energy source

Answer: A

Watch Video Solution

254. The fastest enzyme is

A. Zymase

B. Carbonic anhydrase

C. Amylase

D. Hexokinase

Answer: B

Watch Video Solution

255. Select out the correct sequence according to incrases in complexity.

A. Maltose, Frutose, Triose, Oligosaccharide, Strach

B. Fructose, Maltose, Triose, Strach, Oilgosaccharide

C. Fructose, Maltose, Triose, Oilgosaccharide, Strach

D. Fructose, Maltose , Oligosaccharide, strach

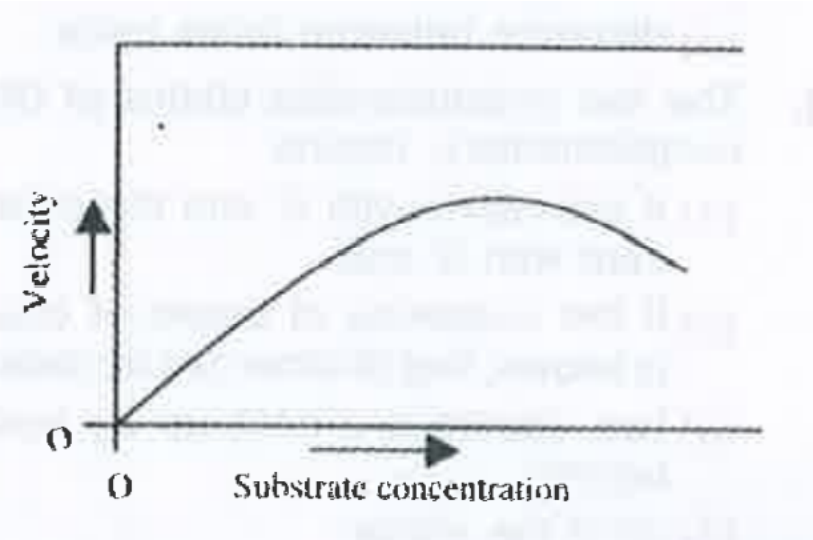
Answer: D

Watch Video Solution

256. What does the graph indicate ?

The graph given below shows the effect of substrate concentration on

the rate of reaction of the enzyme green- gram-phos-phatase.



A. The rate of enzyme reaction is directly proprotional to the substrate concentration.

B. Presence of an enzyme inhibitor in the reaction mixture

C. Formation of an enzyme-substrate complex

D. At higher substrate concentration the ph increase

Answer: B

Watch Video Solution

257. The bonds between the enzyme and substrate must be

A. Weak and long-lived

B. Weak and short-lived

C. Strong and long-lived

D. Strong and short-lived

Answer: B

Watch Video Solution

258. Consider the following fatty acids

1. Linolenic 2.Epimers

3. Aldohexoses 4. Monosaccharides.

which of the above statements are correct ?

A. 1 only

B. 1 and 2

C. 3 and 4

D. 2,3 and 4

Answer: B

Watch Video Solution

259. Consider the following statement.

D-glucose, D-galactose and D-fructose are all.

1. Isomers

2. Epimers

3. Aldohexoses

4.Monosaccharides .

A. 1 and 4

B. 2 and 4

C. 1,2and 4

D. 1,2 and 4

Answer: A

Watch Video Solution

260. Which one of the following statements is not correct?

A. All fattly acids have a carboxyl group at one end

B. Like carbohydrates, fatty acids have more oxygen than hydrogen

C. Saturated fatty acids are soilds at room temperature

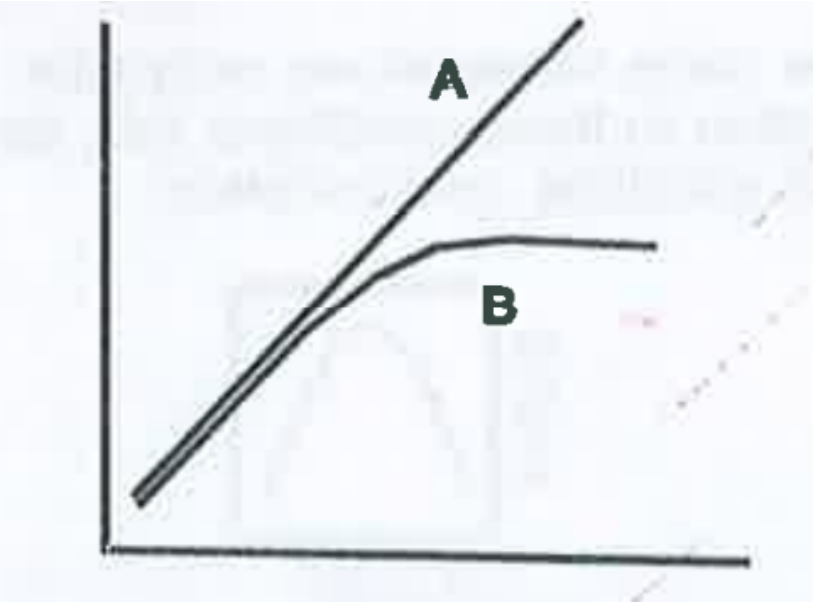
D. Glycerol is a component of phospho liqids

Answer: B

Watch Video Solution

261. The same enzyme catalyzed reaction showed tow differenet kinetic patterns as shown in the graph. Y-axis indicates prouduct formed and X-

axis indicates time. Mark the correct interpretation.



A. Reaction A is carried out at higher tempreature than B

B. Reaction B is carried out at a pH higher than that for reaction A.

C. Substrate in replensihed form time to time in reaction A and not in B

D. Only reaction A is carried out at optimumion concentraion

Answer: C

Watch Video Solution

262. Listed below are certain proteins. Which of them are the only structural proteins ?

(i) Collagen (ii) Trypsion

(iii) Keratin (iv) Actin

(v) Albumin (vi) Tubulin

A. (i),(iii),(iv)

B. (ii),(iv),(v), (vi)

C. (i),(iii),(vi)

D. (i),(iii), (iv),(v),(vi)

Answer: C

Watch Video Solution

263. Which of the following amino acids have side chain that are negatively charged under physiogical conditions ?

A. Aspartic acid

B. Histidine

C. Tryosine

D. Serine

Answer: A

Watch Video Solution

264. When the following amino acids are separated by running them on Agraose gel at pH 7, which one then will migrate slowest to anode ends ?

A. Aspartic acid

B. Valine

C. Glycine

D. Lysine

Answer: D

Watch Video Solution

265. Atherogenic lipoproteins are all EXCEPT

A. LDL

B. HDL

C. VLDL

D. Chylomicrons

Answer: B

Watch Video Solution

266. An enzyme that can stimulate germination of barley seeds is

A. protease

B. invertase

C. α-amylase

D. lipase

Answer: C

Watch Video Solution

267. An organic substance bound to an enzyme and essential for its activity is called

A. aponezyme

B. isoenzyme

C. conenzyme

D. holoennzyme

Answer: C

Watch Video Solution

268. Purines are generally abbreviated as

A. R

B. Y

C. C

D. U

Answer: A

Watch Video Solution

269. Quaternary structure is present in

A. Histone

B. Haemoglobin

C. Globulin

D. Elastin

Answer: B

Watch Video Solution

270. Inulin is a polymer of

A. Amino acids

B. Glucose

C. Fructose

D. None of the above

Answer: C

Watch Video Solution

271. Three of the following statements about enzymes are correct and one is wrong. Which one is wrong

A. Enzymes required optimum pH for maximal activity.

B. Enzymes are denatured at high temperature but in certain exceptional organisms they are effective even at temperature $80^\circ - 90^\circ$ C.

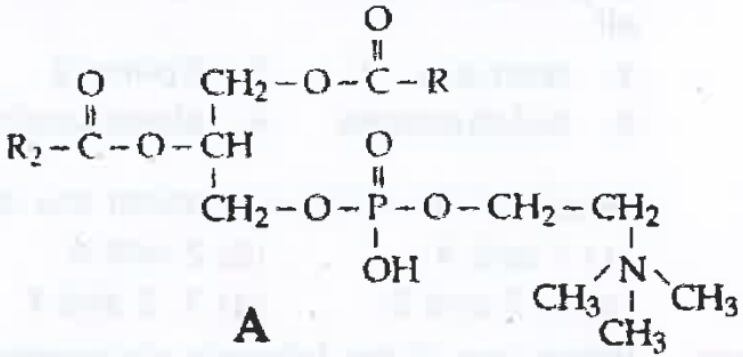
C. Enzyme are highly specific

D. Most enzyme are proteins but some are lipids .

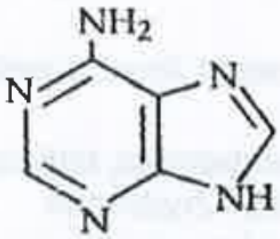
Answer: D

Watch Video Solution

272. Which one fo the following structural formulae of two orgainc compounds is correctly identified along with its related function ?



A



B

A. B: Adenine- a nucleotide that makes up nucleic acids

B. A : Triglyceride - major source of enery

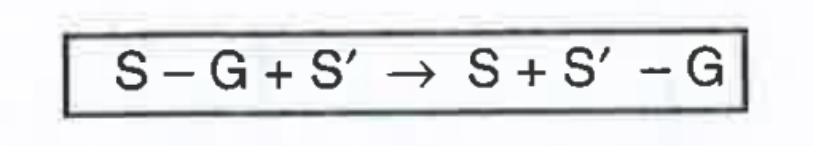
C. B: Uracil - a component of DNA

D. A: Lecithin - a component of cell membrane.

Answer: D

Watch Video Solution

273. Select the types of enzyme involved in the following lowing reaction:



A. dehydrogenases

B. transferases

C. hydrolases

D. lyase

Answer: B

Watch Video Solution

274. Most abundant RNA in a cell is :

A. rRNA

B. mRNA

C. tRNA

D. snRNA

Answer: A

Watch Video Solution

275. For its activity, carboxypeptidase requires

A. Niacin

B. Copper

C. Zinc

D. Iron

Answer: C

Watch Video Solution

276. which one of the following biomolecules is correctly characterized ?

A. Adenylic acid -adensione with a glucose phosphate molecule

B. Alannine amino acid- Contains an amino group and an acidic group anywhere in the molecule

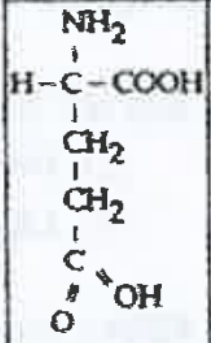
C. Lecithin -a phosphorylated glyceride found in cell membrance.

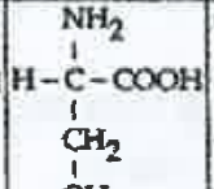
D. Palmitic acid- an unstaurated fatty acid with 18 carbon atoms

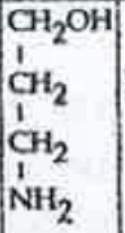
Answer: C

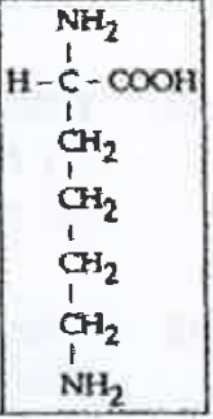
Watch Video Solution

277. Which one out of A- D given below correctly repesents the structural formual of the basic amino acids ?

A	B	C	D
			








A. D

B. A

C. B

D. C

Answer: A

Watch Video Solution

278. Which one is the most abundant protein in the animal world

A. haemoglobin

B. Collagen

C. Insulin

D. Trypsin

Answer: B

Watch Video Solution

279. Macro molecule chitin is:

A. Suluphur containing polysaccharide

B. simple polysaccdaride

C. nitrogen containing polysaccharide

D. phosphorus containg polysaccharide

Answer: C

Watch Video Solution

280. A phosphoglyceride is always made up of

A. a saturated or unsatuarated or unsaturated fatty acid estrified to a glycerol molecule to which a phosphorus group is also attached

B. a saturated or unsaturated fatty acid esterified to a phosphate group which is also attached to a glycerol is also attached

C. only a saturated fatty acid esterified to glycerol moleucle to which a phosphate group is also attached

D. only an unsaturated fatty acid esterified to a glycerol molecule to which a phosphate group is also attached

Answer: A

Watch Video Solution

281. Transition state structure of the substrate formed during an enzymatic reaction is

A. transient and unstable

B. permanent and stable

C. transient but stable

D. permanent but unstable

Answer: A

Watch Video Solution

282. Which one of the following is a non-reducing carbohydrate?

A. Ribose 5-phosphate

B. Malotose

C. Sucrose

D. Lactose

Answer: C

Watch Video Solution

283. Select the option which is not correct with respect to enzyme action

A. Malonate is a competitive inhibtior of succines dehydrogenase

B. Substrate binds with enzyme at its active site

C. Addition of lot of succinate does not regenase by malonate

D. A non-competitve inhibitor binds the enzyme at a site distinct form that which binds the substrate.

Answer: C

Watch Video Solution

284. Which one of the following statements is incorrect ?

A. In competitive inhibition, the inhibitor molecule is not chemically changed by the enzyme

B. The competitive inhibitor does not affect the rate of breakdown of the enzyme substrate complex

C. The presence of the competitive inhibitor decreases the Km of the enzyme for the substrate

D. A competitive inhibitor reacts reversibly with the enzyme to form an enzyme-in-hibitior complex .

Answer: C

Watch Video Solution

285. The chitinous exoskeleton of arthropods is formed by the polymerisation of :

A. Kertain sulphate and chondroition sulphate

B. D-glucosamie

C. N-acetly glucosamie

D. Lipoglycans

Answer: C

Watch Video Solution

286. Which of the following biomolecules does have a phosphodiester bond ?

A. Fatty acids

B. Monosaccharides

C. amino acids

D. Nucleic acids

Answer: D

Watch Video Solution

287. A typical fat molecule is made up of

A. One glycerol and three fatty acid molecules

B. One glycerol and one fatty acid molecule

C. Three glycerol and the three fatty acid molecules

D. Three glycerol molecules and one fatty acid molecule

Answer: A

Watch Video Solution

288. Which one of the following statements is worng ?

A. Cellulose is a polysaccharide

B. Uracil is a pyrmidine

C. Glycine is a sulphur containg amino acid

D. Sucrose is a disaccharide

Answer: C

Watch Video Solution

289. Which of the following is the least likely to be involved in stabilizing the three-dimensional folding of most proteins

A. Hydrogen bonds

B. Electrostatic interaction

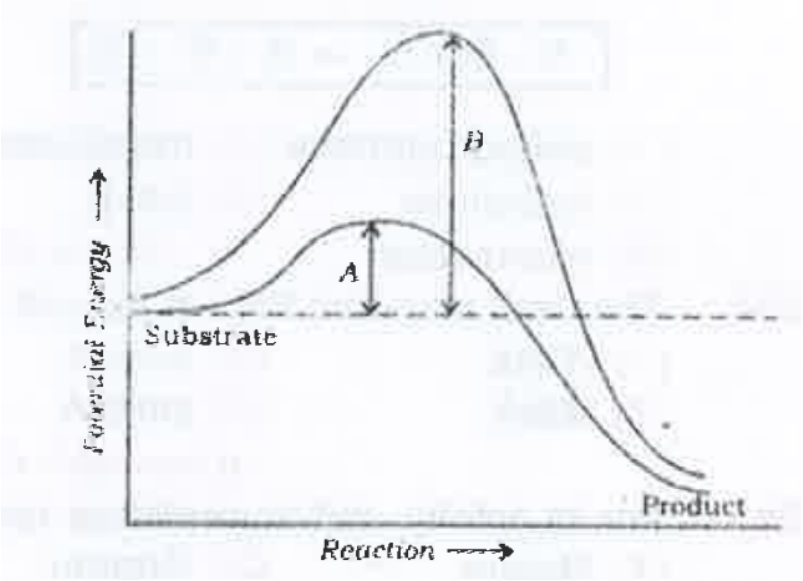
C. Hydrophobic interaction

D. Ester bonds

Answer: D

Watch Video Solution

290. Which of the following describes the given graph correctly ?



A. Endothermic reaction with energy A in presence of enzyme and B in absense of enzyme

B. Exothermic reaction with energy A in presence of enzyme and B in absence of enzyme .

C. Endothermic reaction with enezyme and B in absence of enzyme .

D. Exothermic reaction with energy A in absence of enzyme and B in presence on enzyme .

Answer: B

Watch Video Solution

291. Which one of the following statements is correct with reference to enzymes

A. Aponezyme = Holoenzyme + Conezyme

B. Holoenzyme = Apoenzyme + Coenzyme

C. Coenzyme = Apoenzyme + Holoenzyme

D. Holoenzyme = Coenzyme + Co-factor.

Answer: B

Watch Video Solution

292. Which of the following are not polymeric

A. Nucleic acid

B. Proteins

C. Polysaccharides

D. Lipids

Answer: D

Watch Video Solution

293. Which of the following RNAs should be most abundant in animal cell

A. r-RNA

B. t-RNA

C. m-RNA

D. mi-RNA

Answer: A

Watch Video Solution

294. The two functional groups characteristic of sugars are

A. carbonyl and hydroxyl

B. carbonyl and phosphate

C. carbonyl and methyl

D. hydroxyl and methyl

Answer: A

Watch Video Solution
