BOOKS - CENGAGE CHEMISTRY (ENGLISH)

D AND F BLOCK ELEMENTS

Illustration

1. On what ground can you say that scandium ($Z = 21$) is a transition element but zinc ($Z = 30$) is not?

[Watch Video Solution](#)

2. Why do the transition elements exhibit higher enthalpies of atomisation?

[Watch Video Solution](#)

3. (a) Phosphorous (P_4) and vanadium (V) both exhibit variable oxidation states but due to different reason.

(b) Name the transition metal which does not show variable O.S.

Watch Video Solution

4. (a). Why IE_1 of Zn , Cd and Hg are very high?

(b). The relative difference in IE of any two consecutive d-block elements is smaller than those of s and p-block elements.

(c). IE_2 is usually very high for Cr and Cu . Why?

Watch Video Solution

5. IE_2 for Zn is comparatively lower as compared to other transition elements of same series.

Watch Video Solution

6. Why is Cr^{2+} reducing and Mn^{3+} oxidising when both have d^4 configuration?

Watch Video Solution

7. Give the decreasing order of $E_{\frac{M^{3+}}{(M^{2+})^{e-}}}$ Value for the following:

(a). $Co(Z = 27)$

(b). $Mn(Z = 25)$

(c). $Fe(Z = 26)$

(d). $Cr(Z = 24)$

Watch Video Solution

8. for the first series of transition metal the $E^0(\Theta)$ Value are

$E^\ominus, V, Cr, Mn, Fe, Co, Ni, Cu$

$(M^{2+} / M^{+1}), -1.18, -0.91, -1.18, -0.44, -0.28, -0.25, +0.34$

Explain the irregularity in the above Values.

Watch Video Solution

9. Why is the E^θ value for the Mn^{3+}/Mn^{2+} couple much more positive than that for Cr^{3+}/Cr^{2+} or Fe^{3+}/Fe^{2+} ? Explain.

Watch Video Solution

10. How would you account for the increasing oxidising power in the Example series $VO_2^+ < Cr_2O_7^{2-} < MnO_4^-$

Watch Video Solution

11. The magnetic moment of divalent ion in aqueous solution with atomic number 25 is

Watch Video Solution

12. Name a member of the lanthanoid series which is well known to exhibit +4 oxidation state.

Watch Video Solution

13. (a). A strip of Cu dissolved in $FeCl_3$, however Cu cannot displace Fe.

(b). $[CuCl_4]^{2-}$ exists but $[CuI_4]^{2-}$ does not. Why?

Watch Video Solution

14. (a). Why Mn^{2+} compounds are more stable than Fe^{2+} towards oxidation to their +3 state?

(b). Calculate the magnetic moment of V^{3+} ion.

(c). $[Ti(H_2O)_6]^{3+}$ gives violet coloured aqueous solution but

$[Mg(H_2O)_6]^{2+}$ solution is colourless.

(d). $[Ti(H_2O)_6]^{3+}$ is coloured whereas $[Sc(H_2O)_6]^{3+}$ is colourless.

Why?

[Watch Video Solution](#)

15. Why Eu^{2+} and Yb^{2+} ions in solutions are good reducing agents but an aqueous solution of Ce^{4+} is a good oxidising agent?

[Watch Video Solution](#)

16. A hydrated metallic salt A, light green in colour, gives a white anhydrous residue B after being heated gradually. B is soluble in water and its aqueous solution reacts with NO to give a dark brown compound C. B on strong heating gives a brown residue D and a mixture of two gases E and F. The gaseous mixture, when passed through acidified KMnO_4 discharges the pink colour, when passed through acidified BaCl_2 solution, gives a white precipitate. Identify A, B, C, D, E and F

[Watch Video Solution](#)

17. Which of the following statements is correct?

- (a). Nickel is a silver white metal.
- (b). Nickel dimethylglyoxime is square planer.
- (c). Among complexes of cobalt the most stable are those of Co^{2+} ,
- (d). Among simple compounds of cobalt the most stable are those of CO^{2+} .

Watch Video Solution

18. Which of the following statements (s) is (are) correct with reference to the ferrous and ferric ions?

- (a). Fe^{2+} gives brown colour with potassium ferricyanide.
- (b). Fe^{2+} gives blue precipitate with potassium ferricyanide.
- (c). Fe^{3+} gives red colour with potassium thiocyanate.
- (d). Fe^{3+} gives brown colour with potassium thiocyanate.

Watch Video Solution

19. Hydrazine reduce Fehling's solution to form:

Watch Video Solution

20. In the following reaction Y and Z are respectively:

(d). None

Watch Video Solution

21. Explain the following facts:

(a). Copper hydroxide is soluble in ammonium hydroxide but not in sodium hydroxide.

(b). Addition of an alkali to cuprous chloride solution gives a yellow precipitate which gradually changes to a red colour.

Watch Video Solution

22. Write balanced equations for the reaction of alkaline perbromate with zinc giving tetrahydroxozincate anion.

Watch Video Solution

23. Excess of dilute sodium hydroxide solution is gradually added with shaking to an aqueous solution of zinc sulphate. What would you observe?

Watch Video Solution

24. (a). The addition of NaOH solution to a solution of zinc chloride produces a white precipitate which dissolves on further addition of NaOH.

(b). The addition of NH_4OH to $ZnSO_4$ solution produces white precipitate but no precipitate is formed if it contains NH_4Cl .

Watch Video Solution

25. Identify A, B, C, D and E.

A white substance A reacts with dilute H_2SO_4 to produce a colourless gas B and a colourless solution C. The reaction between B and acidified $K_2Cr_2O_7$ solution produces a green solution and slightly coloured precipitate D. The substance D burns in air to produce a gas E which reacts with B to yield D and a colourless liquid. Anhydrous copper sulphate is turned blue on addition of this colourless liquid. Addition of aqueous NH_3 or $NaOH$ to C produces first a precipitate

Watch Video Solution

26. Mercurous ion is written as Hg_2^{2+} whereas cuprous ion is written as Cu^+ . Explain.

Watch Video Solution

27. Give reasons for the following :

Variation in the radii of transition elements are not as pronounced as those of representative elements.

Watch Video Solution

28. (a). The addition of NaOH solution to a solution of zinc chloride produces a white precipitate which dissolves on further addition of NaOH.

(b). The addition of NH_4OH to $ZnSO_4$ solution produces white precipitate but no precipitate is formed if it contains NH_4Cl .

Watch Video Solution

[Watch Video Solution](#)

29. Mercurous chloride turns black on adding NH_4OH to it. Explain.

[Watch Video Solution](#)

Solved Example

1. Why in any transition series, melting points first increase and then decrease and also they show a dip in the middle?

[Watch Video Solution](#)

2. Atomic radius of Cu is greater than that of Cr but ionic radius of Cr^{2+} is greater than Cu^{2+} . Give suitable explanation.

[Watch Video Solution](#)

3. Why hydrated copper sulphate is blue while anhydrous copper sulphate is white?

Watch Video Solution

4. Assign reasons for the following :

(b) The ionization energy of 5d elements are greater than 3d elements.

Watch Video Solution

5. Explain why cuprous chloride ($CuCl$) is colourless while cupric chloride ($CuCl_2$) is blue? Or $TiCl_3$ is coloured while $TiCl_4$ is colourless?

Watch Video Solution

6. Describe giving reason which one of the following pairs has the property indicated?

(a). Fe or Cu has higher melting point.

(b). Co^{2+} or Ni^{2+} has lower magnetic moment.

Watch Video Solution

7. Give reason for the following features of transition metal chemistry:

(i). The lowest oxide of a transition metal (say, chromium, atomic number 24) is basic whereas the highest oxide is usually acidic.

(ii). Transition metals sometimes exhibit very low oxidation states such as +1 and 0.

Watch Video Solution

8. The 4d and 5d series of transition metals have more frequency metal-metal bonding in their compounds than do the 3d metals. Explain.

Watch Video Solution

9. Most of the transition metals do not displace hydrogen from dilute acids. Why?

Watch Video Solution

10. (a). Of the lanthanides, cerium ($Z = 58$) forms a tetrapositive ion, Ce^{4+} in aqueous solution. Why?

(b), The $+3$ oxidation states of lanthanum ($Z = 57$), gadolinium ($Z = 64$) and lutetium ($Z = 71$) are especially stable. Why?

Watch Video Solution

11. (a). Why second and third transition series elements show similar size?

(b). Why electronic configuration of lanthanoids not known with certainty?

Watch Video Solution

12. Chemistry of all the lanthanoids is quite similar.

Watch Video Solution

13. Identify A to E. Pyrolusite on heating with KOH in the presence of air gives a dark green compound (A). The solution of (A) on treatment with H_2SO_4 gives a purple coloured compound (B), which gives the following reactions:

(a). KI on reaction with alkaline solution of (B) changes into a compound (C).

(b). The colour of the compound (B) disappears on treatment with the acidic solution of $FeSO_4$.

(c). With conc. H_2SO_4 compound (B) gives (D) which can decompose to yield (E) and oxygen.

Watch Video Solution

Watch Video Solution

15. (a). A powdered substance (A) on treatment with fusion mixture gives a green coloured compound (B).

(b). The solution of (B) The solution of (B) in boiling water on acidification with dilute H_2SO_4 gives a pink coloured compound (C).

Watch Video Solution

16. (a). An ore (A) on roasting with sodium carbonate and lime in the presence of air gives two compounds (B) and (C).

(b). The solution of (B) in conc. HCl on treatment with potassium ferrocyanide gives a blue colour or precipitate of compound (D).

Watch Video Solution

17. Identify A to C.

- (a). An aqueous solution of a compound (A) is acidic towards litmus and (A) is sublimed at about $300^{\circ}C$.
- (b). (A) on treatment with an excess of NH_4CNC gives a red coloured compound (B) and on treatment with a solution of $K_4Fe(CN)_6$ gives a blue coloured compound (C).

Watch Video Solution

18. How the following conversions are made?

- (a). Copper chloride from copper nitrate.
- (b). Cuprous oxide from copper sulphate.
- (c). Cuprous oxide from copper.

Watch Video Solution

1.(a). Explain why Mn^{3+} is less stable than Mn^{2+} and M^{4+} ions?

(b). $Cu(I)$ compounds are not known in aqueous solution.

Watch Video Solution

2. Write down the names of crystal structures in which the following elements are presents:

$Sc, Ti, V, Cr, Mn, Fe, Co, Ni, Cu, Zn$

Watch Video Solution

3. Write down the name of catalyst for the following:

Adams catalyst in reduction.

Watch Video Solution

4. Arrange the following complexes in decreasing order of magnetic moment:

Watch Video Solution

5. What happen when:

(a). CO_2 gas is passed through aqueous solution of Na_2CrO_4 .

(b). Ammonium dichromate is heated strongly.

Watch Video Solution

6. Explain by giving suitable reason.

(a). Yellow coloured aqueous solution of sodium chromate changes to orange-red when CO_2 under pressure is passed.

(b). Green solution of potassium manganate, K_2MnO_4 , turns purple when CO_2 is circulated.

(c). Hg^{2+} and Hg_2^{2+} salts are colourless.

(d). Cu^{2+} salts are paramagnetic while Cu^{\oplus} salts are diamagnetic in nature.

[Watch Video Solution](#)

7. Explain:

(a). Why is $K - 2Cr_2O_7$ generally preferred to $Na_2Cr_2O_7$ in volumetric analysis?

(b). Which divalent metal ion has maximum paramagnetic character amongst the first transition metals? Why?

(c). How the colour of $K_2Cr_2O_7$ solution does depend on pH of the solution?

[Watch Video Solution](#)

8. (a). Why do second and third rows of transition elements resemble each other more closely than the first row?

Give reasons:

(b). Most transition metals show paramagnetic behaviours.

(c). Transition metal and their many compounds are coloured.

Watch Video Solution

9. Acidified $K_2Cr_2O_7$ solution turns green when Na_2SO_3 is added to it.

This is due to the formation of

Watch Video Solution

10. Identify D

When a white crystalline compound X is heated with $K_2Cr_2O_7$ and concentrated H_2SO_4 , a reddish brown gas A is evolved. On passing A into caustic soda solution a yellow coloured solution of B is obtained. Neutralising the solution of B with acetic acid and on subsequent addition of lead acetate, a yellow precipitate C is obtained. When X is

heated with NaOH solution a colourless gas is evolved and on passing this gas into K_2HgI_4 solution a reddish brown precipitate D is formed.

Watch Video Solution

11. Complete and balance the following equation:

Watch Video Solution

12. Explain the following giving suitable reason.

Transition metals of 3d-series do not react readily with dilute acids to liberate hydrogen although they have high negative reduction potential values. Explain. .

Watch Video Solution

Ex 6 2 Subjective Compound Of Fe

1. Complete and balance the following equation:

Watch Video Solution

2. Explain the following :

(i). $FeCl_3$ and $FeBr_3$ are well known, but FeI_3 has doubtful existence.

(ii). Anhydrous $FeCl_3$ cannot be obtained by heating hydrated ferric chloride.

Watch Video Solution

3. Draw shape of $FeCl_3$ in :

(i). Water

(ii). Ether

(iii). Gaseous state.

Watch Video Solution

4. What happen when iron is treated with:

(i). Steam

(ii). Dilute HNO_3

Watch Video Solution

5. Colourless salt (A) decolourise I_2 solution and gives white precipitate (change to black) with $AgNO_3$ solution. (A) also produces pink colour with $FeCl_3$ solution. Identify (A) and explain reactions.

Watch Video Solution

6. Iron forms iron (II) chloride, $FeCl_2$ and iron (III) chloride $FeCl_3$. One of these chlorides is a dark brown solid, melting point $306^\circ C$. The other is a white crystalline solid with greenish tint, melts at $674^\circ C$ Which description best fits iron (II) chloride Explain.

Watch Video Solution

7. Account for the following observation and write balanced chemical equations for them.

- (i). When ferrous sulphate crystals are exposed to air, it turns brown.
- (ii). A solution of ferric chloride in water gives a brown precipitate on standing.

Watch Video Solution

1. When copper is exposed to atmosphere for a longer time, a green mass deposits on its surface. Discuss the chemical reaction involved.

Watch Video Solution

2. Complete and balance the following equations:

Watch Video Solution

3. Explain the following:

(i). Copper hydroxide is soluble in ammonium hydroxide but not in sodium hydroxide.

(ii). A dark blue precipitate is formed when sodium hydroxide solution is added to copper sulphate solution. The precipitate darkens on heating.

Watch Video Solution

Ex 6 2 Subjective Compound Of Zn

- (i). ZnO is used as a white paint inspite of the fact that it has less convering power than white lead.
- (ii). Hydrated $ZnCl_2$ cannot be dehydrated on heating?
- (iii). Zn is used in galvanisation of Fe.

Watch Video Solution

Ex 6 2 Subjective Compound Of Ag

- Preparation of looking mirrors involves the use of ammonical $AgNO_3$ +red lead+ HCHO. Explain the function of each.

Watch Video Solution

- Give reason for the following:

- (i). Silver ornament gets tarnished when exposed to atmosphere for a

long time.

(ii) Silver nitrate solution is kept in dark coloured bottles.

(iii). Why does $AgNO_3$ produce a black stain on the skin.

Watch Video Solution

Ex 6 2 Subjective Compound Of Hg

1. An aqueous solution containing one mole of HgI_2 and two moles of NaI is orange in colour. On addition of excess NaI the solution becomes colourless. The orange colour reappears on subsequent addition of $NaOCl$. Explain with equation.

Watch Video Solution

2. $HgCl_2$ and $SnCl_2$ cannot exist together in an aqueous solution . Explain.

Watch Video Solution

3. Complete and balance the following equations:

Watch Video Solution

Exercises Linked Comprehension

1. The colours of the transition metal are due to d-d excitation. The energy required for d-d electron excitation is available in the visible range.

Transition metal ions have the tendency to absorb certain radiations from the visible region and exhibit the complementary colour.

The transition metal ions which have completely filled d-orbitals are colourless as the excitation of electron or electrons is not possible within d-orbitals. The transition metal ions which have completely

empty d-orbitals are also colourless. In $KMnO_4$ and $K_2Cr_2O_7$, there are no unpaired electrons at the central atom but they are deep in colour. The colour of these compounds is due to charge transfer spectrum. for example in MnO_4 electron is momentarily transferred from O to the metal and thus oxygen changes from O^{2-} and O^{\ominus} manganese from Mn^{7+} to Mn^{6+} .

Q. Which of the following is paramagnetic as well as coloured ion?

Answer: b

Watch Video Solution

2. The colours of the transition metal are due to d-d excitation. The energy required for d-d electron excitation is available in the visible

range.

Transition metal ions have the tendency to absorb certain radiations from the visible region and exhibit the complementary colour.

The transition metal ions which have completely filled d-orbitals are colourless as the excitation of electron or electrons is not possible within d-orbitals. The transition metal ions which have completely empty d-orbitals are also colourless. In $KMnO_4$ and $K_2Cr_2O_7$, there are no unpaired electrons at the central atom but they are deep in colour. The colour of these compounds is due to charge transfer spectrum. for example in MnO_4^- electron is momentarily transferred from O to the metal and thus oxygen changes from O^{2-} and O^{\ominus} manganese from Mn^{7+} to Mn^{6+} .

Q. Which is a coloured ion?

Answer: a

Watch Video Solution

3. The colours of the transition metal are due to d-d excitation. The energy required for d-d electron excitation is available in the visible range.

Transition metal ions have the tendency to absorb certain radiations from the visible region and exhibit the complementary colour.

The transition metal ions which have completely filled d-orbitals are colourless as the excitation of electron or electrons is not possible within d-orbitals. The transition metal ions which have completely empty d-orbitals are also colourless. In $KMnO_4$ and $K_2Cr_2O_7$, there are no unpaired electrons at the central atom but they are deep in colour.

The colour of these compounds is due to charge transfer spectrum. For example in MnO_4^- electron is momentarily transferred from O to the metal and thus oxygen changes from O^{2-} and O^{\ominus} manganese from

Mn^{7+} to Mn^{6+} .

Q. Select the correct statement:

- A. colour of the transition metal ion arises due to d-d transition.
- B. colour of certain oxysalts of transition metals is due to charge transfer.
- C. Both are correct.
- D. None is correct.

Answer: c

Watch Video Solution

4. The colours of the transition metal are due to d-d excitation. The energy required for d-d electron excitation is available in the visible range.

Transition metal ions have the tendency to absorb certain radiations from the visible region and exhibit the complementary colour.

The transition metal ions which have completely filled d-orbitals are colourless as the excitation of electron or electrons is not possible within d-orbitals. The transition metal ions which have completely empty d-orbitals are also colourless. In $KMnO_4$ and $K_2Cr_2O_7$, there are no unpaired electrons at the central atom but they are deep in colour. The colour of these compounds is due to charge transfer spectrum. for example in MnO_4^- electron is momentarily transferred from O to the metal and thus oxygen changes from O^{2-} and O^{\ominus} manganese from Mn^{7+} to Mn^{6+} .

Q. Which of the following compounds is (are) coloured due to charge transfer spectra and not due to d-d transition?

D. all of these

Answer: d

Watch Video Solution

5. The colours of the transition metal are due to d-d excitation. The energy required for d-d electron excitation is available in the visible range.

Transition metal ions have the tendency to absorb certain radiations from the visible region and exhibit the complementary colour.

The transition metal ions which have completely filled d-orbitals are colourless as the excitation of electron or electrons is not possible within d-orbitals. The transition metal ions which have completely empty d-orbitals are also colourless. In $KMnO_4$ and $K_2Cr_2O_7$, there are no unpaired electrons at the central atom but they are deep in colour. The colour of these compounds is due to charge transfer spectrum. for example in MnO_4^- electron is momentarily transferred from O to the metal and thus oxygen changes from O^{2-} and O^\ominus manganese from Mn^{7+} to Mn^{6+} .

Q. $K_2Cr_2O_7$ gives coloured solution in water. The colour is due to

A. d-d transition in Cr-atoms

- B. Presence of unpaired electron in d-orbital of oxygen
- C. charge transfer from O to Cr
- D. none of the above

Answer: c

Watch Video Solution

6. $KMnO_4$ is prepared from the mineral pyrolusite, MnO_2 (deep purple colour). It acts as an oxidising agent in the neutral, alkaline as well as acidic medium in acidic medium it is used in volumetric analysis for estimation of Fe^{2+} , $Cr_2O_4^{2-}$ salts etc. The titrations are carried out in presence of H_2SO_4 . However, before using it as a titrant, it is first standardised with standard oxalic acid solution or Mohr's salt solution . In one of the experiments on titration 26.8g of dry pure sodium oxalate ($Mw = 123gmol^{-1}$) was dissolved in 1L of distilled water and then 100 mL of $2MH_2SO_4$ were added. The solution was cooled. Now to this solution $0.1MKMnO_4$ solution was added till a very faint pink colour

persisted.

Q. The purple colour of $KMnO_4$ is due to

- A. incomplete d-subshell
- B. ionic nature of $KMnO_4$
- C. Charge transfer
- D. Resonance in MnO_4^\ominus ion

Answer: c

Watch Video Solution

7. $KMnO_4$ is prepared from the mineral pyrolusite, MnO_2 (deep purple colour). It acts as an oxidising agent in the neutral, alkaline as well as acidic medium in acidic medium it is used in volumetric analysis for estimation of Fe^{2+} , $Cr_2O_4^{2-}$ salts etc. The titrations are carried out in presence of H_2SO_4 . However, before using it as a titrant, it is first standardised with standard oxalic acid solution or Mohr's salt solution . In one of the experiments on titration 26.8g of dry pure sodium oxalate

($M_w = 123 \text{ g mol}^{-1}$) was dissolved in 1L of distilled water and then 100 mL of $2M H_2SO_4$ were added. The solution was cooled. Now to this solution $0.1M KMnO_4$ solution was added till a very faint pink colour persisted.

Q. Mohr's salt, $FeSO_4(NH_4)_2SO_4 \cdot H_2O$, is preferred over $FeSO_{4.7}H_2O$ for standardisation of $KMnO_4$ solution because.

- A. Mohr's salt is a double salt while ferrous sulphate is a single salt.
- B. Mohr's salt is not hygroscopic but $FeSO_{4.7}H_2O$ is hygroscopic.
- C. Mohr's salt contains only ferrous ions whereas ferrous sulphate contains some ferric ions.
- D. Mohr's salt solution can be titrated even in the absence of H_2SO_4 .

Answer: c

Watch Video Solution

8. $KMnO_4$ is prepared from the mineral pyrolusite, MnO_2 (deep purple colour). It acts as an oxidising agent in the neutral, alkaline as well as acidic medium in acidic medium it is used in volumetric analysis for estimation of Fe^{2+} , $Cr_2O_4^{2-}$ salts etc. The titrations are carried out in presence of H_2SO_4 . However, before using it as a titrant, it is first standardised with standard oxalic acid solution or Mohr's salt solution . In one of the experiments on titration 26.8g of dry pure sodium oxalate ($Mw = 123gmol^{-1}$) was dissolved in 1L of distilled water and then 100 mL of $2MH_2SO_4$ were added. The solution was cooled. Now to this solution $0.1MKMnO_4$ solution was added till a very faint pink colour persisted.

Q. When pyrolusite is fused with KOH and $KClO_3$, we get

D. None of these

Answer: b

Watch Video Solution

9. $KMnO_4$ is prepared from the mineral pyrolusite, MnO_2 (deep purple colour). It acts as an oxidising agent in the neutral, alkaline as well as acidic medium in acidic medium it is used in volumetric analysis for estimation of Fe^{2+} , $Cr_2O_4^{2-}$ salts etc. The titrations are carried out in presence of H_2SO_4 . However, before using it as a titrant, it is first standardised with standard oxalic acid solution or Mohr's salt solution . The solution was cooled. Now to this solution $0.1MKMnO_4$ solution was added till a very faint pink colour persisted.

Q. If $0.1MK_2Cr_2O_7$ solution were used in place of $0.1 MKMnO_4$ solution used would be

A. 200 mL

B. 400 mL

C. 333.3 mL

D. 666.6 mL

Answer: d

Watch Video Solution

10. If instead of H_2SO_4 , HCl or HNO_3 of suitable concentration were used, the volume of $KMnO_4$ solution used would have been

A. less in case of HCl but more in case of HNO_3

B. More in case of HCl but less in case of HNO_3

C. more in both cases

D. Less in both cases

Answer: b

Watch Video Solution

11. $KMnO_4$ is prepared from the mineral pyrolusite, MnO_2 (deep purple colour). It acts as an oxidising agent in the neutral, alkaline as well as acidic medium in acidic medium it is used in volumetric analysis for estimation of Fe^{2+} , $Cr_2O_4^{2-}$ salts etc. The titrations are carried out in presence of H_2SO_4 . However, before using it as a titrant, it is first standardised with standard oxalic acid solution or Mohr's salt solution . In one of the experiments on titration 26.8g of dry pure sodium oxalate ($Mw = 123gmol^{-1}$) was dissolved in 1L of distilled water and then 100 mL of $2MH_2SO_4$ were added. The solution was cooled. Now to this solution $0.1MKMnO_4$ solution was added till a very faint pink colour persisted.

Q. The volume of $KMnO_4$ solution that must have been added to obtain the faint pink colour at the end point must be

A. 100 mL

B. 200 mL

C. 400 mL

D. 800 mL

Answer: d

Watch Video Solution

12. Transition metals and many of their compounds show paramagnetic behaviour where there are unpaired electron or electrons. The magnetic moment arises from the spin and orbital motions in ions or molecule.

Magnetic moment of n unpaired electrons is given as

$$\mu = \sqrt{n(n+2)} \text{ Bohr magneton}$$

Magnetic moment increases as the number of unpaired electrons increases.

Q. Which among the following ions has maximum value of magnetic moment

D. Ti^{2+}

Answer: b

Watch Video Solution

13. Arrange the following in increasing value of magnetic moments.

A. $I < II < III < IV$

B. $IV < III < II < I$

C. $II < III < I < IV$

D. $I < II < IV < III$

Answer: d

Watch Video Solution

14. Transition metals and many of their compounds show paramagnetic behaviour where there are unpaired electron or electrons. The magnetic moment arises from the spin and orbital motions in ions or molecule.

Magnetic moment of n unpaired electrons is given as

$$\mu = \sqrt{n(n + 2)} \text{ Bohr magneton}$$

Magnetic moment increases as the number of unpaired electrons increases.

Q. In 3d series the maximum magnetic moment is shown by

A. Sc

B. V

C. Cr

D. Fe

Answer: c

Watch Video Solution

15. Transition metals and many of their compounds show paramagnetic behaviour where there are unpaired electron or electrons. The magnetic moment arises from the spin and orbital motions in ions or molecule.

Magnetic moment of n unpaired electrons is given as

$$\mu = \sqrt{n(n+2)} \text{ Bohr magneton}$$

Magnetic moment increases as the number of unpaired electrons increases.

Q. Magnetic moments of $Cr(Z = 24)$, $Mn^{\oplus}(Z = 35)$ and $Fe^{2+}(Z = 36)$ are x, y and z respectively. Which of the following order is correct?

A. $x < y < z$

B. $x = y < z$

C. $z < x = y$

D. $x = y = z$

Answer: c

Watch Video Solution

16. Transition metals and many of their compounds show paramagnetic behaviour where there are unpaired electron or electrons. The magnetic moment arises from the spin and orbital motions in ions or molecule.

Magnetic moment of n unpaired electrons is given as

$$\mu = \sqrt{n(n+2)} \text{ Bohr magneton}$$

Magnetic moment increases as the number of unpaired electrons increases.

Q. There are three unpaired electrons in $[Co(H_2O)_6]^{2+}$ and calculated value of magnetic moment on the basis of $\sqrt{n(n+2)}$ formula is 3.87 BM. which is lower than the experimental value of 4.40 BM. The reason for this difference is due to

- A. increase in number of unpaired electrons during determination
- B. Some contribution of the orbital motion of the electrons to the magnetic moment
- C. d-d transition
- D. Experimental error

Answer: b

Watch Video Solution

17. Transition metals and many of their compounds show paramagnetic behaviour where there are unpaired electron or electrons. The magnetic moment arises from the spin and orbital motions in ions or molecule.

Magnetic moment of n unpaired electrons is given as

$$\mu = \sqrt{n(n+2)} \text{ Bohr magneton}$$

Magnetic moment increases as the number of unpaired electrons increases.

Q. Magnetic moment of $[Ni(CN)_4]^{2-}$ is zero but that of $[Ni(H_2O)_4]^{2+}$ is $2.83BM$. is because of :

A. CN^\ominus is a strong ligand making two unpaired electrons in Ni^{2+} to pair up, while in $[Ni(H_2O)_4]^{2+}$ two electrons remain unpaired as H_2O is a weak ligand.

B. Different oxidation state of Ni in two complexes

C. Both (a) and (b)

D. none of the above

Answer: a

Watch Video Solution

18. Photography is based on the nature of silver halides. Except AgF, the silver halides are photosensitive. These undergo decomposition in light and turn black due to formation of free silver.

The photography films are prepared by adding 20 % aqueous solution of $AgNO_3$ to NH_4Br solution containing gelatin. When such a film is exposed, emulsion gets affected and a latent image is formed on the film.

When this exposed film or plate is dipped in a developer which contains a reducing agent, the part affected most during exposure is reduced to the maximum. The image becomes visible. It is called a negative. The

remaining sensitive emulsion on the negative is removed by dissolving it in hypo solution (fixer). Finally, a positive of the negative already prepared is made on silver bromide paper.

Q. The compound formed on the unexposed photographic film or plate is

- A. silver nitrate
- B. ammonium bromide
- C. diammine silver bromide
- D. silver bromide

Answer: d

Watch Video Solution

19. Photography is based on the nature of silver halides. Except AgF, the silver halides are photosensitive. These undergo decomposition in light and turn black due to formation of free silver.

The photography films are prepared by adding 20 % aqueous solution

of $AgNO_3$ to NH_4Br solution containing gelatin. When such a film is exposed, emulsion gets affected and a latent image is formed on the film.

When this exposed film or plate is dipped in a developer which contains a reducing agent, the part affected most during exposure is reduced to the maximum. The image becomes visible. It is called a negative. The remaining sensitive emulsion on the negative is removed by dissolving it in hypo solution (fixer). Finally, a positive of the negative already prepared is made on silver bromide paper.

Q. The exposed part of the film or plate after developing contains

- A. Silver metal
- B. Silver oxide
- C. Silver bromide
- D. Silver nitrate

Answer: a

Watch Video Solution

20. Photography is based on the nature of silver halides. Except AgF, the silver halides are photosensitive. These undergo decomposition in light and turn black due to formation of free silver.

The photography films are prepared by adding 20 % aqueous solution of $AgNO_3$ to NH_4Br solution containing gelatin. When such a film is exposed, emulsion gets affected and a latent image is formed on the film.

When this exposed film or plate is dipped in a developer which contains a reducing agent, the part affected most during exposure is reduced to the maximum. The image becomes visible. It is called a negative. The remaining sensitive emulsion on the negative is removed by dissolving it in hypo solution (fixer). Finally, a positive of the negative already prepared is made on silver bromide paper.

Q. Silver halides are used in photography because these compounds

A. are insoluble in water

B. are affected by light

C. are soluble in ammonia solution

D. easily stick on the surface of photographic plate or film

Answer: b

Watch Video Solution

21. Photography is based on the nature of silver halides. Except AgF, the silver halides are photosensitive. These undergo decomposition in light and turn black due to formation of free silver.

The photography films are prepared by adding 20 % aqueous solution of $AgNO_3$ to NH_4Br solution containing gelatin. When such a film is exposed, emulsion gets affected and a latent image is formed on the film.

When this exposed film or plate is dipped in a developer which contains a reducing agent, the part affected most during exposure is reduced to the maximum. The image becomes visible. It is called a negative. The

remaining sensitive emulsion on the negative is removed by dissolving it in hypo solution (fixer). Finally, a positive of the negative already prepared is made on silver bromide paper.

Q. The solution of the developer consists of

- A. Alkaline solution of pyrogallol
- B. Alkaline solution of quinil
- C. Either (a) or (b)
- D. Neither (a) nor (b)

Answer: c

Watch Video Solution

22. Photography is based on the nature of silver halides. Except AgF, the silver halides are photosensitive. These undergo decomposition in light and turn black due to formation of free silver.

The photography films are prepared by adding 20 % aqueous solution

of $AgNO_3$ to NH_4Br solution containing gelatin. When such a film is exposed, emulsion gets affected and a latent image is formed on the film.

When this exposed film or plate is dipped in a developer which contains a reducing agent, the part affected most during exposure is reduced to the maximum. The image becomes visible. It is called a negative. The remaining sensitive emulsion on the negative is removed by dissolving it in hypo solution (fixer). Finally, a positive of the negative already prepared is made on silver bromide paper.

Q. Silver bromide dissolves in hypo solution forming:

Answer: c

23. In any transition series, from left to right, the d-orbitals are progressively filled and their properties vary accordingly.

Q. In the second transition series, the largest number of oxidation states are shown by

A. Tc

B. Ru

C. Rh

D. Pd

Answer: c

Watch Video Solution

24. In any transition series, from left to right, the d-orbitals are progressively filled and their properties vary accordingly.

Q. Which element do you expect to have the smallest atomic radius?

A. La

B. Zn

C. Sc

D. Hg

Answer: b

Watch Video Solution

25. In any transition series, from left to right, the d-orbitals are progressively filled and their properties vary accordingly.

Q. Which element do you expect to have the highest melting point?

A. La

B. W

C. Pt

D. Os

Answer: b

Watch Video Solution

26. In any transition series, from left to right, the d-orbitals are progressively filled and their properties vary accordingly.

Q. Which of the following pair of compounds is expected to exhibit same colour in aqueous solution?

Answer: b

Watch Video Solution

27. In any transition series, from left to right, the d-orbitals are progressively filled and their properties vary accordingly.

Q. Which of the following is the correct order of second ionisation energy ?

A. $V > Cr > Mn$

B. $V < Cr < Mn$

C. $V < Cr > Mn$

D. $V > Cr < Mn$

Answer: c

28. $KMnO_4$ reacts with $Na_2S_2O_3$ in acidic, strongly basic and aqueous (neutral) media. 100 mL of $LMnO_4$ reacts with 100 mL of $0.1\text{ M } Na_2S_2O_3$ in acidic, basic and neutral media.

Q. The molarity (M) of $KMnO_4$ solution in the acidic medium is

A. 0.2 M

B. 0.02M

C. 0.4 M

D. 0.04 M

Answer: b

Watch Video Solution

29. $KMnO_4$ reacts with $Na_2S_2O_3$ in acidic, strongly basic and aqueous (neutral) media. 100 mL of $LMnO_4$ reacts with 100 mL of $0.1\text{ M } Na_2S_2O_3$ in acidic, basic and neutral media.

Q. The molarity (M) of $KMnO_4$ solution in basic medium is:

A. 0.8 M

B. 0.08 M

C. 0.26 M

D. 0.026M

Answer: a

Watch Video Solution

30. $KMnO_4$ reacts with $Na_2S_2O_3$ in acidic, strongly basic and aqueous (neutral) media. 100 mL of $LMnO_4$ reacts with 100 mL of $0.1\text{ M } Na_2S_2O_3$ in acidic, basic and neutral media.

Q. The molarity (M) of $KMnO_4$ in aqueous medium is

A. 0.8M

B. 0.08M

C. 0.26M

D. 0.026M

Answer: c

Watch Video Solution

31. $KMnO_4$ reacts with $Na_2S_2O_3$ in acidic, strongly basic and aqueous (neutral) media. 100 mL of $LMnO_4$ reacts with 100 mL of 0.1 M $Na_2S_2O_3$ in acidic, basic and neutral media.

Q. The molality (m) of $KMnO_4$ in the acidic medium is (Density of $KMnO_4$ solution = $1.58^{-1} Mw(KMnO_4) = 158 g mol^{-1}$)

A. 0.025

B. 0.25

C. 0.12

D. 0.012

Exercises Multiple Correct

1. dz^2 orbital is involved in which of the following hybridisation?

A. sp^3d

B. dsp^3

C. sp^3d^2

D. d^2sp^3

Answer: a,b

Watch Video Solution

2. d_{xy} , d_{yz} and d_{xz} orbitals is involved in which of the following hybridisation?

A. dsp^2

B. sp^3d

C. sp^3d^2

D. d^3sp^3

Answer: c,d

[Watch Video Solution](#)

3. $d_{x^2-y^2}$ and d_{z^2} orbitals is involved in which of the foollowing hybridisation?

A. sp^3d^2

B. d^2sp^3

C. sp^3d^3

D. d^3sp^3

Answer: a,b

[Watch Video Solution](#)

4. $d_{x^2-y^2}$ orbital is involved in which of the following hybridisation ?

A. sp^3d

B. sp^3d^2

C. sp^3d^3

D. None of these

Answer: b,c

Watch Video Solution

5. Which of following is/are correctly matched ?

A. d-block element: Electronic configuration is $ns^{0-2}(n-1)d^{1-10}$

B. p-block element: electronic configuration is $ns^{1-2}np^{1-6}$

C. s-block element: electronic configuration is ns^{1-2}

D. Ce: f-block's first member

Answer: a,c,d

9. Which is true statement about $KMnO_4$?

A. Its solution is unstable in acidic medium.

B. It has purple colour.

C. MnO_4^{\ominus} changes to Mn^{2+} in basic solution.

D. It is self indicator in Fe^{2+} or $C_2O_4^{2-}$ titration.

Answer: a,b,d

 Watch Video Solution

10. Out of $[Fe(CN)_6]^{4-}$, $[Ni(CN)_4]^{2-}$, and $[Ni(CO)_4]$: select the incorrect Statement(s):

A. All have identical geometry

B. All are paramagnetic

C. all are diamagnetic

D. $[Fe(CN)_6]^{4-}$ is diamagnetic but $[Ni(CN)_4]^{2-}$ and $[Ni(CO)_4]$ are paramagnetic

Answer: a,b,d

 Watch Video Solution

11. The ability of d-block elements to form complexes is due to:

- A. Small and highly charged ions
- B. Vacant low energy orbitals to accept lone pair of electrons from ligands
- C. Low polarising power of cation
- D. None is correct

Answer: a,b

Watch Video Solution

12. Which one of the following ionic species will impact colour to an aqueous solutions?

D. Cr^{3+}

Answer: a,b,c

Watch Video Solution

13. A transition element X has a configuration $3d^4$ in its $+3$ oxidation state. Its atomic number is not

A. 25

B. 26

C. 22

D. 19

Answer: b,c,d

Watch Video Solution

14. The transition metals which do not form amalgams are

A. Zn

B. Fe

C. Cd

D. Pt

Answer: b,c

Watch Video Solution

15. The colour of the transition metal ions is due to

A. d-d transition

B. Charger transfer

C. Change in the geometry

D. None

Answer: a,b

Watch Video Solution

16. Transition elements have greater tendency to form complexes because

- A. They have vacant d-orbitals
- B. They have large size
- C. They show variable oxidation state
- D. They have two electrons in their outermost shells.

Answer: a,c,d

10. The first ionisation energies of the elements of the first transition series (Ti to Cu)

- A. Increases as the atomic number increases
- B. Decreases as the atomic number increases
- C. Do not show any change as the addition of electrons takes place in the inner $(n - i)$ d-orbitals.
- D. Increases from Ti to Mn and then decreases from Mn to Cu.

Answer: a

Watch Video Solution

11. Which has the largest radius?

Answer: d

[Watch Video Solution](#)

12. The atomic numbers of vanadium (V), chromium (Cr), manganese (Mn) and iron (Fe) are respectively 23, 24, 25 and 26. Which one of these may be expected to have the highest second ionisation enthalpy ?

V

Cr

Mn

Fe

A. V

B. Cr

C. Mn

D. Fe

Answer: b

[Watch Video Solution](#)

13. The first ionisation energies of the elements of the transition series.

- A. Increases as the atomic number increases
- B. Decreases as the atomic number increases
- C. Do not show any change as the addition of electrons takes place in the inner $(n - 1)$ d-orbitals.
- D. None of these

Answer: a

Watch Video Solution

14. Among 3d transition series the IE

- A. Increases regularly in moving from left to right
- B. Decrease regularly in moving from left to right
- C. Remains constant within the period

D. increases gradually within the period but the relative increase is not sharp.

Answer: d

Watch Video Solution

15. Which of the following is the most suitable description of transition elements?

- A. Low melting points
- B. No catalytic activity
- C. Show variable oxidation states
- D. Exhibit inert pair effect

Answer: c

Watch Video Solution

1. The tendency of the transition elements to form coloured compounds is attributed to

- A. Transition of electrons from one atom to the other
- B. Transition of electrons from s-orbitals of then outer shells to p-orbitals.
- C. d-d-transition in last but one shell.
- D. None of the reason is correct.

Answer: c

Watch Video Solution

2. Which of the following compound is not cooured?

- A. Copper (II) sulphat

B. Zinc(II) chloride

C. Chromium(II) sulphate

D. Manganese(II oxalate)

Answer: b

Watch Video Solution

3. Anhydrous cobalt(II) chloride is blue in blue in colour but on dissolving in water it changes to pink in colour because

A. its oxidation state changes

B. Its magnetic character changes

C. its coordination number changes

D. in water it shows fluorescence

Answer: c

32. Coinage metals show the properties of

A. Typical elements

B. Normal elements

C. Transitional elements

D. Inert elements

Answer: c

Watch Video Solution

33. When $(\text{NH}_4)_2\text{CrO}_2\text{O}_7$ is heated, the gas evolved is

Answer: a

Watch Video Solution

34. Which of the following oxides of Cr is amphoteric.

D. CrO_3

Answer: a

Watch Video Solution

Exercises Single Correct Compounds Of Transition Elements Iron

1. Important ore of iron is

A. Garnierite

B. Pentlandite

C. Haematite

D. Smaltite

Answer: c

Watch Video Solution

2. A compound of iron exists as a dimer in vapour state. It is hygroscopic in nature and dissolves in water giving brown acidic solution. The compound is

Answer: c

Watch Video Solution

3. Which among FeO and Fe_2O_3 is more basic?

C. both have same basic length

D. None of them is basic

Answer: a

Watch Video Solution

4. The colour of FeF_3 is

A. Brown

B. Red Brown

C. Light green

D. White

Answer: d

Watch Video Solution

5. Iron is obtained on a large scale from Fe_2O_3 by

- A. Reduction with Al
- B. Smelting with carbon
- C. Calcination
- D. Water gas

Answer: b

Watch Video Solution

6. The deep red colour of $Fe(SCN)_3$ and $Fe(SCN)_4^\ominus$ is destroyed by addition of :

- A. F^\ominus
- B. CN^\ominus
- C. SCN^\ominus
- D. Fe^\ominus

Answer: a

[Watch Video Solution](#)

Exercises Single Correct Compounds Of Transition Elements Copper

1. On heating copper nitrate strongly the compound obtained is

- A. Copper
- B. Copper oxide
- C. Copper nitrite
- D. Copper nitride

Answer: b

[Watch Video Solution](#)

2. Which of the following is fool's gold?

- A. $CuFeS_2$

Answer: a

Watch Video Solution

3. Bordeaux mixture consists of lime and

Answer: b

Watch Video Solution

4. In vapour state $Cu(NO_3)_2$ and $Cu_2(CH_3COO)_4 \cdot 2H_2O$ exist as

- A. Dimer, monomer
- B. monomer, dimer
- C. monomer, monomer
- D. dimer, dimer

Answer: b

Watch Video Solution

Exercises Single Correct Compounds Of Transition Elements Silver

1. Which of the following is known as WORM SILVER?

- A. $AgCl$
- B. A specific horn, type article made of silver

C. Ag_2S

D. PbS containing traces of Ag_2S

Answer: a

Watch Video Solution

2. It is always advisable not to cover egg yolk or mustard with silver cutlery because

A. Silver reacts with water of egg yolk to form $AgOH$

B. Silver reacts with sulphur of egg yolk forming black Ag_2S

C. silver reacts with egg yolk forming Ag_2SO_4 which is a poisonous substance.

D. Silver attracts UV light of the atmosphere, thereby spoiling the food.

Answer: b

[Watch Video Solution](#)

3. Silver halides are used in photography because they are

- A. Photosensitive
- B. Soluble in hyposolution
- C. Soluble in NH_4OH
- D. Insoluble in acids

Answer: a

[Watch Video Solution](#)

4. Which of the following false?

- A. molten lead and zinc are miscible
- B. silver is more soluble in molten zinc than lead

C. zinc-silver alloy is volatile

D. zinc-silver alloy is heavier and gets solidified later than lead

Answer: d

View Text Solution

5. $AgNO_3$ gives red ppt. with.

A. NaI

B. KCl

C. $NaNO_3$

D. Na_2CrO_4

Answer: d

4. Which method is based on distribution principle?

- A. Mond's process
- B. Plattner's principle
- C. Glower's process
- D. Parke's process

Answer: d

Watch Video Solution

5. Which of the following statement is wrong?

- A. An acidified solution of $K_2Cr_2O_7$ liberated iodine from iodides
- B. In acidic solution dichromate ions are converted to chromate ions
- C. Ammonium dichromate on heating undergo exothermic decomposition to give Cr_2O_3
- D. Potassium dichromate is used as a titrant for Fe^{+} ions

Answer: b

Watch Video Solution

6. When H_2S has is passed through an orange red solution (X), the solution turns milky. When an alkali is added to this orange red solution it turns yellow and on acidifying this yellow solution again turns orange red. X is

Answer: d

Watch Video Solution

7. Which of the following statement is incorrect?

A. Basic copper carbonate is $CuCO_3 \cdot Cu(OH)_2$

B. On strong heating potassium dichromate decomposes with evolution of oxygen

C. CuS is white in colour

D. $KMnO_4$ exists as dark purple black prismatic crystals

Answer: c

Watch Video Solution

8. A man made white silvery metal,radioactive innature has a strong tendency to form oxocations and complexes. It is used as nuclear fuel in atomic reactors. The metal is a

- A. Lanthanide
- B. Actinide
- C. Transition metal representative element
- D. S block element

Answer: b

Watch Video Solution

9. From a solution of $CuSO_4$ the metal used to recover copper is

- A. Na

B. Ag

C. Hg

D. Fe

Answer: d

Watch Video Solution

10. Iron, once dipped in concentrated H_2SO_4 , does not displace copper from copper sulphate solution, because

A. It is less reactive than copper

B. A layer of sulphate is deposited on it

C. An inert layer of iron oxide is deposited on it

D. All valence electrons of iron are consumed

Answer: c

Watch Video Solution

11. Which of the following ions will finally give a black precipitate with Ag^{\oplus} ion?

Answer: d

Watch Video Solution

12. The compound which gives off oxygen on moderate heating is

A. Zinc oxide

B. Mercuric oxide

C. Aluminium oxide

D. Ferric oxide

Answer: b

Watch Video Solution

13. Identify the statement which is not correct regarding $CuSO_4$?

- A. It reacts with KI to give iodine
- B. It reacts with KCl to give Cu_2Cl_2
- C. It reacts with $NaOH$ and glucose to give Cu_2O
- D. It gives CuO on strong heating in air

Answer: b

Watch Video Solution

14. KI and $CuSO_4$ solutions when mixed give

Answer: c

15. Bordeaux used a fungicide is a mixture of

Answer: a

Watch Video Solution

16. Mercury is the only metal which is liquid at $0^{\circ}C$ this is due to its

- A. Very high ionisation energy and weakly metallic bond
- B. Low ionisation potential
- C. High atomic weight
- D. High vapour pressure

Answer: a

Watch Video Solution

17. Which of the following is false for Hg ?

- A. It can evolve hydrogen from H_2S
- B. It is metal
- C. It has high specific heat

D. It is less reactive than hydrogen

Answer: a

Watch Video Solution

18. Which compound is volatile on heating?

A. $MgCl_2$

B. $HgCl_2$

C. $ZnCl_2$

D. None of these

Answer: b

Watch Video Solution

19. Which one of the following pairs of substances on reaction will not evolve H_2 gas ?

- A. Iron and H_2SO_4
- B. Iron and steam
- C. Copper and HCl
- D. Sodium and ethyl alcohol

Answer: c

Watch Video Solution

20. Which of the following is not the characteristic of zinc?

- A. It is volatile metal
- B. It dissolves in alkali forming sodium zincate
- C. It is brittle at very high temperature

D. Zinc dust is used as a reducing agent

Answer: c

Watch Video Solution

21. The correct formula of permanganic acid is

Answer: a

Watch Video Solution

1. Assertion: The second ionisation energies of V, Cr and Mn are in the order $V < Cr < Mn$.

Reason: Ionisation energies show a regular increase along a period with increase of atomic number.

- A. If both (A) and (R) are correct and (R) is the correct explanation of (A).
- B. If both (A) and (R) are correct, but (R) is not the correct explanation of (A).
- C. If (A) is correct, but (R) is incorrect.
- D. If (A) is incorrect but (R) is correct.

Answer: d

Watch Video Solution

2. Metal-metal bonding is more frequent in 4d or 5d series than in 3d series due to Tyndall effect. True/False

A.

B.

C.

D.

Answer: a

Watch Video Solution

3. Assertion: Mercury is not considered as a transition element.

Reason: Mercury is liquid.

- A. If both (A) and (R) are correct and (R) is the correct explanation of (A).
- B. If both (A) and (R) are correct, but (R) is not the correct explanation of (A).
- C. If (A) is correct, but (R) is incorrect.

D. If (A) is incorrect but (R) is correct.

Answer: b

Watch Video Solution

4. Assertion: Ti^{3+} salts are coloured whereas Ti^{4+} salts are white.

Reason: Ti^{3+} is less stable than Ti^{4+}

A. If both (A) and (R) are correct and (R) is the correct explanation of (A).

B. If both (A) and (R) are correct, but (R) is not the correct explanation of (A).

C. If (A) is correct, but (R) is incorrect.

D. If (A) is incorrect but (R) is correct.

Answer: b

Watch Video Solution

5. Assertion: Cu, Ag and Au lie in Group 11 of the periodic table. Hence their atomic radii are in the order $Cu < Ag < Au$

Reason: In any group of the transition elements, the atomic radii increase as we move down the group.

- A. If both (A) and (R) are correct and (R) is the correct explanation of (A).
- B. If both (A) and (R) are correct, but (R) is not the correct explanation of (A).
- C. If (A) is correct, but (R) is incorrect.
- D. If (A) is incorrect but (R) is correct.

Answer: d

Watch Video Solution

6. Assertion : $K_2Cr_2O_7$ is used as primary standard in volumetric analysis.

Reason : It has a good solubility in water.

- A. If both (A) and (R) are correct and (R) is the correct explanation of (A).
- B. If both (A) and (R) are correct, but (R) is not the correct explanation of (A).
- C. If (A) is correct, but (R) is incorrect.
- D. If (A) is incorrect but (R) is correct.

Answer: c

Watch Video Solution

7. Statement-1: Tungsten has very high melting point

Statement-2: Tungsten is a covalent compounds

- A. If both (A) and (R) are correct and (R) is the correct explanation of (A).
- B. If both (A) and (R) are correct, but (R) is not the correct explanation of (A).
- C. If (A) is correct, but (R) is incorrect.
- D. If (A) is incorrect but (R) is correct.

Answer: c

Watch Video Solution

8. Assertion: Manganese shows a number of oxidation states.

Reason: The difference of energy between 3d and 4s subshells is large.

- A. If both (A) and (R) are correct and (R) is the correct explanation of (A).

B. If both (A) and (R) are correct, but (R) is not the correct explanation of (A).

C. If (A) is correct, but (R) is incorrect.

D. If (A) is incorrect but (R) is correct.

Answer: c

Watch Video Solution

9. Assertion: Equivalent mass of $KMnO_4$ is same in the neutral as well as alkaline medium.

Reason: The product formed in both cases is MnO_2

A. If both (A) and (R) are correct and (R) is the correct explanation of (A).

B. If both (A) and (R) are correct, but (R) is not the correct explanation of (A).

C. If (A) is correct, but (R) is incorrect.

D. If (A) is incorrect but (R) is correct.

Answer: a

Watch Video Solution

10. Assertion: In $Cr_2O_7^{2-}$ ion, all the $Cr - O$ bond lengths are equal.

Reason: In $Cr_2O_7^{2-}$ ion all the $O - Cr - O$ bond angles are equal.

A. If both (A) and (R) are correct and (R) is the correct explanation of

(A).

B. If both (A) and (R) are correct, but (R) is not the correct explanation

of (A).

C. If (A) is correct, but (R) is incorrect.

D. If (A) is incorrect but (R) is incorrect.

Answer: d

[Watch Video Solution](#)

11. Assertion: In any transition series the magnetic moment of M^{2+} ions first increases then decreases

Reason: In a transition series, the number of unpaired electrons first increases and then decreases.

- A. If both (A) and (R) are correct and (R) is the correct explanation of (A).
- B. If both (A) and (R) are correct, but (R) is not the correct explanation of (A).
- C. If (A) is correct, but (R) is incorrect.
- D. If (A) is incorrect but (R) is correct.

Answer: a

[Watch Video Solution](#)

12. Assertion: MnO is basic whereas Mn_2O_7 is acidic.

Reason: Higher the oxidation state of a transition metal in its oxide, greater is the acidic character.

- A. If both (A) and (R) are correct and (R) is the correct explanation of (A).
- B. If both (A) and (R) are correct, but (R) is not the correct explanation of (A).
- C. If (A) is correct, but (R) is incorrect.
- D. If (A) is incorrect but (R) is correct.

Answer: a

Watch Video Solution

13. Assertion : Ce^{4+} is used as an oxidising agent in volumetric analysis.

Reason : Ce^{4+} has the tendency of attaining +3 oxidation state.

- A. If both (A) and (R) are correct and (R) is the correct explanation of (A).
- B. If both (A) and (R) are correct, but (R) is not the correct explanation of (A).
- C. If (A) is correct, but (R) is incorrect.
- D. If (A) is incorrect but (R) is correct.

Answer: a

Watch Video Solution

14. Statament-1: Mn atom loses ns electrons first during ionisation as compared to (n-1) d-electrons.

Statement-1: The effective nuclear charge experienced by (n-1) d elctrons is greater than that by ns electrons.

- A. If both (A) and (R) are correct and (R) is the correct explanation of (A).

- B. If both (A) and (R) are correct, but (R) is not the correct explanation of (A).
- C. If (A) is correct, but (R) is incorrect.
- D. If (A) is incorrect but (R) is correct.

Answer: a

Watch Video Solution

15. Assertion: Actinoids show greater number of oxidation states than lanthanoids. **Reason:** Actinoids are radioactive.

- A. If both (A) and (R) are correct and (R) is the correct explanation of (A).
- B. If both (A) and (R) are correct, but (R) is not the correct explanation of (A).
- C. If (A) is correct, but (R) is incorrect.

D. If (A) is incorrect but (R) is correct.

Answer: b

Watch Video Solution

16. Assertion : E° for Mn^{3+} / Mn^{2+} is more positive than Cr^{3+} / Cr^{2+} .

Reason : The third ionization energy of Mn is larger than that of Cr.

A. If both (A) and (R) are correct and (R) is the correct explanation of (A).

B. If both (A) and (R) are correct, but (R) is not the correct explanation of (A).

C. If (A) is correct, but (R) is incorrect.

D. If (A) is incorrect but (R) is correct.

Answer: a

Watch Video Solution

17. Assertion: The spin only magnetic moment of Sc^{3+} is 1.73 BM.

Reason: The spin only magnetic momentum in (BM) is equal to $\sqrt{n(n+2)}$.

- A. If both (A) and (R) are correct and (R) is the correct explanation of (A).
- B. If both (A) and (R) are correct, but (R) is not the correct explanation of (A).
- C. If (A) is correct, but (R) is incorrect.
- D. If (A) is incorrect but (R) is correct.

Answer: d

Watch Video Solution

18. Assertion: An aqueous solution of $FeCl_3$ is acidic.

Reason: It is due to cationic hydrolysis of Fe^{3+} ion to give $Fe(OH)_3$ and H^{\oplus} ions.

- A. If both (A) and (R) are correct and (R) is the correct explanation of (A).
- B. If both (A) and (R) are correct, but (R) is not the correct explanation of (A).
- C. If (A) is correct, but (R) is incorrect.
- D. If (A) is incorrect but (R) is correct.

Answer: a

Watch Video Solution

19. Assertion: La should be the f-block element according to Aufbau principle.

Reason: 57th electron exceptionally enters in 5d orbital.

If both (A) and (R) are correct and (R) is the correct explanation of (A).

If both (A) and (R) are correct, but (R) is not the correct explanation of (A).

If (A) is correct, but (R) is incorrect.

If (A) is incorrect but (R) is correct.

A. If both (A) and (R) are correct and (R) is the correct explanation of (A).

B. If both (A) and (R) are correct, but (R) is not the correct explanation of (A).

C. If (A) is correct, but (R) is incorrect.

D. If (A) is incorrect but (R) is correct.

Answer: b

Watch Video Solution

20. Assertion: Mercurous compounds are diamagnetic.

Reason: Two Hg^{\oplus} species which have $6s^1$ configuration are bonded together using s-electrons.

- A. If both (A) and (R) are correct and (R) is the correct explanation of (A).
- B. If both (A) and (R) are correct, but (R) is not the correct explanation of (A).
- C. If (A) is correct, but (R) is incorrect.
- D. If (A) is incorrect but (R) is correct.

Answer: a

4. Copper is the most noble of first row transition metals and occurs in small deposits in several countries. Ores of copper include chalcantite ($CuSO_4 \cdot 5H_2O$), atacamite $[Cu_2Cl(OH)_3]$, cuprite (Cu_2O), copper glance (Cu_2S), and malachite $[Cu_2(OH)_2CO_3]$. However, 80 % of the world copper production comes from the ore chalcopyrite ($CuFeS_2$). The extraction of copper from chalcopyrite involves partial roasting, removal of iron and self-reduction.

Partial roasting of chalcopyrite produces

A. Cu_2S and FeO

B. Cu_2O and FeO

C. CuS and Fe_2O_3

D. Cu_2O and Fe_2O_3

Answer: A

Watch Video Solution

5. Copper is the most noble of first row transition metals and occurs in small deposits in several countries. Ores of copper include chalcantite ($CuSO_4 \cdot 5H_2O$), atacamite $[Cu_2Cl(OH)_3]$, cuprite (Cu_2O), copper glance (Cu_2S), and malachite $[Cu_2(OH)_2CO_3]$. However, 80 % of the world copper production comes from the ore chalcopyrite ($CuFeS_2$). The extraction of copper from chalcopyrite involves partial roasting, removal of iron and self-reduction.

Iron is removed from chalcopyrite as.

A. FeO

B. FeS

C. Fe_2O_3

D. $FeSiO_3$

Answer: D

Watch Video Solution

6. Copper is the most noble of first row transition metals and occurs in small deposits in several countries. Ores of copper include chalcantite ($CuSO_4 \cdot 5H_2O$), atacamite $[Cu_2Cl(OH)_3]$, cuprite (Cu_2O), copper glance (Cu_2S), and malachite $[Cu_2(OH)_2CO_3]$. However, 80 % of the world copper production comes from the ore chalcopyrite ($CuFeS_2$). The extraction of copper from chalcopyrite involves partial roasting, removal of iron and self-reduction.

In self-reduction, the reducing species is.

A. S

B. O^{2-}

C. S^{2-}

D. SO_2

Answer: C

Watch Video Solution

7. When a metal rod M is dipped into an aqueous colourless concentrated solution of compound N, the solution turns light blue. Addition of aqueous NaCl to the blue solution gives a white precipitate O. Addition of aqueous NH_3 dissolves O and gives an intense blue solution.

Q. The metal rod M is

Fe

Cu

Ni

Co

A. *Fe*

B. *Cu*

C. *Ni*

D. *Co*

Answer: B

Watch Video Solution

8. When a metal rod M is dipped into an aqueous colourless concentrated solution of compound N, the solution turns light blue. Addition of aqueous NaCl to the blue solution gives a white precipitate O. Addition of aqueous NH_3 dissolves O and gives an intense blue solution.

Q. The compound N is

Answer: A

Watch Video Solution

9. When a metal rod M is dipped into an aqueous colourless concentrated solution of compound N, the solution turns light blue. Addition of aqueous NaCl to the blue solution gives a white precipitate O. Addition of aqueous NH_3 dissolves O and gives an intense blue solution.

Q. The final solution contains.

- A. $[Ph(NH_3)_4]^{2+}$ and $[ClCl_4]^{2-}$
- B. $[Al(NH_3)_4]^{3+}$ and $[Cu(NH_3)_4]^{2+}$
- C. $[Ag(NH_3)_2]^{\oplus}$ and $[Cu(NH_3)_4]^{4+}$
- D. $[Ag(NH_3)_2]^{\oplus}$ and $[Ni(NH_3)_6]^{2+}$

Answer: C

Watch Video Solution

Archives Multiple Correct

1. Potassium manganate (K_2MnO_4) is formed when

- A. Chlorine is passed through aqueous $KMnO_4$ solution
- B. Manganese dioxide is fused with potassium hydroxide in air.
- C. Formaldehyde reacts with potassium permanganate in the presence of a strong alkali.
- D. Potassium permanganate reacts with concentrated sulphuric acid.

Answer: B::C

Watch Video Solution

2. The aqueous solution of the following salts will be colored in the case of

- A. $Zn(NO_3)_2$
- B. $LiNO_3$
- C. $Co(NO_3)_2$
- D. $CrCl_3$

Answer: C::D

Watch Video Solution

3. Which of the following alloys contain (s) Cu and Zn?

A. Bronze

B. Brass

C. Gun metal

D. Type metal

Answer: A::B::C

Watch Video Solution

4. Which of the following statements is/are correct, when a mixture of $NaCl$ and $K_2Cr_2O_7$ is gently warmed with concentrated H_2SO_4 ?

- A. Deep red vapours are evolved.
- B. The vapours when passed into NaOH solution give a yellow solution of Na_2CrO_4 .
- C. Chlorine gas is evolved.
- D. Chromyl chloride is formed.

Answer: A::B::D

Watch Video Solution

5. The addition of high proportions of manganese makes steel useful in making rails or railroads because manganese
- A. Gives hardness to steel
 - B. Helps in the formation of oxides of iron
 - C. Can remove oxygen and sulphur
 - D. Can show the highest oxidation state of +7

Answer: A::C

Watch Video Solution

6. Reduction of the metal centre in aqueous permanganate ion involves

A. 3 electrons in neutral medium

B. 5 electrons in neutral medium

C. 3 electrons in alkaline medium

D. 5 electrons in acidic medium

Answer: A::D

Watch Video Solution

7. The equilibrium $2Cu^I \rightleftharpoons Cu + Cu^{II}$

In aqueous medium at $25^\circ C$ shifts towards the left in the presence of

Answer: B::C::D

Watch Video Solution

8. Which of the following arrangements does not represent the correct order of the property stated against it ?

Answer: B::D

Watch Video Solution

Archives Single Correct

1. One of the constituents of German silver is

A. Ag

B. Cu

C. Mg

D. Al

Answer: B

Watch Video Solution

2. Which one of the following dissolves in hot concentrated $NaOH$?

A. Fe

B. Zn

C. Cu

D. Ag

Answer: B

Watch Video Solution

3. How many unpaired electrons are present in Ni^{2+} cation? (At. No. = 28)

A. 0

B. 2

C. 4

D. 4

Answer: B

Watch Video Solution

4. In the metallurgy of iron, when limestone is added to the blast furnace, the calcium ions end up in

- A. Slag
- B. Gangue
- C. Metallic calcium
- D. Calcium carbonate

Answer: A

Watch Video Solution

5. Iron is rendered passive by treatment with

- A. H_2SO_4
- B. H_3PO_4
- C. HCl

D. HNO_3

Answer: D

Watch Video Solution

6. The types of bonds present in $CuSO_4 \cdot 5H_2O$ are only

- A. Electrovalent and covalent
- B. Electrovalent and coordinate covalent
- C. Electrovalent, covalent, and coordinate covalent
- D. Covalent and coordinate covalent.

Answer: C

Watch Video Solution

7. Zinc-copper couple that can be used as a reducing agent is obtained by

- A. Mixing zinc dust and copper gauze
- B. Zinc coated with copper
- C. Copper coated with zinc
- D. Zinc and copper wires welded together.

Answer: B

Watch Video Solution

8. The reaction which proceeds in the forward direction is

Answer: A

Watch Video Solution

9. Which of the following is formed when excess of KCN is added to an aqueous solution of copper sulphate ? .

Answer: D

Watch Video Solution

10. An aqueous solution of $FeSO_4 \cdot Al_2(SO_4)_3$ and chrome alum is heated with excess of Na_2O_2 and filtered. The materials obtained are

- A. A colourless filtrate and a green residue
- B. A yellow filtrate and a green residue
- C. A yellow filtrate and a brown residue
- D. A green filtrate and a brown residue

Answer: C

Watch Video Solution

11. Among the following sulphides , the one that does not dissolve in dil HNO_3 is

- A. HgS
- B. PbS
- C. CuS

D. CdS

Answer: A

Watch Video Solution

12. Ammonium dichromate is used in some fire works. The green coloured power blown in the air is

A. CrO_3

B. Cr_2O_3

C. Cr

D. $CrO(O_2)$

Answer: B

Watch Video Solution

13. Which of the following compounds is expected to be coloured?

Answer: B

Watch Video Solution

14. Which of the following is an organometallic compound ?

A. Lithium methoxide

B. Lithium acetate

C. Lithium dimethylamide

D. methyl lithium

Answer: D

Watch Video Solution

15. In the dichromate anion ($Cr_2O_7^{2-}$)

- A. Four $Cr - O$ bonds are equivalent
- B. six $Cr - O$ bonds are equivalent
- C. All $Cr - O$ bonds are equivalent
- D. All $Cr - O$ bonds are non-equivalent.

Answer: B

Watch Video Solution

16. On heating ammonium dichromate, the gas evolved is

- A. Oxygen

B. Ammonia

C. Nitrous oxide

D. Nitrogen

Answer: D

Watch Video Solution

17. Which of the following species has an atom with +6 oxidation state?

Answer: D

Watch Video Solution

18. Anhydrous ferric chloride is prepared by:

- A. Heating hydrated ferric chloride at a high temperature in a stream of air.
- B. Heating metallic iron in a stream of dry chlorine gas
- C. Reaction of ferric oxide with HCl
- D. Reaction of metallic iron with HCl

Answer: B

Watch Video Solution

19. When MnO_2 fused with KOH , a coloured compound is formed . The product and its colour is:

- A. K_2MnO_4 , purple
- B. $KMnO_4$, purple

C. Mn_2O_3 , brown

D. Mn_3O_4 , black

Answer: A

Watch Video Solution

20. $(NH_4)_2Cr_2O_7$ on heating gives a gas which is also given by

A. heating NH_4NO_2

B. Heating NH_4NO_3

C. $Mg_3N_2 + H_2O$

D. $Na + H_2O_2$

Answer: A

Watch Video Solution

21. Which of the following pair of compounds is expected to exhibit same colour in aqueous solution?

Answer: B

Watch Video Solution

22. A solution of a metal ion when treated with KI gives a red precipitate which dissolves in excess KI to give a colourless solution. Moreover, the solution of metal ion on treatment with a solution of cobalt (II) thiocyanate gives rise to a deep-blue crystalline precipitate. The metal ion is

Answer: B

Watch Video Solution

23. The colour of light absorbed by an aqueous solution of $CuSO_4$ is

A. Orange red

B. Blute green

C. Yellow

D. Violet

Answer: A

Watch Video Solution

24. In the cyanide extraction process of silver from argentite ore, the oxidizing and reducing agents used are

- A. O_2 and CO_2
- B. O_2 and Zn dust
- C. HNO_3 and CO
- D. HNO_3 and Zn dust

Answer: B

Watch Video Solution

25. Four successive members of the first series of the transition metals are listed below. For which one of them the standard potential $\left(E_{M^{2+}/M}^\circ\right)$ value has a positive sign

- A. $Mn(Z = 25)$

B. $Fe(Z = 26)$

C. $Co(Z = 27)$

D. $Cr(Z = 24)$

Answer: C

Watch Video Solution

26. Which of the following statements about the interstitial compounds is incorrect?

A. They are much harder than the pure metal.

B. They have higher melting points than the pure metal.

C. They retain metallic conductivity

D. They are chemically reactive.

Answer: D

Watch Video Solution

27. $KMnO_4$ can be prepared from K_2MnO_4 as per the reaction: 

The reaction can go to completion by removing OH^\ominus ions by adding.

A. CO_2

B. SO_2

C. HCl

D. KOH

Answer: A

Watch Video Solution

28. A magnetic moment of 1.73 BM will be shown by one among the following

A. $TiCl_4$

B. $[CoCl_6]^{4-}$

Answer: C

Watch Video Solution

29. Which of the following lanthanoid ions is diamagnetic? (At. No. Ce=58, Sm=62, Eu=63, Yb=70)

Answer: B

Watch Video Solution

1. (a). Assertion (A) is true, Reason (R) is also true, Reason (R) is the correct explanation for assertion (A).

(b). Assertion (A) is true, Reason (R) is true, Reason (R) is not the correct explanation for Assertion (A).

(c). Assertion (A) is true, Reason (R) is false.

(d). Assertion (A) is false, Reason (R) is true.

Q. Assertion (A): to a solution of potassium chromate, if a strong acid is added, it changes its colour from yellow to orange.

Reason (R): The colour change is due to the change in oxidation state of potassium chromate.

Watch Video Solution

2. (a). Assertion (A) is true, Reason (R) is also true, Reason (R) is the correct explanation for assertion (A).

(b). Assertion (A) is true, Reason (R) is true, Reason (R) is not the correct

explanation for Assertion (A).

(c). Assertion (A) is true, Reason (R) is false.

(d). Assertion (A) is false, Reason (R) is true.

Q. Assertion (A): Zn^{2+} is diamagnetic.

Reason (R): The electrons are lost from 4s-orbital to form Zn^{2+} .

Watch Video Solution

3. (a). Assertion (A) is true, Reason (R) is also true, Reason (R) is the correct explanation for assertion (A).

(b). Assertion (A) is true, Reason (R) is true, Reason (R) is not the correct explanation for Assertion (A).

(c). Assertion (A) is true, Reason (R) is false.

(d). Assertion (A) is false, Reason (R) is true.

Q. Assertion (A): $[Fe(H_2O)_5NO]SO_4$ paramagnetic.

Reason (R): The Fe in $[Fe(H_2O)_5NO]SO_4$ has three unpaired electrons.
