CIRCLES

Exercise

1. The centre of a circle lies in ..... of the circle.

Watch Video Solution

2. A point, whose distance from the centre of a circle is greater than its radius lies in ..... Of the circle.

Watch Video Solution

3. The longest chord of a circle is a ..... of the circle.

Watch Video Solution

4. An arc is a ..... When its ends are the ends of a diameter.

Watch Video Solution

5. Segment of a circle is the region between an arc and ..... of the circle.

Watch Video Solution

6. A circle divides the plane, on which it lies, in ..... parts.

Watch Video Solution

7. (True/ False) Line segment joining the centre to any point on the circle is a radius of the circle.

Watch Video Solution

8. (True/ False) A circle has only finite number of equal chords.

Watch Video Solution

9. (True/ False) If a circle is divided into three equal arcs each is a major arc.

Watch Video Solution

10. (True/ False) A chord, which is twice as long as its radius is a diameter of the circle.

Watch Video Solution

11. (True/ False) Sector is the region between the chord and its corresponding arc.

Watch Video Solution

12. (True/ False) A circle is a plane figure.

Watch Video Solution

13. Recall that two circles are congruent if they have the same radii. Prove that equal chords of congruent circles subtend equal angles at their centres.

Watch Video Solution

14. Prove that if chords of congruent circlessubtend equal angles at their centres,

then the chords are equal.

15. Draw different pairs of circles. How many points does each pair have in common ? What is the maximum number of common points ?

16. Suppose you are given a circle. Give a construction to find its centre.

Watch Video Solution

17. If two circles intersect at two points, prove that their centres lie on the perpendicular bisector of the common chord.

Watch Video Solution

18. Two circles of radii 5 cm and 3 cm intersect at two points and the distance between their

centres is 4 cm. Find the length of the common chord.

Watch Video Solution

19. If two equal chords of a circle intersect within the circle, prove that the segments of one chord are equal to corresponding segments of the other chord.

Watch Video Solution

20. If two equal chords of a circle intersect within the circle, prove that the line joining the point of intersection to the centre makes equal angles with the chord.

Watch Video Solution

21. If a line intersects two concentric circles (circles with the same centre) with centre O at A, B, C and D, prove that AB = CD

Watch Video Solution

22. Three girls Reshma, Salma and Mandip are standing on a circle of radius 5 m drawn in a park. Reshma throws a ball to Salma, Salma to Mandip, Mandip to Reshma. If the distance between Reshma and Salma and between Salma and Mandip is 6 m each, what is the distance between Reshma and Mandip ?

Watch Video Solution

23. A circular park of radius 20 m is situated in a colony. Three boys Ankur, Syed and David are sitting at equal distance on its boundary each having a toy telephone in his hands to talk each other. Find the length of the string of each phone.

Watch Video Solution

24. In the given figure, A,B and C are three points on a circle with centre O such that

$\angle BOC = 30^\circ$ and $\angle AOB = 60^\circ$. If D is a point on the circle other than the arc ABC, find $\angle ADC$.

Watch Video Solution

25. A chord of a circle is equal to the radius of the circle. Find the angle subtended by the chord on a point on the minor arc and also at a point on the major arc.

Watch Video Solution

26. In the given figure, $\angle PQR = 100^\circ$, where P, Q and R are points on a circle with centre O. Find $\angle OPR$.

Watch Video Solution

27. In Fig. 10.38, $\angle ABC = 69^\circ$, $\angle ACB = 31^\circ$, find $\angle BDC$.

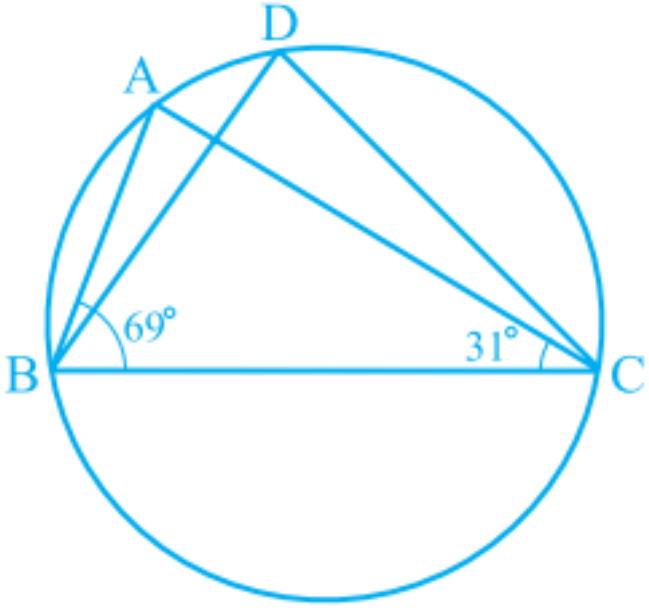

Fig. 10.38

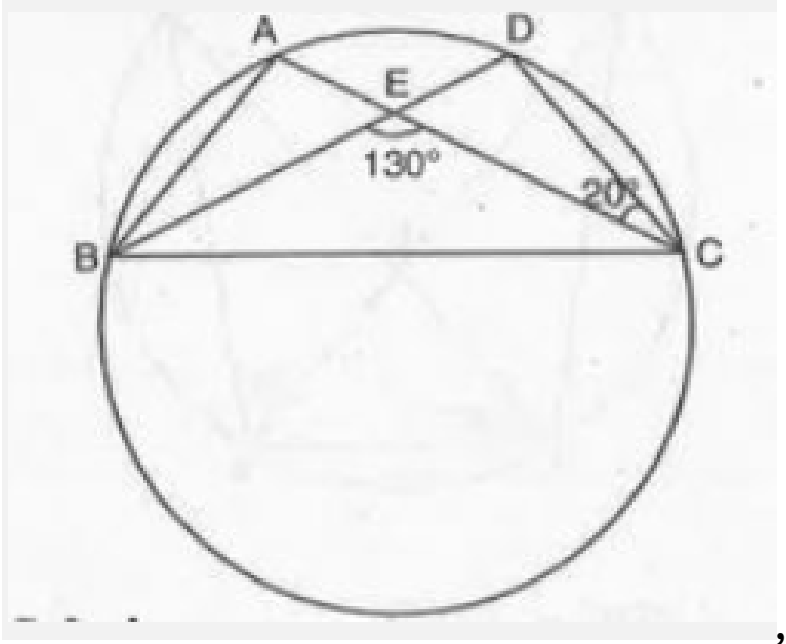
Watch Video Solution

28. In fig.



, A, B, C, D are four points on a circle. AC and BD intersect at a point E such that $\angle BEC = 130^\circ$ and $\angle ECD = 20^\circ$. Find $\angle BAC$.

Watch Video Solution

29. ABCD is a cyclic quadrilateral whose diagonals intersect at a point E. $\angle DBC = 70^\circ$, $\angle BACis30^\circ$, find $\angle BCD$. Futher, if AB = BC, find $\angle ECD$.

Watch Video Solution

30. If diagonals of a cyclic quadrilateral are diameters of the circle through the vertices of the quadrilateral, prove that it is a rectangle.

Watch Video Solution

31. If the non-parallel sides of a trapezium are equal, prove that it is cyclic.

Watch Video Solution

32. Two circles intersect at two points B and C. Through B, two line segments ABD and PBQ are drawn to intersect the circles at A, D, P, Q respectively (see fig.

). Prove that $\angle ACP = \angle QCD$.

Watch Video Solution

33. If circles are drawn taking two sides of a triangle as diameters, prove that the point of intersection of these circles lie on the third side.

Watch Video Solution

34. ABC and ADC are two right triangles with common hypotenuse AC. Prove that

$\angle CAD = \angle CBD$.

Watch Video Solution

35. Prove that a cyclic parallelogram is a rectangle.

Watch Video Solution

36. Prove that the line of centres of two intersecting circles subtends equal angles at the two points of intersection.

Watch Video Solution

37. Two chords AB and CD of lengths 5 cm and 11 cm respectively of a circle are parallel to each other and are on opposite sides of its centre. If the distance between AB and CD is 6 cm, find the radius of the circle.

Watch Video Solution

38. The lengths of two parallel chords of a circle are 6 cm and 8 cm. If the smaller chord is at a distance of 4 cm from the centre, what is the distance of the other chord from the centre ?

Watch Video Solution

39. Let vertex of an angle ABC be located outside a circle and let the sides of the angle intersect chords AD and CE with the circle.

Prove that $\angle ABC$ is equal to half the difference of the angles subtended by the chords AC and DE at the centre.

Watch Video Solution

40. Prove that the circle drawn with any side of a rhombus as diameter, passes through the point of intersection of its diagonals.

Watch Video Solution

41. ABCD is a parallelogram. The circle through A, B and C intersect CD (produced if necessary) at E. Prove that AE = AD.

Watch Video Solution

42. AC and BD are chords of a circle which bisect each other. Prove that (i) AC and BD are diameters, (ii) ABCD is a rectangle.

Watch Video Solution

43. Bisectors of angles A, B and C of a triangle ABC intersect its circumcircle at D, E and F respectively. Prove that angles of the triangle are $90^\circ - \frac{A}{2}, 90^\circ - \frac{B}{2}$ and $90^\circ - \frac{C}{2}$ respectively.

Watch Video Solution

44. Two congruent circles intersect each other at points A and B. Through A any line segment PAQ is drawn so that P, Q lie on the two circles. Prove that BP = BQ.

Watch Video Solution

45. In any triangle ABC, if the angle bisector of $\angle A$ and perpendicular bisector of BC intersect, prove that they intersect on the circumcircle of the triangle ABC.

Watch Video Solution

Example

1. Given an arc of a circle, complete the circle.

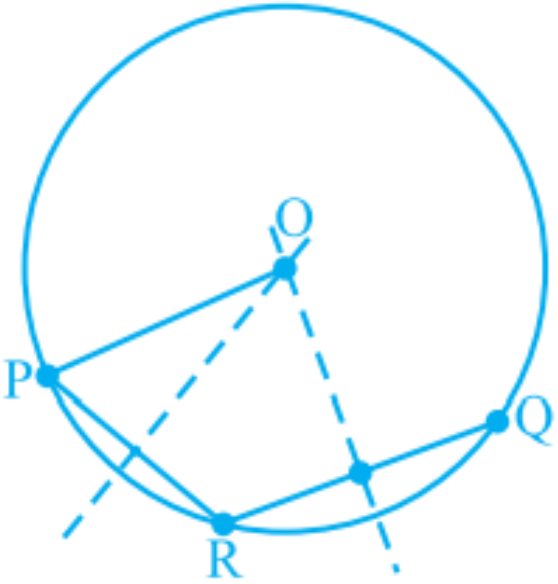


Fig. 10.20

Watch Video Solution

2. If two intersecting chords of a circle make equal angles with the diameter passing through their point of intersection, prove that the chords are equal.

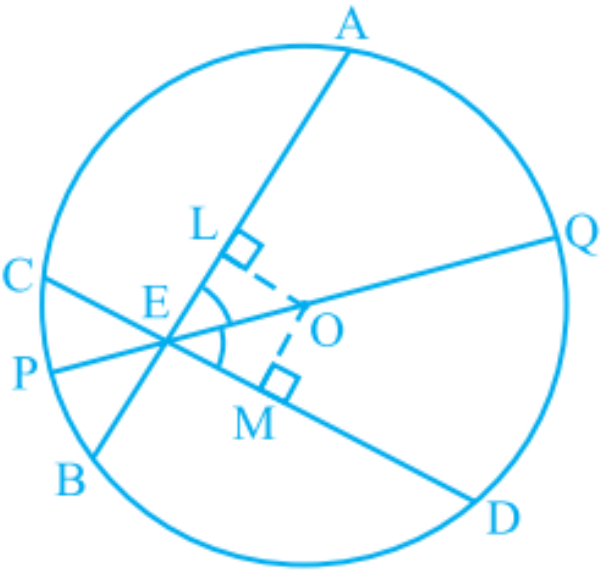

Fig. 10.24

Watch Video Solution

3. In Fig. 10.32, AB is a diameter of the circle, CD is a chord equal to the radius of the circle. AC and BD when extended intersect at a point E. Prove that $\angle AEB = 60^\circ$.

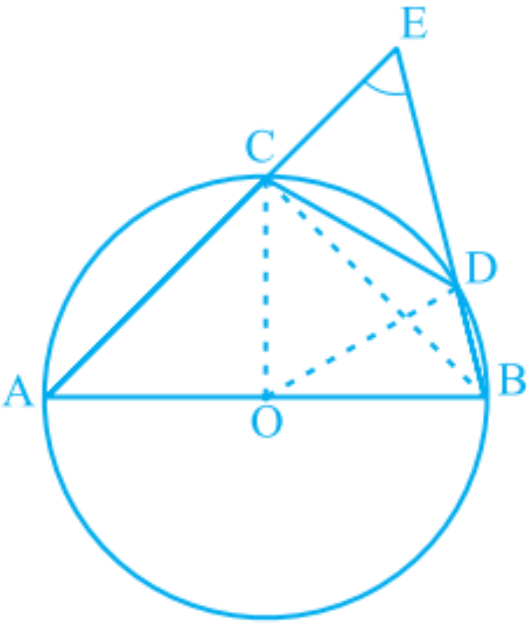

Fig. 10.32

Watch Video Solution

4. In Fig 10.33, ABCD is a cyclic quadrilateral in which AC and BD are its diagonals. If $\angle DBC = 55^\circ$ and $\angle BAC = 45^\circ$, find

$\angle BCD$.

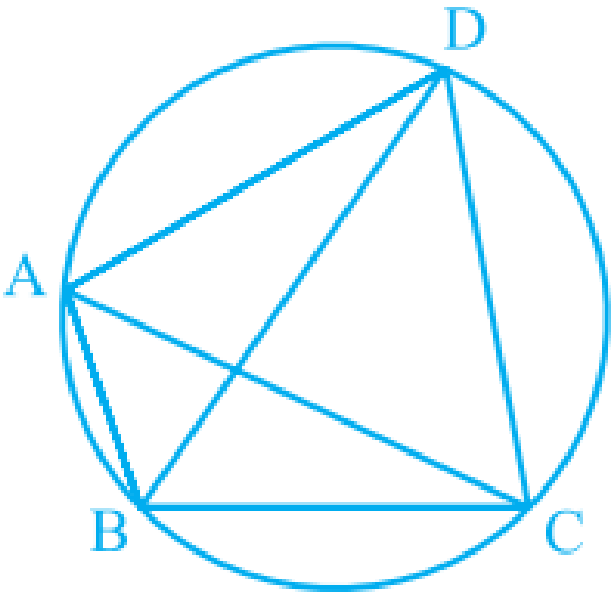

Fig. 10.33

Watch Video Solution

5. Two circles intersect at two points A and B. AD and AC are diameters to the two circles (see Fig.10.34). Prove that B lies on the line segment DC.

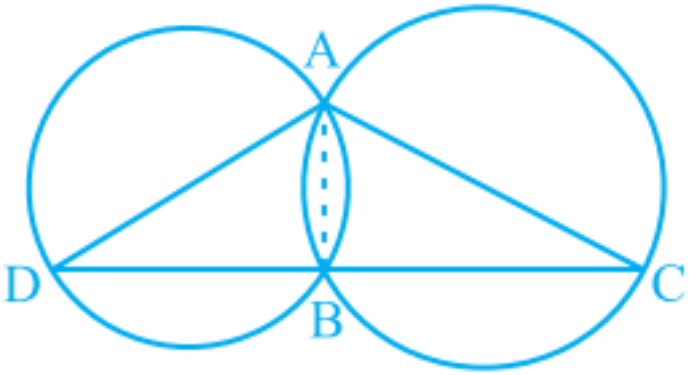

Fig. 10.34

Watch Video Solution

6. Prove that the quadrilateral formed (if possible) by the internal angle bisectors of any quadrilateral is cyclic.

Watch Video Solution
