SEMICONDUCTOR ELECTRONICS: MATERIALS, DEVICES, AND SIMPLE CIRCUITS

Exercise

1. In an n-type silicon, which of the following statement is true:

A. Electrons are majority carriers and trivalent atoms are the dopants .

B. Electrons are minority carriers and pentavalent atoms are the dopants .

C. Holes are minority carriers and pentavalent atoms are the dopants.

D. Holes are majority carriers and trivalent atoms are the dopants.

Answer:

Watch Video Solution

2. Which of the statements given in is true for p-type semiconductors.

A. (A) Electrons are majority carriers and trivalent atoms are the dopants.

B. (B) Electrons are minority carriers and pentavalent atoms are the dopants.

C. (C) Holes are minority carriers and pentavalent atoms are the dopants.

D. (D) Holes are majority carriers and trivalent atoms are the dopants.

Answer:

Watch Video Solution

3. Carbon, silicon and germanium have four valence electrons each. These are characterised by valence and conduction bands separated by energy band gap respectively equal to $(E_g)_C$, $(E_g)_{Si}$ and $(E_g)_{Ge}$. Which of the following statements is true?

A. $(E_g)_{Si} < (E_g)_{Ge} < (E_g)_C$

B. $(E_g)_C < (E_g)_{Ge} > (E_g)_{Si}$

C. $(E_g)_C > (E_g)_{Si} > (E_g)_{Ge}$

D. $(E_g)_C = (E_g)_{Si} = (E_g)_{Ge}$

Answer:

Watch Video Solution

4. In an unbiased p-n junction, holes diffuse from the p-region to n-region because

A. free electrons in the n-region attract them.

B. they move across the junction by the potential difference.

C. hole concentration in p-region is more
as compared to n-region.

D. All of the above.

Answer:

Watch Video Solution

5. When a forward bias is applied to a p-n
junction, it

A. raises the potential barrier.

B. reduces the majority carrier current to zero.

C. lowers the potential barrier.

D. None of the above.

Answer:

Watch Video Solution

6. For transistor action, which of the following statements are correct:

A. Base, emitter and collector regions should have similar size and doping concentrations.

B. The base region must be very thin and lightly doped.

C. The emitter junction is forward biased and collector junction is reverse biased.

D. Both the emitter junction as well as the collector junction are forward biased.

Answer:

Watch Video Solution

7. For a transistor amplifier, the voltage gain

A. remains constant for all frequencies.

B. is high at high and low frequencies and
constant in the middle frequency range.

C. is low at high and low frequencies and
constant at mid frequencies.

D. None of the above.

Answer:

Watch Video Solution

8. In half-wave rectification, what is the output frequency if the input frequency is 50 Hz. What is the output frequency of a full-wave rectifier for the same input frequency

Watch Video Solution

9. For a CE-transistor amplifier, the audio signal voltage across the collected resistance of $2\text{ k}\Omega$ is 2 V . Suppose the current amplification factor of the transistor is 100, find the input signal voltage and base current, if the base resistance is $1\text{ k}\Omega$.

Watch Video Solution

10. Two amplifiers are connected one after the other in series (cascaded). The first amplifier

has a voltage gain of 10 and the second has a voltage gain of 20. If the input signal is 0.01 volt, calculate the output ac signal.

Watch Video Solution

11. A p-n photodiode is fabricated from a semiconductor with band gap of 2.8 eV. Can it detect a wavelength of 6000 nm?

Watch Video Solution

12. The number of silicon atoms per m^3 is 5×10^{28} . This is doped simultaneously with 5×10^{22} atoms per m^3 of Arsenic and 5×10^{20} per m^3 atoms of Indium. Calculate the number of electrons and holes. Given that $n_i = 1.5 \times 10^{16} m$. Is the material n-type or p-type?

Watch Video Solution

13. In an intrinsic semiconductor the energy gap E_g is 1.2eV . Its hole mobility is much smaller than electron mobility and independent of temperature. What is the ratio between conductivity at 600K and that at 300K? Assume that the temperature dependence of intrinsic carrier concentration n_i is given by $n_i = n_0 \exp\left(\frac{E_g}{2k_B T}\right)$ where n_0 is constant.

Watch Video Solution

14. In a p-n junction diode, the current I can be expressed as
$$I = I_0 \left(\exp \left(\frac{eV}{2k_B T} \right) - 1 \right)$$
 where I_0 is called the reverse saturation current, V is the voltage across the diode and is positive for forward bias and negative for reverse bias, and I is the current through the diode, k_B is the Boltzmann constant (8.6×10^{-5} eV/K) and T is the absolute temperature. If for a given diode $I_0 = 5 \times 10^{-12}$ A and $T = 300$ K, then - What will be the forward current at a forward voltage of 0.6 V?

Watch Video Solution

15. In a p-n junction diode, the current I can be expressed as $I = I_0 \exp\left(\frac{eV}{2k_B T}\right)$ where I_0 is called the reverse saturation current, V is the voltage across the diode and is positive for forward bias and negative for reverse bias, and I is the current through the diode, k_B is the Boltzmann constant $\left(8.6 \times 10^{-5} \frac{eV}{K}\right)$ and T is the absolute temperature. If for a given diode $I_0 = 5 \times 10^{-12} A$ and $T = 300 K$, then -
What will be the increase in the current if the

voltage across the diode is increased from 0.6 V to 0.7 V?

Watch Video Solution

16. In a p-n junction diode, the current I can be expressed as $I = I_0 \exp\left(\frac{eV}{2k_B T}\right)$ where I_0 is called the reverse saturation current, V is the voltage across the diode and is positive for forward bias and negative for reverse bias, and I is the current through the diode, k_B is the Boltzmann constant $\left(8.6 \times 10^{-5} \frac{eV}{K}\right)$ and T

is the absolute temperature. If for a given diode $I_0 = 5 \times 10^{-12} \text{ A}$ and $T = 300 \text{ K}$, then -
What is the dynamic resistance when the voltage is increased to 0.7 V from 0.6 V ?

Watch Video Solution

17. In a p-n junction diode, the current I can be expressed as
$$I = I_0 \left(\exp \left(\frac{eV}{2k_B T} \right) - 1 \right)$$
 where I_0 is called the reverse saturation current, V is the voltage across the diode and is positive for forward bias and negative for

reverse bias, and I is the current through the diode, k_B is the Boltzmann constant (8.6×10^{-5} eV/K) and T is the absolute temperature. If for a given diode $I_0 = 5 \times 10^{-12}$ A and $T = 300$ K, then - What will be the current if reverse bias voltage changes from 1 V to 2 V?

Watch Video Solution

18. Write the truth table for a NAND gate connected as given in Fig. 14.45. Hence identify the exact logic operation carried out by this

circuit. :

Watch Video Solution

19. You are given two circuits as shown in Fig. 14.46, which consist of NAND gates. Identify the logic operation carried out by the two circuits. :

Watch Video Solution

20. Write the truth table for circuit given in Fig. 14.47 below consisting of NOR gates and identify the logic operation (OR, AND, NOT)

which this circuit is performing.

Watch Video Solution

21. Write the truth table for the circuits given in Fig. 14.48 consisting of NOR gates only. Identify the logic operations (OR, AND, NOT)

performed by the two circuits.

Watch Video Solution
