

BIOLOGY

BOOKS - CENGAGE BIOLOGY

(ENGLISH)

BIOTECHNOLOGY:PRINCIPLES AND PROCESSES

Exercises

1. 3'-5' exonucleolytic degradation of DNA is performed by which enzyme ?

- A. a.DNA polymerase
- B. b.Alkaline phosphatase
- C. c.DNA ligase
- D. d.RNA polymerase

Answer: A

Watch Video Solution

2. The technique of gel electrophoresis was developed by

A. a.Kary Mullis

B. b.J.S Chamberlain

C. c. A.Tiselius

D. d.F.Sanger

Answer: C

Watch Video Solution

3. Which of the following dyes can be used to visualize nucleic acid after electrophoresis ?

- A. a.Acridine orange
- B. b.Ethidium bromide
- C. c.Bromophenol blue
- D. d.Both (1) and (2)

Answer: D

Watch Video Solution

4. Which of the following bonds are formed by the action of DNA ligase ?

- A. Sugar-phosphate bond
- B. Phosphodiester bond
- C. Both (1) and (2)
- D. Phosphate-phosphate bond

Answer: C

Watch Video Solution

5. Who were responsible for the isolation of "methylase" kind of enzyme from E coli in 1960's ?

A. Cohen and Boyer

B. Banting and Best

C. Linn and Arber

D. Smith and Wilcox

Answer: C

Watch Video Solution

6. The specific sequence recognized by "molecular scissors" is called

A. Isomer

B. Isobar

C. Misnomer

D. Palindrome

Answer: D

Watch Video Solution

7. When a piece of DNA is digested with Eco RI, what kind of ends are created ?

- A. Blunt ends
- B. Flush ends
- C. Cohesive ends
- D. Non-staggered ends

Answer: C

Watch Video Solution

8. The sticky ends generated by the action of Eco RI on insert DNA facilitate the action of which enzyme ?

- A. DNA polymerase
- B. Taq polymerase
- C. Alkaline phosphatase
- D. DNA ligase

Answer: D

Watch Video Solution

9. Which is incorrect with respect to DNA polymerase III?

A. It requires ATP for polymerase action.

B. It is required for PCR.

C. It is more active than DNA polymerases I and II.

D. It requires a pre-formed DNA template to work on.

Answer: B

Watch Video Solution

10. Which is not an application of modern biotechnology ?

- A. Production of humulin
- B. Developing a DNA vaccine
- C. Gene therapy
- D. Production of cheese and butter

Answer: D

Watch Video Solution

11. Which of the following cannot be related to biotechnology ?

A. Integration of natural science and organisms.

B. Techniques to alter the chemistry of DNA.

C. Introducing undesirable genes into the target organism.

D. Maintenance of sterile ambience to enable the growth of only the desired microbes.

Answer: C

Watch Video Solution

12. Which of the following specific DNA sequence is responsible for initiating replication ?

A. Vector site

B. Restriction enzymes action site

C. Ori site

D. Palindromic site

Answer: C

Watch Video Solution

13. Autonomously replicating, circular, extra chromosomal DNA of prokaryotic cell is called

A. Satellite DNA

B. Plasmid

C. Recombinant DNA

D. Nucleoid

Answer: B

Watch Video Solution

14. Key tools to be involved in recombinant DNA technology are

Restriction enzymes

Polymerase enzyme

Ligase enzymes

Vectors

A. (A) only

B. (A) and (C) only

C. (A) , (B) and (C)

D. (A),(B) ,(C) and (D)

Answer: D

Watch Video Solution

15. The first restriction endonuclease was:

A. Hind II

B. Eco RI

C. Bam HI

D. Pst I

Answer: A

Watch Video Solution

16. Approximately how many restriction enzymes have been isolated from the different (over 230) strains of bacteria:

A. 300

B. 600

C. 750

D. 900

Answer: D

Watch Video Solution

17. The conventional method for naming restriction enzymes is followed. In case of EcoRI the "R" indicates

- A. Genus
- B. Species
- C. Name of the scientist
- D. Strain

Answer: D

Watch Video Solution

18. The restriction endonuclease enzyme binds to the DNA and cuts

A. Any one stand of the double helix

B. Each of the two strands at specific points in their base-sugar bonds

C. Each of the two strands at specific points in their base-phosphate bonds

D. Each of the two strands at specific points in their sugar-phosphate

backbones

Answer: D

Watch Video Solution

19. The specific palindromic sequence which is recognised by EcoRI is:

- A. $5' G \downarrow AATTC 3'$
 $3' CTTAA \uparrow G 5'$
- B. $5' CCC \downarrow GGG 3'$
 $3' GGG \uparrow CCC 5'$
- C. $5' ACT \downarrow ACT 3'$
 $3' TCA \uparrow TGA 5'$

Answer: A

Watch Video Solution

20. During gel electrophoresis for separation of DNA fragment :

A. Smallest fragment will move to the farthest point towards cathode

B. Smallest fragment will move to the farthest point towards anode

C. Largest fragment will move to the farthest point towards cathode

D. Largest fragment will move to the farthest point towards anode

Answer: B

Watch Video Solution

21. After electrophoresis the separated DNA fragment can be visualised ethidium bromide gel exposed UV light . These DNA fragments appear as _____ coloured bands :

A. Orange

B. Blue

C. Silver

D. Green

Answer: A

Watch Video Solution

22. The procedure through which a piece of DNA is introduced in a host bacterium is

- A. Cloning
- B. Transformation
- C. PCR
- D. Clonal selection

Answer: B

Watch Video Solution

23. After completing the transformation experiment involving the coding sequence of enzyme α -galactosidase, the recombinant colonies should:

- A. Give blue colour
- B. Not give blue colour
- C. Have active β -galactosidase
- D. Both (2) and (3)

Answer: B

Watch Video Solution

24. Which of the following microbes transform normal plant and animal cells to cancerous cells respectively ?

A. *Agrobacterium tumifaciens*

B. Retroviruses

C. DNA viruses

D. Plasmids

Answer: B

Watch Video Solution

25. Which of the following is not applicable to *Agrobacterium tumifaciens*?

A. Pathogen of several dicot plants.

B. Has the ability to transform normal plant cells.

C. Delivers gene of our interest.

D. Ti plasmid of it is always pathogenic to plants without any exception.

Answer: D

Watch Video Solution

26. Insertional inactivation is related to:

- A. Microinjection
- B. Gene gun
- C. Gel electrophoresis
- D. Selection of recombinants

Answer: D

Watch Video Solution

27. For transformation with recombinan DNA, the bacterial cells must first be made compentent which means

A. Should increase their metabolic reactions

B. Should decrease their metabolic reactions

C. Increase efficiency with which DNA

enters the bacterium

D. Ability to divide fast

Answer: C

Watch Video Solution

28. Which of the following methods can be used for making the bacterial cell "competent"?

?

- A. Treating with specific concentration of divalent cation (Ca^{2+})
- B. Treating with specific concentration of monovalent cation (K^+)
- C. Heat shock
- D. Both (1) and (3)

Answer: D

Watch Video Solution

29. Which of the following techniques can be used to introduce foreign DNA into cell?

A. Using disarmed pathogen

B. Microinjection

C. Gene gun

D. All of these

Answer: D

Watch Video Solution

30. During heat shock, the temperature used for giving thermal shock to the bacterium is

A. $82^{\circ}C$

B. $100^{\circ}C$

C. Liquid nitrogen

D. $42^{\circ}C$

Answer: D

Watch Video Solution

31. Which of the following enzymes is used in case of fungus to cause the release of DNA along with other macromolecules?

A. Lysozyme

B. Cellulase

C. Chitinase

D. Amylase

Answer: C

Watch Video Solution

32. During the isolation of DNA, the addition of which of the following causes the precipitation of purified DNA?

- A. Chilled ethanol
- B. Ribonuclease enzyme
- C. DNA polymerase
- D. Proteases

Answer: A

Watch Video Solution

33. Which of the following is the correct sequence of PCR (polymerase chain reaction)?

A. Denaturation < Annealing <

Extension

B. Extension < Denaturation <

Annealing

C. Annealing < Extension <

Denaturation

D. Denaturation

Extension

Annealing

Answer: A

Watch Video Solution

34. The most commonly used bioreactor is of stirring type. The stirrer facilitates

A. Temperature control

B. pH control

C. Oxygen availability

D. Product removal

Answer: C

Watch Video Solution

35. After completion of the biosynthetic stage in the bioreactors, the product undergoes separation and purification processes, collectively termed as

- A. Upstream processing
- B. Downstream processing
- C. Modern biotechnology
- D. Gene amplification

Answer: B

Watch Video Solution

36. From isolated DNA from a cell culture with seven desired genes, DNA segment can be

excised by molecular scissors or chemical scalpels what biotechnologists call as

A. Polymerase enzymes

B. DNA ligase

C. Restriction enzymes

D. Helicase

Answer: C

Watch Video Solution

37. All the following statements about Stanley Cohen and Herbert Boyer are correct but one is wrong. Which one is wrong

A. They discovered recombinant DNA (rDNA) technology, and this marks the birth of modern biotechnology.

B. They first produced healthy sheep clone, a Finn Dorset lamb, Dolly, from the differentiated adult mammary cells.

C. They invented genetic engineering by combining a piece of foreign DNA containing a gene from a bacterium with a bacterial plasmid using the enzyme restriction endonuclease.

D. They isolated the antibiotic resistance gene by cutting out a piece of DNA from the plasmid which was responsible for conferring antibiotic resistance.

Answer: B

Watch Video Solution

38. What is the fate of a piece of DNA which is somehow transferred into an alien organism?

A. a. This piece of DNA would not be able to multiply itself in the progeny cells of the organism if not integrated into the genome of the organism.

B. b. If the alien piece of DNA has become a part of the chromosome, it will replicate.

C. c.If the alien piece of DNA is linked with the origin of replication in chromosome, it will replicate.

D. d.All of these

Answer: D

Watch Video Solution

39. In the year 1963 , the two enzymes responsible for restricting the growth of

bacteriophage in Escherichia coli were isolated

. They were respectively

A. a.Ligase, restriction endonuclease

B. b.Helicase, restriction endonuclease

C. c.Methylase, restriction endonuclease

D. d.DNA polymerase, restriction
endonuclease

Answer: C

Watch Video Solution

40. The cutting of DNA by restriction endonucleases results in fragments of DNA. These fragments are generally separated by a technique known as

- A. Gel- filtration chromatography
- B. Centrifugation
- C. Gel electrophoresis
- D. Thin-layer chromatography

Answer: C

Watch Video Solution

41. Which of the following bacteria are known as natural genetic engineers of plants, as gene transfer is happening in nature without human interference?

A. a. *Azotobacter*

B. b. *Agrobacterium tumefaciens*

C. c. *Escherichia coli*

D. d. *Rhizobium*

Answer: B

Watch Video Solution

42. The technique in which a foreign DNA precipitated on the surface of tungsten or gold particles and shot into the target cells is known as

A. Microinjection

B. Chemical-mediated genetic transformation

C. Electroporation

D. Biolistics

Answer: D

Watch Video Solution

43. Isolation of the genetic material in pure form, free from other macromolecules can be achieved by treating the bacterial cells/plant or animal tissues with the following enzymes, except

A. Lysozyme

B. Cellulase

C. Chitinase

D. Ligase

Answer: D

Watch Video Solution

44. Which of the following is not a recombinant protein used in medical practice ?

A. TPA (tissue plasminogen activator)

B. Interferon (α , β , and γ)

C. Vaccine (for hepatitis B)

D. Heparin

Answer: D

Watch Video Solution

45. cDNA is

A. Circular DNA in bacteria

B. Complementary DNA

C. Copy DNA

D. Both (2) and (3)

Answer: D

Watch Video Solution

46. A: Restriction enzymes belong to a larger class of enzymes called nucleases.

R: Each restriction enzymes recognises sequence in the DNA.

A. Temin and Baltimore

B. Milstein and Kohler

C. Arber, Nathans, and Smith

D. Holley, Khorana, and Nirenberg

Answer: C

Watch Video Solution

47. Plasmids are used in genetic engineering because they are

A. are easily available

B. are able to integrate with host
chromosome

C. are able to replicate along with
chromosomal DNA

D. contain DNA sequence coding for drug
resistance

Answer: C

Watch Video Solution

48. Which of the following processes/techniques can be included under biotechnology ?

(i) In vitro fertilisation

(ii) Synthesis of a gene

(iii) Correcting a defective gene

(iv) Developing a DNA vaccine

A. (B) and (D) only

B. (B),(C), and (D)

C. (A) and (B)

D. (A),(B) ,(C) and (D)

Answer: D

Watch Video Solution

49. The tumour -inducing (Ti) plasmid has now been modified into a cloning vector which is no more pathogenic to the plants but is still able to use the mechanisms to deliver genes of our interest into a variety of plants because Ti plasmid has been modified by

A. Adding tumor-forming genes

B. Deleting tumor-forming genes

C. Adding genes resistant to
endonucleases

D. Deleting endonuclease

Answer: B

Watch Video Solution

50. Which of the following statements is incorrect?

A. Plasmids have the ability to replicate within the bacterial cells independent of the control of chromosomal DNA.

B. Some plasmids have only one or two copies per cell whereas others may have 15-100 copies per cell.

C. Bacteriophages have the ability to replicate within the bacterial cell independent of the control of chromosomal DNA.

D. Transformation is a procedure of separation and isolation of DNA fragments.

Answer: D

Watch Video Solution

51. Which of the following is the first artificial cloning vector that has two selectable markers —tetracycline (tetR) and antibiotic resistance enzymes (ampR)?

A. YAC

B. BAC

C. pBR322

D. Cosmid vectors

Answer: C

Watch Video Solution

52. Restriction endonucleases are most widely used in recombinant DNA technology. They are obtained from

A. Bacteriophage

B. Bacterial cells

C. Plasmids

D. All prokaryotic cells

Answer: B

Watch Video Solution

53. All the following statements are correct about genetic engineering, but one is wrong.

Which one is wrong?

- A. It is a technique for artificially and deliberately modifying DNA (genes) to suit human needs.
- B. It is often referred as gene splicing.
- C. The organism carrying the foreign genes is termed as transgenic or GMO.
- D. Alec Jeffrey is the father of genetic engineering.

Answer: D

Watch Video Solution

54. All the following are the properties of the enzyme taq polymerase except:

A. It is thermostable DNA polymerase

B. It is isolated from a bacterium, *Thermus aquaticus*

C. It is used for the amplification of gene of interest using PCR

D. It is thermostable RNA polymerase

Answer: D

Watch Video Solution

55. Which of the following is incorrect match?

A. Gene therapy : An abnormal gene is replaced by normal gene

B. Cloning : Ability to multiply copies of antibiotic resistance gene in E. coli

C. Restriction enzymes : Molecular scissors

D. Exonucleases : Molecular glue

Answer: D

Watch Video Solution

56. Appropriate techniques have been developed for large scale cell culture using bioreactors for producing :

A. Foreign gene product

B. Vaccines

C. Hormones

D. All of these

Answer: D

Watch Video Solution

57. The uptake of genes by cells in microbes and plants is termed as

A. Insertional inactivation

B. Transformation

C. Selectable markers

D. Cloning vectors

Answer: B

Watch Video Solution

58. If we ligate a foreign, DNA at the Barn HI site of tetracycline resistance gene in pBR322 the recombinant plasmid will:

A. Show ampicillin resistance only

B. Show tetracycline resistance

C. Will grow well on tetracycline-containing
medium

D. Will not grow on ampicillin-containing
medium

Answer: A

Watch Video Solution

59. Polyethylene glycol can help in the uptake of foreign DNA into the host cell, this type of gene transfer is called as:

A. Electroporation

B. Chemical-mediated genetic transformation

C. Microinjection

D. Particle gun

Answer: B

Watch Video Solution

60. The normal *E. coli* cells carry resistance against which of the following antibiotics?

- A. Ampicillin
- B. Chloramphenicol
- C. Tetracycline or kanamycin
- D. None of these

Answer: D

Watch Video Solution

61. The isolation of the genetic material from fungal cells does not involve the use of

A. Agarose

B. Chitinase

C. Ethanol

D. Water

Answer: A

Watch Video Solution

62. In a restriction digestion experiment, the sticky ends of vector rejoined forming a circular vector without insert. Which enzyme can be used to eliminate this possibility?

- A. DNA ligase
- B. Alkaline phosphatase
- C. DNA polymerase
- D. RNA polymerase

Answer: B

Watch Video Solution

63. Denaturation can be achieved at which temperature during PCR?

A. $72^{\circ}C$

B. $95^{\circ}C$

C. $40^{\circ}C$

D. $25^{\circ}C$

Answer: B

Watch Video Solution

64. Choose the incorrect statement with respect to *Agrobacterium tumefaciens*.

A. a.It is a Gram-negative soil bacterium.

B. b.It produces crown gall disease in dicot plants.

C. c.The foreign DNA is inserted at the ori site of Ti plasmid.

D. d.Ti plasmid becomes incorporated into the plant chromosomal DNA.

Answer: C

Watch Video Solution

65. Which is not a method for the introduction of recombinant DNA into host cells?

- A. Electroporation
- B. Biolistics
- C. Transfection
- D. Restriction digestion

Answer: D

Watch Video Solution

66. The essential requirements for a gene amplification reaction are

- A. 20 mg of DNA template
- B. Forward and reverse primers
- C. Mg^{2+}
- D. All of these

Answer: D

Watch Video Solution

67. Choose the incorrect statement with respect to PCR reaction:

A. It requires Taq polymerase.

B. It requires dNTP's.

C. It generates 2^n molecules after n number of cycles.

D. The optimum temperature for polymerization step is greater than or equal to $90^{\circ}C$.

Answer: D

Watch Video Solution

68. Which of the following is not an application of PCR ?

A. DNA fingerprinting

B. DNA foot-printing

C. Detection of mutation

D. Prenatal diagnosis

Answer: B

Watch Video Solution

69. Rejoining of vector molecule after restriction enzyme digestion can be avoided by

A. Using different enzymes for insert and vector

B. Using same enzyme for insert and vector

C. Using DNA ligase immediately after digestion

D. Using alkaline phosphatase on only vector

Answer: D

Watch Video Solution

70. If the gene of interest is cloned at ECoRI in pBR322, the recombinant E-coli after transformation are

- A. Ampicillin
- B. Tetracycline
- C. Both (1) and (2)
- D. Kanamycin

Answer: A

Watch Video Solution

71. It is theoretically possible for a gene from any organism to function in any other organism. Why is this possible ?

A. All organisms have ribosomes.

B. All organisms have the same genetic code.

C. All organisms are made up of cells.

D. All organisms have similar nuclei.

Answer: B

72. If you remove the fimbriae from the bacterial cell, which of the following would you expect to happen ?

A. The cell would create incomplete plasmids.

B. The cell would be unable to replicate its DNA.

C. The cell would become an obligate parasite.

D. The cell would be easily infected by bacteriophages.

Answer: D

Watch Video Solution

73. Assume that you are trying to insert a gene into a plasmid and someone gives you a preparation of DNA cut with restriction

enzyme X. The gene you wish to insert has sites on both ends for cutting by restriction enzyme Y. You have a plasmid with a single site for Y, but not for X. Your strategy should be to

- A. Cut the plasmid with restriction enzyme X and insert the fragments cut with Y into the plasmid
- B. Cut the plasmid with restriction enzyme X and insert the gene into the plasmid
- C. Cut the plasmid twice with restriction enzyme Y and ligate the two fragments

into the plasmid cut with the same enzyme

D. Cut the plasmid twice with restriction enzyme Y and ligate the two fragments onto the ends of the human DNA fragments cut with restriction enzyme X

Answer: C

Watch Video Solution

74. I. Transform bacteria with recombinant DNA molecule.

II. Cut the plasmid DNA using restriction enzymes.

III. Extract plasmid DNA from bacteria cells.

IV. Hydrogen-bond the plasmid DNA to non-plasmid DNA fragments.

V. Use ligase to seal plasmid DNA to non-plasmid DNA.

From the given list, which of the following is the most logical sequence of steps for splicing

foregain DNA into a plasmid and inserting the plasmid into a bacterium ?

A. IV,V,I,II,III

B. III,II,IV,V,I

C. III,IV,V,I,II

D. II,III,V,IV,I

Answer: B

Watch Video Solution

75. *Agrobacterium tumefaciens* used in Genetic engineering for

- A. DNA mapping
- B. DNA modification
- C. Vector
- D. DNA fingerprinting

Answer: C

Watch Video Solution

76. A genetically engineered bacteria used for clearing oil spills is:

- A. *Escherichia coli*
- B. *Bacillus subtilis*
- C. *Agrobacterium tumefaciens*
- D. *Pseudomonas putida*

Answer: D

Watch Video Solution

77. Who isolated the first restriction endonucleases :

A. Temin and Baltimore

B. Sanger

C. Nathan and Smith

D. Paul Berg

Answer: C

Watch Video Solution

78. Genetic engineering is

A. Study of extra-nuclear gene

B. Manipulation of genes by artificial method

C. Manipulation of RNA

D. Manipulation of enzymes

Answer: B

Watch Video Solution

79. Which of the following enzymes cut the DNA molecule at specific nucleotide sequence ?

A. Restriction endonuclease

B. DNA ligase

C. RNA polymerase

D. Exonuclease

Answer: A

Watch Video Solution

80. DNA fingerprinting was invented by

A. Kary Mullis

B. Alec Jeffery

C. Dr. Paul Berg

D. Francis Collins

Answer: B

Watch Video Solution

81. Which structure involved in genetic engineering

- A. Plastid
- B. Plasmid
- C. Codon
- D. None

Answer: B

Watch Video Solution

82. Which of the following is the example of chemical scissors

A. Eco RI

B. Hind III

C. Bam I

D. All of the above

Answer: D

Watch Video Solution

83. Restriction endonucleases are used in genetic engineering because :

- A. They can degrade harmful proteins
- B. They can join DNA fragments
- C. They can cut DNA at Variable sites
- D. They can cut DNA at specific base sequences

Answer: D

Watch Video Solution

84. The term 'chimeric DNA' refers to

- A. DNA which contains uracil
- B. DNA synthesized from RNA
- C. Recombinant DNA
- D. DNA which contains single strand

Answer: C

Watch Video Solution

85. A piece of nucleic acid using to find out a gene, by forming hybrid with it, is called as

A. cDNA

B. DNA probe

C. Sticky end

D. Blunt end

Answer: B

Watch Video Solution

86. Which of the following is the example of direct gene transfer:

- A. Microinjection
- B. Electroporation
- C. Particle gun
- D. All the above

Answer: D

Watch Video Solution

87. How many copies of DNA sample are produced in PCR technique after 6-cycle

A. 4

B. 32

C. 16

D. 64

Answer: C

Watch Video Solution

88. Western blotting is used for the identification of :-

A. DNA

B. RNA

C. Protein

D. All of the above

Answer: C

Watch Video Solution

89. In r-DNA technique which of the following technique is not used in introducing DNA into host cell

A. Transduction

B. Conjugation

C. Transformation

D. Electroporation

Answer: B

Watch Video Solution

90. Which of the following techniques are used in analyzing restriction fragment length polymorphism (RFLP) :-

Electrophoresis

Electroporation

Methylation

Restriction digestion

A. (a) and (c)

B. (c) and (d)

C. (a) and (d)

D. (b) and (d)

Answer: C

Watch Video Solution

91. Restriction enzymes are :

A. Not always required in genetic engineering

B. Essential tool in genetic engineering

C. Nucleases that cleave DNA at specific sites

D. Both (2) and (3)

Answer: D

Watch Video Solution

92. Function of restriction endonuclease enzyme is

A. It is useful in genetic engineering

B. It protects the bacterial DNA against foreign DNA

C. It is helpful in transcription

D. It is helpful in protein synthesis

Answer: B

Watch Video Solution

93. Which of the following restriction endonuclease enzyme produce blunt end in DNA :

D. All the above

Answer: C

Watch Video Solution

94. A bacterium modifies its DNA by adding methyl groups to the DNA, It does so to

A. Clone its DNA

B. Be able to transcribe many genes simultaneously

C. Turn its gene on

D. Protect its DNA from its own restriction enzyme

Answer: D

Watch Video Solution

95. Restriction enzymes

A. Are endonucleases which cleave DNA at specific sites

B. Make DNA complementary to an existing DNA or RNA

C. Cut or join DNA fragments

D. Are required in vector-less direct gene transfer

Answer: A

Watch Video Solution

96. What is the first step in the Southern Blot technique

A. Denaturation of DNA on the gel for hybridization with specific probe.

B. Production of a group of genetically identical cells.

C. Digestion of DNA by restriction enzyme.

D. Isolation of DNA from a nucleated cell
such as the one from the scene of crime.

Answer: A

Watch Video Solution

97. Which of the following is not produced by E-Coli in the lactose operon.

A. Beta galactosidase

B. Thiogalactoside transacetylase

C. Lactose dehydrogenase

D. Lactose permease

Answer: C

Watch Video Solution

98. The technique of transferring DNA fargment separated on agarose gel to a synthetic membrane such as nitrocellulose is known as

A. Northern blotting

B. Southern blotting

C. Western blotting

D. Dot blotting

Answer: B

Watch Video Solution

99. Electroporation procedure involves:

- A. Fast passage of food through sieve pores in phloem elements with the help of electric stimulation
- B. Opening of stomatal pores during night by artificial light
- C. Making transient pores in the cell membrane to introduce gene constructs
- D. Purification of saline water with the help of a membrane system

Answer: C

Watch Video Solution

100. The total number of nitrogenous bases in human genome is estimated to be about

- A. 3.5 million
- B. 35 thousand
- C. 35 million
- D. 3.1 billion

Answer: D

101. The restriction enzyme *EcoRI* has the property of

A. Endonuclease activity

B. Exonuclease activity

C. Ligation activity

D. Correcting the topology of replicating

DNA

Answer: A

[Watch Video Solution](#)

102. DNA ligase is an enzyme that catalyses the

- A. Splitting of DNA threads into small bits
- B. Joining of the fragments of DNA
- C. Denaturation of DNA
- D. Synthesis of DNA

Answer: B

[Watch Video Solution](#)

103. More advancement in genetic engineering is due to

A. Restriction endonuclease

B. Reverse transcriptase

C. Protease

D. Zymase

Answer: A

Watch Video Solution

104. The function of polymerase chain reaction (PCR) is

- A. Translation
- B. Transcription
- C. DNA amplification
- D. None of these

Answer: C

Watch Video Solution

105. Which of the following is used as a best genetic vector in plants?

- A. *Bacillus thuriengensis*
- B. *Agrobacterium tumefaciens*
- C. *Pseudomonas putida*
- D. All of these

Answer: B

Watch Video Solution

106. The transfer of protein from electrophoretic gel to nitrocellulose membrane is known as

- A. Transferase
- B. Northern blotting
- C. Western blotting
- D. Southern blotting

Answer: C

Watch Video Solution

107. DNA fingerprinting was first discovered by

A. Alec Jeffery

B. Kary Mullis

C. C.Milstein

D. Dr. Paul Berg

Answer: A

Watch Video Solution

108. Which of the following abnormalities is due to autosomal dominant mutation ?

- A. Terminase
- B. Endonuclease
- C. Ligase
- D. DNA polymerase

Answer: C

Watch Video Solution

109. Plasmid has been used as vector because:-

A. It is circular DNA which has capacity to
join eukaryotic DNA

B. It can move between prokaryotic and
eukaryotic cells

C. Both ends show replication

D. It has antibiotic resistance gene

Answer: A

Watch Video Solution

110. Which of the following product is formed by genetic engineering to treat pituitary dwarfism ?

A. Restriction endonuclease (Eco RI)

B. Ligase

C. Exonuclease

D. Alkaline phosphate

Answer: A

Watch Video Solution

111. Genetic variation in a population arises due to

A. Restriction endonuclease

B. DNA ligase

C. Transcriptase

D. Primase

Answer: A

Watch Video Solution

112. DNA fingerprinting refers to

A. Techniques used for the identification of fingerprints of individuals

B. Molecular analysis of profiles of DNA samples

C. Analysis of DNA samples using imprinting devices

D. Techniques used for molecular analysis of different specimens of DNA

Answer: D

Watch Video Solution

113. Restriction endonucleases :

A. Are synthesized by bacteria as part of their defense compound

B. Are present in mammalian cells for degradation of DNA when the cell dies

C. Are used in genetic engineering for ligating two DNA molecules

D. Are used for in vitro DNA synthesis

Answer: A

Watch Video Solution

114. Genetic identity of a human male is determined by

- A. Bacterial cell can carry out RNA splicing reactions
- B. The mechanism of gene regulation is identical in humans and bacteria
- C. human chromosome can replicate in bacterial cell
- D. Genetic code is universal

Answer: D

Watch Video Solution

115. Two microbes found to be very useful in genetic engineering are-

A. *Escherichia coli* and *Agrobacterium tumefaciens*

B. *Vibrio cholerae* and a tailed bacteriophage

C. *Diplococcus* sp. And *Pseudomonas* sp.

D. Crown gall bacterium and *Caenorhabditis elegans*

Answer: A

Watch Video Solution

116. A: Restriction enzymes belong to a larger class of enzymes called nucleases.

R: Each restriction enzymes recognises sequence in the DNA.

A. Cuts the DNA molecule randomly

B. Cuts the DNA molecule at specific sites

C. Restricts the synthesis of DNA inside the nucleus

D. Synthesis DNA

Answer: B

Watch Video Solution

117. Satellite DNA is useful tool in ;

A. Organ transplantation

B. Sex determination

C. Forensic science

D. Genetic engineering

Answer: C

Watch Video Solution

118. Assertion: DNA ligase plays an important role in recombinant DNA technology.

Reason: The linking of antibiotic resistance gene with plasmid vector became possible by enzyme DNA ligase

A. If both Assertion and Reason are true and the reason is the correct explanation of the assertion, then mark (1).

B. If both Assertion and Reason are true but the reason is not the correct explanation of the assertion then mark (2).

C. If Assertion is true but Reason are false, then mark(3).

D. If both Assertion and Reason are false,
then mark(4).

Answer: A

Watch Video Solution

119. A: Restriction enzymes belong to a larger class of enzymes called nucleases.

R: Each restriction enzymes recognises sequence in the DNA.

A. If both Assertion and Reason are true and the reason is the correct explanation of the assertion, then mark (1).

B. If both Assertion and Reason are true but the reason is not the correct explanation of the assertion then mark (2).

C. If Assertion is true but Reason are false, then mark(3).

D. If both Assertion and Reason are false,
then mark(4).

Answer: B

Watch Video Solution

120. A: During gel electrophoresis, the DNA fragments move towards the anode.

R: DNA fragments are negatively charged molecules .

A. If both Assertion and Reason are true and the reason is the correct explanation of the assertion, then mark (1).

B. If both Assertion and Reason are true but the reason is not the correct explanation of the assertion then mark (2).

C. If Assertion is true but Reason are false, then mark(3).

D. If both Assertion and Reason are false,
then mark(4).

Answer: A

Watch Video Solution

121. A: Selection of recombinants due to inactivation of antibiotics is cumbersome procedure.

R: It requires simultaneous plating on two plates having different antibiotics.

A. If both Assertion and Reason are true and the reason is the correct explanation of the assertion, then mark (1).

B. If both Assertion and Reason are true but the reason is not the correct explanation of the assertion then mark (2).

C. If Assertion is true but Reason are false, then mark(3).

D. If both Assertion and Reason are false,
then mark(4).

Answer: A

Watch Video Solution

122. A: Taq Polymerase is involved in PCR technique.

R: This enzyme remain active during the high temperature including denaturation of double stranded DNA.

A. If both Assertion and Reason are true and the reason is the correct explanation of the assertion, then mark (1).

B. If both Assertion and Reason are true but the reason is not the correct explanation of the assertion then mark (2).

C. If Assertion is true but Reason are false, then mark(3).

D. If both Assertion and Reason are false,
then mark(4).

Answer: A

Watch Video Solution

123. Assertion : Small DNA fragments will arrange towards the positive end after gel electrophoresis.

Reason : DNA is negatively charged.

A. If both Assertion and Reason are true and the reason is the correct explanation of the assertion, then mark (1).

B. If both Assertion and Reason are true but the reason is not the correct explanation of the assertion then mark (2).

C. If Assertion is true but Reason are false, then mark(3).

D. If both Assertion and Reason are false,
then mark(4).

Answer: A

Watch Video Solution

124. Taq polymerase enzyme is used in

A. If both Assertion and Reason are true
and the reason is the correct

explanation of the assertion, then mark

(1).

B. If both Assertion and Reason are true

but the reason is not the correct

explanation of the assertion then mark

(2).

C. If Assertion is true but Reason are false,

then mark(3).

D. If both Assertion and Reason are false,

then mark(4).

Answer: C

Watch Video Solution

Archives Choose The Correct Option

1. The linking of antibiotic resistance gene with the plasmid vector became possible with:

- A. DNA polymerase
- B. Exonucleases
- C. DNA ligase

D. Endonucleases

Answer: C

Watch Video Solution

2. Gel electrophoresis is used for

A. construction of recombinant DNA by

joining with cloning vectors

B. isolation of DNA molecule

C. cutting of DNA into fragments

D. separation of DNA fragments according to their size

Answer: D

Watch Video Solution

3. Polyethylene glycol method is used for

A. Energy production from sewage

B. Gene transfer without a vector

C. Biodiesel production

D. Seedless fruit production

Answer: B

Watch Video Solution

4. Restriction endonucleases are enzymes which

A. Make cuts at specific positions within the DNA molecule

- B. Recognize a specific nucleotide sequence
for binding of DNA ligase
- C. Restrict the action of enzyme DNA
polymerase
- D. Remove nucleotides from the ends of
the DNA molecule.

Answer: A

Watch Video Solution

5. DNA or RNA segment tagged with a radioactive molecule is called

A. Vector

B. Probe

C. Clone

D. Plasmid

Answer: B

Watch Video Solution

6. Which one of the following palindromic base sequences in DNA can be easily cut at about the middle by some particular restriction enzyme ?

A. 5' _____ CGT TCG _____ 3'

3' _____ ATG GTA _____ 5'

B. 5' _____ GATATG _____ 3'

3' _____ CTA CTA _____ 5'

C. 5' _____ GA AT TC _____ 3'

3' _____ CT TA AG _____ 5'

D. 5' _____ CACGTA _____ 3'

3' _____ CTCAGT _____ 5'

Answer: C

Watch Video Solution

7. Which one of the following is used as vector for cloning genes into higher organisms ?

A. Baculovirus

B. Samonella typhimurium

C. Rhizopusnigricans

D. Retrovirus

Answer: D

Watch Video Solution

8. Agarose extracted from sea weeds finds use
in

A. Gel electrophoresis

B. Spectrophotometry

C. Tissue Culture

D. PCR

Answer: A

Watch Video Solution

9. There is a restriction endonuclease called Eco RI. What does 'co' part in it stand for ?

A. coli

B. colon

C. coelon

D. coenzyme

Answer: A

Watch Video Solution

10. PCR and restriction Fragments length

Polymorphism are the methods for

A. Genetic transformation

B. DNA sequencing

C. Genetic fingerprinting

D. Study of enzymes

Answer: C

Watch Video Solution

11. Which one is true statement regarding DNA polymerase used in PCR ?

A. It serves as a selectable marker.

B. It is isolated from a virus.

C. It remains active at high temperature .

D. It is used to ligate introduced DNA in recipient cells.

Answer: C

Watch Video Solution

12. For transformation, micro-particles coated with DNA to be bombarded from gene gun are made up of

(a) silver or platinum

(b) platinum or zinc

(c) silicon or platinum

(d) gold or tungsten

A. Platinum or zinc

B. Silicon or platinum

C. Gold or tungsten

D. Silver or platinum

Answer: C

Watch Video Solution

13. A single strand of nucleic acid tagged with a radioactive molecule is called

A. Selectable marker

B. Plasmid

C. Probe

D. Vector

Answer: C

Watch Video Solution

14. The given figure is the diagrammatic representation of the E. coli vector pBR 322. Which one of the given options correctly identifies its certain component (s)?

A. *rop*-reduced osmotic pressure

B. Hind III, Eco RI-selectable markers

C. ampR,tetR-antibiotic resistance genes

D. ori-original restriction enzyme

Answer: C

Watch Video Solution

15. Which one of the following is a case of wrong matching?

A. Vector DNA : Site for tRNA synthesis

B. Micropropagation :In vitro production of plants in large numbers

C. Callus: Unorganized mass of cells produced in tissue culture

D. Somatic hybridization : Fusion of two diverse cells

Answer: A

Watch Video Solution

16. Biolistics (gene-gun) is suitable for

A. Disarming pathogen vectors

B. Transformation of plant cells

C. Constructing recombinant DNA by
joining with vectors

D. DNA fingerprinting

Answer: B

Watch Video Solution

17. In genetic engineering, the antibiotics are used

A. As selectable markers

B. To select healthy vectors

C. As sequences from where replication starts

D. To keep the cultures free of infection

Answer: A

Watch Video Solution

18. The basis of DNA fingerprinting is

- A. The relative proportions of purines and pyrimidines in DNA.
- B. The relative difference in the DNA occurrence in blood, skin, and saliva.
- C. The relative amount of DNA in the ridges and grooves of fingerprints.
- D. Satellite DNA occurring as highly repeated short DNA segments.

Answer: D

Watch Video Solution

19. The figure below shows three steps (A, B, C) of Polymerase Chain Reaction (PCR). Select the option giving correct identification together with what it represents ?

A. B-Denaturation at a temperature of about $98^{\circ}C$ separating the two DNA

strands

B. A-Denaturation at a temperature of about $50^{\circ}C$

C. C-Extension in the presence of heat stable DNA polymerase

D. A-Annealing with two sets of primers

Answer: A

Watch Video Solution

20. Which one of the following represents a palindromic sequence in DNA?

A. 5'-GA AT TC-3',3'-CT TA AG-5'

B. 5'-C CATC C-3',3'-GA ATC C-5'

C. 5'-CAT TAG-3',3'-GATA AC-5'

D. 5'-GATAC C-3',3'-C CTA AG-5'

Answer: A

Watch Video Solution

21. DNA fragments generated by the restriction endonucleases in a chemical reaction can be separated by

- A. Polymerase chain reaction
- B. Electrophoresis
- C. Restriction mapping
- D. Centrifugation

Answer: B

Watch Video Solution

22. The colonies of recombinant bacteria appear white in contrast to blue colonies of non-recombinant bacteria because of

A. Insertional inactivation of alpha-galactosidase in non-recombinant bacteria.

B. Insertional inactivation of alpha-galactosidase in recombinant bacteria

C. Inactivation of glycosidase enzyme in recombinant bacteria

D. Non-recombinant bacteria containing
beta-galactosidase

Answer: B

Watch Video Solution

23. Which vector can clone only a small
fragment of DNA ?

A. Bacterial artificial chromosome

B. Yeast artificial chromosome

C. Plasmid

D. Cosmid

Answer: C

Watch Video Solution

24. In vitro clonal propagation in plants is characterized by

A. PCR and RAPD

B. Northern blotting

C. Electrophoresis and HPLC

D. Microscopy

Answer: A

Watch Video Solution

25. An analysis of chromosomal DNA using Southern hybridization technique does not use

A. Electrophoresis

B. Blotting

C. Autoradiography

D. PCR

Answer: D

Watch Video Solution

26. Golden rice is a genetically modified crop plant where the incorporated gene is meant for biosynthesis of:

A. Vitamin A

B. Vitamin B

C. Vitamin C

D. Omega 3

Answer: A

Watch Video Solution

27. Which of the following is not a feature of the plasmids

A. Independent replication

B. Circular structure

C. Transferable

D. Single-stranded

Answer: D

Watch Video Solution

28. The taq polymerase enzyme is obtained from

A. *Thermus aquaticus*

B. *Thiobacillus ferrooxidans*

C. *Bacillus subtilis*

D. *Pseudomonas putida*

Answer: A

Watch Video Solution

29. Which of the following is a restriction endonucleases?

A. Hind II

B. Protease

C. Dnase I

D. Rnase

Answer: A

Watch Video Solution

30. Stirred - tank bioreactors have been designed for

A. availability of oxygen throughout the process

B. ensuring anaerobic conditions in the culture vessel

C. purification of product

D. addition of preservatives to the product

Answer: A

Watch Video Solution

31. A foreign DNA and plasmid cut by the same restriction endonuclease can be joined to form a recombinant plasmid using

- A. Polymerase-III
- B. Ligase
- C. Eco RI
- D. Taq polymerase

Answer: B

Watch Video Solution

32. Which of the following is not component of downstream processing?

A. Preservation

B. Expression

C. Separation

D. Purification

Answer: B

Watch Video Solution

33. Which of the following restriction enzymes produces blunt ends?

A. Xho I

B. Hind III

C. Sal I

D. Eco RV

Answer: D

Watch Video Solution
