

## CHEMISTRY

### BOOKS - CENGAGE CHEMISTRY (ENGLISH)

#### P-BLOCK GROUP 17 ELEMENTS - THE HALOGEN FAMILY

##### Illustration

1. Halogens have maximum negative electron gain enthalpy in the respective periods of the periodic table. Why?

[Watch Video Solution](#)

2. Discuss the molecular shape of  $BrF_3$  on the basis of VSEPR theory

[Watch Video Solution](#)

3. Explain the following:

- (a) In the preparation of  $HI$  from  $KI$ , phosphoric acid is preferred to sulphuric acid.
- (b) Boiling point of  $HCl$  is lower than  $HF$ .
- (c) Bleaching powder loses its bleaching property when kept in an open bottle for a long time.

Watch Video Solution

4. Explain the following:

- (a) More metal fluorides are ionic in nature than metal chlorides.
- (b) Perchloric acid is a stronger acid than sulphuric acid.
- (c) Fluorine does not undergo disproportionation reactions but other halogens do.

Watch Video Solution

5. Fluorine does not form oxyacid, but other halogens do. Why?

(b) Both  $NO$  and  $ClO_2$  are odd electron species.  $NO$  dimerises but  $ClO_2$  does not. Why?

Watch Video Solution

6. (a) Fluorine cannot be prepared from fluorides by chemical oxidation. Why?

(b) Anhydrous  $HCl$  is bad conductor of electricity while aqueous  $HCl$  is a good conductor.

Watch Video Solution

7. Explain the following:

(a) Dry chlorine does not bleach clothes.

(b) Fluorine does not form  $F_3^\ominus$  (polyhalide) ion.

(c)  $HF$  is least volatile and  $HCl$  is most volatile amongst hydrogen halides.

Watch Video Solution

8. Pure  $HI$  kept in a bottle acquires a brown colour after sometime. Why?

(b) Ferric iodide is very unstable but ferric chloride is stable. Why?

(c)  $KHF_2$  is well known but  $KHCl_2$  and  $KHBr_2$  do not exist. Why?

Watch Video Solution

9. (a) Iodine dissolves more in  $KI$  solution than in water. Why?

(b) Colour of  $KI$  solution containing starch turns deep blue when chlorine water is added. Explain.

Watch Video Solution

10. Mention the conditions in which the following statement are correct.

Chlorine is a good bleaching agent.

Watch Video Solution

### Solved Example

1. What happens when  $Cl_2$  reacts with cold dilute solution of sodium hydroxide?

(b) Why does chlorine water lose its yellow colour on standing?

Watch Video Solution

2. (a) When a moist blue litmus paper is dipped in a solution of hypochlorous acid, it first turns red and then latter gets decolourised. Explain.

(b) Iodine is liberated when  $KI$  is added to a solution of  $Cu^{2+}$  ions but  $Cl_2$  is not liberated when  $KCl$  is added to a solution of  $Cu^{2+}$  ions. why?

Watch Video Solution

3.  $Na_2S_2O_3$  reacts with  $Cl_2$  and  $I_2$  to give different oxidation products. Give the equations involved and a plausible explanation of their contrasting behaviour.

Watch Video Solution

4. A liquid 'A' is treated with  $Na_2CO_3$  solution. A mixture of two salts 'B' and 'C' is produced in the solution. The mixture on acidification with sulphuric acid and distillation produces the liquid 'A' again. Identify 'A', 'B' and 'C' and write the equations involved.

Watch Video Solution

5. An inorganic compound ( $X$ ) gives a brick red flame on performing flame test. This compound gives the following tests also.

(a) Smells of chlorine when placed in moist air.

(b) If  $KI$  and  $CH_3COOH$  are added to the suspension in water, a brown colour is obtained.

Identify ( $X$ ) and write down equations for reactions at steps (a) and (b) .

Watch Video Solution

6. On gradual addition of  $KI$  solution to  $Bi(NO_3)_3$  solution initially produces a dark brown precipitate which dissolves in excess of  $KI$  to give a clear yellow solution. Given an explanation for above observations.

Watch Video Solution

7. Give reason: The brown colour of an acidified dilute solution of iodine in aqueous potassium iodide is intensified by addition of nitrite but it is discharged by the addition of sulphite.

Watch Video Solution

#### Exs 4 1 Subjective

1. Bond dissociation energy of  $F_2$  is less than that of  $Cl_2$  give reason.

Watch Video Solution

2. Why fluorine does not exhibit any positive oxidation state?

Watch Video Solution

3. The bleaching action of chlorine is permanent, whereas the bleaching action and sulphur dioxide is temporary. In this context :

(i) Give a reason, why chlorine is not used to bleach silk.

(ii) State similarity in the use of sulphur dioxide and chlorine as bleaching agents.

(iii) Explain the bleaching action of sulphur dioxide with the help of chemical equations. (iv) Why is bleaching by sulphur dioxide only temporary?

Watch Video Solution

4. Arrange  $\text{HOCl}$ ,  $\text{HClO}_2$ ,  $\text{HClO}_3$  and  $\text{HClO}_4$  in order of (i) acidic strength and (ii) oxidising power. Give reason.

Watch Video Solution

5. Explain why the electrons gain enthalpy of fluorine is less negative than that of chlorine?

Watch Video Solution

6. Fluorine is more electronegative than iodine atom, yet HF has lower acidic strength than HI.

Watch Video Solution

7. What happen when  $Cl_2$  is passed through a hot concentrated solution of a base like  $Ba(OH)_2$ ?

Watch Video Solution

8. Why fluorine never acts as the centreal atom in polyatomic interhalogen compounds?

Watch Video Solution

9.  $ClF_3$  exists but  $FCl_3$  does not exist. Why?

Watch Video Solution

10. Addition of  $Cl_2$  turns it colourless. Why?

Watch Video Solution

11. Given relevant chemical equations for the preparation of

a.  $HBr$  from potassium bromide.

b. Bleaching powder from slaked lime.

c.  $NaClO_3$  from sodium chloride.

Watch Video Solution

12. A sodium salt ( $A$ ) is heated with cone. Sulphuric acid. The evolved gas turns moist litmus paper red and produces white fumes in contact with a glass rod moistened with ammonia solution. It also gives white precipitate when passed through  $AgNO_3$  solution. When the salt is heated with  $MnO_2$  and cone.  $H_2SO_4$ , a gas with an irritating smell is evolved which turns starch-iodide paper blue. Identify the salt and the gaseous product evolved from it. Explain your answer with relevant chemical equations.

Watch Video Solution

13. A certain compound ( $X$ ) shows the following reactions.

(a) when  $KI$  is added to an aqueous suspension of ( $X$ ) containing acetic acid, iodine is liberated.

(b) when  $CO_2$  is passed through an aqueous suspension of ( $X$ ) the turbidity transforms to a precipitate. Identify ( $X$ )

Watch Video Solution

**14.** A colourless inorganic compound (A) imparts a green colour to flame. Its solution does not give white precipitate with  $H_2S$ . Its solution gives white precipitate with conc.  $H_2SO_4$  which is insoluble in dil.  $H_2SO_4$ . When it is heated with  $K_2Cr_2O_7$  and conc.  $H_2SO_4$ , a red gas is evolved. The gas when passed through aqueous NaOH solution turns it Yellow. Identify the compound (A) and give chemical reactions.

**Watch Video Solution**

**15.** Give balanced chemical reactions for the following:

- i. Sodium iodate is treated with sodium bisulphite solution.
- ii. Chlorine is passed through hot NaOH solution.
- iii. Chlorine is passed through aqueous potassium hydroxide.

**Watch Video Solution**

16. Pseudohalogens or halogenides are complex molecules which behaves like halogen s. Among the following list  $CN^{\ominus}$  (cyanide),  $OCN^{\ominus}$  (cyanate),  $SCN^{\ominus}$  (thio-cyanate),  $SeCN^{\ominus}$  (selenocyanate),  $TeCN^{\ominus}$  (tellurocyanate),  $ONC^{\ominus}$  (isocyanate),  $N_3^{\ominus}$  (azide), cyanogen  $(CN)_2$  oxycyanogen  $(OCN)_2$ , thiocyanogen  $(SCN)_2$ , telluroyanogen  $(TeCN)_2$ , azidecabon  $SCNN_3$ , dislphide  $CICN$ ,  $BrCN$ ,  $ICN$ ,  $ICI$ ,  $IF_7$ ,  $IF_5$ ,  $I_3^{\ominus}$ ,  $ICI_2^{\ominus}$ ,  $I^{\ominus}$ ,  $I^{\oplus}$ ,  $I_3^{\oplus}$  )

- Which are interpsedohalogents ?
- Which are interhalogens or their anions ?
- Which are polyhalides ?
- Which are neither (a), (b), (c) or pseudohalogen or their anions ?
- Which are pseudohalogens of their anions ?

Watch Video Solution

1. Fill in the blanks.

Watch Video Solution

2. A gas 'X' is passed through water to form a saturated solution. The aqueous solution on treatment with silver nitrate gives a white precipitate. The saturated aqueous solution also dissolves magnesium ribbon with evolution of a colourless gas 'Y'. The compound 'X' is

treated with hot concentrated NaOH, a compound Z is formed. The average bond order between Cl and O atom in (Z) is \_\_\_\_\_.

**Answer: C**

**Watch Video Solution**

3. A 500 g tooth paste sample has 0.2 g fluoride concentration. What is the concentration of F in terms of ppm level?

A. 250

B. 200

C. 400

D. 1000

**Answer: C**

**Watch Video Solution**

4. The interatomic distance in  $H_2$  and  $Cl_2$  molecules are 74 and 198 pm respectively. The bond length of HCl is

A. 272 pm

B. 136 pm

C. 124 pm

D. 248 pm

**Answer: B**

**Watch Video Solution**

5. In the halogen group, chlorine is a gas, bromine is a liquid and iodine exists as solid crystals. Then the next halogen astatine (At) would be

- A. Solid at room temperature
- B. Having higher electronegativity
- C. Liquid with higher ionisation enthalpy
- D. Least atomic size

**Answer: A**

**Watch Video Solution**

6. Iodine is placed between two liquids  $C_6H_6$  and water:

- A. It dissolves more in  $C_6H_6$
- B. It dissolves more in water
- C. It dissolves equally in both

D. Does not dissolved in both

**Answer: A**

**Watch Video Solution**

7. Mixture of  $I_2$  and sand can be separated by:

A. Dissolving in water and filtering

B. Fractional crystallisation

C. Sublimation

D. None of the above

**Answer: C**

**Watch Video Solution**

1. Fluorine, the first member of group 17, differs from the other members of group 17 in many respects due to:

- i. Very small size
- ii. Very high electronegativity
- iii. Absence of vacant d-orbitals in the valence shell
- iv. Dissociation energy in the molecular form ( $X_2$ ) is the least

Which member of the group 17 does not show positive oxidation state?

- A. Iodine
- B. Bromine
- C. Chlorine
- D. Fluorine

**Answer: D**

**Watch Video Solution**

2. Fluorine, the first member of group 17, differs from the other members of group in many respects due to:

- i. Very small size
- ii. Very high electronegativity
- iii. Absence of vacant d-orbitals in the valence shell
- iv. Dissociation energy in the molecular form ( $X_2$ ) is the least

Which has the maximum molar enthalpy of vaporisation ?

A. HF

B. HCl

C. HBr

D. HI

**Answer: A**

**Watch Video Solution**

3. Fluorine, the first member of group 17, differs from the other members of group in many respects due to:

- i. Very small size
- ii. Very high electronegativity
- iii. Absence of vacant d-orbitals in the valence shell
- iv. Dissociation energy in the molecular form ( $X_2$ ) is the least

Which of the following bonds is the stronger ?

**Answer: B**

**Watch Video Solution**

4. Fluorine, the first member of group 17, differs from the other members of group in many respects due to:

- i. Very small size
- ii. Very high electronegativity
- iii. Absence of vacant d-orbitals in the valence shell
- iv. Dissociation energy in the molecular form ( $X_2$ ) is the least

Which halogen does not form any oxyacid ?

- A. Iodine
- B. Bromine
- C. Chlorine
- D. Fluorine

**Answer: D**

**Watch Video Solution**

5. Fluorine, the first member of group 17, differs from the other members of group in many respects due to:

- i. Very small size
- ii. Very high electronegativity
- iii. Absence of vacant d-orbitals in the valence shell
- iv. Dissociation energy in the molecular form ( $X_2$ ) is the least

The most basic among the following is:

**Answer: C**

**Watch Video Solution**

6. Fluorine, the first member of group 17, differs from the other members of group in many respects due to:

- i. Very small size
- ii. Very high electronegativity
- iii. Absence of vacant d-orbitals in the valence shell
- iv. Dissociation energy in the molecular form ( $X_2$ ) is the least

Which of the following do not exist ?

**Answer: B**

**Watch Video Solution**

7. Halogens react with each other to form a number of compounds called interhalogen compounds. Their general formula is  $AX_n$ , where A is less electronegative halogen while X is a more electronegative halogen and n is its number. The interhalogen compounds are essentially covalent and more reactive than the halogens since the bond A-X is weaker than A-A or X-X bond. The reaction of interhalogens are similar to those of halogens.

Which of the following interhalogen compound is not possible ?

**Answer: D**

**Watch Video Solution**

8. Halogens react with each other to form a number of compounds called interhalogen compounds. Their general formula is  $AX_n$ , where A is less electronegative halogen while X is a more electronegative halogen and n is its number. The interhalogen compounds are essentially covalent and more reactive than the halogens since the bond A-X is weaker than A-A or X-X bond. The reactions of interhalogens are similar to those of halogens.

Which halogen shows maximum oxidation state in forming interhalogen compound ?

A.  $I$

B.  $Br$

C.  $Cl$

D.  $F$

**Answer: A**

**Watch Video Solution**

9. Halogens react with each other to form a number of compounds called interhalogen compounds. Their general formula is  $AX_n$ , where A is less electronegative halogen while X is a more electronegative halogen and n is its number. The interhalogen compounds are essentially covalent and more reactive than the halogens since the bond A-X is weaker than A-A or X-X bond. The reactions of interhalogens are similar to those of halogens.

How many lone pairs of electrons are present on chlorine in  $ClF_3$  molecule?

A. 0

B. 1

C. 2

D. 3

**Answer: C**

**Watch Video Solution**

10. Halogens react with each other to form a number of compounds called interhalogen compounds. Their general formula is  $AX_n$ , where A is less electronegative halogen while X is a more electronegative halogen and n is its number. The interhalogen compounds are essentially covalent and more reactive than the halogens since the bond A-X is weaker than A-A or X-X bond. The reactions of interhalogens are similar to those of halogens.

Which of the following statements is wrong for interhalogen ?

- A. The value of n in  $AX_n$  (interhalogen) can be 1, 3, 5 or 7
- B. The value of n in  $AX_n$  (interhalogen) can be 2, 4, or 6
- C. A can never be fluorine as it is most electronegative halogen.
- D. X can never be iodine as it is least electronegative halogen.

**Answer: B**

**Watch Video Solution**

11.  $I_2$  has less solubility in water and its solubility increase on adding KI solution. When KI and  $I_2$  react then a species 'X' is formed by which solubility of  $I_2$  increases.

Hybridisation of anionic part of 'X' is

**Answer: C**

**Watch Video Solution**

12.  $I_2$  has less solubility in water and its solubility increase on adding KI solution. When KI and  $I_2$  react then a species 'X' is formed by which

solubility of  $I_2$  increases.

Shape of anionic part of 'X' is

- A. Linear
- B. T shape
- C. Pyramidal
- D. See-saw

**Answer: A**

**Watch Video Solution**

13.  $I_2$  has less solubility in water and its solubility increase on adding KI solution. When KI and  $I_2$  react then a species 'X' is formed by which solubility of  $I_2$  increases.

Which of the following of the is the correct characteristic of anionic part of 'X' ?

[Polar and non-polar nature to be considered on the basis of dipole

moment]

(I) Planar (II) non-planar (III) polar (IV) non-polar

A. I and II

B. I and IV

C. II and III

D. II and IV

**Answer: B**

**Watch Video Solution**

**14.**  $I_2$  has less solubility in water and its solubility increase on adding KI solution. When KI and  $I_2$  react then a species 'X' is formed by which solubility of  $I_2$  increases.

Geometry of anionic part of X is

A. Trigonal bipyramidal

B. Square pyramidal

C. Pentagon

D. Liner

**Answer: A**

**Watch Video Solution**

15. Oxygen is more electronegative than chloride. In the series of oxyacids  $\text{HOCl}$ ,  $\text{HClO}_2$ ,  $\text{HClO}_3$  and  $\text{HClO}_4$ , an increasing number of oxygen atom is bonded to the chlorine atom. Chlorine forms a number of oxyacids which differ in their stability order.

The order if acid strength og  $\text{HOCl}$ ,  $\text{HClO}_2$ ,  $\text{HClO}_3$  and  $\text{HClO}_4$  are

**Answer: A**

**Watch Video Solution**

16. Oxygen is more electronegative than chloride. In the series of oxyacids  $\text{HOCl}$ ,  $\text{HClO}_2$ ,  $\text{HClO}_3$  and  $\text{HClO}_4$ , an increasing number of oxygen atom is bonded to the chlorine atom. Chlorine forms a number of oxyacids which differ in their stability order.

Which of the following is the strongest conjugate base ?

**Answer: D**

**Watch Video Solution**

17. Oxygen is more electronegative than chloride. In the series of oxyacids  $\text{HOCl}$ ,  $\text{HClO}_2$ ,  $\text{HClO}_3$  and  $\text{HClO}_4$ , an increasing number of oxygen atom is bonded to the chlorine atom. Chlorine forms a number of oxyacids which differ in their stability order.

The hybridisation of Cl in  $\text{ClO}_2^{-1}$  and its shape are

- A.  $sp^3$ , pyramidal
- B.  $sp^2$ , angular
- C.  $sp^3$ , angular
- D.  $sp^2$ , trigonal planar

**Answer: C**

**Watch Video Solution**

18. Oxygen is more electronegative than chloride. In the series of oxyacids  $\text{HOCl}$ ,  $\text{HClO}_2$ ,  $\text{HClO}_3$  and  $\text{HClO}_4$ , an increasing number of

oxygen atom is bonded to the chlorine atom. Chlorine forms a number of oxyacids which differ in their stability order.

The least stable oxo-anion among the following is

**Answer: A**

**Watch Video Solution**

**19.** Among the halogens, fluorine differs considerably from the other members. The hydrides of halogens also differ in their properties.

Fluorine differs from the other halogens due to:

A. Small size

- B. Very high electronegativity
- C. Non-availability of d-orbitals
- D. All of these

**Answer: D**

**Watch Video Solution**

**20. Which one of the following halogens has the lowest bond energy ?**

- A.  $F - F$
- B.  $Cl - Cl$
- C.  $Br - Br$
- D.  $I - I$

**Answer: B**

**Watch Video Solution**

21. Among the halogens, fluorine differs considerably from the other members. The hydrides of halogens also differ in their properties.

Which of the following halogens do not form polyhalide ?

A. F

B. Cl

C. Br

D. I

**Answer: A**

**Watch Video Solution**

22. Bleaching power is a mixed salt of hydrochloric acid and hypochlorous acid. It has the formula,  $CaOCl_2 \cdot H_2O$ . It is manufactured by the action of chlorine on dry slaked lime at  $40^\circ C$ . There is also a view that bleaching power is a mixture

$[Ca(OCI)_2 + CaCl_2 \cdot Ca(OH)_2 \cdot H_2O]$ . The amount of chlorine obtained from a sample of bleaching power by the treatment with excess of dilute acids or  $CO_2$  is called available chlorine. A good sample of bleaching power contains 35 – 38 % of available chlorine. On long standing, it undergoes auto-oxidation and the amount of available chlorine decreases. The estimation of available chlorine is done volumetrically by (a) iodometric method or by (b) arsenite method. In textile industry, the cotton cloth is mainly bleached with the help of bleaching power.

Maximum percentage of available chlorine on the basis of  $CaOCl_2 \cdot H_2O$  formula is

- A. 35
- B. 40
- C. 45
- D. 49

**Answer: D**

Watch Video Solution

**23.** Bleaching power is a mixed salt of hydrochloric acid and hypochlorous acid. It has the formula,  $CaOCl_2 \cdot H_2O$ . It is manufactured by the action of chlorine on dry slaked lime at  $40^\circ C$ . There is also a view that bleaching power is a mixture  $[Ca(OCl)_2 + CaCl_2 \cdot Ca(OH)_2 \cdot H_2O]$ . The amount of chlorine obtained from a sample of bleaching power by the treatment with excess of dilute acids or  $CO_2$  is called a available chlorine. A good sample of bleaching power contains 35 – 38 % of available chlorine. On long standing, it undergoes auto-oxidation and the amount of available chlorine decreases. The estimation of available chlorine is done volumetrically by (a) iodometric method or by (b) arsenite method. In textile industry, the cotton cloth is mainly bleached with the help of bleaching power.

On long standing, the bleaching power undergoes auto-oxidation. The products formed are

A. Calcium chloride only

B. Calcium chlorate only

C. Calcium chloride and calcium chlorate

D. Calcium chloride and calcium chlorite

**Answer: C**

**Watch Video Solution**

**24.** Bleaching power is a mixed salt of hydrochloric acid and hypochlorous acid. It has the formula,  $CaOCl_2 \cdot H_2O$ . It is manufactured by the action of chlorine on dry slaked lime at  $40^\circ C$ . There is also a view that bleaching power is a mixture  $[Ca(OCl)_2 + CaCl_2 \cdot Ca(OH)_2 \cdot H_2O]$ . The amount of chlorine obtained from a sample of bleaching power by the treatment with excess of dilute acids or  $CO_2$  is called available chlorine. The estimation of available chlorine is done volumetrically by (a) iodometric method or by (b) arsenite method. In textile industry, the cotton cloth is mainly bleached with the help of bleaching power.

3.55 g of bleaching power when treated with acetic acid and excess of KI liberated iodine which required 60 mL of 0.5 N sodium thiosulphate solution. The percentage of available chlorine in the sample is

A. 30.0

B. 25.0

C. 20.0

D. 35.0

**Answer: A**

**Watch Video Solution**

### Exercises Multiple Correct

1. Species which are isoelectronic with  $OF_2$  are

A.  $ClO^{\ominus}$

B.  $ClF$

C.  $ClO_3$

D.  $ClO_2$

**Answer: A::B**

Watch Video Solution

2. HI cannot be prepared by the action of conc.  $H_2SO_4$  on KI because

- A. HI is stronger acid than  $H_2SO_4$
- B.  $H_2SO_4$  is stronger oxidising agent than HI
- C.  $H_2SO_4$  is an oxidising agent
- D. HI is strong reducing agent

Answer: A::B::C

Watch Video Solution

3. Which one of the following arrangements does not give the correct picture of the trends indicated against it ?

- A.  $F_2 > Cl_2 > Br_2I_2$  : Bond dissociation energy

B.  $F_2 > Cl_2 > Br_2I_2$  : Oxidising power

C.  $F > Cl > Br > I$  : Electron gain enthalpy

D.  $F_2 > Cl_2Br_2 > I_2$  : Electronegativity

**Answer: A::C**

**Watch Video Solution**

4. Which one of the following halogens turn (s) starch iodide paper blue ?

A.  $Cl_2$

B.  $Br_2$

C.  $I_2$

D.  $F_2$

**Answer: A::B**

**Watch Video Solution**

5. Select triangular planar species among the following:

Answer:

Watch Video Solution

6. Iodine reacts with hypo to give

D.  $Na_2SO_4$

Answer: A::C

Watch Video Solution

7. which one of the following salts will evolve halogen on treatment with conc.  $H_2SO_4$  ?

A.  $NaCl$

B.  $CaCl_2$

C.  $NaBr$

D.  $KI$

Answer: C::D

Watch Video Solution

8. Electrolysis of aqueous solution of Brine (NaCl) gives

D. All of these

**Answer: D**

**Watch Video Solution**

9. Which one of the following are pseudohalide ions ?

Answer: A::B

Watch Video Solution

10. The halogens, which are not attacked by conc.  $HNO_3$ , are

Answer: A::B::C

Watch Video Solution

11. Select the correct order of acidic strength.

D. None of these

**Answer: A::B**

**Watch Video Solution**

12.  $Cl_2$  reacts with hot aqueous NaOH to give

**Answer: A::B**

**Watch Video Solution**

13. Aqueous solution of  $Na_2S_2O_3$  on reaction with  $Cl_2$ , gives

Answer: B::C

Watch Video Solution

14. Which of the following reactions does not occur ?

Answer: B::D

Watch Video Solution

### Exercises Single Correct

1. The oxidising ability of perhalates are in the order:

Answer: B

Watch Video Solution

2. Acid strength is in the order:

D. None

Answer: B

Watch Video Solution

3. Oxidising power of halogens are

Answer: A

Watch Video Solution

4. Arrange the following acids in the decreasing order of their acid strength:

Answer: A

Watch Video Solution

5. Bond strength of halogen acids are

**Answer: A**

**Watch Video Solution**

**6. Bond energy of halogens are**

**Answer: B**

**Watch Video Solution**

7. Reducing properties of halogen acid are

Answer: B

Watch Video Solution

8. Which of the following halogen acid is a liquid ?

D. HI

**Answer: A**

**Watch Video Solution**

9. Which of the following exists as an associated molecule even in the vapour state ?

A. HCl

B. HBr

C. HF

D. HI

**Answer: C**

**Watch Video Solution**

10. The relative acidic strength, stability and oxidising agent of oxyacids of chlorine are

Answer: A

Watch Video Solution

11. IE of halogens are

D.  $Cl > Br > F > I$

**Answer: A**

**Watch Video Solution**

**12.** In gaseous state, ionic character is greatest in

A. HBr

B. HF

C. HCl

D. HI

**Answer: B**

**Watch Video Solution**

**13.** Which of the following does not liberate  $Br_2$  from KBr ?

A.  $I_2$

B.  $Cl_2$

C. conc.  $H_2SO_4$

D.  $F_2$

**Answer: A**

**Watch Video Solution**

**14.** Which has the highest degree of hydrogen bonding ?

A. HCl

B.  $H_2O$

C. HF

D. HBr

**Answer: C**

**Watch Video Solution**

15. In case of halogens strong oxidising character is favoured by their

- A. Low dissociation energy
- B. Low E.A.
- C. Low IE
- D. Low hydration energy of  $X^{\ominus}$  ion.

**Answer: A**

Watch Video Solution

16.  $ClI_2$  is

- A. More reactive than  $F_2$
- B. Less reactive than  $Br_2$
- C. More reactive than  $Br_2$  and  $I_2$

D. Less reactive than  $I_2$

**Answer: C**

**Watch Video Solution**

**17. Mark the strongest reducing agent.**

A.  $H_2F_2$

B.  $HCl$

C.  $HBr$

D.  $HI$

**Answer: D**

**Watch Video Solution**

18. The sum of energy term involved in the reaction:

$1/2X_{2(g)} \rightarrow X_{(aq)}^{\ominus}$  is highest in case of

A. Fluorine

B. Chlorine

C. Bromine

D. Iodine

**Answer: A**

**Watch Video Solution**

19. Which one of the following oxidises water to oxygen with large evolution of heat ?

A. Chlorine

B. Bromine

C. Iodine

D. Fluorine

**Answer: D**

**Watch Video Solution**

**20.** Which one of the following halogen acids has the lowest melting point ?

A. HF

B. HCl

C. HBr

D. HI

**Answer: B**

**Watch Video Solution**

21. Which of the following halogen acids has the highest boiling point ?

A. HF

B. HCl

C. HBr

D. HI

Answer: A

Watch Video Solution

22. Size of the iodine species following the order:

**Answer: D**

**Watch Video Solution**

**23.** volatile nature of halogens is because

- A. The halogen molecules are more reactive
- B. The force existing between the molecules are only weak van der Waal forces
- C. Halogen molecules are bounded by strong force
- D. Halogen molecules are bounded by electrostatic forces.

**Answer: B**

**Watch Video Solution**

24. Which of the following will displace the halogen from the solution of the halide ?

A.  $Br_2$  added to NaCl solution

B.  $Cl_2$  added to KCl solution

C.  $Cl_2$  added to NaF solution

D.  $Br_2$  added to KI solution

**Answer: D**

**Watch Video Solution**

25. Which one of the following is the most basic ?

A. I

B. Br

C. Cl

D. F

**Answer: A**

**Watch Video Solution**

**26.** Euchlorine is a mixture of

A.  $Cl_2$  and  $SO_2$

B.  $Cl_2$  and  $ClO_2$

C.  $Cl_2$  and  $CO$

D. None

**Answer: B**

**Watch Video Solution**

27. On heating NaX with  $H_2SO_4$  and  $MnO_2$  the halogens that cannot be prepared is .....

Answer: D

Watch Video Solution

28. In the reaction:  $3Br_2 + 6OH^{\ominus} \rightarrow 5Br^{\ominus} + BrO_3^{\ominus} + 3H_2O$ ,  $Br_2$  is

A. Oxidised

B. Reduced

C. Disintegrated

D. Disproportionated

**Answer: D**

**Watch Video Solution**

**29.** Ticture of iodine contains

A.  $I_2$ ,  $KI$  and  $C_2H_5OH$

B.  $I_2$  and  $C_2H_5OH$

C.  $KI$  and  $C_2H_5OH$

D.  $I_2$  and  $H_2O$

**Answer: A**

**Watch Video Solution**

30. In the reaction  $I_2 + 2OH^{\ominus} \rightarrow I^{\ominus} + IO^{\ominus} + H_2OI_2$  is

- A. Oxidised
- B. Reduced
- C. Oxidised and reduced
- D. Forms complex

**Answer: C**

**Watch Video Solution**

31. Estimation of reducing substances by the use of standard  $I_2$ ,

$I_2 + 2S_2O_3^{2-} \rightarrow S_4O_6^{2-} + 2I^{\ominus}$  is called

- A. Iodimetry
- B. Iodometry
- C. Oxidising

D. Reducing

**Answer: A**

**Watch Video Solution**

**32.** Estimation of oxidising substance involving the liberation of  $I_2$  and subsequent volumetric estimation of  $I_2$  are referred to as

A. Iodimetry

B. Iodometry

C. Oxidising

D. Reducing

**Answer: B**

**Watch Video Solution**

33. HCl and HF are prepared by heating their salt ( $NaCl$  and  $CaF_2$ ) with conc.  $H_2SO_4$  but HI and HBr cannot be prepared by similar reaction because HBr and HI have

- A. Reducing properties
- B. Oxidising property
- C. Complex forming ability
- D. None of these

Answer: A

Watch Video Solution

34. HBr and HI may be obtained by heating bromide and iodine with syrupy phosphoric acid not with  $H_2SO_4$  because  $H_2SO_4$  is

- A. A weaker acid

- B. Less stable
- C. An oxidising agent
- D. A reducing agent

**Answer: C**

**Watch Video Solution**

35. On passing  $Cl_2$  water in a mixture of KBr and KI solution in contact with  $CCl_4$  continuously with occasional shaking, we observe

- A. Orange  $CCl_4$  layer changing to violet
- B. Persisting violet  $CCl_4$  layer
- C. Persisting brown layer
- D. Violet layer changing into brown and finally colourless

**Answer: D**

**Watch Video Solution**

36. Which of the following is soluble in water ?

- A.  $\text{AgF}$
- B.  $\text{AgBr}$
- C.  $\text{AgCl}$
- D.  $\text{AgI}$

**Answer: A**

**Watch Video Solution**

37. A greenish yellow gas reacts with an alkali metal hydroxide to form a halite which can be used in fireworks and safety matches. The gas and halides respectively are -

- A.  $\text{Br}_2, \text{KBrO}_3$

B.  $Cl_2$ ,  $KClO_3$

C.  $I_2$ ,  $NaIO_3$

D.  $I_2$ ,  $KIO_3$

**Answer: B**

**Watch Video Solution**

**38.** When chlorine water is added to an aqueous solution of sodium iodide in the presence of chloroform, a violet colouration is obtained. On adding more of chlorine water and vigorous shaking, the violet colour disappears. This shows the conversion of ..... into .....

A.  $I_2$ ,  $HIO_3$

B.  $I_2$ ,  $HI$

C.  $HI$ ,  $HIO_3$

D.  $I_2$ ,  $HOI$

Answer: A

Watch Video Solution

39. For  $(A) + K_2CO_3 + \text{air} \xrightarrow{\text{Heat}} (B)$

$(B) + Cl_2 \rightarrow (C)$  pink

Which of the following is correct ?

A. (A) is black,  $MnO_2$ , (B) is blue,  $K_2MnO_4$  and (C) is pink,  $KMnO_4$

B. (A) is green,  $Cr_2O_3$ , (B) is yellow,  $K_2CrO_4$  and (C) is pink,

C. (A) is black,  $MnO_2$ , (B) is green,  $K_2MnO_4$  and (C) is pink,

D. (A) is black,  $Bi_2O_3$ , (B) is colourless,  $KBiO_2$  and (C) is pink,

Answer: C

Watch Video Solution

40. Educhlorine is

- A. Obtained by heating perchlorate with conc.  $HCl$
- B. A chloride of europium
- C. A mixture of  $ClI_2$  and  $ClI_2O_7$
- D. A mixture of  $ClI_2$  and  $ClIO_2$

Answer: D

Watch Video Solution

41. Which is incorrectly matched?

**Answer: D**

**Watch Video Solution**

**42.** A certain compound X when treated with copper sulphate solution yields a brown precipitate. On adding hypo solution, the precipitate turns white. The compound X is

**Answer: B**

**Watch Video Solution**

43. The products of the chemical reaction between  $Na_2S_2O_3$ ,  $Cl_2$  and  $H_2O$  are

Answer: A

Watch Video Solution

44. Fluorine on reaction with  $KIO_{3(aq)}$  gives (A) and on reaction with  $KHSO_4$  gives (B). (A) and (B) are

B.  $KI, F_2O$

C.  $HF, K_2S_2O_8$

D.  $I_2K_2S_2O_8$

**Answer: C**

**Watch Video Solution**

45.  $KClO_3$  on reaction with  $SO_2$  gives (A) and on reaction with conc.  $H_2SO_4$  gives (B). (A) and (B) are

A.  $KCl, HCl_4$

B.  $Cl_2, ClO_2$

C.  $KCl, HClO_3$

D.  $Cl_2, HClO_4$

**Answer: A**

**Watch Video Solution**

(A) gives yellow precipitate with  $AgNO_3$ . (A) and (B) are

**Answer: B**

**Watch Video Solution**

47. 10 g of bleaching powder on reaction with KI required 50 mL of 2N hypo solution. Thus, % of bleaching powder is

A. 100

B. 80

C. 63.5

D. 35.5

**Answer: C**

**Watch Video Solution**

(A) and (B) are

**Answer: D**

Watch Video Solution

49.

The substances (A), (B), (C) and (D) are

Answer: A

Watch Video Solution

50. Select the correct statement(s):

- A.  $Cl_2O$  and  $ClO_2$  are used as bleaching agents and as germicides.
- B.  $ClO_2$  is the anhydride of  $HClO_2$  and  $HClO_3$ .
- C.  $I_2O_5$  is used in the quantitative estimation of CO.
- D. All of the above are correct.

Answer: D

Watch Video Solution

51. Which one of the following pairs of reactants does not form oxygen when they react with each other ?

- A.  $F_2$ ,  $NaOH$  solution (hot, conc.)
- B.  $F_2$ ,  $H_2O$
- C.  $Cl_2$ ,  $NaOH$  solution (cold, dilute)

D.  $\text{CaOCl}_2$ ,  $\text{H}_2\text{SO}_4$  (dilute, small amount)

**Answer: C**

**Watch Video Solution**

52. One atom of ..... combines with one atom of bromine.

A. Ar

B. Rb

C. Mg

D. HCl

**Answer: B**

**Watch Video Solution**

53. Which bond has the greatest polarity ?

A.  $H - Cl$

B.  $H - Br$

C.  $H - I$

D.  $H - F$

**Answer: D**

**Watch Video Solution**

**54.** Bleaching properties of bleaching powder are due to its

A. Oxidising properties

B. Reducing properties

C. Basic properties

D. Disinfecting properties

**Answer: A**

**Watch Video Solution**

**55.** Bleaching powder is a mixture of

- A. Calcium hypochlorite and calcium chloride
- B. Calcium chlorate and calcium chloride
- C. Calcium hypochlorite and basic calcium chloride
- D. Calcium chlorate and calcium hydroxide

**Answer: C**

**Watch Video Solution**

**56.** One can draw the map of a building on a glass plate by

- A. HI
- B. HF
- C. HBr

D. HCl

**Answer: B**

**Watch Video Solution**

**57.** The colour of  $I_2$  is violet because it

- A. Absorbs violet light
- B. Does not absorb light
- C. Absorbs yellow and green light
- D. None of the above

**Answer: C**

**Watch Video Solution**

**58.** The boiling points of halogens increase with increase in molecular weight, it is because

- A. As the size increases molecules undergo association leading to higher stability
- B. Bond strength increases due to increase in electronegativity
- C. van der Waals force increase with increase in number of electrons per mole
- D. None of the above

**Answer: C**

**Watch Video Solution**

**59.** The tetrahedral nature of the three bonds in a chlorate ion ( $\text{ClO}_3^-$ ) is due to

- A. The presence of a lone of electrons
- B.  $sp^3$ -hybridisation
- C.  $sp^2$ -hybridisation
- D. Trigonal bipyramidal shape of ion

**Answer: B**

**Watch Video Solution**

**60.** The catalyst used in the Deacon's process for the manufacture of chlorine is

- A. Cu
- B. An alloy of copper
- C.  $CuCl_2$
- D. CuS

**Answer: C**

Watch Video Solution

61. Which one of the following acts as an antichlor ?

Answer: B

Watch Video Solution

62. One gas bleaches the colour of flowers by reduction and other by oxidation. These gases are

B. CO and  $Cl_2$

C.  $NH_3$  and  $SO_2$

D.  $H_2$  and  $Br_2$

**Answer: A**

**Watch Video Solution**

**63.** Bromine occurs as a bromide in a mineral called

A. Nitre

B. Tincal

C. Common salt

D. Carnallite

**Answer: D**

**Watch Video Solution**

64. The halide which does not give a precipitate with  $AgNO_3$  is

**Answer: B**

**Watch Video Solution**

65. Which halogen can be purified by sublimation ?

**Answer: D**

**Watch Video Solution**

**66.** The halogen having the smallest covalent radius is

A. I

B. Cl

C. Br

D. F

**Answer: D**

**Watch Video Solution**

**67.** The following acids have been arranged in order of decreasing acid strength. Identify the correct order.

I.  $\text{ClOH}$  II.  $\text{BrOH}$

III.  $\text{IOH}$

A.  $I > II > III$

B.  $II > I > III$

C.  $III > II > I$

D.  $I > III > II$

**Answer: A**

**Watch Video Solution**

**68.** Which has maximum pH in aqueous solution ?

A.  $\text{NaClO}$

B.  $\text{NaClO}_2$

C.  $\text{NaClO}_3$

D.  $\text{NaClO}_4$

**Answer: A**

**Watch Video Solution**

**69.** The strongest oxidising agent among the following is

A. Ozone

B. Oxygen

C. Fluorine

D. Chlorine

**Answer: C**

**Watch Video Solution**

**Exercises Assertion Reasoning**

1. Assertion (A):  $ClF$  is more reactive than  $F_2$ .

Reason (R): The F-F bond is weaker than ClF bond.

- A. If both (A) and (R) are correct and (R) is the correct explanation of (A).
- B. If both (A) and (R) are correct and (R) is the correct explanation of (A).
- C. If (A) is correct, but (R) is incorrect.
- D. If (A) is incorrect, but (R) is correct.

**Answer: C**

**Watch Video Solution**

2. Assertion (A): Salts of  $ClO_3^\ominus$  and  $ClO_4^\ominus$  are well known but those of  $FO_3^\ominus$  are unknown.

Reason (R ): F is more electronegative than O, while Cl is less electronegative than O.

[Watch Video Solution](#)

3. Assertion (A): ICl on hydrolysis gives HI and HOCl.

Reason (R ): Water can attack iodine more readily.

- A. If both (A) and (R) are correct and (R) is the correct explanation of (A) .
- B. If both (A) and (R) are correct and (R) is not the correct explanation of (A)
- C. If (A) is correct, but (R) is incorrect .
- D. Both (A) and (R) are incorrect .

**Answer: D**

[Watch Video Solution](#)

4. Assertion (A):  $F_2$  does not show disproportion reactions.

Reason (R ):  $F_2$  is the stronger oxidising agent and is always reduced.

Watch Video Solution

5. Assertion (A): HBr is weaker acid than HI.

Reason (R ): HBr is more polar than HI.

Watch Video Solution

6. Assertion (A): Iodine forms  $IF_7$ .

Reason (R ): In iodine 5d-subshell is available in the valence shell to expand its octet.

Watch Video Solution

7. Assertion (A):  $\text{HOCl}$  is a stronger acid than  $\text{HOBr}$ .

Reason (R): More the electronegativity of the halogen stronger is the acid.

- A. If both (A) and (R) are correct, and (R) is the correct explanation of (A)
- B. If both (A) and (R) are correct, but (R) is not the correct explanation of (A).
- C. If (A) is correct, but (R) is incorrect.
- D. If (A) is incorrect, but (R) is correct.

**Answer: A**

**Watch Video Solution**

8. Assertion (A): Bond energy of  $\text{Cl-Cl}$  bond is more than  $\text{F-F}$  bond.

Reason (R): Shorter the bond length, stronger the bond, more is the

bond energy.

Watch Video Solution

9. Assertion (A):  $I_2$  can displace  $Cl_2$  from  $NaClO_3$ .

Reason (R) : I is more electronegative than Cl.

If both (A) and (R) are correct, and (R) is the correct explanation of (A)

If both (A) and (R) are correct, but (R) is not the correct explanation of (A).

If (A) is correct, but (R) is incorrect.

If (A) is incorrect, but (R) is correct.

Watch Video Solution

10. Assertion (A) : F-F bond in  $F_2$  molecules is weak. Reason (R) : F Atom is small in size.

Watch Video Solution

**11. Assertion (A):** The flourine has lower reactivity.

**Reason (R ):** F-F bond has low bond dissociation energy.

If both (A) and (R) are correct, and (R) is the correct explanation of (A)

If both (A) and (R) are correct, but (R) is not the correct explanation of (A).

If (A) is correct, but (R) is incorrect.

If (A) is incorrect, but (R) is correct.

**Watch Video Solution**

**12. Assertion :** All halogens are coloured.

**Reason :** The halogens absorb visible light .

**Watch Video Solution**

**13.** Assertion:  $HClO_4$  is a stronger acid than  $HClO_3$ .

Reason: Oxidation state of chlorine in  $HClO_4$  is +7 and in  $HClO_3$  is +5.

**Watch Video Solution**

### Exercises Integer

1. Sodium iodate is treated with calculated amount of sodium bisulphite to prepare one mole of iodine. How many moles of sodium disulphite are required to prepare one mole of iodine from sodium iodate ?

### Exercises Archives Linked Comprehension

1. Bleaching powder and bleach solution are produced on a large scale and used in several house-hold products. The effectiveness of bleach solution is often measured by iodometry.

$25\text{mL}$  of household bleach solution was mixed with  $30\text{mL}$  of  $0.50\text{MKI}$  and  $10\text{mL}$  of  $4\text{N}$  acetic acid. In the titration of the liberated iodine,  $48\text{mL}$  of  $0.25\text{NNa}_2\text{S}_2\text{O}_3$  was used to reach the end point. The molarity of the household bleach solution is :

A. 0.48M

B. 0.96M

C. 0.24M

D. 0.02M

**Answer: C**

**Watch Video Solution**

2. Bleaching powder and bleach solution are produced on a large scale and used in several house hold production. The effectiveness of bleach solution is often measured by iodometry.

Bleaching powder contains s salt of an oxoacid as one of its components. The anhydride of that oxoacid is

A.  $Cl_2O$

B.  $Cl_2O_7$

C.  $ClO_2$

D.  $ClO_2O_8$

**Answer: A**

**Watch Video Solution**

3. The reactions of  $Cl_2$  gas with cold-dilute and hot-concentrated NaOH in water give sodium salts of two (different) oxoacids of chlorine, P and Q, respectively. The  $Cl_2$  gas reacts with  $SO_2$  gas, in presence of charcoal, to give a product R. R reacts with white phosphorus to give a compound S. On hydrolysis, S gives an oxoacid of phosphorus, T.

P and Q, respectively are the sodium salts of

- A. Hypochlorous and chloric acids
- B. Hypochlorous and chlorous acids
- C. Chloric and perchloric acids
- D. Chloric and hypochlorous acids.

**Answer: A**

**Watch Video Solution**

4. The reactions of  $Cl_2$  gas with cold-dilute and hot-concentrated NaOH in water give sodium salts of two (different) oxoacids of chlorine, P and Q, respectively. The  $Cl_2$  gas reacts with  $SO_2$  gas, in presence of charcoal, to give a product R. R reacts with white phosphorus to give a compound S. On hydrolysis, S gives an oxoacid of phosphorus, T.

R, S and T, respectively are

A.  $SO_2Cl_2$ ,  $PCl_5$  and  $H_3PO_4$

B.  $SO_2Cl_2$ ,  $PCl_3$  and  $H_3PO_3$

C.  $SOCl_2$ ,  $PCl_3$  and  $H_3PO_2$

D.  $SOCl_2$ ,  $PCl_5$  and  $H_3PO_4$

**Answer: A**

**Watch Video Solution**

## Exercises Archives Multiple Correct

1. The reagent(s) used for softening the temporary hardness of water is (are):

Answer: A::C::D

Watch Video Solution

2. Which of the following halides react(s) with  $AgNO_3(aq)$  to give a precipitate that dissolves in  $Na_2S_2O_3(aq)$

A.  $HCl$

B.  $HF$

C.  $HBr$

D.  $HI$

Answer: A::C::D

Watch Video Solution

3. For the reaction :

The incorrect statement in the balanced equation is

A. a. Stoichiometric coefficient of  $HSO_4^{\ominus}$  is 6.

B. b. Iodide is oxidised.

C. c. Sulphur is reduced.

D. d.  $H_2O$  is one of the products.

Answer: A::B::D

Watch Video Solution

### Exercises Archives Single Correct

1. HBr and HI can reduce sulphuric acid, HCl can reduced  $KMnO_4$  and HF can reduce.....

D. None of these

Answer: D

Watch Video Solution

2. Chlorine acts as a bleaching agent only in the presence of

- A. Dry air
- B. Moisture
- C. Sunlight
- D. Pure oxygen

**Answer: B**

**Watch Video Solution**

3. Bromine can be liberated from potassium bromide solution by the action of

- A. Iodine solution
- B. Chlorine water
- C. Sodium chloride
- D. Potassium iodide

**Answer: B**

**Watch Video Solution**

4. The following acids have been arranged in order of decreasing acid strength. Identify the correct order.

I.  $\text{ClOH}$  II.  $\text{BrOH}$

III.  $\text{IOH}$

A. IgtIIgtIII

B. IIgtIgtIII

C. IIIgtIIgtI

D. IgtIIIgtII

**Answer: A**

**Watch Video Solution**

5. Which of the following species is not a pseudo halide ?

Answer: B

Watch Video Solution

6. In compounds of type  $ECl_3$ , where  $E = B, P, As$  or  $Bi$ , the angles  $Cl - E - Cl$  for different  $E$  are in the order:

**Answer: B**

**Watch Video Solution**

7. The correct order of acid strength is -

**Answer: A**

**Watch Video Solution**

8. The set with the correct order of acidity is

**Answer: A**

**Watch Video Solution**

9. The product of oxidation of  $\text{I}^-$  with  $\text{MnO}_4^-$  in alkaline medium is:

**Answer: A**

**Watch Video Solution**

10. The correct statement for the molecule,  $Csl_3$  is

- A. It contains  $Cs^{\oplus}$  and  $I^{\ominus}$  ions
- B. It contains  $Cs^{\oplus}$  and  $I^{\ominus}$  and lattice  $I_2$  molecule
- C. It is a covalent molecule
- D. It contains  $Cs^{\oplus}$  and  $I_3^{\ominus}$  ions

Answer: D

Watch Video Solution

11. Among the following oxoacids, the correct decreasing order of acid strength is:

- A.  $HClO_4 > HClO_3 > HClO_2 > HOCl$
- B.  $HClO_2 > HClO_4 > HClO_3 > HOCl$
- C.  $HOCl > HClO_2 > HClO_3 > HClO_4$

**Answer: A**

**Watch Video Solution**

12. Hydrogen peroxide in its reaction with  $\text{KIO}_4$  and  $\text{NH}_4\text{OH}$  respectively, is acting as a

- A. Reducing agent, oxidising agent
- B. Reducing agent, reducing agent
- C. Oxidising agent, oxidising agent
- D. Oxidising agent, reducing agent

**Answer: A**

**Watch Video Solution**

1. Based on *VSEPR* theory the number of  $90^\circ F - Br - F$  angles in a molecules of  $BrF_5$  is \_\_\_\_.

[Watch Video Solution](#)

2. Reaction of  $Br_2$  with  $Na_2CO_3$  in aqueous solution gives NaBr and sodium bormate with evolution of  $CO_2$  gas. The number of NaBr molecue involved in the balanced chemical equation is .....

[Watch Video Solution](#)

3. Consider the following list of reagents: Acidified  $K_2Cr_2O_7$ , alkaline  $KMnO_4$ ,  $CuSO_4$ ,  $H_2O_2$ ,  $Cl_2$ ,  $O_3$ ,  $HNO_3$ , and  $Na_2S_2O_3$ . The total number of reagents that can oxidis aqueous  $I^\ominus$  ion  $I_2$  is ....

## Exercises Archives Fill In The Blanks

1. Iodine reacts with hot NaOH solution. The products are NaI and

\_ \_ \_ \_ \_

Watch Video Solution

## Exercises Archives True False

1. Dilute HCl oxidises metallic Fe to  $Fe^{2+}$ .

Watch Video Solution

2. In aqueous solution, chlorine is a stronger oxidising agent than fluorine.

Watch Video Solution

3. HBr is stronger acid than HI because of hydrogen bonding.

Watch Video Solution

### True False Subjective

1. Give reason for the following within two sentences:

- i. Hydrogen bromide cannot be prepared by the action of concentrated sulphuric acid on sodium bromide.
- ii. When a blue litmus paper is dipped in a solution of hypochlorous acid, it first turns red then gets decolourised.

Watch Video Solution

2. Complete and balance the following reactions:

**Watch Video Solution**

3. Show with balanced equations what happens when the following are mixed: Aqueous solution of ferric sulphate and potassium iodide.

**Watch Video Solution**

4. Give reasons in one or two sentence for each of the following:  
Fluorine can not be prepared from fluoride by chemical oxidation.

**Watch Video Solution**

5. Write the balanced equations for the reactions when a mixture of potassium chlorate, oxalic acid and sulphuric acid is heated.

**Watch Video Solution**

 Watch Video Solution

6. Arrange the following in the order of:

i. Increase bond strength:  $HCl$ ,  $HBr$ ,  $HF$ ,  $HI$

ii. Increasing oxidation number of iodine:  $I_2$ ,  $HI$ ,  $HIO_4$ ,  $ICI$

Watch Video Solution

7. Complete and balance the following reactions:

Watch Video Solution

8. Mention the products formed in the following: "Chlorine gas is bubbled through a solution of ferrous bromide."

Watch Video Solution

9. Give balanced equations for the following: Iodate ion reacts with bisulphite ion to liberate iodine.

Watch Video Solution

10. Arrange the following:  $\text{HOCl}$ ,  $\text{HOClO}_2$  and  $\text{HOClO}$  in increazsing order of thermal stability.

Watch Video Solution

11. Write the balanced chemical equations for the following:

- i. Sodium bromate reacts with fluorine in the presence of an alkali.
- ii. Sodium chlorate reacts with sulphur dioxide in dilute sulphuric acid medium.

Watch Video Solution

12. Account for the following :

- (i)  $NH_3$  is a stronger base than  $PH_3$
- (ii) Sulphur has a greater tendency for catenation than oxygen.
- (iii) Bond dissociation energy of  $F_2$  is less than that of  $Cl_2$ .
