## NTA MOCK TESTS ENGLISH

## NTA NEET SET 84

## Biology

1. Study the given pedigree chart for sickle-cell anaemia and work out the genotypes of parents, $1^{\text {st }}$ child and $3^{\text {rd }}$ child in $F_{1}$ generation respectively.

2. Recognize the following flow diagram and find CORRECT option according to taxonomic hierarchy .

(a) 1-Polymoniales, 2-Sapindales, 3-Poales, 4-Dicotyledonae, 5Monocotyledonae, 6-Angiospermae.
(b) 1-Solanaceae , 2 - Anacardiaceae, 3 - Poaceae, 4-Leguminaceae, 5 Poales , 6-Angiospermae.
(c) 1- Solanum , 2-Mangifera , 3-Triticum, 4-Dicotyledonae, 5Monocotyledonae, 6 - Fungi
(d) 1-Polymoniales, 2 -Sapindales, 3 - Poales, 4-Angiospermae, 5Monocotyledonae , 6-Metazoa..
A. I-Polymoniales, 2 -Sapindales, 3 - Poales, 4 - Dicotyledonae, 5 Monocotyledonae, 6-Angiospermae.
B. 1 - Solanaceae , 2 - Anacardiaceae, 3 - Poaceae, 4 - Leguminaceae, 5 -

Poales, 6-Angiospermae.
C.I-Solanum , 2-Mangifera, 3-Triticum , 4-Dicotyledonae, 5-

Monocotyledonae, 6-Fungi
D. I-Polymoniales, 2-Sapindales, 3 - Poales, 4-Angiospermae, 5Monocotyledonae, 6 -Metazoa..

## Answer: A

## - Watch Video Solution

3. A single species might show high diversity in its distributional range at a:
A. Genetic level
B. Species level
C. Ecosystem level
D. Both (a) and (b)

## Answer: A

## - Watch Video Solution

4. 'Bt' toxin is
A. crystalline, proteinaceous, insecticidal $\beta$ endotoxin
B. amorphous , proteinaceous , insecticidal $\delta$ endotoxin
C. crystalline, proteinaceous , insecticidal $\delta$ endotoxin
D. amorphous , proteinaceous, insecticidal $\beta$ endotoxin

## Answer: C

5. Daughter will be colour blind when
(a) father is colour blind, mother is normal
(b) Mother is a carrier, father is normal
(c) Mother is a colour blind, father is normal
(d) Father is colour blind, mother is carrier
A. father is colour blind, mother is normal
B. Mother is a carrier, father is normal
C. Mother is a colour blind, father is normal
D. Father is colour blind, mother is carried

## Answer: D

## - Watch Video Solution

6. In the process of recombinant DNA technology, the isolated foreign DNA is inserted into another DNA molecule known as
A. Coding Vector
B. Lipo vector
C. Protein Vector
D. Cloning Vector

## Answer: D

## - Watch Video Solution

7. The frequency of two alleles in a gene pool is 0.19 ( A) and 0.81 (a).

Assume that the population is in Hardy-Weinberg equilibrium and
(a) Calculate the percentage of heterozygous individuals in the population.
(b) Calculate the percentage of homozygous recessive in the population.
A. $60 \%$ and $40 \%$
B. $66 \%$ and $31 \%$
C. $40 \%$ and $60 \%$
D. $31 \%$ and $66 \%$

## Answer: D

## - Watch Video Solution

8. Superburg claimed to clean up oil slicks in ocean is
A. Escherichia coli
B. Bacillus thuringiensis
C. Pastuerlla pestis
D. Pseudomonas putida

## Answer: D

## - Watch Video Solution

9. Which one of the following is WRONGLY matched?
(a) Transcription - writing information from DNA to mRNA
(b) Translation- using information in to make protein
(c) Repressor protein - Binds to operator to stop enzyme synthesis
(d) Operon-structural genes , operator, promoter and intron
A. Transcription - writing information from DNA to mRNA
B. Translation- using information in to make protein
C. Repressor protein - Binds to operator to stop enzyme synthesis
D. Operon-structural genes, operator, promoter and intron

## Answer: D

## D Watch Video Solution

10. If natality and mortality of a population are nearly same it will be termed as:
(a) Young population
(b) Stable population
(c) declining population
(d) growing population
A. Young population
B. Stable population
C. declining population
D. growing population

## Answer: B

## - Watch Video Solution

11. How many types of gametes can be produced by a diploid organism who is heterozygous for 4 loci ?
A. 4
B. 8
C. 16
D. 32

## Answer: C

## - Watch Video Solution

12. In monocots, grafting is almost impossible because they lack
(a) cambium
(b) ground tissue
(c) vascular bundle
(d) Parenchymatous cells
A. cambium
B. ground tissue
C. vascular bundle.
D. Parenchymatous cells

## Answer: A

13. Identify $A$ and $B$ in the given reaction.

Pyruvic
acid
$+\mathrm{CoA}+\mathrm{NAD}^{+} \xrightarrow[\text { Pyruvate dehydrogenase }]{\mathrm{Mg}^{2+}} A+B+\mathrm{NADH}+\mathrm{H}^{+}$
A. $A-P E P, B-C O_{2}$
B. A-Acetyl $\mathrm{CoA}, \mathrm{B}-\mathrm{CO}_{2}$
C. $\mathrm{A}-\mathrm{CO}_{2}, \mathrm{~B}-\mathrm{H}_{2} \mathrm{O}$
D. A - Acetyl CoA , $\mathrm{B}-\mathrm{H}_{2} \mathrm{O}$

## Answer: B

## - Watch Video Solution

14. In the polt of the species - area relationship for the co-efficient $z$, the axis X and Y , represents
A-axis
$y$ - axis
Species richness Area
B. ${ }^{\mathrm{x} \text {-axis }} \mathrm{y}$-axis

Area Species richness
C.
x -axis $\quad \mathrm{y}$-axis
Slope of the line Intercept
D.
x -axis $\quad \mathrm{y}$-axis
Intercept Slope of the line

## Answer: B

## - Watch Video Solution

15. Skin color inheritance observed in man is an example of
(a) Cytoplasmic inheritance
(b) Mendel's inheritance
(c) Plastid inheritance
(d) Quantitative inheritance
A. Cytoplasmic inheritance
B. Mendel's inheritance
C. Plastid inheritance
D. Quantitative inheritance

## Answer: D

## - Watch Video Solution

16. During the processing of the prohormone "proinsulin" into the mature "insulin"
A. C- peptide is added to proinsulin
B. C- peptide is removed from proinsulin
C. B- peptide is added to proinsulin
D. B- peptide is removed from proinsulin

## Answer: B

## - Watch Video Solution

17. Which of the following could be a restriction enzyme recognition site ?
A. ATGCAT
B. ATCATC
C. AAGGA
D. ATCCTA

## Answer: A

## - Watch Video Solution

18. The rate of synthesis of organic matter by consumers is
(a) net primary productivity
(b) gross primary productivity
(c) standing state
(d) secondary productivity
A. net primary productivity
B. gross primary productivity
C. standing state
D. secondary productivity

## Answer: D

## - Watch Video Solution

19. What percentage of total area in hilly regions does the National

Forests Policy suggests to be under forests
A. $30 \%$
B. $67 \%$
C. $33 \%$
D. $66 \%$

## Answer: B

20. Eukaryotic genome differs from prokaryotic genome in
A. DNA being circular
B. Possessing histones and non-histone proteins
C. having single stranded DNA
D. DNA is not organized inside nucleus.

## Answer: B

## - Watch Video Solution

21. Ecological niche is
A. the sum total of environmental factors or conditions, which determine the existence of organism, population, or community in
a particular locality
B. an ecologically adapted zone and is the address of an organism
C. the physical position and functional role of a species within the community
D. formed of all plants and animals living at the bottom of a lake

## Answer: C

## - Watch Video Solution

22. In which of the following will be observed the webbed neck condition?
(a) XXY
(b) $X Y$
(c) XO
(d) XXX
A. XXY
B. XY
C. XO
D. XXX

## Answer: C

## - Watch Video Solution

23. Select the wrong statements with respect to glycolysis.
A. It occurs outside mitochondria.
B. It is an anaerobic phase.
C. Glucose undergoes partial oxidation to form 2 molecules of pyruvic acid.
D. Glucose is phosphorylated to glucose-6-phosphate by isomerase enzyme.

## Answer: D

## - Watch Video Solution

24. Robert May places the global species diversity at about:
A. 6 million
B. 7 million
C. Slightly more than 1.5 million
D. Slightly less than 1.5 million

## Answer: B

## - Watch Video Solution

25. Which Indian plants have either been patented or attempts have been made to patent them by western nations for their commercial use ?
A. Basmati rice, neem and brazzeana
B. Turmeric, cocus, brazzeana
C. Neem, cardamom, pothos
D. Basmathi rice, neem and turmeric

## Answer: D

26. Select the CORRECT match.
(a) Sedimentary cycle - Nitrogen cycle
(b) Guano deposit - phosphorus cycle
(c) Lithosphere - Reservoir pool of carbon
(d) Quercus - Species of woodland stage
A. Sedimentary cycle - Nitrogen cycle
B. Guano deposit - phosphorus cycle
C. Lithosphere - Reservoir pool of carbon
D. Quercus - Species of woodland stage

## Answer: B

## - Watch Video Solution

27. In the DNA strand undergoing transcription has a following base pair sequence. What would be the sequence of mRNA formed from this strand?

3' GAT CTT AGC GGG AAT TCG $5^{\prime}$
A. 5' GAU CUU AGC GGG AAU UCG 3'
B. 5' CAU GAA UGC CCC UUA AGC 3'
C. 5' CUA GAA UCG CCC UUA AGC ${ }^{\prime}$
D. 3' CUA GAA UGG CCC UUA AGC 5'

## Answer: C

## - Watch Video Solution

28. All gens located on the same chromosome
A. form different groups depending upon their relative distance
B. from one linkage group
C. do not form any linkage group
D. from interactive groups that affect the phenotype

## Answer: B

## - Watch Video Solution

29. Which of the following statements is INCORRECT ?
I. The cell wall of plants is made up to homopolysaccharides while the cell wall of fungi is made up of heteropolysacchaerides.
II. The function of enzyme will stop if its tertiary structure is destroyed.
III. The cytoplasm contains $r$ - thymidylic acid and d-uridylic acid as building blocks of nucleic acids.
IV. Arachidonic acid has 20 carbon atoms including the carboxyl carbon .
A. I and II
B. III and IV
C. I and III
D. II and IV

## Answer: C

## - Watch Video Solution

30. Which is correct about joint diastole?
a. Bicuspid and tricuspid valves are open
b. Bicuspid and tricuspid valves are closed
c. Semilunar valves are open
d. Semilunar valves are closed
A. a and c
B. b and d
C. a and d
D. b and c

## Answer: C

31. On a graph paper, we have plotted the oxygen haemoglobin curve of hemoglobin seen in the embryonic stage. A new oxygen hemoglobin curve of hemoglobin seen in a 10 - year - old child is plotted on the same graph paper. with respect to this graph, which one of the following statements is correct ?
A. The new curve is on the right of the old
B. The new curve is on the left of the old curve.
C. The new curve completely overlaps the old curve.
D. Data is insufficient to comment on the position of graphs

## Answer: A

## - Watch Video Solution

32. The enzyme recombinase is required at which stage of meiosis
A. Pachytene
B. Zygotene
C. Diplotene
D. Diakinesis

## Answer: A

## D Watch Video Solution

33. Which of the following organelles does not have a double layer ?
A. nuclei
B. lysosomes
C. Chloroplasts
D. mitochondria

## Answer: A

34. If pituitary is surgically removed, blood level of sodium falls and that of potassium rises due to
A. atrophy of adrenal cortex
B. atrophy of adenal medulla
C. fact that ADH from pituitary is no longer available
D. fact that TSH from pituitary is no longer available

## Answer: A

## - Watch Video Solution

35. Select the INCORRECT match.
A. Clavicle - S-shaped collar bone having flat medial part and cylindrical outer parts.
B. Scapula -a large triangular bone situated dorsolaterally over $2^{\text {nd }}$ to $7^{\text {th }}$ rib.
C. Acetabulum - a cavity formed by the fusion of illum, ischium and pubis.
D. Partella - cup shaped sesamoid bone making knee joint

## Answer: A

## - Watch Video Solution

36. Sudden addition or deletion of genes by chance in a small population is called
(a) Sewall wright effect
(b) Mutation
(c) Gene flow
(d) Gene migration
A. Sewall wright effect
B. Mutation
C. Gene flow
D. Gene migration

## Answer: A

## - Watch Video Solution

37. A patient is diagnosed with internal bleeding, muscular pain, fever, anemia, blockage of intestinal passage. He is most likely suffering from
(a) Filariasis
(b) Amoebiasis
(c) Ascariasis
(d) Malaria
A. Filariasis
B. Amoebiasis
C. Ascariasis
D. Malaria

## Answer: C

## - Watch Video Solution

38. Which organelle is absent in human sperms?
A. Nucleus
B. Mitochondria
C. Centriole
D. Endoplasmic reticulum

## Answer: D

## - Watch Video Solution

39. What would happen if vasa deferentia of man are cut ?
A. Sperms are non - nucleate
B. Spermatogenesis does not occur
C. Semen is without sperms
D. Sperms are non-motile

## Answer: C

## - Watch Video Solution

40. Which one of the following statements is totally wrong about the occurrence of notochord, while the other three are correct
A. It is present only in larval tail in Ascidians.
B. It is replaced by a vertebral column in frog.
C. It is absent throughout life in humans from the very beginning.
D. It is present throughout life in Amphioxus.

## Answer: C

41. Which of the following statement are CORRECT?
I. Renin is a proteolytic enzyme found in gastric juice of infants which helps in the digestion of milk proteins.
II. No significant digestive activity occurs in the large intestine.
III. The egestion of faeces to the outside through the anal opening ( defecation ) is a voluntary process and is carried out by a mass peristaltic movement.
IV. Ejection of stomach contents through the mouth is a reflex action controlled by the vomiting center in the medulla.
(a) I, II and IV
(b) II, III and IV
(c) III and IV
(d) II and III
A. I, II and IV
B. II, III and IV
C. III and IV
D. II and III

## Answer: B

## - Watch Video Solution

42. Identify the correct statement regarding urine formation
A. Countercurrent mechanism works around the PCT and glomerulus.
B. To prevent diuresis, ADH facilitates water reabsorption from the
latter parts of the tubule.
C. Maximum reabsorption of electrolytes occurs in the Henley's loop.
D. A decrease in blood pressure can increase the GFR

## Answer: B

43. Which of the following is not an effect produced by parasympathetic stimulation?
A. Promotes sugar release
B. Constriction of bronchi
C. Increased saliva secretion
D. Increased stomach peristalsis

## Answer: A

## - Watch Video Solution

44. Read the following statements and mark the incorrect statement regarding cardiac muscle.
A. It is a contractile tissue present in heart
B. They are not under the control of will of the animals
C. They show relatively rapid contraction
D. Muscle fibers are multinucleated

## Answer: D

## - Watch Video Solution

45. Co- factor and prosthetic groups are $\qquad$ compounds, bound to apoenzyme.
A. organic, transiently
B. inorganic, tightly
C. organic, tightly
D. inorganic, transiently

## Answer: C

46. Plasma protein which helps in osmotic balance is
A. Albumin
B. Globulin
C. Fibrinogen
D. Heparin

## Answer: A

## - Watch Video Solution

47. A person has exhaled forcefully. The amount of air present in his lungs is
A. 0 litres
B. 3 litres
C. 1.2 litres
D. 0.5 litres

## Answer: C

## - Watch Video Solution

48. A cell divides every minute. It will fill a 100 ml beaker in one hour. How much time would it take to fill 50 ml beaker
A. 29 minutes
B. 30 minutes
C. 59 minutes
D. 60 minutes

## Answer: C

## - Watch Video Solution

49. In Mitochondria, cristae are sites for
A. protein synthesis
B. oxidation-reduction reaction
C. breakdown of macromolecules
D. phosphorylation of flavoproteins

## Answer: B

## - Watch Video Solution

50. Which one of the following is not a second messenger in hormone action?
A. $I P_{3}$
B. $C a^{2+}$
C. cAMP
D. NaHCO 3

## Answer: D

51. Which of the following statement is INCORRECT regarding actin filaments?
A. Each actin filament is made of two G actin
B. Each F actin is a polymer of G actin
C. Troponin is a complex protein distributed at regular intervals on tropomyosin
D. Tropomyosin run close to F -actin along its length

## Answer: A

## - Watch Video Solution

52. Homologous organs are
A. Wings of pigeon and Butterfly
B. Wings of Pigeon and Housefly
C. Wings of Bat and arms of Humans
D. Wings of Bat, Housefly and Butterfly

## Answer: C

## - Watch Video Solution

53. Mention the drugs which are misused/abused by certain sportsperson to enhance their performance.
A. Narcotic analgesics
B. Anabolic steroids
C. Diuretics and certain hormones
D. All of the above

## Answer: D

54. The function of ovary is
a. To produce female gamete.
b. To provide the site for fertilisation
c. To provide the site for implantation
d. To produce several steroid hormones
(1) a and b
(2) a, b and d
(3) a, b and d
(4) a and d
A. a and b
B. $\mathrm{a}, \mathrm{b}$ and d
C. $\mathrm{a}, \mathrm{b}$ and d
D. a and d

## Answer: D

55. GIFT is an assisted reproductive technique used for intended couples who are unable to have children. What is done in this?
A. embryo implantation after in vitro fertilization
B. egg implantation for in vivo fertilization
C. zygote implantation after in vivo fertilization
D. egg implantation before in vitro fertilization

## Answer: B

## - Watch Video Solution

56. Which one of the following phyla is correctly matched with its two general characteristics?
A.

Annelida Notochord at some stage and sperate anal and urinary ope
B.

Echinodermata Pentamerous radial symmetry and mostly internal
C.

Mollusca Normally oviparous and development through a trochoph
D.

Arthropoda Body divided into head, thorax and respiration by trac

## Answer: C

## - Watch Video Solution

57. Renin is secreted by
A. juxtaglomerular cells of juxtamedullary nephrons in response to
high blood pressure
B. juxtaglomerular cells of juxtamedullary nephrons in response to
C. juxtaglomerular cells of cortical nephrons in response to high blood pressure
D. juxtaglomerular cells of cortical nephrons in response to increased osomolarity.

## Answer: B

## - Watch Video Solution

58. The spinal cord in man extends from the
A. medulla oblongata to the second thoracic vertebra.
B. level of third cervical vertebra to the coccyx
C. level of the axis to the lowest lumber vertebra
D. medulla oblongata to the level of the second lumbar vertebra

## Answer: D

59. Read the given statements about the blood vascular system of cockroach.
I. The circulatory system of cockroach is of closed type
II. It contains no blood vessels except aorta of the heart .
III. The heart is 6 - chambered.

IV The haemolymph is composed of coloruless plasma and haemocytes.
Which of the statement (s) given above is / are INCORRECT?
(a) only I
(b) I,II and III
(c) I and III
(d) only IV
A. only I
B. I,II and III
C. I and III
D. only IV

## Answer: C

## D Watch Video Solution

60. Inulin is apolymer of
A. amino acids
B. glucose
C. fructose
D. nucleotides

## Answer: C

Watch Video Solution
61. Middle lamella is
A. plasma membrane covering the two cells together.
B. made of calcium pectate or magnesium pectate.
C. a pore in the plasma membrane of cell.
D. a cell wall between to adjacent cells.

## Answer: B

## - Watch Video Solution

62. Reception for protein hormones are located
(a) in the nucleus
(b) in the cytoplasm
(c) on the cell surface
(d) on the endoplasmic reticulum
A. in the nucleus
B. in the cytoplasm.
C. on the cell surface
D. on the endoplasmic reticulum.

## Answer: C

## - Watch Video Solution

63. Resource partitioning in an environment with limited resources and interbreeding species leads to
A. convergent evolution
B. divergent evolution
C. parallel evolution
D. non-stabilizing evolution.

## Answer: B

## - Watch Video Solution

64. Which of the following cells is NOT a part of cellular barriers?
(a) Interferons
(b) Natural killer cell
(c) Kupffer cell
(d) Polymorphonuclear lymphocytes
A. Interferons
B. Natural killer cell
C. kupffer cell
D. Polymorphonuclear lymphocytes

## Answer: A

## - Watch Video Solution

65. Match the columns I and II, and choose the correct combination from the options given.

Column I
a. Opioids
b. Cannabinoids
2. Inhalation and oral
ingestion
Snorting
c. Coka alkoloids 3. Snorting

## Column II

1. Snorting and injection
A. (a) - (ii) , (b) - (v), (c) - (i), (d) - (iii) , (e) - (iv)
B. (a) - (i) , (b) - (iv) , (c) - (v) , (d) - (ii) , (e) - (iii)
C. (a) - (ii) ,
(b) - (iv) , (c) - (v) , (d) - (iii) , (e) - (i)
D. (a) - (i) , (b) - (iv) , (c) - (v), (d) - (iii), (e) - (ii)

## Answer: C

## - Watch Video Solution

66. Role of suspensor is:
A. To push the embryo in the nutritive zone
B. To derive nutrition from the embryo
C. To help in the fertilization.
D. To help in maturation of the embryo.

## Answer: A

67. Which plants part possesses polyarch condition of vasuclar bundles with a well developed pith?
A. dicot root.
B. monocot root.
C. dicot root.
D. monocot stem.

## Answer: A

## - Watch Video Solution

68. The genetic material in the TMV is
A. double - stranded DNA.
B. single - stranded DNA.
C. double - stranded RNA.
D. single - stranded RNA.

Answer: D

## - Watch Video Solution

69. Match the following and choose the correct combination from the options given.

# Column I Column II 

A. Mustard

1. Polyadelphy
B. Brinjal 2. Diadelphy
C. Citrus 3. Variations in the length of filaments
D. Pea 4. Epipetalous stamens
A. $\mathrm{A}-4, \mathrm{~B}-3, \mathrm{C}-2, \mathrm{D}-1$
B. $\mathrm{A}-1, \mathrm{~B}-2, \mathrm{C}-3, \mathrm{D}-4$
C. $\mathrm{A}-2, \mathrm{~B}-3, \mathrm{C}-4, \mathrm{D}-1$
D. $A-3, B-4, C-1, D-2$

## Answer: D

70. Reconginse the figure and find out the CORRECT matching :

A. a - Seta , b-Capsule, c-Gametophyte , d-Sporophyte
B. a-Capsule, b-Seta , c-Sporophyte, d-Gametophyte
C. a - Seta , b-Capsule, c-Sporophyte, d-Gametophyte
D. a-Capsule, b-Seta , c-Gametophyte , d-Sporophyte

## Answer: C

## - Watch Video Solution

71. The primary treatment basically involves the physical removal of particles from the sewage through
(A) filtration
(B) sedimentation
(C) microbial treatment
(D) Both (A) and (B)
A. filtration
B. sedimentation
C. microbial treatment
D. Both (A) and (B)

## Answer: D

## - Watch Video Solution

72. If $2 n=12$, the number of chromosomes in nucellus, integument and egg cell would be:
A. 12, 12, 6
B. 12, 18, 24
C. $12,12,12$
D. 12, 12, 24

## Answer: A

73. In which of the following, all three are macronutrients
A. Boron, zinc , manganese
B. Iron , copper , molybdenum
C. Molybdenum, magnesium , manganese
D. Nitrogen , magnesium , phosphorus

## Answer: D

## - Watch Video Solution

74. In $C_{4}$ plants ,
A. grana is present in mesophyll cells and absent in bundle sheath cells.
B. grana is absent in mesophyll cells and present in bundle sheath cells.
C. grana is present in both mesophyll and bundle sheath cells.
D. grana are absent in both mesophyll and bundle sheath cells.

## Answer: A

## - Watch Video Solution

75. The pigment that absorbs red and far red light in plants is
A. Option1 carotene.
B. Option2 xanthophyll.
C. Option3 chlorophyll.
D. Option 4 phytochrome.

## Answer: D

## - Watch Video Solution

76. Diffusion pressure of the pure solvent is
A. always more than its solution.
B. sometimes more than its solution.
C. less than its solution
D. equal to its solution

## Answer: A

## - Watch Video Solution

77. In tissue culture technique the source of carbon is
A. Option 1 fructose
B. Option2 $\mathrm{CO}_{2}$
C. Option 3 maltose
D. Option4 sucrose

## Answer: D

78. The collective used for phelloderm cork cambium and cork is
A. pericycle
B. periderm
C. protoderm
D. procambium

## Answer: B

## - Watch Video Solution

79. Azolla is used as biofertilizer because it
A. multiplies very fast to produce massive biomass.
B. has an association of nitrogen - fixing Rhizobium
C. has an association of nitrogen - fixing cyanobacteria
D. has an association of mycorrhiza

Answer: C

## - Watch Video Solution

80. The TS of the ovary shows in the figure represent

A. Swollen placenta
B. Binocular ovary
C. Bicarpellary ovary
D. All of these

## Answer: D

## - Watch Video Solution

81. Match the columns I and II, and choose the CORRECT combination from the options given.
Column I $\quad$ Column II

Find the CORRECT match.
A. $a-i i, b-i, c-i i i$
B. $a-i i i, b-i i, c-i$
C. $a-\mathrm{i}, \mathrm{b}-\mathrm{iii}, \mathrm{c}-\mathrm{ii}$
D. $a-i i, b-i i i, c-i$

## Answer: D

## D Watch Video Solution

82. In human beings, monosomy of sex chromosomes causes:
A. Down's syndrome
B. Kinefeter's syndrome
C. Turner's syndrome
D. Edward's syndrome

## Answer: C

## - Watch Video Solution

83. Parthenocarpic fruits are
A. dry and indehiscent
B. fleshy and seedless
C. multi seeded
D. provided with haploid embryo

## Answer: B

## - Watch Video Solution

84. Select the INCORRECT match.
A. Morels and truffles - Phycomycetes
B. Puff balls and toad stools - Basidiomycetes
C. Early blight of potato - Alternaria solani
D. Late blight of potato - Phytophthora infestans

## Answer: A

85. Which of the following statement is incorrect?
A. In monocotyledons, the leaf base expands into a sheath covering the stem partially or wholly
B. In some grasses, the leaf base may become swollen, which is called the pulvinus
C. The leaf blade is the green expanded part of the leaf with verins and veinlets
D. Leaves originate from shoot apical meristems and are arranged in an acropetal order.

## Answer: B

## - Watch Video Solution

86. Commelina produces:
A. Cleistogamous flowers
B. Chasmogamous flowers
C. Both cleistogamous and chasmogamous types of flowers
D. Either cleistogamous or chasmogamous flowers at a time

## Answer: C

## - Watch Video Solution

87. All the following are correct about enzymes, except:
A. Lower the energy of activation of reaction
B. Make the equilibrium more favourable for the organism
C. Lower the energy of product and increases the energy of reactant .
D. Are altered permanently in the reaction they catalyse

## Answer: A

88. The main functions of the root is
A. absorption of water and minerals
B. to provide proper anchorage of plant
C.to store reserve food material and synthesis of plant growth regulators
D. All of the above

## Answer: D

## - Watch Video Solution
