# MATHS

# BOOKS - JNAN PUBLICATION

# FUN WITH SUMS

**Example**

**1.** Which of the picture given below do not have line symmetry, let's find it given around.

(a) F  .   (b) V  .  (c) X    (d) i

**2.** Solving the equation given below, let's write their values in respective spaces.

$5x - 8 = 2x + 10$

**3.** Solving the equations given below, let's write their, velues in respective spaces.

$7x - 7 = 6x - 2$

**4.** Solving the equations given below, let's write their, values in respective spaces.

$$\frac{x}{15} = \frac{1}{5}$$

**5.** Solving the equations given below, let's write their, values in respective spaces.

7(3x-30) = 0

**6.** Solving the equations given below, let's write their, values in respective spaces.

4(7-x) = 24

**7.** Solving the equation given below, let's write their values in respective spaces.

14x - (-22) = 18 + 4x

**8.** Solving the equations given below, let's write their, velues in respective spaces.

40 = -x + 49

**9.** Solving the equations given below, let's write their, velues in respective spaces.

$$\frac{4x}{3} - \frac{2}{3} = \frac{2x}{3} + \frac{2}{3}$$

**10.** Solving the equation given below, let's write their values in respective spaces.

$$\frac{x}{2} + \frac{x}{4} = 6$$

▶ **Watch Video Solution**

**11.** Solving the equation given below, let's write their values in respective spaces.

5x(-2) = 2 (2x + 1)

▶ **Watch Video Solution**

**12.** Solving the equations given below, let's write their, velues in respective spaces.

$5x - 8 = 2x + 10$

▶ **Watch Video Solution**

**13.** Solving the equations given below, let's write their, velues in respective spaces.

$7x - 7 = 6x - 2$

▶ **Watch Video Solution**

**14.** Solving the equations given below, let's write their, values in respective spaces.

$$\frac{x}{15} = \frac{1}{5}$$

▶ **Watch Video Solution**

**15.** Solving the equations given below, let's write their, values in respective spaces.

7(3x-30) = 0

▶ **Watch Video Solution**

**16.** Solving the equations given below, let's write their, values in respective spaces.

$4(7-x) = 24$

> ▶ **Watch Video Solution**

**17.** Solving the equations given below, let's write their, values in respective spaces.

$14x + (-22) = 18 + 4x$

**18.** Solving the equations given below, let's write their, velues in respective spaces.

40 = -x + 49

**19.** Solving the equations given below, let's write their, velues in respective spaces.

$$\frac{4x}{3} - \frac{2}{3} = \frac{2x}{3} + \frac{2}{3}$$

**20.** Solving the equations given below, let's write their, values in respective spaces.

$$\frac{x}{2} + \frac{x}{6} = 6$$

▶ **Watch Video Solution**

**21.** Solving the equations given below, let's write their, velues in respective spaces.

5x(x-2) = 2(2x +1)
