## WAVES

## Question Bank

1. A string of length $1 m$ fixed at both ends is
vibrating in $3^{\text {rd }}$ overtone. Tension in string is
$200 N$ and linear mass density is 5 gmin.
Frequency of these vibrations is (in Hz ).
2. You have a microwave generator that can produce microwaves at any frequency between 1

GHz and IO GHz . The microwave radiation enters a

10 cm long cylinder with reflective and caps, as shown in the figure. What frequency of the microwave generator (in GHz ) will produce the lowest-order' standing wave with an antinode
(maximum) in the center of the cavity? Note that with reflectors at both ends, the electromagnetic
standing wave acts just like the standing wave on
a string that is tied at both ends. Take velocity of
waves as $3 \times 10^{8} \mathrm{~m} / \mathrm{s}$.

## D View Text Solution

3. A point source of power $50 \pi$ watts is producing sound waves. The velocity of sound is $330 \mathrm{~m} / \mathrm{s}$, density of air is $1.0 \mathrm{kgm}^{-3}$. Then at $r=\sqrt{330} \mathrm{~m}$ from the point source pressure amplitude is (in $N m^{-2}$ ). (Using $\pi=\frac{22}{7}$ )
4. A wave is given by the equation $y=10 \sin 2 \pi(100 t-.02 x)+10 \sin 2 \pi(100 t+.02 x)$

The loop length of the stationary wave produced will be

## - View Text Solution

5. To determine the sound propagation velocity in
air by ncoustic resonance techique one can use a
pipe with a piston and a sonic membrane closing one of its ends. If the distance between the adjacent positions of the piston at which
resonance is observed at a frequency
$f=1600 \mathrm{~Hz}$ is $\lambda=10 \mathrm{~cm}$, the velocity of sound
will be (in $\mathrm{m} / \mathrm{s}$ ).

## D View Text Solution

6. Two sources of sound $A$ and $B$, each having natural frequency 68 Hz lying on opposite sides of observer $O$. Both move with velocity $20 \mathrm{~m} / \mathrm{s}$ relative to stationary 0 . A mioves away from the observer while the $B$ moves towards him. A wind
with a speed $20 \mathrm{~m} / \mathrm{s}$ is blowing in the direction
of motion of $A$. The beat frequency measured by,
the observer (in Hz) will be (speed of sound in air $340 \mathrm{~m} / \mathrm{s})$.

## - View Text Solution

7. A wave with a frequency of 30 Hz travels' along a string at a speed of 36 meters per second and reflects off from a free end. How far (in m ) is the
first node from the end of the string.

## View Text Solution

8. The vibrations of a string of length 60 cm fixed at both cnds are represented by the equation.
$y=4 \sin \left(\frac{\pi x}{/}(15)\right) \cos (96 \pi t)$, where $x$ and $y$ are in cm and $t$ in second. The maximum displacement (in cm ) at $x=\frac{5}{2}(\mathrm{~cm})$ is

## D View Text Solution

9. Organ pipe $P_{1}$ closed at one end vibrating in its
first harmonic and another pipe $P_{2}$ open at both cnds vibrating in its third harmonic are in
resonsnce with a given tuning. fork. The ratio of the length of $P_{2}$ to that of $P_{1}$ is

## D View Text Solution

10. If the velocity of sound in hydrogen at $27^{\circ} \mathrm{C}$ is
$1200 \mathrm{~ms}^{-1}$, velocity of sound in oxygen (in $m s^{-1}$
) at the same temperature will be

## D View Text Solution

11. When a transverse plene wave tfanverses a medium, judividual particles execute pcriodic
$y=4 \sin \frac{\pi}{/}(2)\left(2 t+\frac{x}{/}(8)\right)$.
The phase
difference (in degrec) for two position of same particle which are occupied by time intervals $0.4 s$ apart is

## - View Text Solution

12. If the sound heard by observer, whose equation is given as $y=8 \sin (10 \pi t) \cos (200 \pi t)$ at $x=0$, then number of beat frequency heard by observer is $2 k$. Then the value of $k$ is
13. Two electric trains run at the same speed of
$v=90 k \frac{m}{h} r$ along a straight track one after the
other with an interval of $l=2.0 \mathrm{~km}$ between
them. At the instant when they are located
symmetrically relative to point $A$ at a distance of
$b=1.0 \mathrm{~km}$ from the track (figure) both trains
give a brief sound signal of the same frequency of
$v=50 \mathrm{~Hz}$. What will the number of beats beard
per second at point $(A)$ when the vibrations
produced by the signals arrive at it? The speed of
sound is $\mathrm{v}=350 \mathrm{~m} / \mathrm{s}$. Round off to nearest integer.

14. If a string of lerigth $l$.fixed at both ends vibrates with a standing wave $y=A \sin \left(\frac{2 \pi}{/}(l) x\right) \sin (2 \pi t)$ in resonance.Then the minimum time after which energy is maximuru at mid-point of string will be (in s)

## D View Text Solution

15. A string $A B$ of length $5 m$ and linear mass denity $1 \mathrm{kgm}^{-1}$ is clamped at both the ends with
a tension of 144 N . Find minimum frequency (in H
z ) of transverse standing wave in string so that a node appears at a distance $3 m$ from end $A$.

## D View Text Solution

16. Two identical strings of same length are clamped at both the eads. Both strings vibrate
'with same fundamental frequency. If tension in
one of the strings is increased by $21 \%$, then 8
beats are produced per second. If fundamental
frequency of strings in initial state is $10 x H z . F \in d x^{\prime}$.
17. A police car moving at $40 \mathrm{~m} / \mathrm{s}$ chases a thief running away at speed of $30 \mathrm{~m} / \mathrm{s}$. The track is perpendicular to a stiff cliff as shown. The police man blows a hom at 40 Hz . If sound has a speed of $340 \mathrm{~m} / \mathrm{s}$, what is the beat frequency (in Hz ) heard by the thief?
'(\#\#CEN_KSR_PHY_JEE_C17_EO1_018_Q04\#\#)'
18. A transverse wave is travelling on a string with
velocity $v$. The shape of string at $t=1 s$ is given
by $y=\frac{5}{/}\left(x^{2}+6 x+9\right)$ and at $f: 2 s$, it is given
by $y=\frac{5}{/}\left(x^{2}+12 x+36\right)$, then fill the value of
$(v+c)$, where $c$ denotes the direction of motion of wave ( +1 for positive $x$-direction $\&-1$ for -ve $x$-direction).

## D View Text Solution

19. Fundamental frequency of a stretched sonometer wric is $f_{0}$. When its tension is
increased by $96 \%$ and length decreased by $35 \%$, its fundamental frequency becomes $\eta_{1} f_{0}$. When its tension is decreased by $36 \%$ and its length is increased by $30 \%$, its fundamental frequency becomes $\eta_{2} f_{0}$. The value of $\frac{\eta_{1}}{/}\left(\eta_{2}\right)$ is found to be $\frac{7}{/}(n)$. Find $n$.

## D View Text Solution

20. A string of length $l$ is fixed at both ends. It is vibrating in its $3^{r d}$ overtone with maximum amplitude $a=2 \sqrt{3}$ mun. Find the square of
amplitude $\left(\right.$ in $\left.(\min )^{2}\right)$ at a distance $\frac{l}{/}(3)$ from one end.

26. A siren placed st a railway platform is emitting
sound of frequency $5 k \mathrm{~Hz}$. A passenger sitting in
a moving train $A$ records a frequency of 5.5 kHz
while the train approaches the siren. During bis
retum joumey in a differeat train $B$ he records a
frequency of 6.0 kHz while approaching the same
siren. Find the ratio of the velocity of train $B$ to that of opera $\rightarrow$ rname $($ tra $\in) A$.

## D View Text Solution

27. The three identical loud speakcrs in figure play
a 170 Hz frequency tone in a room where speed of sound is $340 \mathrm{~m} / \mathrm{s}$. At point exactly infront of source $S_{2}$ the amplitude of the wáve from each speaker is a. What is ratio of resultant intensity at $P$ and intensity due to single speaker. '(\#\#CEN_KSR_PHY_JEE_C17_EO1_028_Q06\#\#)
28. Two loudspeakers are, diriven by a common oscillator and amplifier, are arranged as shown.

The frequency of the oscillator is graduallyincreased from-zero and the detector at $D$ records a series of maxima and minima. If speed of sound is $330 \mathrm{~m} / \mathrm{s}$, then what is the frequency
(in Hz ) at which the first time a maxima is heard. '(\#\#CEN_KSR_PHY_JEE_C17_E01_029_Q07\#\#)'

## - View Text Solution

29. A sound source ( S ) emits frequency of 180 Hz
when moving towards a tigid wall with speed 5 m
/ s and an observer $(O)$ is moving away from wall
with speed $5 \mathrm{~m} / \mathrm{s}$. Both source and observer
move on $(z)$ straight line which is perpendicular
to the wall as shown in figure. Find the number of
beats, per second heard by the observer. (Speed of sound $355 \mathrm{~m} / \mathrm{s}$ ).
'(\#\#CEN_KSR_PHY_JEE_C17_E01_030_Q08\#\#)'

## View Text Solution

30. As shown in the figure, two loudspeakers are located at point $A$ and $B$. Both are vibrating in phase at a frequency $(v)$ and $P_{1}$ and $P_{2}$ are their respective power outputs. Point $C$ lies on a line
joining the two loudspeakers at a distance of $d_{1}$
from $A$ and $d_{2}$ from $B$. With both speakers
switched on what is the power (in $\frac{W}{m^{2}}$ ) at point
$C$. Take velocity of sound $=300 \mathrm{~ms}^{-1}$, frequency'
$v=100 H z, d_{t}=1 m$ and $d_{2}=1.5 m, P_{1}=8 \pi$
watts and $P_{2}=18 \pi$ watts. Also assume that
loudspeakers behave like isotropic sources. (emit sound uniformly in.all directions).
