

BIOLOGY

BOOKS - TRUEMAN'S BIOLOGY (ENGLISH)

Plant Physiology

Assertion And Reason

1. [A]: Phytotron is a device by which photolysis of water is created.

[R]: Phytotron is a method of keeping plants in natural light and temperature in houses

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: D

Watch Video Solution

2. [A]: The driving force for passive absorption is non metabolic in origin.

[R]: The driving force for active absorption is energy derived from the metabolic processes.

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: B

Watch Video Solution

3. [A]: The movement of ions from endodermis to xylem elements is an active process.

[R]: It requires the involvement of metabolic energy that comes from respiration.

- A. If both A and R are true and R is the correct explanation of A
- B. If both A and R are true but R is not the correct explanation of A
- C. If A is true and R is false
- D. If both A and R are false

Answer: A

Watch Video Solution

4. [A]: The water molecules are held together from cells of leaf to root because of cohesive force.

[R]: Water does not ascend in the tissue due to transpiration pull.

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: C

Watch Video Solution

5. [A]: Passive absorption of a substance occurs from its lower to higher chemical potential across the membrane.

[R]: Active absorption occurs across a membrane from its higher to lower chemical potential i.e., along the concentration gradient

- A. If both A and R are true and R is the correct explanation of A
- B. If both A and R are true but R is not the correct explanation of A
- C. If A is true and R is false
- D. If both A and R are false

Answer: D

Watch Video Solution

6. [A]: Xylem transports sap from root to shoot.

[R]: Phloem translocates food.

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: B

Watch Video Solution

7. [A]: Maximum transpiration occurs in mesophytes than xerophytes.

[R]: In mesophytes stomata are found on both surfaces of leaves and guard cells show frequent movements

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: A

Watch Video Solution

8. Assertion : Thick cuticle is mostly present in disease resistant plants.

Reason : Disease causing agents cannot grow on cuticle and cannot invade the cuticle.

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: B

Watch Video Solution

9. Assertion. Submerged plants get carbon dioxide in the form of carbonates and bicarbonates.

Reason. Stomata are not present in submerged plants

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: D

Watch Video Solution

10. [A]: Phloem is the main conducting tissue.

[R]: Phloem does the function of conduction of water.

- A. If both A and R are true and R is the correct explanation of A
- B. If both A and R are true but R is not the correct explanation of A
- C. If A is true and R is false
- D. If both A and R are false

Answer: A

Watch Video Solution

11. [A]: Antitranspirants are used to retard transpiration.

[R]: AbA and PMA are not antitranspirants

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: C

Watch Video Solution

12. [A]: Rate of transpiration is high in low wind velocity.

[R]: Wind removes humid air from around the leaf due to which transpiration is high.

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: B

Watch Video Solution

13. [A]: The rate of transpiration is indirectly proportional to RH.

[R]: If the outer air is humid, it will reduce the

diffusion of water vapour from intercellular spaces of leaf to the outer atmosphere.

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: A

Watch Video Solution

14. [A]: High pH in guard cells activate phosphorylase to convert starch into glucose 1- PO_4 .

[R]: Stomata open when pH is low

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: D

Watch Video Solution

15. [A]: Daily periodicity of stomata! movement is not the characteristic of succulent plants.

[R]: In succulent plants stomata are closed at night and open during the day.

A. (a) If both A and R are true and R is the correct explanation of A

B. (b) If both A and R are true but R is not the correct explanation of A

C. (c) If A is true and R is false

D. (d) If both A and R are false

Answer: D

Watch Video Solution

16. [A]: In *Nepenthes*, lamina is modified to capture insects to get nitrogenous food.

[R]: The plant proteins are broken down to amino acids and then absorbed by plant.

A. (a) If both A and R are true and R is the correct explanation of A

B. (b) If both A and R are true but R is not the correct explanation of A

C. (c) If A is true and R is false

D. (d) If both A and R are false

Answer: A

Watch Video Solution

17. [A]: The downward movement of minerals through soil is effected by quantity and pH of water.

[R]:. Water makes mineral ions available to roots. The lower the pH, greater the leaching power of water.

- A. If both A and R are true and R is the correct explanation of A
- B. If both A and R are true but R is not the correct explanation of A
- C. If A is true and R is false
- D. If both A and R are false

Answer: A

Watch Video Solution

18. [A]: Auxins are found in large amounts in the apical Meristem of shoot.

[R]: Because the shoot is exposed to the sunlight.

A. (a) If both A and R are true and R is the correct explanation of A

B. (b) If both A and R are true but R is not the correct explanation of A

C. (c) if A is true and R is false

D. (d) If both A and R are false

Answer: B

Watch Video Solution

19. [A]: In C_4 plants, CO_2 fixation occurs at three sites.

[R]: CO_2 is fixed in mesophyll cells, bundle sheath cells and vascular cambium

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: D

Watch Video Solution

20. [A]: Oxidation of H_2O takes place during photo-synthesis.

[R]: Photosynthesis is an oxidation-reduction

process where H_2O is oxidised to O_2 and CO_2 is reduced to $(CH_2O)_n$.

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: C

Watch Video Solution

21. [A]: The rate of photosynthesis is determined in terms of the rate of production either per unit mass of green tissue or per unit weight of total chlorophyll.

[R]: Amount of light, CO_2 supply and temperature are important internal factors that directly affect the photosynthesis.

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: C

Watch Video Solution

22. [A]: The energy capturing part of photosynthesis occurs in thylakoid membranes and can not proceed without

solar energy.

[R]: The synthesis part of photosynthesis occurs in the stroma and does not require direct light energy.

- A. If both A and R are true and R is the correct explanation of A
- B. If both A and R are true but R is not the correct explanation of A
- C. If A is true and R is false
- D. If both A and R are false

Answer: B

Watch Video Solution

23. [A]: The light dependent reactions occur in thylakoids.

[R]: In thylakoids chlorophyll pigments are found to trap light.

A. (a) If both A and R are true and R is the correct explanation of A

B. (b) If both A and R are true but R is not the correct explanation of A

C. (c) If A is true and R is false

D. (d) If both A and R are false

Answer: A

Watch Video Solution

24. [A]: Tropical movements occurring in response to water stimulus are called Haptotropism.

[R]: Haptotropic movement occurs in response to vibrations

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: D

Watch Video Solution

25. [A]: The evolution of molecular oxygen is concerned with photosystem-1 (PS-I).

[R]: The photosystem-11 (PS-II) is not involved in the evolution of oxygen

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: D

Watch Video Solution

26. [A]: Hill and Bendall proposed Z-scheme and suggested that photosystems operate in series.

[R]: The light-dependent reactions require the participation of two light gathering units called PS-I and PS-II.

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: A

Watch Video Solution

27. [A]: Rhizobial aggregates have been observed at distinct sites on curled root hairs.

[R]: The infection thread is formed by a process of invagination of the hair cell walls in the region of curling

A. (a) If both A and R are true and R is the correct explanation of A

B. (b) If both A and R are true but R is not the correct explanation of A

C. (c) If A is true and R is false

D. (d) If both A and R are false

Answer: A

Watch Video Solution

28. [A]: Light is very important external factor of transpiration.

[R]: Light induces stomata! opening and darkness stomata! closure. Thus the rate of transpiration increases in light and de- creases in dark.

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: A

Watch Video Solution

29. [A]: Wax, resin and suberin coating on the surface of plant parts reduce the rate of transpiration.

[R]: These adaptations are found mostly in xerophytes.

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: B

Watch Video Solution

30. [A]: Gibberellic acid when added to isolated aleurone layer, induces alfa-amylase activity. It acts at gene level.

[R]: GA may act at the gene level or just activates the inactive enzyme or interact to remove enzyme inhibitor.

A. (a) If both A and R are true and R is the correct explanation of A

B. (b) If both A and R are true but R is not the correct explanation of A

C. (c) If A is true and R is false

D. (d) If both A and R are false

Answer: A

Watch Video Solution

31. Assertion : Axillary buds, in actively growing herbaceous plants, generally remain dormant

Reason : This is due to apical dominance which is under the influence of auxins

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: A

Watch Video Solution

32. Assertion : If you burn a plant , its nitrogen component is given off as ammonia and other gases .

Reason : Hydroponics does not allow plants to grow well if they are supplied with all the mineral nutrients they need.

- A. If both A and R are true and R is the correct explanation of A
- B. If both A and R are true but R is not the correct explanation of A
- C. If A is true and R is false
- D. If both A and R are false

Answer: C

Watch Video Solution

33. [A]: Amino acids are converted into ammonia by a group bacteria called ammonifying bacteria.

[R]: The majority of plants, however, can not utilize ammonium compounds as a source of nitrogen

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: B

Watch Video Solution

34. [A]: Due to excessive use of fertilizers, the available water to the plants becomes hypotonic in relation to cell sap.

[R]: The water molecules, as a result, diffuse out of the cells due to endosmosis.

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: D

Watch Video Solution

35. [A]: Vernalization is also called as
yarovization.

[R]: In short day plants the dark period re-
quired is important

A. If both A and R are true and R is the
correct explanation of A

B. If both A and R are true but R is not the
correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: B

Watch Video Solution

36. [A]: Fundamental factor in the vernalization is low temperature.

[R]: Vernalization is ineffective in the absence of oxygen, water and adequate supplies of carbohydrates for respiratory processes.

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: B

Watch Video Solution

37. [Aj: ABA plays an important role in plants during water stress and drought conditions.

[R]: Exogenously applied ABA promotes stomatal closing.

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: B

Watch Video Solution

38. (A): Cytokinins help in retention of chlorophyll and delayed senescence in leaves.

[R]: Cytokinins only stimulate root initiation

A. (a) If both A and R are true and R is the correct explanation of A

B. (b) If both A and R are true but R is not the correct explanation of A

C. (c) If A is true and R is false

D. (d) If both A and R are false

Answer: C

Watch Video Solution

39. [A]: The germination of lettuce seeds is stimulated by red light and inhibited by infrared light.

[R]: Red light converts pr to active pfr form.

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: A

Watch Video Solution

40. [A]: The far-red form of the phytochromes absorb light at 740 nm.

[R]: The red form of phytochrome absorbs light at 660 nm

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: B

Watch Video Solution

41. [A]: Elongation and division of cells are promoted by gibberellins.

[R]: Gibberellins increase the formation of hydrolytic enzymes that release energy necessary for growth

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: A

Watch Video Solution

42. [A]: Senescence effect can be reversed by cytokinin.

[R]: The loss of liquid from leaves of intact plant is termed as guttation.

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: B

Watch Video Solution

43. [A]: Wilting occurs due to loss in turgidity.

[R]: Turgor pressure checks the excessive entry of water into cells.

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: B

Watch Video Solution

44. [A]: Plasmolysis is seen by both living and dead cells.

[R]: Both types of cell are impermeable

A. (a) If both A and R are true and R is the correct explanation of A

B. (b) If both A and R are true but R is not the correct explanation of A

C. (c) If A is true and R is false

D. (d) If both A and R are false

Answer: D

Watch Video Solution

45. [A]: The water is absorbed by the root and moves into the stem.

[R]: From root hair cell, water directly moves to xylem cells

- A. If both A and R are true and R is the correct explanation of A
- B. If both A and R are true but R is not the correct explanation of A
- C. If A is true and R is false
- D. If both A and R are false

Answer: C

Watch Video Solution

46. [A]: Sulphur stabilizes protein structure.

[R]: It does not participate in metabolic processes

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: C

Watch Video Solution

47. [A]: Stomata remain open during day

[R]: Stomata help in gaseous exchange.

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: B

Watch Video Solution

48. [A]: The nitrogen content of the plant cannot be detected accurately by ash analysis.

[R]: On burning of plant, nitrogen component is given off as NH_3 & other gases

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: A

Watch Video Solution

49. [A]: Submerged plants, get CO_2 in-the form of CO_3^- & HCO_3^-

[R]: Stomata are absent in submerged plants

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: B

Watch Video Solution

50. [A]: The evolution of molecular oxygen is concerned with photosystem-1 (PSI).

[R]: The photosystem-11 (PS-II) is not involved in the evolution of oxygen.

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: D

Watch Video Solution

51. [A]: Antitranspirants are material applied to plants for retarding transpiration.

[R]: Abscisic acid and phenyl mercuric acetate are not antitranspirants.

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: C

Watch Video Solution

52. Assertion. Calcium deficiency symptoms first appear in the apical region.

Reason. Calcium is highly mobile in plants

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: B

Watch Video Solution

53. Assertion: Deficiency of sulphur causes chlorosis in plants

Reason : Sulphur is a constituent of chlorophyll, proteins and nucleic acids.

A. (a) If both A and R are true and R is the correct explanation of A

B. (b) If both A and R are true but R is not the correct explanation of A

C. (c) If A is true and R is false

D. (d) If both A and R are false

Answer: C

Watch Video Solution

54. Assertion : Water and mineral uptake by root hairs from the soil occur through apoplast until it reaches endodermis

Reason : Casparian strips in endodermis are suberized.

A. (a) If both A and R are true and R is the correct explanation of A

B. (b) If both A and R are true but R is not the correct explanation of A

C. (c) If A is true and R is false

D. (d) If both A and R are false

Answer: A

Watch Video Solution

55. [A]: Stomata open when guard cells have more H^+ .

[R]: Increased K^+ concentrations results in exo-osmosis in guard cells.

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: D

Watch Video Solution

56. [A]: In washed beet root cylinders, betacyanin pigment does not come out when placed in cold water.

[R]: Because cell membrane is impermeable to betacyanin

- A. If both A and R are true and R is the correct explanation of A
- B. If both A and R are true but R is not the correct explanation of A
- C. If A is true and R is false
- D. If both A and R are false

Answer: A

Watch Video Solution

57. [A]: Rate of transpiration is directly proportional to relative humidity.

[R]: Humid air increases rate of diffusion.

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: D

Watch Video Solution

58. [A]: Root cells have lower OP than leaf cells.

[R]: Root cells have higher solute concentration.

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: D

Watch Video Solution

59. [A]: Root pressure is largely responsible for ascent of sap in herbaceous plants.

[R]: Root pressure develops due to DPD & is maintained by the living cells.

A. (a) If both A and R are true and R is the correct explanation of A

B. (b) If both A and R are true but R is not the correct explanation of A

C. (c) If A is true and R is false

D. (d) If both A and R are false

Answer: B

Watch Video Solution

60. [A]: The nodulated bacteria fix nitrogen in the presence of leg Hb.

[R]: Leg Hb acts as oxygen scavenger

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: A

Watch Video Solution

61. [A]: Plants growing under trees show less photosynthesis.

[R]: Green light is least effective in photosynthesis.

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: A

Watch Video Solution

62. Assertion : Long distance flows of photoassimilates in plants occurs through sieve tubes

Reason : Mature sieve tubes have parietal cytoplasm and perforated sieve plates

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: A

Watch Video Solution

63. [A]: Rhoea discolor leaves contain anthocyanin in epidermal cells

[R]: Anthocyanins are accessory photosynthetic pigments & trap solar radiations from surface

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: C

Watch Video Solution

64. [A]: Ringing/Girdling experiments involved removal of all tissues outside endodermis from a woody stem.

[R]: The upper & lower part of the plant is attached by central xylem & phloem.

- A. If both A and R are true and R is the correct explanation of A
- B. If both A and R are true but R is not the correct explanation of A
- C. If A is true and R is false
- D. If both A and R are false

Answer: D

Watch Video Solution

65. [A]: Action spectra for photosynthesis help to identify the pigments involved.

[R]: Because these spectron often closely match the absorption spectra of the pigments that take part in photosynthesis

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: A

Watch Video Solution

66. [A] : C_3 & C_4 cycle can not occur in the same plant

[R] : C_3 cycle is common in dicot & C_4 in monocots

A. (a) If both A and R are true and R is the correct explanation of A

B. (b) If both A and R are true but R is not the correct explanation of A

C. (c) If A is true and R is false

D. (d) If both A and R are false

Answer: D

Watch Video Solution

67. [A]: Photosynthesis is an oxidation reduction process.

[R]: Electron transport involves oxidation & dark reaction involves reduction of CO_2

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: A

Watch Video Solution

68. Assertion. Nitrogen deficiency induced purplish colouration in stems, petioles and lower leaf surfaces of some plants.

Reason. Purple colour appears due to accumulation of anthocyanin.

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: A

Watch Video Solution

69. Assertion: C_4 photosynthetic pathway is more efficient than the C_3 pathway.

Reson : Photorespirationis suppressed in C_4 plants.

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: A

Watch Video Solution

70. Assertion: Sigmoid growth curve consists of four parts.

Reason : Lag phase is called as grand phase of growth.

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: C

Watch Video Solution

71. [A] : 2,4-D is a herbicide

[R] : It is not used during showing of crops

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: B

Watch Video Solution

72. [A] : Nastic movements occur in the directions of stimuli

[R] : "Touch" response occur in Mimosa is an example of such movements

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: D

Watch Video Solution

73. [A] : Germinating seeds which store fats as reserve food material are very rich in glyoxysomes

[R] : Glyoxysomes are required for the conversion of fats into sugar to provide energy to the germinating

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: A

Watch Video Solution

74. [A] : Gibberellic acid , when added to isolated aleurone , induce amylase activity

[R] : The enzyme amylase converts insoluble starch into soluble sugars

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: B

Watch Video Solution

75. [A] : When apical bud is removed, the next axial bud begins to grow out.

[R]: High concentration of auxin in the apical bud suppresses the growth of next axial bud.

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: A

Watch Video Solution

76. [A]: Xanthium will not flower if the long dark period is interrupted by a single brief flash of light.

[R]: Xanthium is a long day plant where continuous long light period is essential for flowering.

- A. If both A and R are true and R is the correct explanation of A
- B. If both A and R are true but R is not the correct explanation of A
- C. If A is true and R is false
- D. If both A and R are false

Answer: C

Watch Video Solution

77. [A]: Senescence is induced by the application of cytokinin in plants.

[R]: Cytokinin promotes the breakdown of chlorophyll, proteins and nucleic acid.

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: D

Watch Video Solution

78. Assertion : A correct concentration of auxin and cytokinin is required for the development of root and shoot in callus.

Reason: When the ratio of kinetin to auxin is high only shoot develop but when the ratio is low only roots develop

- A. If both A and R are true and R is the correct explanation of A
- B. If both A and R are true but R is not the correct explanation of A
- C. If A is true and R is false
- D. If both A and R are false

Answer: A

Watch Video Solution

79. [A]: The endogenous level of plant hormones is measured by Bioassay technique.

[R]: The concentration of hormones in plants is so low that it is not possible to chemically estimate the level.

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: A

Watch Video Solution

80. [A] : Bolting of rosette plants is caused by Gibberellins.

[R]: Gibberellins induce subapical meristem to develop taster

- A. If both A and R are true and R is the correct explanation of A
- B. If both A and R are true but R is not the correct explanation of A
- C. If A is true and R is false
- D. If both A and R are false

Answer: C

Watch Video Solution

81. [A] : Cytokinins help in the retention of chloro- phyll and delay senescence in leaves.

[R]: Cytokinins only stimulate root initiation

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: C

Watch Video Solution

82. [A]: Plants hormones are called phytohormones

[R]: They increase rate of reaction & accelerate growth.

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: C

Watch Video Solution

83. [A] : Senescence occurs in all non meristematic cells.

[B]: Meristems are potentially immortal.

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: A

Watch Video Solution

84. Assertion . Senescence is the time when age associated defects are manifested

Reason . Certain genes may be undergoing sequential switching on and off during one's life

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: A

Watch Video Solution

85. Assertion: Photosynthetically C_4 plants are less efficient than C_3 plants.

Reason: The operation of C_4 pathway requires the involvement of only bundle-sheath cells.

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: D

Watch Video Solution

86. Assertion. The atmospheric concentration of CO_2 at which photosynthesis just compensates for respiration is referred to as CO_2 compensation point.

Reason. CO_2 -compensation point is reached when the amount of CO_2 uptake is less than that generated through respiration because the level of CO_2 is more than that required for achieving CO_2 -compensation point.

- A. If both A and R are true and R is the correct explanation of A
- B. If both A and R are true but R is not the correct explanation of A
- C. If A is true and R is false
- D. If both A and R are false

Answer: C

Watch Video Solution

87. Assertion: C_4 photosynthetic pathway is more efficient than the C_3 pathway.

Reason : Photorespiration is suppressed in C_4 plants.

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: A

Watch Video Solution

88. Assertion : Photomorphogenetic responses are controlled by the pigment cytochrome.

Reason : Cytochrome exists in two photoreversible forms

A. (a) If both A and R are true and R is the correct explanation of A

B. (b) If both A and R are true but R is not the correct explanation of A

C. (c) If A is true and R is false

D. (d) If both A and R are false

Answer: D

Watch Video Solution

89. [A] : Some plants flower only in summers & some only in winters.

[R]: Such plants require specific photoperiods for flowering.

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: A

Watch Video Solution
