## ALKENES AND ALKYNES II

## Solved Problem

1. Write a mechanism that explains the
following reaction

## D View Text Solution

2. Write a mechanism that will explain the course of the following reaction

## - View Text Solution

3. Outline a method for carrying out the following conversion .

4. Phenyle thanel

2-Phenylethanool

4. Explain the following facts: Treating (Z) -2butene with $\mathrm{OsO}_{4}$ in pyridine and then
$\mathrm{NaHSO}_{3}$ in water give a diol that is optically inactive and cannot be resolved Treating (E) -2butene with the same reagents gives a diol
that is optically inactive but can be resolved into enantiomers.

5. An unknown alkene with the formula $C_{8} H_{16}$ was found , on oxidation with hot basic permanganate, to yield a three-carbon carboxylic acid (propanoic acid) and a five carbon carboxylic acid (pentanoic acid). What was the structure of this alkene?

6. Give the structure of an unknown alkene
with the formula $C_{7} H_{12}$ that undergoes
ozonolysis to yield, after acidification, only the following product :

## 7. Give the reaction for the ozonolysis of the

following reactant

18. Consider the reaction of an alkene with HBr .

Write the mechanism of the reaction.

- View Text Solution

19. Consider the reaction of an alkene with HBr .

Why do the $\pi$-bond electrons attack the hydrogen end of HBr ?

## D View Text Solution

20. Consider the reaction of an alkene with HBr .

Briefly explain why the addition of HBr gives
the product as shown instead of a primary alkyl halide.
21. Give the structures of product $A$ and $B$ and write the mechanism for the formation of each

## - View Text Solution

22. Should an alkyne react with HBr in the same manner as an alkene ? Briefly explain why or why not.
23. Consider the reaction of a non-conjugated diene with aqueous sulfuric acid :

Give the major product for the reaction and provide a detailed mechanism for the reaction

## D View Text Solution

24. Consider the reaction of a non-conjugated
diene with aqueous sulfuric acid :

Give the products if a second equivalent of $\mathrm{H}_{2} \mathrm{O}$ is added.

26. Show how the following transformations
may be carried out ? Include your retrosynthetic reasoning ?

## D View Text Solution

27. Consider the following reaction :

R
(a) Write the mechanism for this reaction.
(b) Draw the transition state for the rate determining step of this reaction.
(c)Briefly explain the choice for the rate determining step.
(d) Write reaction that is clearly faster than the reaction shown above.
(e) Briefly explain why this reaction is faster.
