10. Let $\overrightarrow{x}, \overrightarrow{y}$ and \overrightarrow{z} be three vectors each of magnitude $\sqrt{2}$ and the angle between each pair of them is $\frac{\pi}{3}$ if \overrightarrow{a} is a non-zero vector perpendicular to \overrightarrow{x} and $\overrightarrow{y} \times \overrightarrow{z}$ and \overrightarrow{b} is a non-zero vector perpendicular to \overrightarrow{y} and $\overrightarrow{z} \times \overrightarrow{x}$, then

A. (a)
$$\overrightarrow{b} = \left(\overrightarrow{b}, \overrightarrow{z}\right) \left(\overrightarrow{z} - \overrightarrow{x}\right)$$

B. (b) $\overrightarrow{a} = \left(\overrightarrow{a}, \overrightarrow{y}\right) \left(\overrightarrow{y} - \overrightarrow{z}\right)$
C. (c) $\overrightarrow{a}, \overrightarrow{b} = -\left(\overrightarrow{a}, \overrightarrow{y}\right) \left(\overrightarrow{b}, \overrightarrow{z}\right)$
D. (d) $\overrightarrow{a} = \left(\overrightarrow{a}, \overrightarrow{y}\right) \left(\overrightarrow{z} - \overrightarrow{y}\right)$

Answer: a,b,c

11. Let
$$PQR$$
 be a triangle . Let
 $\overrightarrow{a} = \overrightarrow{QR}, \overrightarrow{b} = \overrightarrow{RP}$ and $\overrightarrow{c} = \overrightarrow{PQ}$. if $|\overrightarrow{a}| = 12, |\overrightarrow{b}| = 4\sqrt{3}$ and $\overrightarrow{b}, \overrightarrow{c}$

then which of the following is (are) true ?

A. (a)
$$\frac{\left|\overrightarrow{c}\right|^{2}}{2} - \left|\overrightarrow{a}\right| = 12$$

B. (b) $\frac{\left|\overrightarrow{c}\right|^{2}}{2} - \left|\overrightarrow{a}\right| = 30$
C. (c) $\left|\overrightarrow{a} \times \overrightarrow{b} + \overrightarrow{c} \times \overrightarrow{a}\right| = 48\sqrt{3}$
D. (d) $\overrightarrow{a} \cdot \overrightarrow{b} = -72$
