

PHYSICS

BOOKS - MBD

GRAVITATION

Example

1. State the universal law of gravitation.

Watch Video Solution

2. Write the formula to find the magnitude of gravitational force between the earth and an object on the surface of the earth.

Watch Video Solution

3. What is meant by free fall ?

Watch Video Solution

4. What is meant by acceleration due to gravity ?

Watch Video Solution

5. What is the difference between the mass of an object and its weight ?

Watch Video Solution

6. The weight of an object on the moon is.....
of its weight on the earth.

Watch Video Solution

7. Why is it difficult to hold a school bag
having a strap made of thin and strong string
?

Watch Video Solution

8. What do you mean by buoyancy ?

Watch Video Solution

9. Why does an object float or sink when placed on the surface of water ?

Watch Video Solution

10. You find your mass to be 42 kg on a weighing machine. Is your mass more or less

than 42 kg ?

Watch Video Solution

11. You have a bag of cotton and an iron bar, each indicating a mass of 100 kg when measured on a weighing machine. In reality, one is heavier than other. Can you say which one is heavier and why ?

Watch Video Solution

12. How does the force of gravitation between two objects change when the distance between them is reduced to half ?

Watch Video Solution

13. Gravitational force acts on all objects in proportion to their masses. Why then, a heavy object does not fall faster than a light object ?

Watch Video Solution

14. What is magnitude of gravitational force between the earth and a 1 kg object on its surface ? Take mass of earth to be $6 \times 10^{24} \text{ kg}$ and radius of the earth is $6.4 \times 10^6 \text{ m}$. $G = 6.67 \times 10^{-11} \text{ Nm}^2 \text{ kg}^{-2}$.

Watch Video Solution

15. The earth and the moon are attracted to each other by gravitational force. Does the earth attracts the moon with a force that is greater than or smaller than or the same as

the force with which the moon attracts the earth ? Why ?

Watch Video Solution

16. If the moon attracts the earth, why does the earth not move towards the moon ?

Watch Video Solution

17. What happens to the force between two objects, if the mass of one object is doubled ?

Watch Video Solution

18. What happens to the force between two objects, if the distance between the objects is doubled and tripled ?

Watch Video Solution

19. What happens to the force between two objects, if the masses of both objects are doubled ?

Watch Video Solution

20. What is the importance of universal law of gravitation?

Watch Video Solution

21. What is meant by acceleration due to gravity ?

Watch Video Solution

22. What do you call the gravitational force between the earth and an object?

Watch Video Solution

23. A person 'A' buys a few grams of gold at the poles as per the instruction of one of his friends. He hands over the same when he meets him at the equator. Will the friend agree with

the weight of gold bought? If not, Why?

Watch Video Solution

24. Why will a sheet of paper fall slower than one that is crumpled into a ball?

Watch Video Solution

25. Gravitational force on the surface of moon is $\frac{1}{6}$ as strong as gravitational force on the earth. What is the weight in newton of a 10 kg object on moon and on the earth ?

Watch Video Solution

26. A ball is thrown vertically upwards with a velocity of 49ms^{-1} . Calculate :The maximum height to which it rises

Watch Video Solution

27. A ball is thrown vertically upwards with a velocity of 49ms^{-1} . Calculate :The total time it takes to return to the surface of earth.

Watch Video Solution

28. A stone is released from the top of a tower of height 19.6 m. Calculate the final velocity just before touching the ground.

Watch Video Solution

29. A stone is thrown vertically upward with an initial velocity of 40ms^{-1} . Taking $g = 10\text{ms}^{-2}$, find the maximum height reached by the stone. What is the net displacement and the total distance covered by the stone ?

Watch Video Solution

30. Calculate the force of gravitation between the earth and the sun, given the mass of earth = $6 \times 10^{24}\text{kg}$ and of the sun = $2 \times 10^{30}\text{kg}$.

Average distance between the two is $1.5 \times 10^{10} m$.

[Watch Video Solution](#)

31. A stone is allowed to fall from the top of the tower 100 m high and at the same time another stone is projected vertically upwards from the ground with a velocity of $25ms^{-1}$. Calculate when and where the two stones will meet ?

[Watch Video Solution](#)

32. A ball thrown up vertically returns to the thrower after 6 s. Find Velocity with which it was thrown up.

Watch Video Solution

33. A ball thrown up vertically returns to the thrower after 6 s. Find the maximum height it reached .

Watch Video Solution

34. A ball thrown up vertically returns to the thrower after 6 s. Find its position after 4 s.

Watch Video Solution

35. In what direction does the buoyant force on an object immersed in a liquid act.

Watch Video Solution

36. Why does a block of plastic immersed under water come to the surface of water ?

Watch Video Solution

37. Why does a block of plastic immersed under water come to the surface of water ?

Watch Video Solution

38. The volume of 50 g of a substance is 20cm^3 . If the density of water is 1gcm^{-3} , will the substance float or sink ?

Watch Video Solution

39. The volume of 500 g sealed packed in 350cm^3 . Will the packet float or sink in water of the density of water is 1gcm^{-3} ? What will the mass of the water displaced by his packet?

Watch Video Solution

40. Define Newton's universal law of gravitation and establish mathematical formula for force of attraction between two objects.

Watch Video Solution

41. Write Kepler's law in context with the motion of planets.

Watch Video Solution

42. How did Robert proved experimentally that all bodies fall in vacuum with same acceleration?

Watch Video Solution

43. How did Robert Boyle show experimentally that a coin and a piece of paper when dropped simultaneously from same height in vacuum fall with same acceleration ?

Watch Video Solution

44. Prove that acceleration due to gravity is independent of mass.

Watch Video Solution

45. Find the value of 'g'.

Watch Video Solution

46. Describe those factors which are responsible for variation in the value of acceleration due to gravity ' g ' ?

Watch Video Solution

47. Establish the relation between ' g ' and ' G ' .

Watch Video Solution

48. Deduce an expression in terms of mass of the earth ' M ' And universal gravitational constant ' G ' and gravity ' g '.

Watch Video Solution

49. Prove that acceleration due to gravity is independent of mass.

Watch Video Solution

50. What is Archimedes principle ? How can you verify it experimentally ? Also write applications of Archimedes' principle.

Watch Video Solution

51. Which one is greater-the gravitational force of the earth on 1 kg iron or the force of gravitation applied by 1 kg on earth ?

Watch Video Solution

52. Why is G called universal gravitational constant ?

Watch Video Solution

53. Is the value of ' g ' at a given place same for different bodies or it is variable ?

Watch Video Solution

54. Why does a body becomes weightless at the centre of earth ?

Watch Video Solution

55. A tennis ball jumps higher at hills than at planes. Explain.

Watch Video Solution

56. The weight of an object on the surface of earth is 9.8 N. What does this statement mean?

Watch Video Solution

57. What type of motion a freely falling body execute under gravity ?

Watch Video Solution

58. Give points of difference between Acceleration due to gravity (g) and Universal gravitational constant (G).

Watch Video Solution

59. You buy weight of sugar at a place situated on equitorial line and then take it to Antarctica. Will that sugar weigh same there ? If not whether it would be more or less.

Watch Video Solution

60. Why cannot we move a finger without disturbing all the stars ?

Watch Video Solution

61. Distinguish between Gravitation and Gravity.

Watch Video Solution

62. Explain why a small piece of stone is not attracted towards another big piece of stone on the earth's surface ?

Watch Video Solution

63. The earth attracts an apple. Does the apple also attract with earth ? If it does, why does the earth not move towards the apple ?

Watch Video Solution

64. If the force of gravity somehow vanishes today, why would we be sent being in space ?

Watch Video Solution

65. What is meant by density and relative density ?

Watch Video Solution

66. What do you mean by buoyancy? In which direction does the buoyant force on an object immersed in a liquid act ?

Watch Video Solution

67. State Archimedes' principle.

Watch Video Solution

68. Name two forces which act on a body immersed in a liquid. Give the directions in which they act.

Watch Video Solution

69. How is submarine able to move on water surface as well as go under water ?

Watch Video Solution

70. Give reason when Big buildings and dams have wide foundations for safety.

Watch Video Solution

71. A steel needle sinks in water but a steel ship floats. Explain how ?

Watch Video Solution

72. Give reasons for the following :A sharp blade is more effective in cutting an object than a blunt blade.

Watch Video Solution

73. Give reasons for the following :A cork piece floats but an iron piece sinks in water.

Watch Video Solution

74. Explain the following : Swimmers are provided with an inflated rubber jacket.

Watch Video Solution

75. Explain the following : It is easier of swim in sea water than in river water.

Watch Video Solution

76. Why is the pressure on ground more when a man is walking than when he is standing ?

Watch Video Solution

77. Why a bucket of water is lighter when in water than when it is taken out of water?

Watch Video Solution

78. If a fresh egg is put into a beaker filled with water, it sinks. On dissolving a lot of salt in the water, the egg begins to rise and floats. Why ?

Watch Video Solution

79. Two spheres of 1kg mass each are separated by 3 m. Calculate the gravitational force between them. Given

$$G = 6.67 \times 10^{-11} Nm^2 / kg^2.$$

Watch Video Solution

80. The radius of moon is $1.7 \times 10^6 m$ and its mass is $7.35 \times 10^{22} kg$. What is the acceleration due to gravity on the surface of moon ? Given $G = 6.67 \times 10^{-11} Nm^2 / kg^2$.

Watch Video Solution

81. Find the change in weight percentage of a body when it is taken from equator to poles. Polar radius is 6357 km and equatorial radius is 6378 km.

Watch Video Solution

82. At what height above the earth surface, the acceleration due to gravity will be half that on the surface of earth ? Suppose R is the radius of earth.

Watch Video Solution

83. A ball is dropped from top of 40m high tower. What will be its velocity after covering a

distance of 20m ? What will be its velocity on striking the earth ?

Watch Video Solution

84. If weight of an object is 49 N then what will be its mass ?

Watch Video Solution

85. A block of wood is kept on the table top. The mass of wooden block is 5 kg and its

dimensions are $40\text{cm} \times 20\text{cm} \times 10\text{cm}$. Find the pressure exerted by the wooden block on the table top if it is made to lie on the table top with its sides of dimensions : $20\text{cm} \times 10\text{cm}$.

Watch Video Solution

86. A block of wood is kept on the table top. The mass of wooden block is 5 kg and its dimensions are $40\text{cm} \times 20\text{cm} \times 10\text{cm}$. Find the pressure exerted by the wooden block on

the table top if it is made to lie on the table top with its sides of dimensions : $40\text{cm} \times 20\text{cm}$.

Watch Video Solution

87. What is g on the moon as compared to that on earth?

Watch Video Solution

88. What is unit of G ?

Watch Video Solution

89. What is the mass of the earth?

Watch Video Solution

90. What is essential property of matter- mass or weight ?

Watch Video Solution

91. What is SI unit of weight of a body?

Watch Video Solution

92. The earth's gravitational force an acceleration of $5ms^{-2}$ on a 1kg mass somewhere in the space. How much will be the acceleration of a 3kg mass at that place ?

Watch Video Solution

93. Why one can jump higher on the surface of moon than on the earth?

Watch Video Solution

94. Give the value of universal gravitational constant in S.I. units.

Watch Video Solution

95. The value of 'G' on the surface of earth is $6.67 \times 10^{-11} Nm^2 / kg^2$. What is its value on the surface of moon ?

Watch Video Solution

96. State two factors on which the gravitational force between two objects depends.

Watch Video Solution

97. Write the formula to find the magnitude of gravitational force between the earth and an object on the surface of the earth.

Watch Video Solution

98. Can the mass of a body be zero.

Watch Video Solution

99. You find your mass to be 42 kg on a weighing machine. Is your mass more or less than 42 kg ?

Watch Video Solution

100. How does the value of 'g' vary from equator to poles ?

Watch Video Solution

101. What will be the weight of an object on the earth whose mass is 10 kg ?

Watch Video Solution

102. Write the S.I. unit of G.

Watch Video Solution

103. When does an object float when placed on the surface of water ?

Watch Video Solution

104. While swimming why do we feel light ?

Watch Video Solution

105. Why does a truck or a motor-bus has much wider tyres ?

Watch Video Solution

106. An army tank weighing more than a hundred tonne move conveniently on an earthen road. How ?

Watch Video Solution

107. What is the unit of relative density ? Why ?

Watch Video Solution

108. The weight of an object on the moon is..... of its weight on the earth.

Watch Video Solution
