## PROBABILITY I

## Examples

1. A coin is toosed three times consider the following events. A:'No head appears', B: 'Exactly one head appears' and C: 'Atleast two heads appear'.

## - Watch Video Solution

2. Find the probability of getting more than 7 when two dice are rolled.
3. A die is loaded so that the probability of a face $i$ is proportional to $i, i=1,2,6$. Then find the probability of an even number occurring when the die in rolled.

## - Watch Video Solution

4. Consider the experiment of tossing a coin. If the coin shows head, toss it again but if it shows tail, then throw a die. Find the conditional probability of the event that the die shows a number greater than 4 given that there is atleast one tail.

## - Watch Video Solution

5. Four candidates A, B, C, D have applied for the assignment ot coach a school cricket team. If $A$ is twice as likely to be selected as $B$, and $B$ and $C$ are given about the same chance of being selected, while C is twice as likely to be selected as D, what are the probability that (i) C will be selected ? (ii) A will not be selected?

8. A dice is rolled three times, find the probability of getting a larger number than the previous number each time.

## - Watch Video Solution

9. If a coin be tossed $n$ times, then find the probability that the head comes odd times.

## - Watch Video Solution

10. A card is drawn at random from a pack of cards. What ist the probability that the drawn card is neither a heart nor a king?

## - Watch Video Solution

11. Card is drawn from a pack of 52 cards. A persons bets that it is a spade or an ace. What are the odds against him of winning this bet?

## - Watch Video Solution

12. A fair dice is thrown three times. If $p, q$ and $r$ are the numbers obtained on the dice, then find the probability that $i^{p}+i^{q}+i^{r}=1$, where $I=\sqrt{-1}$.

## Watch Video Solution

13. A mapping is select at random from the set of all the mappings of the set $A=\{1,2, n\}$ into itself. Find the probability that the mapping selected is an injection.

## - Watch Video Solution

14. Two integers $x a n d y$ are chosen with replacement out of the set $\{0,1,, 2,3,10\}$. Then find the probability that $|x-y|>5$.

## - Watch Video Solution

15. Find the probability that the 3 Ns come consecutively in the arrangement of the letters of the word CONSTANTINOPLE.

## - Watch Video Solution

16. Out of $3 n$ consecutive integers, there are selected at random. Find the probability that their sum is divisible by 3 .

## - Watch Video Solution

17. Find the probability that a randomly chosen three-digit number has exactly three factors.

## - Watch Video Solution

18. If pandq are chosen randomly from the set $\{1,2,3,4,5,6,7,8,9,10\}$ with replacement, determine the probability that the roots of the equation $x^{2}+p x+q=0$ are real.

## - Watch Video Solution

19. An integer is chosen at random and squared. Find the probability that the last digit of the square is 1 or 5 .

## - Watch Video Solution

20. Four fair dices are thrown simultaneously. Find the probability that the highest number obtained is 4 .

## - Watch Video Solution

21. An unbiased dice, with faces numbered $1,2,3,4,5,6$, is thrown $n$ times and the list of n numbers shown up is noted. Then find the probability that among the numbers $1,2,3,4,5,6$ only three numbers appear in this list and each number appears at least once.

## - Watch Video Solution

22. Six points are there on a circle from which two triangles drawn with no vertex common. Find the probability that none of the sides of the triangles intersect.
23. Balls are drawn one-by-one without replacement from a box containing 2 black, 4 white and 3 red balls till all the balls are drawn. Find the probability that the balls drawn are in the order 2 black, 4 white and 3 red.

115. A box contains $N$ coins $m$ of which are fair and the rest are biased.

The probability of getting a head when a fair coin is tossed is $1 / 2$, while it is $2 / 3$ when a biased coin is tossed. A coin is drawn from the box at random and is tossed twice. The first time it shows head and the second time it shows tail. What is the probability that the coin drawn is fair?
116. A person goes to office either by car, scooter, bus or train probability of which being $\frac{1}{7}, \frac{3}{7}, \frac{2}{7}$ and $\frac{1}{7}$ respectively. Probability that he reaches office late, if he takes car, scooter, bus or train is $\frac{2}{9}, \frac{1}{9}, \frac{4}{9}$ and $\frac{1}{9}$ respectively. Given that he reached office in time, then what is the probability that he travelled by a car?
