BOOKS - TRUEMAN BIOLOGY

Cellular Respiration

Assertion And Reason

1. [A] : Krebs cycle is considered as amphibolic pathway.

[R]: Catabolic pathways converge on it and

anabolic pathways diverge from it choose the correct Aatement.

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: A

Watch Video Solution

2. [A]: Glucose oxidation is a slow process.

[R]: It consists of only two subprocesses.

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: C

Watch Video Solution

3. Assertion. All the enzymes participating in the Krebs cycle reactions occur in the matrix of mitochondria.

Reason. Krebs cycle generates GTP in animal as well as plant cells.

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: D

Watch Video Solution

4. [A]: RQ indicates type of substrate oxidised in cell respiration.

[R]: Proteins are used in protoplasmic respiration.

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: B

Watch Video Solution

5. [A] : Fermentation is a wasteful process.

[R]: It yields only 5% of the energy provided by aerobic respiration.

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: A

Watch Video Solution

6. [A]: Glycolysis yields 2ATP & 2NADH only.

[R]: Glycolysis is an anaerobic process & can't oxidise substrate fully.

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: A

Watch Video Solution

7. [A]: Glycolysis occurs in the cytoplasm and converts some of the energy stored in glucose bonds to ATP and NADH.

[R]: In glycolysis, glucose is rearranged and split into three carbon intermediates, each of

which is rearranged further to eventually yield two molecules of pyruvic acid.

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: A

Watch Video Solution

8. [A] : The mechanism of ATP formation in mitochondria is almost similar to that of chloroplast.

[R]: In mitochondria there is proton gradient formation inside intermembrane space whereas in chloroplast proton gradient is formed in thylakoid lumen.

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: A

Watch Video Solution

9. [A] : Poisons like cyanide inhibit Na^+ efflux and K^+ influx during cellular transport.

ATP supply required for the Na^+ and K^+ exchange pump is stopped.

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: A

Watch Video Solution

10. [A] : During catabolism of food through Krebs cycle, energy is generated by ETS.

[R]: Energy is released from electrons, as they pass along a series of reactions

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: A

Watch Video Solution

11. [A]: Glycolysis occurs in the cytoplasm and converts some of the energy stored in glucose to ATP and NADH.

[R]: Glucose, in glycolysis is splitted into two molecules of 3-C compound.

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: A

Watch Video Solution

12. [A] : PGAL is isomerised to produce DHAP.

[R]: isomerisation is catalysed by the enzyme phosphate triose isomerase.

A. If both A and R are true and R is the correct explanation of A

B. If both A and R are true but R is not the correct explanation of A

C. If A is true and R is false

D. If both A and R are false

Answer: A

Watch Video Solution
