## TEST 7

Exercise

1. Which one is not a correct statement w.r.t.
cyclic photophosphorylation?
A. It occurs mostly in stroma lamellae membrane
B. It operates under high light intensity and aerobic conditions only
C. It operates when $\mathrm{CO}_{2}$ availability is poor
D. It does not take part in photosynthesis
except for certain bacteria

## Answer:

2. Choose the correct statement
A. $C_{3}$ pathway is a slower process of carbon fixation than $C_{4}$ pathway
B. 6 ATP are consumed to fix one $\mathrm{CO}_{2}$ via
$C_{4}$ pathway
C. The first stable product is a 4C
compound in $C_{3}$ pathway
D. The primary acceptor of $C O_{2}$ is PEP in
$C_{3}$ pathway

## Answer:

## D Watch Video Solution

3. Which of the following plants has scotoactive stomata?
A. Opuntia
B. Cuscuta
C. Sugarcane
D. Rice

## Answer:

## - Watch Video Solution

# 4. Dimorphic chloroplasts are found in 

A. Wheat
B. Rice
C. Maize
D. Pea

## - Watch Video Solution

5. Avena curvature test is a bioassay for examining the activity of

A. Auxin activity
B. Gibberellic acid (GA) activity
C. Benzyl amino purine (BAP) activity

## D. Abscisic acid (ABA) activity

## Answer:

## D Watch Video Solution

6. Which phytohormone is known as Anti GA
hormone?
A. Ethylene
B. $A B A$
C. Cytokinin
D. Auxin

## Answer:

## D Watch Video Solution

## 7. Molybdenum (Mo) is more commonly found

A. Roots
B. Stems
C. Leaves

## D. Fruits

## Answer:

## D Watch Video Solution

## 8. Nitrate assimilation is

$$
\text { A. } \mathrm{NO}_{3}^{-} \xrightarrow{\text { oxidation }} \mathrm{NH}_{3}
$$

B. $\mathrm{NO}_{3}^{-} \xrightarrow{\text { reduction }} \mathrm{NH}_{3}$
C. $\mathrm{NO}_{3} \xrightarrow{\text { oxidation }} \mathrm{NH}_{4}^{+}$
D. $\mathrm{NO}_{2}^{-} \xrightarrow{\text { reduction }} \mathrm{NO}_{3}^{-}$

## Answer:

## D Watch Video Solution

9. Nitrifying bacteria such as Nitrosomonas
and Nitrobacter are
A. Heterotrophs
B. Photoautotrophs
C. Symbiotic
D. Chemoautotrophs

## Answer:

## - Watch Video Solution

10. Potometer is a device used for measuring rate of
A. Imbibition
B. Ascent of sap
C. Transpiration
D. Phloem transport

## Answer:

## D Watch Video Solution

11. In roots, which tissue layer acts as control point for solutes and allow the passage of ions in one direction only?
A. Epiblema
B. Endodermis
C. Pericycle
D. Cortex

## Answer:

## D Watch Video Solution

12. At the sink, sucrose is moved out of the
phloem sap by _A_, as a result the osmotic pressure _B_ in sieve tube elements. Fill the blanks with suitable A and B.
A. A- Active transport ,B-Increases
B. A- Active transport ,B-Decreases
C. A- Passive transport ,B- Increases
D. A- Passive transport, B-Decreases

## Answer:

## D Watch Video Solution

13. Which phytohormone stimulates cell division and delays senescence?
A. Auxins
B. Gibberellins
C. Cytokinins

## D. Vernalins

## Answer:

## D Watch Video Solution

14. Which phytohormone is known as stress
hormone?
A. Cytokinin
B. Gibberellin
C. Abscisic acid

## D. Ethylene

## Answer:

## D Watch Video Solution

15. Auxin (IAA) was first isolated from
A. Yeast
B. Rhizopus
C. Fusarium
D. Human urine

## Answer:

D Watch Video Solution
16. Which one is odd wrt. LDP?
A. Wheat
B. Tobacco
C. Sugarbeet
D. Radish
17. Select the wrong statement.
A. In epigeal seed germination, hypocotyl
grows first
B. In a plant, the perception site of
light/dark is the leaves
C. Rate of respiration decreases rapidly
during seed germination

# D. Vernalisation can help in shortening the 

period between germination and

## flowering

## Answer:

D Watch Video Solution
18. In $C_{3}$ cycle, fixation of one $\mathrm{CO}_{2}$, requires
A. 5 ATP + 2NADPH
B. 5 ATP + 3NADPH

## C. 3ATP + 3NADPH

## D. 3 ATP +2 NADPH

## Answer:

## - Watch Video Solution

19. Immediate donor of electrons to PS I is
A. Phaeophytin
B. $C y t b_{6}$
C. Plastocyanin

## D. Plastoquinone

## Answer:

## D Watch Video Solution

20. Choose the events which correctly differentiate non cyclic photophosphorylation
from cyclic photo phosphorylation br a.
Requirement of an external electron donor, br
b. Synthesis of ATP, br C. Photolysis of water, br
d. Involvement of PSI , br e-Formation of

NADPH

A. a, b and c only
B. b,c,d and e
C. a, c and e only
D. a, b, c and e

Answer:

D Watch Video Solution
21. Who used prism, green alga Cladophora and aerobic bacteria and plotted the first action spectrum of photosynthesis?
A. Jan Ingenhousz
B. T. W. Engelmann
C. Joseph Priestley
D. C. Van Niel

## Answer:

D Watch Video Solution
22. Select the incorrect statement related to

Mn toxicity
A. Prevention of binding of Mg with
enzymes
B. Promotion of Ca translocation to shoot apex
C. Reduction in uptake of Mg
D. Combined deficiency symptoms of Mg ,

Fe and Ca

## Answer:

## - Watch Video Solution

23. The effect of tuberculosis is seen on

## D Watch Video Solution

24. Which set of elements become toxic when
their concentration exceeds $10 \mathrm{mmol} / \mathrm{kg}$ of dry
matter in plants?
A. C, Mg, S
B. $\mathrm{S}, \mathrm{Mg}, \mathrm{Fe}$
C. $\mathrm{B}, \mathrm{Zn}, \mathrm{Cu}$
D. $\mathrm{Mn}, \mathrm{Mg}, \mathrm{Ca}$

Answer:

D Watch Video Solution
25. For a solution at atmospheric pressure
A. $\psi_{w}>\psi_{s}$
B. $\psi_{w}=\psi_{s}$
C. $\psi_{w}=0$
D. $\psi_{w}<\psi_{s}$

## Answer:

- Watch Video Solution

26. Symptoms of hypertension.

- Watch Video Solution

27. Which one is incorrectly matched pair
A. Lenticular transpiration- Approximately
$0.1 \%$ of total water loss
B. $\psi_{w}$ of pure water- Minimum
C. $\psi_{w}$ of pure water - zero
D. $\psi_{s}$ (solute potential) - Lowering of free
energy of water

## Answer:

28. Read the following statements and choose
the correct option. Statement-A: Potassium
pump theory explains that during opening of stomata in light, ion exchange is an active process. Statement-B : Poaceous stomata are ellipsoidal in shape.
A. Only statement $B$ is correct
B. Only statement $B$ is incorrect
C. Both statements are incorrect
D. Both statements are correct

## Answer:

## - Watch Video Solution

29. In a flaccid cell
A. $D P D=0$
B. $D P D=O P$
C. DPD > OP
D. $\mathrm{DPD}=\mathrm{TP}$
A. Glucose into pyruvic acid
B. Glucose into ethyl alcohol and $\mathrm{CO}_{2}$
C. Pyruvic acid into acetyl CoA
D. Pyruvic acid into $\mathrm{CO}_{2}$ and $\mathrm{H}_{2} \mathrm{O}$

Answer:
31. In electron transport system of respiration, which enzyme complex is odd w.r.t. electron carrier?
A. Complex I
B. Complex III
C. Complex IV
D. Complex V
32. How many ATP molecules will be formed from complete oxidation of two molecules of 3-PGAL in an eukaryotic cell?
A. 34
B. 40
C. 36
D. 42
33. Auxin promotes the apical dominance whereas it is counteracted by_Complete the statement by choosing the correct option
A. Gibberellin
B. Cytokinin
C. Ethylene
D. ABA
34. Match the phytohormones given their precursors given and find the wrong option
A. auxins--indole compounds
B. gibberlins---terpenes
C. cytokinins---adenine derivatives
D. abscissic acid---acetate compounds

Answer:
35. Identify the wrong statements: br a. There are three steps in Krebs cycle where $N A D^{+}$is reduced to $N A D H+H^{+}$, br b. Krebs cycle starts with the condensation of acetyl group with fumaric acid to yield citric acid.br c.

Cytochrome c is a small, mobile carrier protein, which transfers protons between complex III and IV.br d. In glycolysis, glucose undergoes partial d d. oxidation and at the end produces 2 molecules of pyruvic acid. .
A. b, c and d
B. b and conly
C. b and c only
D. c and d only

## Answer:

D Watch Video Solution
36. Read the given statements and choose the correct option:
A. Yeasts poison themselves to death when the
concentration of alcohol reaches about $10 \%$.
B. During glucose activation phase of glycolysis, 2 ATP are consumed,
A. Only A is correct
B. Only A is incorrect
C. Both A and B are correct
D. Both $A$ and $B$ are incorrect

## Answer:

D Watch Video Solution
37. On the basis of the RQ values, arrange the given respiratory substrates in descending order. a. Glucose b. Oxalic acid C. Tripalmitin d.

## Protein

A. bgt a gt dgt c
B. a gt bgt dgtc
C. bgt cgt agt d
D. cgt bgt agt d

Answer:

D Watch Video Solution
38. Select the correct set of non-mineral essential elements
A. C. $\mathrm{Cl}, \mathrm{N}$
B. C, H. B
C. C, H, O
D. H.O, Cl

## Answer:

39. Which one of the following elements helps
in photolysis of water and to maintain anioncation balance in cells?
A. Boron
B. Chlorine
C. Manganese
D. Potassium

## Answer:

D Watch Video Solution
40. Which of the following prevents inactivation of enzyme nitrogenase by oxygen poisoning, during biological nitrogen fixation?
A. Nod factors
B. Leguminous haemoglobin
C. Cytochrome
D. Amides

## Answer:

D Watch Video Solution
41. In $C_{4}$ plants, bundle sheath cells are characterised by how many features given below? Br i. Large cells, br ii- Having large number of agranal chloroplasts, br iii- Thin
walled ,br iv- Impervious to gaseous exchange, br v-Presence of intercellular space.
A. 5
B. 4
C. 2
D. 3

## Answer:

## - Watch Video Solution

42. Read the oven statements and choose the correct option br A- Like dark reactions, light reactions are also temperature sensitive but are affected to a much lesser extent, br B-C $C_{4}$
plants respond to lower temperatures and show higher rate of photosynthesis.
A. Only A is correct
B. Only B is correct
$C$. Both $A$ and $B$ are incorrect
D. Both A and B are correct

## Answer:

D Watch Video Solution
43. Select the incorrect statement
A. In monocots, guard cells are dumb-bell
shaped
B. The positive pressure that develops in xylem is called root pressure
C. Active transport is a downhill process
D. Diffusion is a slow process

## Answer:

## D Watch Video Solution

44. The opening of stoma is aided due to the orientation of the microfibrils in the cell walls of the guard cells. These microfibrils are
A. Proteinaceous
B. Cellulosic
C. Lipid derivative
D. Polynucleotide chains

## Answer:

- Watch Video Solution

45. Read the following statements and select
the correct option.
A. Mixing of oxygenated and deoxygenated
blood occurs in heart of fish and
amphibians
B. Paired pharyngeal gill slits present on
dorsal side of body are characteristic
feature of chordates
C. Gills function as respiratory as well as
excretory structure of molluses
D. Male and female leeches can be
distinguished on the basis of size

## Answer:

## - Watch Video Solution

46. A true fish among the following is not
A. Dog fish
B. Cat fish
C. Hag fish
D. Saw fish
47. Structures called ommatidia are associated with which organ system of Periplaneta?
A. Respiratory system
B. Reproductive system
C. Nervous system
D. Excretory system

Answer:
48. Which one of the following is the correct description about the animal concerned?
A. Cockroach - 10 pairs of spiracles present on ventral side of body
B. Earthworm - Internal fertilisation and
indirect development
C. Frog - Ureters function as urinogenital
duct in male.

## D. Crow - Heterodont dentition

## Answer:

## D Watch Video Solution

49. In contrast to flatworms, the roundworms show
A. Radial symmetry
B. Three germ layers
C. Organ level of organization

## D. Complete digestive system

## Answer:

## D Watch Video Solution

50. Which of the following represents the correct combination without any exception?
A. Characteristics -Fore limbs modified into
wings, partially ossified endoskeleton, moist and glandular skin, Taxon-Aves
B. Characteristics- Acoelomate organism, bilateral symmetry, complete digestive system, Taxon-Aschelminthes
C. Characteristics - Tetrapod in adult, presence of post anal tail, moist and glandular skin , Taxon- Amphibia
D. Characteristics - Presence of mammary
glands, body hair is present at some
point of development internal
fertilisation, Taxon-Mammals

## Answer:

## - Watch Video Solution

51. Mark the odd one among the following parasitic organisms.
A. Hook worm
B. Tape worm
C. Leech
D. Limulus

## Answer:

## D Watch Video Solution

52. What is true about Asterias, Ophiura and

Cucumaria?
A. They all possess ventral heart
B. They all exhibit secondary radial
symmetry
C. They all have mouth on dorsal side and
anus on ventral side
D. They all are sessile organisms

## Answer:

## D Watch Video Solution

53. Common characteristic between devil fish
and tongue worm is
A. Presence of haemocoel
B. Unsegmented body
C. Direct development
D. Presence of parapodia as respiratory
structure

## Answer:

## D Watch Video Solution

54. Life of Petromyzon begins in _A_ and ends in _B_ Select the option which gives correct answer for blank in above statement
A. A-Brackish water, B-Sea
B. A- Fresh water, B-Brackish water
C. A- Fresh water, B- Fresh water,
D. A-Sea , B- Fresh water,

## Answer:

D Watch Video Solution
55. Select the correct matched with its
A. Cockroach - Pinctada vulgaris
B. Lion - Panthera leo
C. Tortoise - Chelone graeca
D. Flying fish - Clarias magur

## Answer:

## D Watch Video Solution

56. Structure present at the junction of foregut and midgut in cockroach are
A. Hepatic caecae
B. Crop
C. Malpighian tubules
D. Gizzard

## Answer:

- Watch Video Solution

57. Presence of pneumatic bones and avascular air sacs are characteristic feature of members of class
A. Aves
B. Mammalia
C. Amphibia
D. Osteichthyes

## Answer:

## D Watch Video Solution

58. Every phylum is named according to certain features present in most of its members. Cephalochordates are named so
A. Due to presence of notochord only in
tail of adult
B. Because of presence of notochord only
in head of larva and adult
C. Due to presence of notochord from head
to tail throughout the life of organism
D. Because of presence of notochord from
head to tail only in larval stage

## Answer:

59. Select the incorrect statement

# A. Hooks and suckers are primarily 

locomotory structures of Taenia
B. Bioluminescence is well marked in
members of phylum Ctenophora.
C. Poriferans are neither clearly diploblastic nar triploblastic organisms

# D. Multicellularity is common charactenstic 

 of all members of Kingdom Animalia,
## Answer:

## D Watch Video Solution

60. A chordate having both vertebral column and notochord in adult stage is
A. Branchiostoma
B. Rattus

## C. Scoliodon

## D. Bungarus

## Answer:

## D Watch Video Solution

61. How many among the animals given in the box are homeotherms having bony endoskeleton and exhibit internal
fertilisation? [Pristis, Ichthyophis, Calotes,

Corvus Hyla, Felis, Elephas, Pterophyllum]
A. Four
B. Five
C. Seven
D. Three

Answer:

## D Watch Video Solution

62. As compared to Clarias, Trygon has
A. Bony endoskeleton
B. Electric organ
C. Claspers as copulatory structure
D. Presence of swim bladder

## Answer:

## D Watch Video Solution

63. Characteristic(s) common between

Macropus. Omithorhynchus and Pteropus
include.

# A. Poikilothermy 

B. Presence of marsupial pouch
C. Internal fertilisation and direct
development

D. Presence of ear pinna

## Answer:

## D Watch Video Solution

64. Notochord in chordates is located
A. Dorsal to nerve cord
B. Ventral to gut
C. Ventral to nerve cord
D. Lateral to gut

## Answer:

D Watch Video Solution
65. Economically harmful insect is
A. Locusta
B. Bombyx
C. Apis
D. Laccifer

## Answer:

- Watch Video Solution

66. Read the following statements and select
the correct option br 1. In poriferans, water enters spongocoel via multiple oscula. Br II- In

Spongilla, digestion is both extracellular as well as intracellular.
A. Both statements are correct
B. Statement I is correct
C. Statement II is correct
D. Both statements are incorrect

## Answer:

## D Watch Video Solution

67. Select the correct option where the set of animals which belong to same taxon.
A. Silver fish, dog fish, cuttle fish
B. Hook worm, round worm, tongue worm
C. Dolphin, whale, flying fox
D. Sea pen, sea lily, sea urchin

## Answer:

D Watch Video Solution
68. Read the following features of certain
organisms. Br (a) Metameric segmentation, br
(b) Presence of haemocoel, br (c) Exhibits metamorphosis, br (d) Presence of tracheal system, Which of the following organisms exhibit above mentioned characteristics?
A. Chaetopleura
B. Ancylostoma
C. Cucumaria
D. Anopheles

## Answer:

## D Watch Video Solution

69. Mark the odd one among the following invertebrates.
A. Doliolum
B. Amphioxus
C. Betta
D. Saccoglossus

## Answer:

## D Watch Video Solution

70. Select the correct match.
A. Psittacula - Ectotherm
B. Pavo - Open type circulation
C. Petromyzon - Spawning in sea water

D. Pterophyllum - Presence Of swim bladder

71. Air bladder is found in which of the following fishes?
A. Trygon
B. Torpedo
C. Labeo
D. Carcharodon

Answer:
72. What is humus?

## D Watch Video Solution

73. A multicellular organism which uses cilia for locomotion is
A. Sycon
B. Paramecium
C. Pleurobrachia

D. Physalia

## Answer:

## - Watch Video Solution

74. Acoelomate organism despite presence of
mesoderm belongs to which of the following phylum?
A. 1.Platyhelminthes
B. 2.Cnidaria

## C. 3.Annelida

## D. 4.Echinodermata

## Answer:

## D Watch Video Solution

75. Read the following statements regarding cockroach and select the correct option. I-2nd nymphal stage of cockroach is almost similar to adult except that the wings, II- Development of nymph takes place inside ootheca.
A. Both statements are incorrect
B. Statement I is correct
C. Statement II is correct
D. Both statements are correct

## Answer:

D Watch Video Solution
76. Define communicable disease.
77. Fasciola infects its primary host at _A_ larval stage and its secondary host at _B_ larval stage. Select the option which gives correct answer for blanks in above statement.
A. A-Sporocyst, B-Cercaria
B. A- Metacercaria, B-Miracidium
C. A- Cercaria,B-Metacercaria
D. A- Miracidium, B-Sporocyst
78. Complete the following analogy. Fasciola :

Flame cells :: Balanoglossus:
A. Flame cells
B. Proboscis gland
C. Nephridia
D. Renette cell

## Answer:

79. Alligator and Corvus are similar to Pteropus and Bufo in which one of the following features?
A. Presence of dorsal, hollow notochord in
embryonic life
B. Forelimbs are modified for flight
C. Presence of four chambered heart
D. Categorized under Gnathostomata

## Answer:

## - Watch Video Solution

80. Select the correct statement from the ones
given below w.r.t. Periplaneta americana.
A. Malpighian tubules present at the
junction of gizzard and mesenteron help
in removal of excretory waste from
haemolymph
B. About 12 alary muscles cause rhythmic
contraction of heart
C. Spermathecae in males are site for storage of sperm
D. Nervous system consists of a scene of
fused segmentally arranged ganglia
joined
by
paired
longitudinal
connectives on ventral side of body

## Answer:

81. True coelomate organism exhibiting metamerism, closed circulatory system and
bilateral symmetry is
A. Bombyx
B. Aplysia
C. Ascidia
D. Pheretima

Answer:

D Watch Video Solution
82. Which one of the following pairs of animals are similar to each other pertaining to the features stated against them?
A. Catia and Pristis - Body covered by
placoid scales, marine fishes
B. Hippocampus and Chameleon

Ectotherms, prehensile tail
C. Antedon and Loligo - Sessile organism, indirect development

# D. Salpa and Limulus - Chitinous 

exoskeleton, Retrogressive metamor phosis

## Answer:

## D Watch Video Solution

83. Mark the correct statement w.r.t. snakes.
A. Their body is covered by dry and cornified skin, composed of mesodermal
scales
B. They are oviparous and exhibit metamorphosis
C. Like birds, their body temperature is
regulated by external environment
D. They lack ear pinnae

## Answer:

- Watch Video Solution

84. In which one of the following the genus name, its two characters and its phylum are not correctly matched?
A. Genus - Euspongia, Characters- (a) Water canal system,(b) Skeleton made up of spongin fibres, Phylum-Porifera
B. Genus-
Gorgonia,
Characters-(a)
Calcareous skeleton , (b) Sessile
organism, Phylum-Coelenterata
C. Genus - Taenia, Characters- (a) Lacks
digestive
system,
(b)
Indirect
development, Phylum-Platyhelminthes
D. Genus - Octopus, Characters-

Hexapoda, (b) Segmented organism,

Phylum- Mollusca

## Answer:

## D Watch Video Solution

85. Which of the following features cannot be associated with Rana tigrina?
A. Tympanum represents the ear
B. Three chambered heart
C. Body divisible into head and trunk
D. Direct development

## Answer:

D Watch Video Solution
86. Male Ascaris can be distinguished from the
female on the basis of all of the following except
A. Size
B. Presence of separate excretory pore
C. Presence of penial setae
D. Presence of cloaca

## Answer:

## 87. Find the odd one among the following w.r.t.

## dioecious organisms.

A. Ascaris

B. Anopheles

C. Ctenoplana

D. Nereis

## Answer:

## - Watch Video Solution

88. Select correct option with its scientist who
discovered / isolated it
A. Auxins----charles darwin
B. cytokinins----F. skoog
C. gibberlins---F. W went
D. Ethylene--- cousins and workers

## Answer:

( Watch Video Solution
89. Which type of body symmetry is most suitable for sessile and motile organisms respectively?
A. Radial and bilateral symmetry
B. Bilateral and radial symmetry
C. Bilateral and biradial symmetry
D. Biradial and radial symmetry

## Answer:

90. In multicellular organisms growth and reproduction are the events which are
A. Mutually inclusive and linked
B. Mutually exclusive but linked
C. Mutually inclusive but not linked

D. Mutually exclusive and not linked

## Answer:

## D Watch Video Solution

# 91. Middle Lamella is mainly made up of 

A. Cellulose

B. Chitin
C. Calcium and magnesium pectate

D. Lignin

## Answer:

# 92. Non pigmented plastid which lacks grana is 

A. Chromoplast

B. Leucoplast

C. Chloroplast

D. Tonoplast

## Answer:

## 93. Match the column I with column II and

 choose the correct optionColumn I
A. Mutualism
B. Commensalism
C. Parasitism
D. Predation

## Column II

1. Tiger and deer
2. Cuscuta on Cissus
3. Sucker fish and shark
4. Crab and sea anemone
A. $a($ iii), $b(i v), c(i i), d(i)$
B. $a(i), b(i v), c(i i), d(i i i)$
C. $a(i), b(i i) . c(i v), d(i i i)$
D. $a(i i i), b(i i), c(i v), d(i)$

## 94. Select the correct match.

A. ABA - Closure of stomata
B. $G A_{3}$ - Promotes seed dormancy
C. Cytokinin - Derives from violaxanthin
D. Ethylene - Richmond-Lang effect

## Answer:

95. A fungus that is decompose of wood, has
long lived secondary mycelium, shows clamp
connections and produces exogenous sexual
spores is put under the class
A. Zygomycetes
B. Basidiomycetes
C. Ascomycetes
D. Oomycetes

# 96. In Bougainvillea thorns are the 

 modification ofA. Petiole
B. Stipule
C. Apical buds

D. Axillary buds

## Answer:

97. Tricarpellary, syncarpous, trilocular, superior ovary with axile placentation is found in
A. Solanaceae

B. Liliaceae

C. Fabaceae
D. Poaceae
98. In roots, pericycle is
A. Thick walled sclerenchymatous
B. Parenchymatous
C. Collenchymatous
D. Chlorenchymatous

## Answer:

99. Select the incorrect match.
A. Monoecious prothallus - Lycopodium
B. Dioecious prothallus - Dryopteris
C. Class sphenopsida - Equisetum
D. Heterospory - Leads to seed habit

## Answer:

- Watch Video Solution

100. Which one of the given statements is wrong?
A. Bacterial cell wall is made up of peptidoglycan
B. The walls of diatoms are easily
destructible
C. In viroids, RNA is of low molecular
weight
D. Neurospora is used in the study of biochemical and genetic work.

## Answer:

## - Watch Video Solution

101. Choose the incorrect match.
A. Cyanobacteria - Chlorophyll 'a' similar to
green plants
B. Halophiles - Develop a pigmented membrane in strong light
C. Azotobacter - Free living aerobic
bacterium
D. Transduction - Was firstly demonstrated

in E. coli

## Answer:

D Watch Video Solution
102. State true ( $T$ ) or false ( $F$ ) for the given statements and choose the correct option. Br
(a) Seeds of Pinus cannot germinate properly without mycorrhizal associations br (b) During passive absorption of water by roots a positive pressure is developed in xylem.

$$
\begin{aligned}
& \text { A. (a) -T, (B)-F, C-F, (d)-T } \\
& \text { B. (a) }-T, \text { (B)-F, C-T, (d)-F } \\
& \text { C. (a) -T, (B)-T, C-F, (d)-F } \\
& \text { D. (a) }-F, \text { (B) }-F, C-T \text {, (d) }-T
\end{aligned}
$$

## Answer:

- Watch Video Solution

103. Detritus food chain.

## D Watch Video Solution

104. Increased level of $K^{+}$and malate ions
into the vacuole of guard celis leads to
A. Increase in turgor pressure of guard cells
B. Decrease in turgor pressure of guard cells
C. Exosmosis from guard cells
D. Decrease in osmotic concentration of guard cells

## Answer:

105. To explain the translocation of food, "pressure flow hypothesis" was proposed by
A. Levitt
B. Graft
C. E. Munch
D. M. Fujino

Answer:

D Watch Video Solution
106. Root pressure is a
A. Negative hydrostatic pressure in the xylem of root.
B. Positive hydrostatic pressure in the xylem due to metabolic activity of root.
C. Negative hydrostatic pressure in
companion cells of root.
D. Positive hydrostatic pressure in
companion cells of root.

## Answer:

## - Watch Video Solution

107. Read the following features for brown algae a- Presence of pigments Chlorophyll a and c. carotenoids and xanthophyll
(fucoxanthin), b- Cell wall is composed of cellulose, pectin and hydrocolloids like carrageen. c- Gametes are pyriform with two laterally attached flagella d-Stored food may be in form of laminarin or mannitol d- Deepest dweller
A. Five
B. Four
C. Three
D. Two

## Answer:

## D Watch Video Solution

108. Select the wrong statement.
A. Chlorella and Spirullina are used as food
supplements even by space travellers.
B. Algae are primary producers
C. Pyrenoids contain protein and starch
D. Phenetics involves usage of only
chemical features for the evaluation of
similarities and differences between
species

## Answer:

109. How many total ATP are produced
through ETS only from two molecules of Acetyl

CoA in aerobic respiration?
A. 24
B. 22
C. 30
D. 11

Answer:

D Watch Video Solution
110. In germinating fatty seeds, fats are converted to sugars by
A. $C_{2}$ cycle
B. Glyoxylate cycle
C. Krebs cycle
D. $C_{4}$ cycle

## Answer:

111. Universal donor of blood is

## - Watch Video Solution

112. Read the given statements $A$ \& $B$ and choose the correct option. Br A - The enzyme nitrogenase is made up of Mo-Fe protein. Br

B- The synthesis of ammonia requires very high input of energy i.e. 8 ATP for each $\mathrm{NH}_{3}$ produced
A. Only A is correct
B. Only B is correct
C. Both $A$ and $B$ are incorrect
D. Both A and B are corrects

## Answer:

D Watch Video Solution
113. What is true about photorespiration? a- It is also known as $C_{2}$ cycle, b - There is neither
synthesis of sugar nor ATP, c- It is wasteful process in $C_{3}$ plants
A. Only a and b
B. Only b and c
C. Only a and c
D. All $a, b$ and $c$

Answer:
( Watch Video Solution
114. $C O_{2}$ fertilization effect signifies
A. Higher yields, if some $C_{3}$ crops are allowed to grow in $\mathrm{CO}_{2}$ enriched atmosphere
B. Effect of $\mathrm{CO}_{2}$ on double fertilization
event
C. Lower yields, if $C_{3}$ crops are grown in
$\mathrm{CO}_{2}$ enriched atmosphere
D. Both (1) and (2)

## Answer:

## - Watch Video Solution

115. How many of the following are correct regarding plant hormone $A B A$ ? Br a- Inhibition of seed germination, br b-Stress hormone, c-

Acceleration of abscission of flowers \& fruit. Br d - Anti-GA, br e-Respiratory climactic.
A. 3
B. 2
C. 5
D. 4

## Answer:

- Watch Video Solution

116. Which one lateral meristem is completely
primary in origin?
A. Cork cambium
B. Fascicular vascular cambium

# C. Interfascicular cambium 

## D. Vascular cambium

## Answer:

## D Watch Video Solution

117. If in a flower, Female reproductive part occupies the highest position while other parts are situated below it, the flower is called
A. Perigynous

## B. Partly epigynous

C. Epigynous
D. Hypogynous

## Answer:

## D Watch Video Solution

118. Which of the following layer of cell wall is
capable of growth and gradually diminishes as
the cell matures?
A. Tertiary cell wall
B. Secondary cell wall
C. Primary cell wall
D. Cell membrane

## Answer:

## D Watch Video Solution

119. If there are 20 chromosomes in a pollen grain of a diploid plant then the number of
bivalents in a meiocyte of that plant at prophase I will be
A. 40
B. 20
C. 30
D. 10

Answer:
( Watch Video Solution

# 120. Opposite phyllotaxy is found in 

A. Calotropis
B. Alstonia
C. China rose
D. Sunflower

Answer:
121. The fungus in which ascus formation occurs but no ascocarp is seen is
A. Claviceps
B. Neurospora
C. Penicillium
D. Saccharomyces

## Answer:

D Watch Video Solution
122. Protists obtain their food by ( a-)Chemosynthesis, ( b- )Photosynthesis , ( c)Heterotrophic mode of nutrition
A. (a) only
B. (a) \& (C)
C. (a) \& (b)
D. (b) \& (C)

## Answer:

123. In plants, how many of the following
symptoms are due to viral infection? Br a-

Mosaic formation, br b- Yellowing and vein
clearing, br c- Leaf rolling and curling, br dDwarfing and stunted growth.
A. 1
B. 2
C. 4
D. 3

## Answer:

124. The deuteromycetes generally reproduce by asexual spores known as
A. Oidia
B. Conidia
C. Sporangiospore
D. Chlamydospore

Answer:

D Watch Video Solution
125. Pacemaker enzyme of EMP pathway is
A. Hexokinase
B. Phosphohexoisomerase
C. Phosphofructokinase
D. Enolase

Answer:

- Watch Video Solution

126. A flower can be cut into two equal or identical halves in any radial plane passing through the centre. This flower will be
A. Actinomorphic B. Bilateral symmetric
C. Asymmetric

D. Zygomorphic

## Answer:

127. Heterocysts are specialised cells found in some BGA. They are specialised for
A. Sexual reproduction
B. Nitrogen fixation under anaerobic
condition
C. Nitrogen fixation under aerobic
condition
D. Performing photosynthesis with the help
of PS II

## Answer:

## D Watch Video Solution

128. Lichens cannot tolerate _A_ especially due
to _B_ Fill the blanks with suitable option for
(A) and (B)
A. (A) -Water pollution ,B $-\mathrm{CO}_{2}$
B. A- Soil pollution, B-CH4
C. A- Air pollution, B- $\mathrm{SO}_{2}$
D. A- Air pollution, $\mathrm{B}-\mathrm{CO}_{2}$

## Answer:

## D Watch Video Solution

129. In bryophytes, spores get disseminated by
A. Wind
B. Water
C. Insects
D. Animals

## - Watch Video Solution

130. Which of the following is not a correct statement?
A. Herbaria serve as quick source of reference in taxonomical studies.
B. Botanical gardens are in-situ
conservation strategies of plants.
C. Key is artificial analytical device, used for identification for both plants and
animals.

# D. Monograph contains information of any 

 one taxon.
## Answer:

D Watch Video Solution
131. Phellem becomes impervious to water due to deposition of
A. Lignin

## B. Suberin

## C. Cutin

D. $\mathrm{SiO}_{2}$

## Answer:

## D Watch Video Solution

132. Gymnosperms are
A. Wind pollinated archegoniates
B. Insected pollinated archegoniates

# C. Water pollinated non archegoniates 

## D. Animal pollinated non-archegoniates

## Answer:

## D Watch Video Solution

133. Mycorrhizal association is responsible for
a- Increasing absorptive area, b- Providing
shelter to fungi, c- Nitrogen fixation, d-

Enhanced supply of N, P, S
A. Only a \& b
B. Only b\&c
C. Only $a, b \& d$.
D. All $a, b, c \& d$

Answer:

- Watch Video Solution

134. Smallest angiosperm is
A. Acacia
B. Wolfia
C. Zamia
D. Ginkgo

## Answer:

## D Watch Video Solution

135. Complete the following analogy Pheretima
: Nephridia ::Balanoglossus
A. Malpighian tubules
B. Ctenidia
C. Flame cells
D. Proboscis gland

## Answer:

## D Watch Video Solution

136. All of the following hormones from
hypothalamus are carried to pituitary via hypophyseal portal vein except
A. Somatostatin
B. GnRH
C. GHRH
D. ADH

## Answer:

## D Watch Video Solution

137. Given is the diagrammatic sketch of a certain type of connective tissue Identify the parts labelled as $A, B, C$ and $D$ and
select the correct option.

A. (A)Produce antibodies, (B) Secrete fibres,
(C) Provide rigidity, (D) Phagocytic cells
B. (A)Secrete anti coagulant, (B) Phagocytic
cells , (C) Provide elasticity, (D)Produce
antibodies,
C. (A)Secrete collagen fibres, (B) Produce antibodies, C - Component of intracellular
histamines

# D. (A)-Phagocytic cells , (B)-Secrete 

collagenfibres, C- Provide strength to
tissue, D-Produce anti coagulant

## Answer:

## - Watch Video Solution

138. Select the correct option having set of
factors which cause left shift and right shift respectively in oxygen. dissociation curve.
A. High $\mathrm{PCO}_{2}$, and low $\left[\mathrm{H}^{+}\right]$
B. High $P O_{2}$, and high 2,3 BPG.
C. Low pH and high $p O_{2}$
D. Low $p O_{2}$, and lowpCO_2'

## Answer:

139. Read the following statements and select
the correct option regarding muscular and nervous tissue. Br Statement I: Excitability is
the common characteristic between muscular and nervous tissue. Br Statement II: Cells
which form a large volume of nervous tissue lack electrical excitability.
A. Both statements are incorrect
B. Statement is incorrect
C. Statement II is incorrect

## D. Both statements are correct

## Answer:

## D Watch Video Solution

140. If an enzyme has been given the EC code 4.3.2.1. it is likely to be involved in
A. Joining of $\mathrm{C}-\mathrm{O}, \mathrm{C}-\mathrm{S}, \mathrm{C}-\mathrm{N}$ bonds
B. Hydrolysis of peptide and glycosidic bonds

# C. Formation of double bond 

D. Redox reactions

## Answer:

## D Watch Video Solution

141. Type of joint present between wrist bones
is also present between
A. Humerus and pectoral girdile
B. Atas and axis

# C. Bones of cranium 

D. Tarsals

## Answer:

## D Watch Video Solution

142. Select the incorrect match.
A. Respiratory volume/capacity -Residual
volume, Value-1100 ml -- 1200 ml
B. Respiratory volume/capacity - Vital
capacity, Value- $3500 \mathrm{~mL}-4500 \mathrm{ml}$
C. Respiratory volume/capacity - Functional
residual capacity, Value- 2500 ml
D. Respiratory volume/capacity - Expiratory
capacity, Value- $3000 \mathrm{ml}-3500 \mathrm{ml}$

## Answer:

## D Watch Video Solution

143. During muscle contraction
A. Cross bridges are formed when the energized myosin head attaches to myosin binding site on actin
B. The Z-lines are drawn towards each other
C. $C a^{2+}$ concentration in the cytosol
increases

# D. The thick filaments slide over the thin 

filaments

## Answer:

## D Watch Video Solution

144. Common feature of frog and cockroach is
A. Closed circulatory system

B. Uricotelism

C. Dorsal nerve cord
D. Indirect development

## Answer:

## - Watch Video Solution

145. Choose the incorrectly matched pair.
A. Squamous epithelium - Walls of blood
vessels
B. Cuboidal epithelium - Tubular parts of

## C. Compound epithelium - Bronchioles

## D. Glandular epithelium - Goblet cells

## Answer:

## D Watch Video Solution

146. Damage to which cells of gastric glands
can cause anemia?
A. Mucus neck coll
B. Peptic cells

## C. Parietal cells

D. Chief cells

## Answer:

## D Watch Video Solution

147. The following is a list of animals and their excretory organs. Choose the incorrect match
A. Palaemon - Statocysts
B. Planaria - Flame cells
C. Ancylostoma -Renette cells
D. Pila - Feathery gills

## Answer:

## D Watch Video Solution

148. Jaundice is a disorder of -
A. Excretory disorder
B. Digestive disorder
C. Occupational respiratory disorder

## D. Coronary artery disease

## Answer:

## D Watch Video Solution

149. Read the following statements and select
the correct option br Statement I :

Development of larvae of earthworm takes
place inside cocoon. Br Statement II: In earthworm, fusion of gametes and formation of zygote occurs inside cocoon
A. Both statements are correct
B. Statement I is correct but statement II is incorrect
C. Statement I is incorrect but statement II
is correct

## D. Both statements are incorrect

## Answer:

150. identify the mismatched option wrt human
A. Inspiration : Occurs due to contraction
of external intercostal muscles
B. Renal corpusclo : Consists of Bowman's
capsule and renal tubules
C. Lub : First heart sound produced due to
the closure of $A V$ valves
D. Atherosclerosis : Caused due to the deposition of cholesterol, calcium and fibrous lissue in arteries

## Answer:

## D Watch Video Solution

151. In normal respiration, contraction of which
of the following muscles leads to a decrease in
intra pulmonary pressure?
A. Diaphragm
B. Internal intercostal muscles
C. Abdominal muscles
D. Cardiac muscles

## Answer:

D Watch Video Solution
152. Cellular respiration includes
A. Exchange of gases across alveolar membrane
B. Pulmonary ventilation
C. Breakdown of glucose and release of
$\mathrm{CO}_{2}$
D. Diffusion of gases between blood and
tissue

## Answer:

153. Which of the following regions of brain is incorrectly paired with its function?
A. Thalamus : Relay centre in cerebral cortex
B. Corpus callosum : Tract of muscle fibres
which connect one cerebral hemisphere
to another
C. Hypothalamus : Thermostat of the body
D. Cerebral aqueduct : Connects third
ventricle to fourth ventricle

## Answer:

## D Watch Video Solution

154. As compared to sympathetic system, stimulation from parasympathetic system causes.
A. Increase in heart rate and cardiac output
B. Decrease in duration of cardiac cycle and
increase in cardiac output
C. Decrease in speed of conduction of action potential across heart musculature and in heart rate
D. Increase in stroke volume and cardiac output

## Answer:

## D Watch Video Solution

155. Select the set of animals which are homeotherms.
A. Chelone and Naja
B. Aptenodytes and Macropus
C. Pteropus and Calotes
D. Balaenoptern and Chameleon

Answer:
( Watch Video Solution
156. Human eye contains cone cells which respond to red green and blue light. When all of these cones Are stimulated equally then a sensation of ___ light is produced Select the option which fills the blank correctly.
A. Black
B. White
C. Grey
D. Brown

Answer:
157. Which one of the following statements in regard to the excretion by the human kidneys is correct?
A. Vasa recta and loop of Henle of cortical nephrons form counter current system
B. With or without the influence of ADH,
maximum reabsorption of water still occurs in proximal convoluted tubules
C. Reabsorption of water occurs in every
segment of the tubular part of nephron
D. Selective secretion of nutrients like
glucose and electrolytes occurs in PCT
and collecting duct

## Answer:

## - Watch Video Solution

158. Part of nephron where maximum reabsorption of nutrients occur is lined by
A. Brush bordered columnar epithelium
B. Ciliated epithelium
C. Brush bordered cuboidal epithelium
D. Squamous epithelium

## Answer:

D Watch Video Solution
159. Select the option having correct set of sensory type of cranial nerves only
A. IV, X, XI
B. I, II, VIII
C. III, XI, XII
D. V, VII, IX

## Answer:

D Watch Video Solution
160. Select the disease caused by both
hyposecretion as well hypersecretion of a
hormone
A. Four
B. Five
C. Three
D. Six

Answer:

D Watch Video Solution
161. What will happen when a threshold stimulus is applied at a particular site in neuron?
A. The entire axonal membrane gets depolarised altogether

B. Axonal membrane becomes more

permeable to $N a^{+}$, leading to efflux of

## $N a^{+}$to ECF

C. Polarity entire of neurilemma gets

# D. Reversal of charge occurs only at site 

## where stimulus is applied

## Answer:

## D Watch Video Solution

162. Digestion of carbohydrates begins in _A_ and ends in _B_ Select the option which fill the blanks correctly
A. A-Stomach, B-Small intestine
B. A- Duodenum, B- Jejunum
C. A- Buccal cavity, B- Small intestine
D. A-Buccal cavity, B-Stomach

## Answer:

## D Watch Video Solution

163. Select the correct match between group of animals, features and exception.
A. Animal - Pheretima,Hirudinaria, Features-

Closed circulatory system, Exception-

Pheretima
B. Animal - Ascidia,Petromyzon ,Features-

Lack vertebral column, Exception-

Petromyzon
C. Animal - Rana, Calotes, Features- Three
chambered heart, Exception- Calotes
D. Animal - Omithorhynchus,Corvus,

Features- Dorsal nerve cord, Exception-

## Corvus

## Answer:

## D Watch Video Solution

164. Which of the following option given below
is correct representation of net filtration pressure?
(a) (Glomerular hydrostatic pressure) -
(capsular hydrostatic pressure)
(b) (Glomerular hydrostatic pressure) -
(capsular hydrostatic pressure + blood colloidal osmotic pressure)
(c) (Glomerular hydrostatic pressure + capsular osmotic pressure)
(d) (Capsular hydrostatic pressure + blood colloidal .osmotic pressure) (Glomerular hydrostatic pressure)
A. (Glomerular hydrostatic pressure) -
(Capsular hydrostatic pressure)
B. (Glomerular hydrostatic pressure) -
(Capsular hydrostatic pressure + blood

## colloidal osmotic pressure)

C. (Glomerular hydrostatic pressure) +
(Capsular osmotic pressure)
D. (Capsular hydrostatic pressure + blood
colloidal osmotic pressure) - (Glomerular
hydrostatic pressure)

## Answer:

## D Watch Video Solution

165. Which part of the body is affected in jaundice?

## D Watch Video Solution

166. During aestivation and hibernation, a frog respires through
A. Both skin and buccal cavity
B. Only through lungs
C. Only through skin

# D. Both lungs and buccal cavity 

## Answer:

## D Watch Video Solution

167. After the removal of pituitary gland, a person was advised to undergo pituitary
hormone replacement therapy. Select the set
of hormones which are included in this
therapy.
A. Insulin, Thymosin, Thyroxine
B. Thyroxine, Relaxin, Gastrin
C. Oxytocin, Glucagon, Estrogen
D. ACTH, TSH, ADH

## Answer:

## D Watch Video Solution

168. The 24 hour (diurnal) rhythm of our body
like sleep wake cycle is regulated by which hormone?
A. Adrenaline
B. Melanin
C. Melatonin
D. Prolactin

## Answer:

D Watch Video Solution
169. Select the odd one among the following viviparous organisms?
A. Scoliodon
B. Balaenoptera
C. Trichinella
D. Testudo

## Answer:

## D Watch Video Solution

170. Cockroaches show gradual metamorphosis. Which of the following statement correctly illustrates it?
A. The life story includes egg, nymph
(young) with small wings and imago
(adult)
B. Metamorphosis occurs through a series
of nympha stages and is known as
paurometabolous
C. 18 moults occurs to reach the adtlt form
D. Gradual metamorphosis also occurs in
silver fish
171. Identify the aromatic amino acid from the given option.
A. Serine
B. Cysteine
C. Tyrosine
D. Stutamic acid

Answer:
172. Which hormone is produced by wall of atria of heart to opposs RAAS pathway?

A. ANF

B. ADH
C. Adrenamie
D. Angiotensin

Answer:

D Watch Video Solution
173. Erythroblastosis foetalis can occur
A. When mother is Rhive r.nd father is Rhve
B. When both mother and foetus are Rh-ve
C. Wher mother is Rh+ and foetus is Fin--ve
D. When mother is Rh-ve and lotus a Rh+ve

## Answer:

174. Which of the following set gives correct description regarding human dentition?
A. Thecodont, Diphyodont, Homodont
B. Diphyodont, Heterodont, Thecodont
C. Monophyodont, Acrodont, Homodont
D. Diphyodont, Heterodont, Acrodont

## Answer:

D Watch Video Solution
175. Rigor mortis is caused due to
A. Breakdown of cross bridges between
actin and myosin head
B. Depletion of ATP
C. Degradation of contractile proteins
D. Loss of troponin and tropomyosin

## Answer:

176. Select the incorrect match of the site of action on the given substrate the enzyme acting upon it and the end product

# A. Stomach : Proteins rarr^(pepsin) 

Proteoses+Peptones
B. Buccal cavity : Starch rarr^(Ptyalin)

Maltose
C. Small intestine : Fats rarr^(bile
pigments) Micelles

# D. Small intestine : Maltoserarr ${ }^{\wedge}$ (maltase) 

Glucose+ Glucose

## Answer:

## - Watch Video Solution

177. Find the odd one among the following skull bones.
A. Zygomatic
B. Lacrimal

## C. Nasal

D. Sphenoid

## Answer:

(D) Watch Video Solution
