## BOOKS - R G PUBLICATION

### MOTION IN A STRAIGHT LINE

#### Exercise

1. What is the difference between average velocity and instantaneous velocity?

**Watch Video Solution**

2. Write down the equations of motion in circular path.

[Watch Video Solution](#)

3. A ball is projected vertically upward with a speed of 50 m/s. Find the maximum height.

[Watch Video Solution](#)

4. A ball is projected vertically upward with a speed of  $50 \text{ m/s}$ . Find the time to reach the maximum height,

[Watch Video Solution](#)

5. A ball is projected vertically upward with a speed of  $50 \text{ m/s}$ . Find (a) the maximum height, (b) the time to reach the maximum height, (c) the speed at half the maximum height. Take  $g = 10 \text{ m/s}^2$ .

[Watch Video Solution](#)

6. During  $n^{\text{th}}$  second of its motion a body covers a distance  $S_n$  with uniform acceleration 'a' and initial velocity 'u'. Show that

$$\left( a = \frac{2S_n - 2u}{2n - 1} \right)$$

[Watch Video Solution](#)

7. Explain the difference between distance and displacement with an example.

[Watch Video Solution](#)

8. Derive acceleration from velocity-time graph.

[Watch Video Solution](#)

9. A stone falls from the top of a building and travels 53.9 m in the last second before it reaches the ground. Find the height of the building.

[Watch Video Solution](#)

**10.** Explain the difference between distance and displacement with an example.

**Watch Video Solution**

**11.** Derive acceleration from velocity-time graph.

**Watch Video Solution**

**12.** The motion of particle of mass  $m$  is given by  $y = ut + \frac{1}{2}gt^2$ . The force acting on the particle is

[Watch Video Solution](#)

**13.** Deduce the equations of motion for constant acceleration using method of calculus.

[Watch Video Solution](#)

**14.** A particle is moving in a straight line. Its displacement at any instant  $t$  is given by  $x = 10t + 15t^3$ , where  $x$  is in meters and  $t$  is in seconds. Find

(i) the average acceleration in the interval  $t = 0$  to  $t = 2$  s and

(ii) instantaneous acceleration at  $t = 2$  s.

**Watch Video Solution**

**15.** Can a body have a constant speed and still have a varying velocity?

[Watch Video Solution](#)

16. What will be the nature of velocity time graph for a uniform motion?

[Watch Video Solution](#)

17. Under what conditions is the average velocity equal to instantaneous velocity.

[Watch Video Solution](#)

**18.** Can displacement be greater than distance travelled by an object?

**Watch Video Solution**

**19.** Draw the position-time graph of a stationary object.

**Watch Video Solution**

20. Under which condition the distance travelled by a body is equal to the displacement of the body?

[Watch Video Solution](#)

21. Two straight lines drawn on the same displacement-time graph make angles  $30^\circ$  &  $60^\circ$  with the time axis. Which line represents greater velocity.

[Watch Video Solution](#)

**22.** A person travelling on a straight line moves with a uniform velocity  $v_1$  for some time and with uniform velocity  $v_2$  for the next equal time. The average velocity  $v$  is given by

**Watch Video Solution**

**23.** The position of a moving particle is given by  $x = 6 + 18t + 9t^2$  where  $x$  is the distance and  $t$  is the time. What is the velocity at  $t = 2$ sec.

[Watch Video Solution](#)

**24.** The displacement  $x$  of the body in a motion is given by  $x = A \sin (wt + \theta)$ . Determine at which instant displacement maximum.

[Watch Video Solution](#)

**25.** A particle is moving in a circular path of radius  $r$ . What will be the displacement and distance traversed after half a circle ?

[Watch Video Solution](#)

26. Two train 100 m and 89 m in length are running in opposite directions with a velocity 40 km/hr and 30 km/hr. At what time they will completely cross each other.

[Watch Video Solution](#)

27. The distance  $x$  of a particle moving in one dimension, under the action of constant force is related to time  $t$  by equation.  $t = \sqrt{x} + 3$

where  $x$  in metre and  $t$  in second. Find the displacement of the particle when its velocity is zero.

[Watch Video Solution](#)

**28.** A train 100 m long is moving with a velocity of 60 km/hr. Find the time it takes to cross the bridge 1km long.

[Watch Video Solution](#)

29. A ball thrown vertically upward with a speed of  $19.6ms^{-1}$  from the top of a tower returns to earth in 6 sec. Find the height of tower.

[Watch Video Solution](#)

30. Derive  $S = ut + \frac{1}{2}at^2$  by graphical method.

[Watch Video Solution](#)

**31.** Displacement is given by  $x = 1 + 2t + 3t^2$

Calculate the value of instantaneous acceleration.

**Watch Video Solution**

**32.** Prove that  $S_{uh} = u + \frac{a}{2}(2n - 1)$

**Watch Video Solution**

33. From the graph calculate the average acceleration in first twenty sec.

Watch Video Solution

34. The relation between time  $t$  and displacement  $x$  is  $t = \alpha x^2 + \beta x$ , where  $\alpha$  and  $\beta$  are constants. The retardation is

Watch Video Solution

35. What is the wrong with the speed time graph from

Watch Video Solution

**36.** A ball is dropped from the top of a tower of height ( $h$ ). It covers a distance of  $h/2$  in the last second of its motion. How long does the ball remain in air?

**Watch Video Solution**

**37.** For a particle in one dimensional motion, the instantaneous speed is always equal to the magnitude of instantaneous velocity. Why?

**Watch Video Solution**

**38.** A particle experiences constant acceleration for 20 sec after starting from rest. If it travels a distance  $S_1$  in first 10 sec. and distance  $S_2$  in next 10 sec find the relation between  $S_1$  and  $S_2$ .

**Watch Video Solution**

**39.** Prove that  $V - u = 2as$  from velocity time graph.

**Watch Video Solution**
