MINERAL NUTRITION

Question

1. 'All elements that are present in a plant need not be essential to its survival'. Comment.

Watch Video Solution

2. Why is purification of water and nutrient salts so important in studies involving mineral nutrition using hydroponics?

[Watch Video Solution](#)

3. Explain with examples: macronutrients, micronutrients, beneficial nutrients, toxic elements and essential elements.

[Watch Video Solution](#)

4. Name at least five different deficiency symptoms in plants. Correlate them with the mineral concerned.

Watch Video Solution

5. If a plant shows a symptom which could develop due to deficiency of more than one nutrient, how would you find out experimentally, the real deficient mineral element?

[Watch Video Solution](#)

6. Why is that in certain plants deficiency symptoms appear first in parts of the plants while in others, they do so in mature organs?

[Watch Video Solution](#)

7. How are the minerals absorbed by the plants?

[Watch Video Solution](#)

8. What are the conditions necessary for fixation of atmospheric nitrogen by Rhizobium. What is their role in N_2 -fixation?

[Watch Video Solution](#)

9. What are the steps involved in formation of a root nodule?

[Watch Video Solution](#)

10. Which of the following statements are true? If false, correct them:

(a) Boron deficiency leads to stout axis.

(b) Every mineral element that is present in a cell is needed by the cell.

(c) Nitrogen as a nutrient element, is highly immobile in the plants.

(d) It is very easy to establish the essentiality of micronutrients because they are required only in trace quantities.
