India's Number 1 Education App

## BIOLOGY

## NTA MOCK TESTS ENGLISH

## NTA NEET SET 93

1. Mark the incorrect answer regarding the number of structure in cockroach.
A. Male has three Phallomeres
B. 14-16 eggs in each ootheca
C. Each compound eye consist of 2000 ommatidia

D. 40-80 malpighian tubules

## Answer: D

## - Watch Video Solution

2. Level of estrogen and progesterone are minimum at the time of
A. follicular phase
B. ovulation
C. secretory phase

D. onset of menstrual phase

## Answer: D

D Watch Video Solution
3. Common cold differs from pneumonia in, that
A. the causative agent for common cold is
bacteria and while for pneumonia is
virus
B. Common cold affects upper respiratory
tract while in pneumonia lower
respiratory tract including lung is infected
C. a nutritional deficiency can lead to cold while pneumonia is an infectious disease D. there is no vaccine available to prevent either of the two diseases

## Answer: B

## D Watch Video Solution

4. Given below are few statements related to
the nervous system. Find out the INCORRECT statement.
A. Organ of Corti is located on the tectorial membrane.
B. The membranous semi-circular canals of
internal ear are suspended in the perilymph of the bony canals.
C. At the posterior pole of the eye lateral
to the blind spot, there is a yellowish
pigmented spot called macula lutea with
a central pit called the fovea.

## D. Along with the hypothalamus, the limbic

system is involved in the regulation of
sexual behavior, expression of emotional reactions and motivation

## Answer: A

## D Watch Video Solution

5. Read the following statement and select the incorrect one amongst the following.
A. $T_{4}$ is the chief circulating form of throid
hormone, but is less active than $T_{3}$
B. Acromegaly is usually associated with
hypoglycemia and hypotension
C. Thyroxine promotes the body growth and metamorphosis in amphibians
D. Hypothalamus produces the hormone concerned with milk ejection.

## Answer: B

6. Towards the lateral side of shoulder, clavicle articulates with
A. acromion process of scapula
B. humerus
C. glenoid cavity of scapula
D. sternum

Answer: A
7. Which of these is a drug of choice for AIDS treatment. ?
A. Rifampicin
B. Zidovudine
C. Streptomycin
D. Penicillin

Answer: B

D Watch Video Solution
8. Bacillus thuringiensis (Bt) strains have been used for designing novel
A. bioinsecticidal plants
B. bio-mineralization process
C. biofertilizers
D. bio-metallurgical techniques

Answer: A

D Watch Video Solution
9. Which of the following statements is INCORRECT?
I. Human kidneys can produce urine nearly six
times more concentrated than the initial
filtrate formed.
II. An increase in body fluid volume can switch
on the osmoreceptors and stimulate ADH.
III. Substance like glucose, amino acids, $N a^{+}$,
etc., in the filtrate, are reabsorbed actively by
the renal tubule whereas the nitrogenous
wastes are absorbed by passive transport
IV. Each kidney has nearly one million complex
tubular structures called nephrons which are the functional units.
A. I and II
B. III and IV
C. I, II and III
D. II, III and IV

Answer: A
( Watch Video Solution
10. Contraction of diaphragm increases the volume of the thoracic chamber in the ....(A).... axis while the contraction of external intercostal muscles increases the volume of the thoracic chamber in the ..... (B).... axis.
A. (A) : antero-posterior, (B) : anteroposterior
B. (A) : dorso-ventral, (B) : dorso-ventral
C. (A) : antero-posterior, (B) : dorso-ventral
D. (A) : dorso-ventral, (B) : antero-posterior

## Answer: C

## - Watch Video Solution

11. The correct arrangements of cardiac valves
from the right side to the left sides is
A. Tricuspid value - Bicuspid value -

Pulmonary semilunar value - Aortic

Semilunar value
B. Tricuspid value - Pulmonary semilunar
value - Bicuspid value - Aortic Semilunar
value

## C. Tricuspid value - Aortic Semilunar value -

Bicuspid value - Pulmonary semilunar
value

# D. Tricuspid value - Pulmonary semilunar 

value - Aortic Semilunar value - Bicuspid
value
12. Common bile duct is form by the union of
A. right and left hepatic ducts
B. right and left cystic ducts
C. common hepatic duct and cystic duct
D. left hepatic duct and cystic duct

## Answer: C

# 13. Honey has high content of 

A. laevulose
B. glucose
C. sucrose
D. galactose

Answer: A
14. Given below is a diagrammatic
representation of epithelium.

Choose the CORRECT option w.r.t. the location of this given epithelium.
A. PCT and DCT
B. Walls of blood vessels and air sacs

## C. Bronchioles and fallopian tubes

## D. Urinary bladder and nephrons of kidney

## Answer: C

## D Watch Video Solution

15. Birth canal is formed by
A. uterus along with vagina
B. uterus along with cervix
C. cervical canal along with vagina

## D. uterus , cervix and vagina

## Answer: C

## D Watch Video Solution

16. Bronchoconstriction of smooth muscles is
witnessed by asthma patients. It is triggered due to release of ..X.. and treated by ....Y...
A. X - histamine , Y -aldosterone
B. $X$ - antihistamine $Y$ - epinephrine

## C. X- antihistamine Y - prednisolone

D. X - histamine , Y - adrenaline

## Answer: D

## D Watch Video Solution

17. Which of the following represents the

## correct combination without any exception?

| Characteristics | Class |
| :--- | :---: |
| Body covered with feathers; |  |
| Skin moist and glandular; | Aves |
| hindlimbs form wings; lungs |  |
| with air sacs |  |

## Answer: D

## - Watch Video Solution

18. In brain, the region for touch perception which includes , pressure and temperature and pain is located in
A. frontal lobe
B. Parietal lobe
C. temporal lobe
D. Occipital lobe

Answer: B

D Watch Video Solution
19. Calcitonin
A. is secreted by the parathyroid glands
B. Causes blood calcium levels to decrease
C. insufficiency results in weak bones and tetany
D. levels increase when blood Calcium level
decrease

## Answer: B

## D Watch Video Solution

20. Scapula is a arge triangular flat bone situated in the dorsal part of the thorax between
A. First and fifth ribs
B. Second and seventh ribs
C. third and seventh ribs
D. Second and sixth ribs

Answer: B

D Watch Video Solution

## 21. Hormone releasing IUD is

A. Lippe's loop
B. Multi load 375
C. CuT

D. LNG-20

## Answer: D

## 22. Polyethylene glycol method is used for

A. biodiesel production
B. Seedless fruits production
C. gene transfer without a vector

D. energy production from sewage

## Answer: C

## D Watch Video Solution

23. The glomerular filtrate contains
A. urea , uric acid, globulin
B. urea, vitamin C, RBC
C. urea , uric acid, albumin
D. urea, uric acid, glucose and water

Answer: D
24. Which of the following factors are favorable for the formation of oxyhaemoglobin?
I. high $p O_{2}$
II. low $p \mathrm{CO}_{2}$
III. lesser $H^{+}$concentration
IV. lower temperature
A. I,II and III
B. I,III and IV
C. I and IV

## D. I, II , III and IV

## Answer: D

## D Watch Video Solution

25. How many nucleotides are used for the
synthesis of $A$ chain and $B$ chain of insulin?
A. 90 for $A$ and 63 for $B$
B. 63 for $A$ and 90 for B
C. 92 for $A$ and 61 for $B$

## D. 60 for $A$ and 61 for $B$

Answer: B

## D Watch Video Solution

26. The given diagram is of adenine . What group should be present in the spot marked $X$

A. $-\mathrm{CH}_{3}$
B. $-\mathrm{NH}_{2}$
C. -COOH
D. $-\mathrm{CH}_{2} \mathrm{OH}$

Answer: B

## - Watch Video Solution

27. The end of T-wave in standard ECG of a normal person represents
A. beginning of Ventricular systole
B. end of Ventricular systole
C. beginning of atrial diastole
D. end of atrial diastole

## D Watch Video Solution

28. The pancreatic juice contains enzymes
A. trypsinogen, chymotrypsinogen
procarboxypeptidases, amylase, lipases
and nucleases.
B. trypsinogen,
chymotrypsinogen
procarboxypeptidases, aminopeptidases,
amylases, lipases and nucleases.
C. trypsinogen,
chymotrypsinogen
procarboxypeptidases, aminopeptidases,
amylases, lipases and nucleases ,
nucleotidases, nucleosidases.
D. trypsinogen, chymotrypsinogen
procarboxypeptidases, amylases, lipases, pepsinogen and nucleases,

## Answer: A

29. In human sperm, nebenkern refers to
A. Post acrosomal sheath
B. Mitochondrial spiral
C. Proximal centriole

D. Axial filament

## Answer: B

30. Select the correct statement from the ones

## given below.

A. Barbiturates when given to criminals make them tell the truth
B. Morphine is often given to persons who
have under gone surgery as a pain killer
C. Chewing tobacco lowers blood pressure and heart rate
D. Cocaine is given to patients after surgery as it stimulates recovery

Answer: B

## - Watch Video Solution

31. Which of these statements about the adrenal cortex is true ?
A. It secretes some androgens

B. The<br>zonaglomerulosa<br>secretes

aldosterone
C. The zonafasciculata is stimulated by

## ACTH

D. All of the above

## Answer: D

## D Watch Video Solution

## 32. Restriction endonuclease

A. cuts the DNA molecule randomly
B. cuts the DNA molecule at specific sites

# C. restricts the synthesis of DNA inside the 

nucleus
D. synthesizes DNA

Answer: B

## D Watch Video Solution

33. During protein synthesis which of the following is TRUE?
A. $M n^{++}$is required for completion of
ribosome
B. $3^{\prime}$ of mRNA enters the ribosome
C. 23s rRNA in bacteria is the enzyme
ribozyme that act as catalyst for the formation of peptide bond.
D. EF- Ts helps on codon-anticodon recognition.

## Answer: C

34. How many chromosomes present in gymnospermic endosperm if leaf has 20 chromosomes ?
A. 6
B. 10
C. 18
D. 24

Answer: A

D Watch Video Solution
35. At which stage of meiosis does the genetic constitution of gametes is finally decided
A. Metaphase-I
B. Anaphase-II
C. Metaphase-II
D. Anaphase-I

Answer: D
36. The stem of Maize and Sugarcane have support roots coming out of the lower nodes of stem. They are called
A. Prop roots
B. Stilt roots
C. Pneumatophores
D. Adventitious roots

Answer: B

D Watch Video Solution
37. How many species of animals have been recorded from India?
A. Twice of the plant species
B. Half of the plant species
C. Equal to the fungi species
D. Both (A) and (C)

## Answer: A

38. Find out the correct matching:

A. a-frond, b-stipe, c-holdfast
B. a-stipe, b-frond, c-holdfast
C. a-frond, b-holdfast, c-stipe
D. a-stipe, b-holdfast, c-frond

## Answer: A

D Watch Video Solution
39. Which of the following describes the characters of the family Fabaceae?
A. pinnately compound leaf, zygomorphic
flower, racemose
B. reticulate venation, zygomorphic,
cymose
C. exstipulate, actinomorphic, synandrous
D. alternate leaves, bisexual, bicarpellary

Answer: A

## - Watch Video Solution

40. Select the mismatched pair out of the following
A. Radial vascular bundle - xylem and phloem on different radii
B. Bicollateral vascular bundle - phloem
present on the both side of xylem
C. Open vascular bundle - phloem
surrounds xylem

# D. Conjoint vascular bundle - xylem and 

 phloem on same radii
## Answer: C

## D Watch Video Solution

41. The relationship of DPD , OP , TP and WP is
A. $O P \times T P$
B. $O P \times T P$
C. OP - WP

## D. TP - WP

## Answer: C

## D Watch Video Solution

42. The nodules in a plant root where nitrogen
fixing bacteria live forms from cells of the
A. Epidermis
B. Cortex
C. Endodermis

## D. Vascular cylinder

## Answer: B

## D Watch Video Solution

43. Thylakoids removed from chloroplasts were
kept in illuminated culture having $C_{2}$ and water, it did not produce sugar because of
A. absence of enzymes
B. non-linking of PS I and PS II

## C. absence of light trapping molecules

D. non formation of assimilatory power

## Answer: A

## D Watch Video Solution

44. Consider the first reaction of TCA cycle.

Acetyl $\mathrm{CoA}+\mathrm{OAA}+\mathrm{H}_{2} \mathrm{O} \xrightarrow[\text { synthase }]{\text { Citrate }} A+C o A$
What is true about compound $A$ ?
A. First product of TCA cycle
B. Tricabxoylic acid and six carbon

## compound

C. It undergones reorganisation in the presence of enzyme aconitase to from
cis-aconitate

D. All of these

## Answer: D

45. If the seeding are grown in darkness :
1)They are of the same size as those grown in
light
2) They are much healthier than those grown
in light
3) they are similar to those grown in light
4) They are taller than those grown in light
A. they are of the same size as those grown
in light
B. they are much healthier than those grown in light
C. they are similar to those grown in light
D. they are taller than those grown in light

## Answer: D

## D Watch Video Solution

46. Arrange the various proteins involved DNA replication in the correct sequence they are used.
(i) single strand binding proteins
(ii) Topoisomerase
(iii) Phosphorylase
(iv) DNA ligase
(v) Helicase
A. $(i i i) \rightarrow(v) \rightarrow(i) \rightarrow(i i) \rightarrow(i v)$
B. $(i) \rightarrow(i i) \rightarrow(v) \rightarrow(i i i) \rightarrow(i v)$
C. $(v) \rightarrow(i) \rightarrow(i v) \rightarrow(i i) \rightarrow(i i i)$
D. $(v) \rightarrow(i i) \rightarrow(i) \rightarrow(i i i) \rightarrow(i v)$

Answer: A
47. In himgiri, karan Rai, Pusa Gaurav, Pusa
sem-2, Pusa snowball k-1, pusa a-4 and pusa komal, how many crops are diseas resistance and pest resistance respectively?
A. 3,4
B. 4,3
C. 2,5
D. 6,1

Answer: B

## - Watch Video Solution

48. Antibiotics have greatly improved our capacity to treat deadly diseases such as
A. Plague, whooping cough, polio
B. Plague, polio, AIDS, whooping cough,
diphtheria and leprosy
C. Plague, AIDS, whooping cough, diphtheria
D. Whooping cough, diphtheria and leprosy

## Answer: D

## D Watch Video Solution

49. If a population of 50 Paramecium present in a pool increases to 150 after an hour, what would be the growth rate of population?
A. 5 per hour
B. 50 per hour
C. 200 per hour
D. 100 per hour

## Answer: D

## D Watch Video Solution

50. Given below is one of the types of ecological pyramids. This type represents

A. pyramid of numbers in a grassland

B. pyramid of biomass in a fallow land

C. pyramid of biomass in a lake

## D. energy Pyramid in a spring

## Answer: C

51. Choose the correct pair from the following .
A. Environment Act - 1986
B. Montreal protocol - 1997
C. JFM - 1731
D. Air pollution control Act - 1974

Answer: A
( Watch Video Solution

# 52. Choose the incorrect statement about the 

 plasma membrane.A. The bilipid layer is made up of phosphoglycerides.
B. The membrane of the erythrocyte has
approximately 40 per cent protein and

52 per cent lipids
C. Peripheral proteins lie on the surface of membrane while the integral proteins
are partially or totally buried in the membrane.
D. The fluid nature of the membrane is important for functions like cell growth and formation of intercellular junctions.

## Answer: B

## - Watch Video Solution

53. The minimum number of meiotic divisions to obtain 1000 pollen of wheat are
A. 250
B. 500
C. 1000
D. 1250

Answer: A
(D) Watch Video Solution
54. Match Column -I with column-II and select the CORRECT option from the codes given

## below

|  | Column - I |  | Column - II |
| :--- | :--- | :--- | :--- |
| (P) | Vessels | (i) | Cells are living, with thin <br> cellulosic cell walls |
| (Q) | Tracheids | (ii) | Cells possess highly thickened <br> walls with obliterated central <br> lumen |
| (R) | Xylem fibres | (iii) | Individual members are <br> interconnected Cells are living, <br> with thin cellulosic cell walls |
| (T) | Xylem <br> parenchyma | Elongated tube-like cells with <br> (iv $)$ <br> thick, lignified walls and <br> tapering ends |  |

$$
\begin{aligned}
& \text { A. (P) - (iv), (Q) - (iii), (R) - (ii), (T) - (i) } \\
& \text { B. (P) - (iii), (Q) -(iv), (R) -(ii), (T) - (i) } \\
& \text { C. (P) -(ii), (Q) - (iv), (R) -(iii) , (T) - (i) }
\end{aligned}
$$

D. (P) - (iv), (Q) -(ii) , (R) -(iii) , (T) - (i)

Answer: B

## D Watch Video Solution

55. For effective functioning of PS II, the ions
required are
A. $M n^{+}, C l^{-}$
B. $M g^{+}$and $N O^{-3}$
C. $\mathrm{Fe}^{+}$and $\mathrm{Cl}^{-}$
D. $K^{+}$and $N a^{+}$

## Answer: A

## D Watch Video Solution

56. All of the following processes can release $C O_{2}$ except
A. alcoholic fermentation
B. oxidative decarboxylation and Krebs'
cycle

## C. oxidative phosphorylation

## D. Conversion of $\alpha$ - ketoglutaric to succinic

 acid
## Answer: C

## D Watch Video Solution

57. Euchromatin is:
a. Loosely packed b. Stains light c.

Transcriptionally active d. Early replicating

Choose the option with the correct choice of characters.

A. a and c only

B. a, b, c, and d
C. b, c, and d only
D. a, b, and c only

Answer: B
( Watch Video Solution

# A. The amount of the oxygen that would be 

 consumed to oxidize all the inorganic matter in one liter of waterB. The amount of the oxygen that would be

consumed if all the organic matter in
one liter of water were oxidised by
bacteria.
C. The amount of the oxygen that would be
consumed if all the inorganic matter in
one liter of water were oxidised by
bacteria.
D. The amount of the oxygen that would be
produced if all the organic matter in one
liter of water were oxidised by bacteria.

## Answer: B

## D Watch Video Solution

59. In a graph of population, on $x$-axis time and on $y$-axis population is plotted. A parallel line to $x$-axis shows:
A. Natality equal to mortality
B. Natality decreases mortality increases
C. Natality constant mortality increases
D. Natality increases mortality decreases

Answer: A
60. What proportion of individuals will have
the genotype PpQQRrSstt if their parents had genotypes PPQqRRssTt and PpQQrrSSTt ?
A. $1 / 8$
B. $1 / 16$
C. $1 / 256$
D. $1 / 64$

Answer: B

D Watch Video Solution
61. The soil which is used in polishing ,
filtration of oils and syrups are made of

# A. cellulosic <br> plates <br> on <br> surface 

dinoflagellates
B. cell wall of chrysophytes
C. cell body of desmids
D. extremely resistant spores of slime moulds

Answer: B

## Watch Video Solution

62. Identify the family which shows the following diagnostic features.

Flowers pentamerous, gynoeciumbicarpellary,syncarpous, ovary placed obliquely , placentation axile , placenta swollen.
A. Solanaceae
B. Leguminosae
C. Papilionaceae
D. Liliaceae

Answer: A

## D Watch Video Solution

63. Why are amino acids also called $\alpha$ - amino
acids ?
A. They have $\alpha$ - carbon with amino and
acid group.
B. They are rotated clockwise.
C. They are rotated anti - clockwise

# D. They rotate the plane of polarized light 

 to the right.
## Answer: A

## - Watch Video Solution

64. In a flowering plant, archesporium gives
rise to
A. only the wall of the sporangium
B. tetrad of haploid microspores

## C. wall and the tapetum

## D. only tapetum and sporogenous cells

## Answer: B

## D Watch Video Solution

65. A DNA sequence undergoes three
subsequent point mutations which result in
subsequent changes in the transcription of mRNA as shown below :

Original mRNA:

AUG CAU CUC ACG GAU UAG

Point mutation 1 :

AUG CAU CUU ACG GAU UAG
point mutation 2 :

AUG CAG GCU UAC GGU AUA
point mutation 3 :

AUG CAU GCU UAA GGU AUA

Select the correct sequence of point mutations that occurred in DNA.
A. Missense mutation - Frame shift mutation - Nonsence mutation
B. Silent mutation - Nonsense mutation -

## Frame shift mutation

C. Silent mutation - Frame shift mutation -

Nonsense mutation
D. Missense mutation - Frame shift
mutation - Silent mutation

Answer: C

## D Watch Video Solution

66. One of the most important differences in
the environmental condition of primitive earth
and present - day earth is :
A. There was no water present in primitive
earth
B. The primitive earth's atmosphere was of
reducing type
C. There was no atmosphere in the primitive earth

# D. Hydrogen was present in free state in 

 primitive earthAnswer: B

## D Watch Video Solution

67. Which of the following statement is INCORRECT?
A. The pioneer community in hydrosere are phytoplanktons.
B. The climax community remains stable even if environment changes
C. Both hydrarch and xerarch successions
lead to mesic conditions.
D. As succession proceeds, the number and
type of animals and decomposers
changes.

## Answer: B

68. If mother's blood group is A and father's blood group is B, child's blood could be
A. $A, B, A B$
B. A, B
C. $A, B, A B, O$
D. $A, A B$

Answer: C

- Watch Video Solution

69. Find the incorrect statement from the following .
(a) Tropical rain forests cover around 6 percent of earth's land surface.
(b) Animals with migratory habits are badly affected by habitat loss and fragmentation.
(c) Mammals and birds require small territories.
(d) Amazon rain forest is being cut and cleared
for soya bean cultivation or for conversion to
grasslands for raising beef cattle
A. tobacco, grassland
B. grassland, barren land
C. soyabeans, grassland
D. grassland, soyabean

## Answer: C

## D Watch Video Solution

70. The
characteristic
pigment
of

Cyanobacteria is
A. chlorophyll a

## B. fucoxanthin

C. phycocyanin
D. chlorophyll d

## Answer: A

## D Watch Video Solution

71. In the special mode of reproduction observed in lemons, the embryos develop directly from the
A. nucellus
B. zygote
C. synergids or antipodals in an embryo sac
D. accessory embryo sacs in the ovule.

## Answer: A

## D Watch Video Solution

72. Morgan worked with Drosophila melanogaster because.
i) they complete their life cycle in two months.
ii) male and female are easily distinguishable.
iii) a single mating could produce a large number of progeny flies.
iv) it has many types of hereditary variations
that can be seen with low power microscopes.
A. i,ii
B. ii, iii , iv
C. i,ii , iii
D. i,ii,iii,iv

Answer: B
73. Refer to the figures of skull given below and indentify the one which has evolved recently.
A.

## Answer: D

## - Watch Video Solution

74. Which statement below best describes the
ways that energy and pesticides are transferred between levels in food chains?
A. Available energy increases and pesticide
concentrations increase as you move up
a food chain.
B. Available energy decreases and pesticide
concentrations increase as you move up
a food chain.
C. Available energy decreases and pesticide
concentrations decrease as you move up
a food chain.

# D. Available energy increases and pesticide 

concentrations decrease as you move up a food chain.

## Answer: B

## D Watch Video Solution

75. 'Loss of rivets on the wings" signifies
in ecosystem according to "rivet popper" hypothesis.
A. causing any species to become extinct
B. proper functioning of ecosystem
C. extinction of key species that drives
major ecosystem
D. weak species

Answer: C

## - Watch Video Solution

76. In some fungi such as.............., the fusion of
two haploid cells immediately results in
diploid cell while in other group of fungi like an intervening dikaryotic stage occurs, called dikaryophase.

Phycomycetes, Basidiomycetes
Basidiomycetes, Ascomycetes
Ascomycetes, Phycomycetes
Phycomycetes, Deuteromycetes
A. Phycomycetes , Basidomycetes
B. Basidomycetes, Ascomycetes

# C. Ascomycetes, Phycomycetes 

D. Phycomycetes, Deuteromycetes

## Answer: A

## D Watch Video Solution

77. Which of the following flowers is usually

NOT used for the laboratory study of pollen germination ?
A. Crotolaria
B. Vinca
C. Balsam
D. Cucumber

## Answer: D

## D Watch Video Solution

78. Select the WRONG pair from the following
A. 47, XXY - characteristic palm crease
B. trisomy of 21 - retarded mental and physical development
C. phenylketonuria - mental retardation
D. 45, XO - sterility

## Answer: A

## D Watch Video Solution

79. The ratio of methane, ammonia and hydrogen in Stanley Miller's experiment was
A. $3: 1: 2$
B. 2:1:2
C. 1:2:1
D. 5:4:1

Answer: B

## - Watch Video Solution

80. The height of a plant is controlled by three genes. The maximum height in the species is

24 inches, wherease the minimum height in
the species is 6 inches. What would be the height of a plant of the same species whose genotype in AaBBcc?
A. 12 inches
B. 15 inches
C. 18 inches
D. 21 inches

Answer: B

D Watch Video Solution
