## NTA MOCK TESTS ENGLISH

## NTA NEET SET 30

1. The sweet patoto family is included in the
A. Polymoniales
B. Sapindales
C. Poales
D. Asparagales

Answer: A

D Watch Video Solution
2. The following are some statements about leucocytes. Which of these is incorrect?
I. The most abundant leucocyte is a
granulocyte, whereas the least abundant leucocyte is an agranulocyte.
II. The largent leucocyte is a granulocyte, whereas the smallest leucocyte is an agranulocyte.
III. Phagocytic leucocytes may be agranulocyte or granulocyte.
IV. Polymorphonuclear leucocytes are the
largest granuocyte, whereas the largest agranulocyte has a kidney-shaped nucleus.
A. I, II and III
B. II and IV

## C. III and IV

## D. I and II

## Answer: D

## D Watch Video Solution

3. A doctor has ordered a test for serum bilirubin. The patient goes to a pathologist who collects his blood. The pathologist should collect this blood in a test tube containing
A. Anti-coagulant sodium citrate
B. Anti-coagulant double oxalate
C. Anti-coagulant fluorides
D. No anti-coagulant

## Answer: D

## - Watch Video Solution

4. The renin-angiotensin mechanism to increase blood pressure involves organs in the following order.
A. Kidney- Liver - Lungs - Adrenal gland -

Kidney
B. Kidney- Lungs - Liver - Adrenal gland -

Kidney
C. Kidney- Liver - Adrenal gland - Lungs -

Kidney
D. Kidney- Lungs - Adrenal gland - Liver -

Kidney

## Answer: A

## 5. internal fertilization is seen in

A. Algae

B. Amphibians

C. Fungi

D. Bony fishes

## Answer: C

6. What floral reward does Amorphophallus particularly provide to its pollinator?
A. Floral oils
B. Pollen grains
C. Nectar
D. Safe place to lay eggs

## Answer: D

## - Watch Video Solution

7. My nucellar cells surrounding the embryo
sac and develop into the embryos. Each of my ovule contains many embryos. Who am I?
A. Apple
B. Litchi
C. Lemon
D. Strawberry

Answer: C

- Watch Video Solution

8. Which lupine was excavated from the tundra
that germinated and flowered after a record

10,000 years?
A. Lupinus polyphyllus
B. Lupinus Lepidus
C. Lupinus littoralis
D. Lupinus arcticus

Answer: D

D Watch Video Solution
9. Choose the correct group of plants that use entomophily as their preferred method of pollination
A. Zostera, Vallisneria
B. Zea mays, Sorghum vulgare
C. Bougainvillea, Salvia
D. Butea, Bauhinia

Answer: C

D Watch Video Solution
10. In the development of Angiosperms, generally
A. The development of endosperm starts
before the development of embryo.
B. The development of endosperm starts
after the development of an embryo
C. The development of endosperm starts
along with the development of embryo
D. The endosperm disappears before the development of embryo starts.

## Answer: A

## - Watch Video Solution

11. The height of a plant is controlled by three genes. The maximum height in the species is

24 inches, wherease the minimum height in the species is 6 inches. What would be the
height of a plant of the same species whose genotype in AaBBcc?
A. 12 inches
B. 15 inches
C. 18 inches
D. 21 inches

Answer: B
( Watch Video Solution
12. Progeny with blood group ' $O$ ' can not be obtained cross
A. A
B. B
C. $A B$
D. 0

Answer: C

D Watch Video Solution
13. A homozygous pea plant with round seed coat and yellow cotyledons is crossed with another homozygous pea plant having wrinkled seed coat and green cotyledons.

Give the dihybrid phenotypic ratio with the corresponding phenotypes.
A. $g g r r$
B. Yyrr
C. yyrr
D. GGrr

Answer: A

## D Watch Video Solution

14. which of the following example of
intragenic inheritance was not discovered by

Mendel?
A. Co-dominance
B. Incomplete dominance
C. complete dominance
D. None

## Answer: D

## D Watch Video Solution

15. Which of the folloiwng statement/s about test cross is/are correct?
I. Every test cross is a back cross, but not every back cross is a test cross.
II. Every back cross is a test cross but not every test cross is a back cross.
III. The ratio of a test cross is always 1:1.
IV. A test cross can be considered as a type of reciprocal cross.
A. I and III
B. I, III and IV
C. II and IV
D. I

Answer: D
( Watch Video Solution
16. In Andalusian fowls, the mating of black and white fowls will produce
A. Black fowls
B. White fowls
C. Blue fowls
D. Grey fowls

Answer: C

D Watch Video Solution
17. Which of the following does not belong to the Palaeozoic era?

A. Silurian

B. Cretaceous
C. Devonian
D. Carboniferous

Answer: B

D Watch Video Solution
18. Choose the pairs of organs that are a result of convergent evolution
i. Wings of butterflies and wings of birds.
ii. Flippers of penguins and flippers of dolphins
iii. Eyes of octopus and eyes of mammals.
iv. Thorns of Bougainvillea and tendrils of

Cucurbita.
v. Sweet potato and potato.
vi. Vertebrate hearts and vertebrate brains
A. i, ii,v and vi

# B. i, ii, iii and iv 

C. i, ii and vi
D. i,ii,iii and v

Answer: D

- Watch Video Solution

19. The first cellular forms of life appeared on
earth about
A. 500 mya

# B. 2000 mya 

C. 2500 mya
D. 350 mya

Answer: B

- Watch Video Solution

20. Test cross involves
A. From different breeds
B. From same breeds but with common ancestors only from one side
C. From same breed but with common ancestors from both sides

D. From same breed but with no common ancestors

## Answer: D

## D Watch Video Solution

21. Competitive release' refers to
A. Inablity of two species to co-exist indefinitely and eventual elimation of
the competitively inferior species
B. Avoidance of competition between
species cometing for same resource by
figuring a compromise
C. Expansion of distribution of a species
restriced to a small area due to a
comptitively superior species being
experimental eliminated
D. Evolutionary success in devising a mechanism to counter and neutralize competion

Answer: C

- Watch Video Solution

22. The intrinsic rate of natural increase for Indian human population according to the 2011 census was
A. 0.0205
B. 0.0147
C. 0.0652
D. 0.0351

Answer: B

D Watch Video Solution
23. The major portion of the dry weight of plants comprised of
A. Water
B. Carbon
C. Hydrogen
D. Nitrogen

Answer: B
(D) Watch Video Solution
24. Arrange the following is descending order of their percentage of the toal cost of various ecosystem services
A. Soil formation , nutrient cycling, climate regulation
B. Soil formation , climate regulation , nutrient cycling
C. climate regulation , nutrient cycling , Soil
formation
D. climate regulation , Soil formation , nutrient cycling

## Answer: A

## D Watch Video Solution

25. Choose the incorrect statement from the following
A. Sun is the only source of energy for every single ecosystem on earth
B. Plants capture 2-10\% of PAR
C. Ecosystems follow the 2nd law of thermodynamics
D. In a terrestrial ecosystem major producers are herbaceous and woody plants

Answer: A
26. Which of the following comparisons is

## correct?

A. Number of recorded animals is equal to
number of recorded plants
B. Number of national parks in India is less
than Number of biodiversity hotspots in
the world
C. Number of varieties of mango in India is
less than number of varieties of rice in

India
D. The percentage of mammals facing the threat of extinction is more than the percentage of amphibians facing the threat of extinction

## Answer: D

## D Watch Video Solution

27. Bali, Javan Caspian are
(a) species of tiger
(b) species of Cheetah
(c) subspecies of cheetah
(d) subspecies of tiger
A. Lion
B. Tiger
C. Panther
D. Cheetah

## - Watch Video Solution

28. Which part of the biosphere reserve is an area of active cooperation between reserve management and the local people, wherein activities like settlements, cropping, forestry and recreation and other economic uses continue in harmony with conservation goals ?
A. Core area
B. Buffer area
C. Transition area

## D. Any where in the biosphere reserve

## Answer: C

## - Watch Video Solution

29. Arrange the following efforts to control pollution in chronological order.
A. In India, the air (Prevention and control of Pollution) Act was amended to include noise as an air pollutant.
B. The government of India passed the water
(Prevention and Control of Pollution)Act to safeguard our water resources.
C. Recognizing the deleterious effects of ozone depletion, the Montreal Protocol became effective.
D. The National Forest Policy of India recommended $33 \%$ forest cover for the plains and $67 \%$ for this hills.
A. A-B-D-C
B. $B-A-D-C$
C. B-A-C-D

$$
\text { D. } A-B-C-D
$$

## Answer: B

## - Watch Video Solution

30. Choose the correct representation of effect of sewage discharge on important characteristics of a river.

Answer: A

- Watch Video Solution

31. Identify the tissue which has been incorrectly matched with its function.
A. Columnar Epithelium - Secretion
B. Columnar Epithelium - Absorption
C. Squamous Epithelium - Both secretion
and absorption
D. Ciliated Epithelium - Move particles or mucous in a certain direction

## Answer: C

32. Select the correct statement from the following .
I. Bones support and protect softer tissue and organs
II. Blood is a fluid connective tissue.
III. Cartilage is a type of specialised muscle tissue.
IV. The bone marrow found in some bones is the site of production of leucocytes.
A. I and II
B. I, II, III
C. I, II, III and IV
D. I, II and IV

## Answer: D

## D Watch Video Solution

33. Radioactively - labelled d- nucleotides are introduced into a cell.

In which cell structures will the radioactively
first become concentrated ?
A. 1 and 2
B. 1 and 4
C. 2 and 3

## D. 3 and 4

## Answer: C

## D Watch Video Solution

34. Which type of cell contais the highest proportion of cell structures bound by a single membrane?
A. Ciliated epithelial cell
B. Red blood cell

## C. Smooth muscle cell

## D. Goblet cell

## Answer: D

## D Watch Video Solution

35. Some features of cells are listed. Which features can be found both in plant cells and prokaryotic cells?
I. Cell wall
II. Cell surface membrane

III. Ribosome

A. I and III only
B. II and III only
C. I and III only
D. I, II and III

Answer: D

D Watch Video Solution
36. The diagram shows the relationship

## between some biological molecules.

Which row is correct for this relationship?

| 1 | 2 | 3 | 4 |  |
| :--- | :--- | :--- | :--- | :--- |
| AGlucose | CarbohydrateSucrose Monomer | Fructose |  |  |
| BCellulose | Polymer | Starch | CarbohydrateAmylase |  |
| CFructose | Reducing <br> Sugar | Glucose Monomer | Amino |  |
| acid |  |  |  |  |
| OHaemoglobin | Protein | AmylosePolymer | Cellulose |  |

A. A
B. B
C. C
D. D

## Answer: C

## D Watch Video Solution

37. The diagram shows part of a carbohydrate molecule formed by glucose monomer. What is
the name of the molecule?

A. Amylose
B. Cellulose
C. Starch
D. Glycogen

Answer: D

## - Watch Video Solution

38. What is the effect of an enzyme in an enzyme-catalysed reaction?
A. Decrease the activation energy and decreases the energy yield
B. decrease the activation energy and has
no effect on the energy yield
C. increase the activation energy and increases the energy yield

# D. increases the energy yield and decreases 

the activation energy

Answer: B

## D Watch Video Solution

39. How many copies of each different DNA molecule will be found in a cell at the beginning of each of these stages of the

## mitotic cell cycle?

|  | G 2 of Interphase | Prophase | Cytokinesis |
| :--- | :--- | :--- | :--- |
| A | 1 | 1 | 2 |
| B | 1 | 2 | 1 |
| C 2 | 1 | 2 |  |
| D 2 | 2 | 2 |  |

A. A
B. B
C. C
D. D

Answer: D
40. For successful cell replacement during tissue repair, the chromosome content of each daughter cell must be identical to that of the mother cell. Which stages of mitosis make sure that each daughter cell receives one chromatid from each chromatid pair?
A. Prophase and metaphase
B. Metaphase and anaphase
C. Anaphase and telophase

## D. Telophase and interphase

## Answer: B

## - Watch Video Solution

41. The process of exchange of ........A.......from
the atmosphere with $\mathrm{CO}_{2}$ produced by the cells is called .......B......., commonly known as ...........C..... . Choose the alternative that will correctly replace $A, B$ and $C$ in the above statement and make it meaningful.
A. $A-N_{2}, B$-ventilation, C - respiration
B. $A-\mathrm{NO}_{2}, B$-breathing , C-combusion
C. $A-O_{2}, B$-breathing , C-respiration
D. A- water vapour , B - ventilation, C -

## combustion

Answer: C

D Watch Video Solution
42. Observe the given diagram. Identify the label $\mathrm{A}, \mathrm{B}$ and C .

A. A - Air goes inside to lungs, B-Ribs and
sternum returned to original position, C-

Diaphragm relaxed are arched upward
B. A - Air goes inside to lungs, B - Ribs and sternum raised, C- Diaphragm
contracted
C. A - Air expelled from lungs, B - Ribs and
sternum returned to original position, C -

Diaphragm contracted
D. A - Air expelled from lungs, B - Ribs and
sternum raised, C- Diaphragm relaxed
are arched upward
43. Identify the correct DNA triplet on the original DNA template that will code for the amino acid histidine based on the following table.

| Amino acid | Anti-codon |
| :--- | :--- |
| Ala | GU |
| His | GUA |
| Ser | UCA |

A. TAU
B. CGT
C. GTA
D. GUA

## Answer: C

## - Watch Video Solution

44. From the following, Identify the statements that are correct regarding tRNA.
I. Hydrogen bonds between bases temporarily hold tRNA against mRNA.
II. The base sequences in the tRNA molecules are the same as the base sequences in the mRNA that is being translated.
III. The specificity of the tRNA moleucle for glycine and the specificity of the enzyme that loads glycine are both necessary for correct loading.
A. I, II and III
B. I and II only
C. I and III only
D. II and III only

## Answer: C

## D Watch Video Solution

45. DNA polymerase catalyses condensation reactions between molecules during semiconservative replication of DNA. Which two molecules are joined by DNA polymerase?
A. Base and base
B. Base and nucleotide
C. Nucleotide and nucleotide
D. Phosphate and deoxyribose

## Answer: C

## D Watch Video Solution

46. The diagram shows the structure of a bacterial cell.

The presence of structure C in the bacterial cell is one reason why bacteria are used in genetic engineering. In the cloning vector pBR322, which gene is responsible for the replication of structure $X$ ?
A. Cla I
B. BamH I
C. ori
D. rop

## Answer: D

## D Watch Video Solution

47. Which of the following statement/s is/are and example of genetic engineering?
I. Inserting a gene for human insulin production into bacteria.
II. Selective breeding to produce cattle with
high milk yields.
III. Using methods like crop rotation with leguminous plants to increase the fertility of the soil.
IV. Vegetative propagation and grafting are practised to ensure higher yield.
A. I, II and IV
B. II and III
C. I and III
D. Only I
48. Ligase enzymes are used in gentic engineering to :
A. Cut open plasmid DNA
B. Insert plasmids into bacteria
C. Isolate the DNA making up a human
gene
D. Join human DNA to plasmid DNA

## Answer: D

## D Watch Video Solution

49. To produce insulin via a non-human cell,
which of the following would be required to be inserted in the vector's plasmid?
A. a segment of DNA from a human
B.a segment of DNA from another
becterium
C. a molecule of insulin
D. an enzyme

Answer: A

## D Watch Video Solution

50. For a concave mirror, if real image is
formed the graph between $\frac{1}{u}$ and $\frac{1}{v}$ is of the form
A. so they can get large machinery into the field
B. to prevent cross-pollination between GM

and non-GM crops

C. to prevent diseases spreading between

## crops

D. to prevent pests attacking crops

## Answer: B

## - Watch Video Solution

51. Which of the following organisms is an odd one out with respect to mode of nutrition?

A. Gonyaulax

B. Chlamydomonas
C. Trypanosmona
D. Nostoc

Answer: C
(D) Watch Video Solution
52. Dikaryophase is commonly seen in members of:
A. Ascomycetes and Phycomycetes.
B. Ascomycetes and Basidiomycetes.
C. Phycomycetes and Basidiomycetes
D. Basidiomycetes and Deuteromycetes.

Answer: B

D Watch Video Solution
53. Which of these statement/s about lichens is/are ture?
I. Lichens are mutually beneficial symbotic associations.
II. They grow extensively in area with high pollution, hence called as pollution indicators.
III. The phycobiont member, algae, is an autotroph and the mycobiont member, fungi, is a heterotroph.
IV. Fungi help the algae harvest sunlight for photosynthesis.
A. II and III
B. I and III
C. I, II and III
D. III and IV

## Answer: B

D Watch Video Solution
54. Fill in the blanks $A, B, C$ and $D$ with the correct choice of words.

Viruses are (A), protected by a protein coat
called (B). The protein coat is made up of the assembly of small units called the (C ). It protects the internal (D)of the viruses.
A. A-glycolipids, B - capsule, C- chains, D sugars
B. A- lipoproteins, B- covers, C- helices, D-
genetic material
C. A-glycoproteins, B - cell wall, C - fatty acids, D-cytoplasm
D. A- nucleoproteins, B - capsid, Ccapsomeres, D- genetic material.

## Answer: D

## D Watch Video Solution

55. Observe the below diagram. Identify the option suggesting the correct function of $A, B$
and C .

A.A - Helps in attachment to the
substratum, B- Stalk for supporting the
body of brown algae, C - Leaf-like

Photosynthetic organ for producing
food
B. A - Stalk for supporting the body of
brown algae, B- Leaf-like Photosynthetic
organ for producing food, C-Helps in
attachment to the substratum
C. A - Leaf-like Photosynthetic organ for producing food, B- Stalk for supporting the body of brown algae, C - Helps in attachment to the substratum
D. A - Leaf-like Photosynthetic organ for producing food, B - Helps in attachment
to the substratum , C - Stalk for supporting the body of brown algae

## Answer: C

56. Roots of which of the following plants are involved in nitrogen fixation?
A. Cycas
B. Pinus
C. Banyan
D. Peepal

Answer: A
57. Identify the correct match between the types of aestivation and their examples.

| Types of Aestivation | Examples |
| :--- | :--- |
| i. Valvate | a. Cotton |
| ii. Twisted | b. Bean |
| iii. Imbricate | c. Calotropis |
| iv. Vexillary | d. Gulmohar |

A. i-a, ii-d, iii-b, iv-c
B. i-d, ii-c, iii-b, iv-a
C. i-a, ii-b, iii-c, iv-d
D. i-c, ii-a, iii-d, iv-b

## Answer: D

## D Watch Video Solution

58. A plant with racemose inflorescene,
zygomorphic flowers, five sepals and petals
showing vexillary aestivation, monocarpellary
and unilocular superior ovary, androecium consisting of ten stamens.

The above- listed conditions a
characteristics of the which family of plants?
A. Solanaceae
B. Fabaceae
C. Lilaceae
D. Brassicaceae

Answer: B

D Watch Video Solution
59. In some plants, the leaves are shortlived and small. The petioles of such plants expand and become green. One such plant is:
A. Cactus
B. Venus fly-trap
C. Australian acacia
D. Peas

Answer: C

- Watch Video Solution

60. The edible part of coconut fruit is :
A. Perisperm
B. endosperm
C. endocarp
D. mesocrap

Answer: B

- Watch Video Solution

61. Read the following statements about monocot root. Which amongest them are correct?
I. It shows a polyarch condition of xylem.
II. Central pith is less or absent.
III. The monocot root does not undergo
secondary growth.
A. Only I
B. I, II and III
C. I and III
D. I and II

Answer: C

D Watch Video Solution
62. Arrage the below four layers in proper order starting from the outermost to the innermost layer after secondary growth has already occurred in a dicot stem.
I. Phellem
II. Wood
III. Phelloderm

IV Vascular cambium
A. $I \rightarrow I I \rightarrow I I I \rightarrow I V$
B. $I \rightarrow I I I \rightarrow I I \rightarrow I V$
C. $I V \rightarrow I I I \rightarrow I I \rightarrow I$

$$
\text { D. } I I I \rightarrow I I \rightarrow I \rightarrow I V
$$

Answer: B

## D Watch Video Solution

63. Which of the following is correct with respect to uphill transport using channel pumps?
A. Lower concentration to higher concentration utilizing ATP
B. Higher concentration to lower

## concentration utilizing ATP

C. Higher concentration to lower concentration without utilizing ATP

D. Hypertonic solution to hypotonic solution

Answer: A
64. The process of nitrogen cycling by microbes involves multiple steps of oxidation and simultaneous reduction. The following reaction occurring during one such step is brought about by which bacteria?
$2 \mathrm{NO}_{2}^{-}{ }^{+} \mathrm{O}_{2} \rightarrow 2 \mathrm{NO}_{3}^{-}$
A. Pseudomonas
B. Nitrosomonas
C. Nitrobacter
D. Thiobacillus

## Answer: C

## - Watch Video Solution

65. According to Blackman's law of limiting
factor, which of the following is the most
important limting factor in the process of photosynthesis?
A. Water
B. $\mathrm{CO}_{2}$
C. Light

## D. temperature

Answer: B

## D Watch Video Solution

66. How many cycles of cyclic and non-cyclic photophosphorylation would be required in order to generate enough energy for the production of one glucose molecule?
A. 10 cyclic and 4 non-cyclic
photophosphorylation
B. 6
cyclic
and
6 non-cyclic
photophosphorylation
C. 2
cyclic
and
4
non-cyclic
photophosphorylation
D. 8
cyclic
and
1
non-cyclic
photophosphorylation

## Answer: B

67. How many of the following are the substrates involved in the Kreb's cycle?

Citric acid, succinic acid, hydrochloric acid, aketoglutaric acid, fumaric acid, malic acid, pyruvic acid, phosphoglyceric acid, acetic acid
A. six
B. four
C. five
D. three

## D Watch Video Solution

68. In which of the following form, glycerol can
enter the cell as a cellular substrate?
A. PGA
B. Pyruvate
C. PGAL
D. PEP

## Answer: C

## - Watch Video Solution

69. Read the given statements about auxins and state whether they are true or false :
a. Auxin promotes apical dominance.
b. Auxins have a negative impact on cytokinin
levels.
c. F.W went isolated auxins from the coleoptiles of the coleptiles of the oat plant.
d. Auxin promotes flowering in the pineapple plants.
A. a - false, b-false, c-true, d-false
B. a - true, b-false, c - true, d-true
C. a - true, b-false, $c$ - true, d-false
D. a - false, b-true, c - true, d-true

Answer: B

## D Watch Video Solution

## 70. Growth of vascular cambium is an example

 of :A. Senescence
B. Geometric growth
C. Arithmetic growth
D. Plasticity

Answer: C
( Watch Video Solution
71. Which of the following statements is incorrect regarding organisms of phylum Chordata?
A. The organism are characterized by the presence of a notochord and a ventral
hollow nerve cord
B. They are triploblastic and bilaterally
symmetrical
C. They have a ventral heart
D. They are further divided into three subphyla.

## Answer: A

## - Watch Video Solution

72. How many of the following organisms belong to the second-largest phylum?

Apple snail, Pearl oyster, Anopheles, Culex,
Aedes, Starfish, Sea urchin, Cuttlefish, Sea cucumber, Squid, Devil fish
A. 9
B. 8
C. 10
D. 4

## Answer: D

## D Watch Video Solution

73. A 2 year old child shows stunted growth and slow brain development. He has thin limbs and also shows wasting of muscles. There is
great oedema and swelling present over his
body parts. He has very less amount of fat present beneath his skin. Which of the following could be a reason for the development of this condition in him?
A. Replacement of mother's milk by foods
less in total proteins as well as calories
at an early age
B. Replacement of mother's milk by foods
less in total proteins, but having high
calories at an early age
C. Replacement of mother's milk by foods
less in total fats, but having high
calories at an early age
D. Replacment of mother's milk by foods
less in vitamins and minerals, but having
high calories at an early age

## Answer: B

## D Watch Video Solution

74. Select the correct statements regarding the human skeletal from the statements given below:
I. There are a total of 12 ribs in the human skeletal system.
II. Each limb is made up of 30 bones.
III. The axia skeleton consists of 80 bones.
IV. The wrist bones are 8 in number
A. I and II
B. I and III
C. I, III and IV

## D. II, III and IV

## Answer: D

## D Watch Video Solution

75. Which of the following joint permits only
limited movements ?
A. Joint present between flat skull bones
B. Joint present between adjacent
vertebrae
C. Joint present between humerus and pectoral girdle

D. Knee joint

## Answer: B

## D Watch Video Solution

76. Column I list the parts of the human brain and column II lists the functions. Match the two columns and identify the correct choice
from those given

| Column I | Column II |
| :---: | :---: |
| A Cerebrum | p Controls the pituitary |
| B Cerebellum | q Controls vision and hearing |
| C Hypothalamus | $r$ Controls the rate of heartbeat |
| D Midbrain | $s$ Seat of intelligence <br> t Maintains body posture |

A. $A-t, B=r, C=q, D=p$
B. $A=s, B=t, C=q, D=p$
C. $A=t, B=s, C=p, D=r$
D. $A=p, B=t, C=s, D=q$

## Answer: D

## - Watch Video Solution

77. Which of the following statement regarding forebrain in correct?
A. Forebrain consists of hypothalamus,
thalamus and cerebellium
B. The layer of cells covering the cerebral
hemispheres is referred to as white
matter.
C. The lobe involved in regulation of sexual
behaviour and expression of emotional
reaction is also a part of the forebrain.

D. Association areas of the forebrain are

sensory in function

Answer: C

- Watch Video Solution

78. Which of the following hormone helps in maintaining body temperature, metabolism, pigmentation, and defense capabilities?
A. Melatonin
B. Melanin
C. Thymosis
D. Calcitonin

Answer: A

- Watch Video Solution

# 79. The hormones $A$ and $B$ secreted by Islet of 

## Langerhans cause hyperglycemia and

 hypoglycemia, respectivelyA. A : insulin, B : glucagon
B. A : somtatostain, B : insulin
C. A : glucogon, B : insulin
D. A : insulin B: somatostatin

Answer: C

D Watch Video Solution
80. Read the following statements about the parathyroid gland and identify the true and false ones. Select the correct option after referring to the given table.
I. Human beings have a pair of parathyroid glands, situated in each lobe of the thyroid gland.
II. The secretion of PTH is regulated by the levels of circulating calcium ions.
III. PTH is a hypocalcemic hormone.

PTH plays a major role in maintaining calcium
balance in the body along with TCT.
A. I - True, II - False, III - True, IV - False
B. I - True, II - True, III - False, IV - True
C. I - False, II - False, III - True, IV - False
D. I - False, II - True, III - False, IV -True

## Answer: D

## D Watch Video Solution

81. Identify the functions/characteristics of parts labelled as $A, B, C, D$ and $E$ in the given diagram. Select the correct option after
referring to the given table.

A. A : Part having a narrow lumen, B : Part
where zygote formation occurs, C : Part
closest to the ovary, D : Part resposible
for transportation of ovum, E : Part responsible for production of ovum
B. A : Part having a narrow lumen, B : Part
closest to the ovary, C : Part resposible
for transportation of ovum, D : Part where zygote formation occures, E: Part responsible for production of ovum
C. A : Part responsible for production of ovum, B : Part resposible for transportation of ovum, C : Part where zygote formation occures, D : Part
closest to the ovary, E : Part having a narrow lumen
D. A : Part where zygote formation occurs,

B : Part responsible for production of
ovum, C : Part resposible for
transportation of ovum, D : Part having a
narrow lumen, E : Part closest to the
ovary

## Answer: A

82. Which of the following cells are responsible for the secretion of the hormone
that stimulates muscular growth, growth of facial and axillary hair, aggressiveness, low pitch of voice, etc.in males?
A. Cells which form the lining of
seminiferous tubules
B. Cells which provide nutrition to the growing spermatozoa

# C. cells situated in the interstitial space of 

 testisD. Germ cells

## Answer: C

## D Watch Video Solution

83. Which of the following structures produces energy for the mobilityof mature sperm?
A. The head
B. The neck
C. The tail
D. The middle piece

## Answer: D

## D Watch Video Solution

84. Choose the right one among the statements given below.
A. IUDs are generally inserted by the user herself
B. IUDs increase phagocytosis reaction in
the uterus
C. IUDs suppress gametogenesis
D. IUDs ones inserted need not be replaced

Answer: B
( Watch Video Solution
85. which of the following processes is involved in the assisted reproductive technology known as 'GIFT'?
A. Transfer of zygote into the fallopian
tube
B. Transfer of zygote into the uterus
C. Transfer of ovum collected from donor
to the follopian tube
D. Transfer of ovum collected from donor

## Answer: C

86. Identify the organism which causes dry,
scaly lesions on the skin, nails and scalp of
human is
A. A fungi belonging to genus Neurospora
B. A
fungi
belonging
to
genus

Microsporum
C.A bacteria belonging to genus

Streptococcus
D. A bacteria belonging to genus

Mycobacterium

## Answer: B

## D Watch Video Solution

87. Which of the following is an example of a disease caused by the attack of the body on its
A. Diabetes inscipidus
B. Malaria
C. Rheumatoid arthritis
D. Tuberculosis

## Answer: C

## D Watch Video Solution

88. Which of the following drugs is capable of producing a state of euphoria or increased energy ?
A. Coke obtained from Erythroxylum coca
B. Heroin obtained from Cannabis sativa
C. Charas obtain from Claviceps purpurea
D. Morphine obtianed from Papaver
somniferum

Answer: A

89. Match the microbes given in column I with
the major role played by them given in column

## II and select the correct option from the codes

 given below.| No. | Column I <br> (Microbes) | No. | Column II <br> (Functions) |
| :--- | :--- | :--- | :--- |
| I | Propionibacterium <br> sharmanii | A | Produces an <br> immunosuppressive <br> agent |
| II | Streptococcus | B | Nitrogen fixation in <br> soil |
| III | Trichoderma <br> polysporum | C | Produce Iarge holes <br> in Swiss cheese |
| IV | Rhizobium | D | Produces enzyme <br> used as clot-buster |

## A. I-C, II-A, III-D, IV-B

B. I-C, II-D, III-A, IV-B
C. I-B, II-A, III-D, IV-C
D. I-A, II-C, III-B, IV-D

Answer: B

## D Watch Video Solution

90. Given below are the steps involved in sewage treatment. Arrange them in proper sequence and select the correct option.
A. Passage of primary effluent into large
aeration tanks for mechanical agitation and pumping of air.
B. Passage of secondary effluent and formation of activated sludge.
C. Physical removal of particles through
filtration and sedimentation
D. Release of effluent from the secondary treatment plant into natural water bodies.
E. Growth of useful aerobic microbes into flocs
which significantly reduce the BOD.
A. A,C, B, E, D
B. A,B,C,D,E

## C. C,A,E,B,D

D. C,E,A,B,D

## Answer: C
