BOOKS - NCERT EXEMPLAR

SOUND

Multiple Choice Question

1. A list of mediums is given below.

(i) wood (iii) air

(ii) water (iv) vacuum In which of these mediums can sound travel?

A. i & ii only

B. iii & iv only

C. i, ii & iii only

D. ii, iii & iv only

Answer: C

Watch Video Solution

2. The loudness of sound depends on :

A. its amplitude.

B. its time period

C. its frequency

D. its speed.

Answer: A

Watch Video Solution

3. Which of the following statements are correct?

(i) Sound is produced by vibrations.

(ii) Sound requires a medium for propagation.

(iii) Light and sound both require a medium for propagation.

(iv) Sound travels slower than light.

A. i & ii only

B. i, ii & iii only

C. ii, iii & iv only

D. i, ii & iv only

Answer: D

Watch Video Solution

4. An object is vibrating at 50 hertz. What is its time period?

A. 0.02s

B. 0.2s

C. 2s

D. 20.0s

Answer: A

Watch Video Solution

5. In order to reduce the loudness of a sound we have to

A. decrease its frequency of vibration of the sound

B. increase its frequency of vibration of the sound.

C. decrease its amplitude of vibration of the sound.

D. increase its amplitude of vibration of the sound.

Answer: A

Watch Video Solution

6. The loudness of sound is measured in _____.

A. decibel (dB)

B. metre (m)

C. hertz (Hz)

D. metre/second (m/s)

Answer: A

Watch Video Solution

7. The loudness of sound is determined by the

A. amplitude of vibration

B. ratio of amplitude and frequency of
vibration

C. frequency of vibration

D. product of amplitude and frequency of
vibration

Answer: A

Watch Video Solution

8. 1 hertz is equal to

- A. 1 vibration per minute
- B. 10 vibrations per minute
- C. 60 vibrations per minute
- D. 600 vibrations per minute

Answer: C

Watch Video Solution

9. Pitch of sound is determined by its

A. frequency

B. speed

C. amplitude

D. loudness

Answer: A

Watch Video Solution

1. Ultrasound has frequency of vibration

A. between 20 and 20,000 Hz

B. below 20 Hz

C. above 20,000 Hz

D. between 500 and 10,000 Hz

Answer: D

Watch Video Solution

2. Lightning can be seen the moment it occurs. Paheli observes lightning in her area. She hears the sound 5 s after she observed lightning. How far is she from the place where lightning occurs? (speed of sound = 330 m/s).

3. Does any part of our body vibrate when we speak? Name the part.

A. Esophagus

B. Windpipe

C. Vocal Cords

D. None of these

Answer: C

Watch Video Solution

4. Boojho saw a cracker burst at night at a distance from his house. He heard the sound of the cracker a little later after seeing the

cracker burst. Give reason for the delay in hearing the sound.

Watch Video Solution

5. When we hear a sound, does any part of our body vibrate? Name the part.

Watch Video Solution

6. Name two musical instruments which produce sound by vibrating strings?

[Watch Video Solution](#)

Short Answer Questions

1. A simple pendulum makes 10 oscillations in 20 seconds. What is the time period and frequency of its oscillation?

[Watch Video Solution](#)

2. We have learnt that vibration is necessary for producing sound. Explain why the sound produced by every vibrating body cannot be heard by us?

[Watch Video Solution](#)

3. Suppose a stick is struck against a frying pan in vacuum. Will the frying pan vibrate? Will we be able to hear the sound? Explain.

[Watch Video Solution](#)

4. Two astronauts are floating close to each other in space. Can they talk to each other without using any special device? Give reasons.

[Watch Video Solution](#)

5. List three sources of noise pollution in your locality.

[Watch Video Solution](#)

Long Answer Questions

1. We have a stringed musical instrument. The string is plucked in the middle first with a force of greater magnitude and then with a force of smaller magnitude. In which case would the instrument produce a louder sound?

[Watch Video Solution](#)

2. How is sound produced and how is it transmitted and heard by us?

Watch Video Solution

3. An alarm bell is kept inside a vessel as shown in Fig. 13.1. A person standing close to it can distinctly hear the sound of alarm. Now if the air inside the vessel is removed completely how will the loudness of alarm get affected for

the same person?
