## (ENGLISH)

## ELECTRIC FIELD AND POTENTIAL

Example

1. Two charges $10 \mu C$ and $-10 \mu C$ are placed
at points $A$. and $B$ separated by a distance
of 10 cm . Find the electric. field at a point $P$ on
the perpendicular bisector of $A B$ at. a distance of 12 cm from its middle point.

## D Watch Video Solution

2. A ring of radius a contains a charge $q$ distributed. uniformly ober its length. Find the electric field at a point. on the axis of the ring at a distance x from the centre.

## D Watch Video Solution

3. Three particles, each having a charge of $10 \mu C$, are placed at the vertices of an equilateral triangle of side 10 cm . Find the work done by a person in pulling them apart to infinite separations.

## D View Text Solution

4. Two charges $+10 \mu C$ and $+20 \mu C$ are placed at a. separation of 2 cm . Find the electric potential due to the. pair at the middle point of the line joining the two charges.

## - Watch Video Solution

5. Figure shows two metallic plates $A$ and $B$ placed parallel to each other at a seperation d.

A uniform electric field $E$ exists between the plates in the direction from plate B to plate A.

Find the potential difference between the plates.

## Worked Out Examples

1. 

Charges
$5.0 \times 10^{-7} C,-2.5 \times 10^{-7} C$ and $1.0 \times 10^{-7} C$
are
held fixed at the three corners A, B, C of equilateral triangle of side 10 cm respectively.

Find the electric force on the charge at C due to the rest two.
2. Two particles $A$ and $B$ having charges $8.0 \times 10^{-6} C \quad$ and $\quad-2.0 \times 10(-6) C$
respectively are held fixed with a. separtion of

20 cm . Where should a thired charged. particle be placed so that it dose not experience a net electric force?.

## D Watch Video Solution

3. Three equal charges, each having a magnitude of. $2.0 \times 10^{-6} C$, are placed at the
thre corners of a right. angled triangle of sides
$3 \mathrm{~cm}, 4 \mathrm{~cm}$ and 5 cm . find the force (in magnitude) on the charge at the right angled

## D Watch Video Solution

4. Two small iron particles, each of mass 280 mg , are. placed at a distance 10 cm apart. If
$0.01 \%$ of the electron. of one particle are transferred to the other, find the. electric force between them. Atomic weifht of iron is
$56 \mathrm{gmol}^{-}$and there are 26 electrons in each atom of iron.

## D Watch Video Solution

5. A charge $Q$ is to be divided on two objects.

What should be the values of the charges on
the objects so that the force between the objects can be maximum?
6. Two particles, each having a mass of 5 g and charge. $1.0 \times 10^{-7} \quad$ C, stay in limiting quilibrium on a horizontal. table with a separation of 10 cm between them. The coefficient of friction between each partcle and the table. is the same. Find the value of this coefficient.
7. A vertical electric field of magnitude $4.00 \times 10^{5} N C^{-1}$. just prevents a water droplet of mass $1.000 \times 10^{-4} \mathrm{~kg}$ from. falling., find the charge on the droplet.

## - Watch Video Solution

8. Three charges, each equal to $q$, are placed at
the three. corners of a square of side a . Find the electric field at. the fourth corner.
9. A Charged particle of mass 1.0 g is suspended through a
. silk thread of length 40 cm in a horizantal electric field
. of $4.0 \times 10^{4} N C^{-1}$. If the particle stays aty a distance of
. 24 cm from the wall in equilibrium, find the charge on
.the particle.
10. A particle a having a charge of $5.0 \times 10^{-7} C$ is fixed in. a vertical wall. A second particle $B$ of mass 100 g and. having equal charge is supended by a silk thread. of length 30 cm form the wall. The point of suspension is. 30 cm above the particle A. Find the angle of the thread. with the vertical when it stays in equilibrium.

## D Watch Video Solution

11. Four particles each having a charge $q$, are placed on the four vertices of a regular pentagon. The distance of each corner from the centre is a. Find the electric field at the centre of the pentagon.

## D Watch Video Solution

12. Find the electric field at a point $P$ on the perpendicular bisector of a uniformly charged rod. The length of the rod is $L$, the charge on it
is $Q$ and the distance of $P$ from the centre of the rod is a.

## D Watch Video Solution

13. A uniform electric field $E$ is created between
two parallel
., charged plates as shown in figure . An electron
. enters the field symmetrically between the plataes with a
. speed ${ }^{v} \_0$. The length of each plate is I. Find
the angle of
. deviation of the path of the electron as it comes out
. of the field.

## D Watch Video Solution

14. In a circuit, 10 C of charge is passed through a battery in a given time. The plates of the battery are maintained at a potential
difference of 12 V . How much work is done by
the battery?.

## D Watch Video Solution

15. charges $2.0 \times 10^{-6} C$ and $1.0 \times 10^{-6} C$ are placed at. corners $A$ and $B$ of a squae of side
5.0 cm as shown in. figure .how much work will be done against. the electric field in moving a
charge of $1.0 \mathrm{xx} 10^{\wedge}(-6) \mathrm{C}$ from. C to D ?.

## - Watch Video Solution

16. The electric field in a region is given by $\vec{E}=\left(\frac{A}{x^{3}}\right) \hat{i}$. Write a suitable SI unit for A.

Write an expression for the potential in the region assuming the potential at infinity to be zero.

## D Watch Video Solution

17. Three point charges $q, 2 q$ and $8 q$ are to be placed on a
. 9 cm long straight line. Find the
. positions where the charges shouldbe placed such that the potential energy
. of this sysrem is minimum. In this situation,
what is the
. electric field at the charge $q$ due to the other two charges?

## D Watch Video Solution

18. An HCl molecule has a dipole moment of
$3.4 \times 10(-30) C m$
. Assuming that equal and opposite charges lie on the two
. atoms to froma dipole, what is the magnitude of this
. charge? The separation between the two atoms of HCl is
. $1.0 \times 10(-10) \mathrm{m}$.

## D Watch Video Solution

19. show an electric dipole formed by two
. particles fixed at the ends of a light rod of
length I. The
. mass of each particle is $m$ and the charges
are -q and
. +q. The system is placed in such a way that
the dipole
. axis is parallel to a uniform electric field $E$
that exist
. in the region. The dipole is slightly rotated abut its
. centre and released. Show that for small angular
. displacement, the motion is anguler simple
harmonic
. and find its time period.

## D Watch Video Solution

## Exercises

1. Find the dimensional formula of $\varepsilon_{0}$.
2. A charge of 1.0 C is placed at the top of your college building and another equal charge at
the top of your house. Take the separaton between the two charges to be 2.0 km . Find the force exerted by the charges on each other. How many time of your weight is this force?
3. At what separation should two equal charges 1.0 C each, be placed so that the force between them equals the weight of a 50 kg person?

## - Watch Video Solution

4. Two equal charges are placed at a separtion
of 1.0 m . What should be the magnitude of the
charges so that the force between them equals of a 50 kg person?
5. Find the electric force between two protons separted by a distance of 1 fermi
$\left(1\right.$ fermi $\left.=10^{15} \mathrm{~m}\right)$. The protons in a nucleus remain at a separaton of this order.

## - Watch Video Solution

6. Two chargea $2.0 \times 10^{-6} C$ and $1.0 \times 10^{-6} C$ are placed at a separation of 10 cm . where
should a third charge be placed such that it experiences no net force due to these charges.

## D Watch Video Solution

7. Suppose the second charge in the previous
problem is $-1.0 \times 10^{-6} C$. Locate the position where a third charge will not experience a net force.

D Watch Video Solution
8. Two charged particles are placed at a distance 1.0 cm apart. What is the minimum possible magnitude of the electric force acting o each charge?

## D Watch Video Solution

9. Estimate the number of electrons in 100 g water. How much is the total negative charge on these electrons?
10. Suppose all the electrons of 100 g are
lumped together to form a negatively charged particle and all the nuclei are lumped together to form a positively charge particle. If these two particles are placed 10.0 cm away from each other, then the force of attraction between them. Compare it with your weight.

## D Watch Video Solution

11. Consider a gold nucleus to be a sphere of redius 6.9 fermi in whichprotons and neutrons are distributed. Find the force of repulsion between two protons situated at largest separaton. Why do thes protons not fly apart under this repulsion

## D Watch Video Solution

12. Two insulating small spheres are rubbed against each other and placed 1 cm apart. If
they attract each other with a force of 0.1 N , how many electrons were transferred from one sphere to the other during rubbing?

## D Watch Video Solution

13. Na Cl moecule is bound due to the electreic
force between the sodium and the chlorine ions when one electron of sodium and the
chlorine ions when one electron of sodium is
transferred to chlorine. Taking the separaton
between the ions to be $2.75 \times 10^{-8} \mathrm{~cm}$, find
the force of attraction between them. State the assumptions (if any) that you have made.

## D Watch Video Solution

14. Find the ratio of the electric and gravitational forces between two protons.

## D Watch Video Solution

15. Suppose ana attractive nuclear force acts between two protons which may be written as
$F=C e^{-k r} / r^{2}, \quad$ (a) Write down the dimensional formulae and appporpriate SI units of C and k. (b) Suppose that $k=1 \mathrm{fermi}^{-1}$ and that the repulsive electreic force between the protons is just blanced by the attractive nuclear force when the separation is 5 fermi. Find the value of $c$.

## - Watch Video Solution

16. Three equal charges, $2.0 \times 10^{-6} \mathrm{C}$ each, are held fixed at the three corners of a square
of side 5 cm . find the Coulomb force experienced by one of the charges due to the rest two.

## D Watch Video Solution

17. Four equal charges $2.0 \times 10^{-6} C$ each are
fixed at the four corners of a squae of side 5
cm . Find the coulomba force eperienced by one of the charges due to the rest three.

## D Watch Video Solution

18. A hydrogen atom contains one proton and one electron. It may be assumed that the electron revolves in a circle of radius 0.53 angstrom (1angstrom $=10^{-10} \mathrm{~m}$ and is abbreviated as A) with the proton at the centre. The hydrogen atom is said to be in the ground state in this case. Find the magnitude of the electric force between the proton and the electron of a hydrogen atom in its ground state.
19. A hydrogen atom contains one proton and one electron. It may be assumed that the electron revolves in a circle of radius 0.53 angstrom (1angstrom $=10^{-10} \mathrm{~m}$ and is abbreviated as A) with the proton at the centre. The hydrogen atom is said to be in the ground state in this case. Find the speed of the electron in the ground state of hddrogen atom.
20. Ten positively charged particles are kept fixed on the $x$-axis at points $x=10 \mathrm{~cm}, 20 \mathrm{~cm}$, $30 \mathrm{~cm}, \ldots, 100 \mathrm{~cm}$. The first particle has a charge $1.0 \times 10^{-8} C$, the second $8 \times 10^{-8} \mathrm{C}$, the third $27 \times 10(-8) \mathrm{C}$ and so on. The tenth particle has a charge $1000 \times 10^{-8} C$. find the magnitude of the electric force acting on a 1 C charge placed at the origin.

## D Watch Video Solution

21. Two charged particles having charge
$2.0 \times 10^{-8} C$ each are joined by an insulating
string of length 1 m and the system is kept on
a smooth horizontal table. Find the tension in
the string.

## D Watch Video Solution

22. Two indentical balls, each having a charge
of $2.00 \times 10^{-7} C$ and a mass of 100 g , are
suspended from a common point by two
insulating strings each 50 cm long. The balls are held at a separation 5.0 cm apart and then released. Find (a) the electric force on one of the charged balls (b) the components of the resultant force on it along and perpendicular to the string (c) the tension is the string (d) the acceleration of one of the balls. Answers are to be obtained just after the release.

## D Watch Video Solution

23. Two identical pith balls are charged by rubbing against each other. They are
suspended from a horizontal rod through two
strings of length 20 cm each, the separation between the suspension points being 5 cm . in equilibrium, the separation between the balls in 3 cm . Find the mass of each ball and the tension in the strings. the charge on each ball of a magnitude $2.0 \times 10^{-8} C$.

## - Watch Video Solution

24. Two small spheres, each having a mass of

20 g , are suspended form a common point by
two insulating strings of length 40 cm each.

The spheres are identically charged and the speration between the balls at equilibrium is
found to be 4 cm . Find the charge on each sphere.

## D Watch Video Solution

25. Two identical pith balls, each carrying charge q, are suspended from a common point
by two strings of equal length I. Find the mass of each ball if the angle between the strings is $2 \theta$ in equilibrium.

## - Watch Video Solution

26. A particle having a charge of $2.0 \times 10^{-4} C$
is placed directly below and at a separtion of
10 cm from the bob of a simple pendulum at rest. The mass of the bob is 100 g . What charge should the bob be given so that the string becomes loose?
27. Two particles $A$ and $B$ having charges $q$ and
$2 q$ respectively are placed on a smooth table with a separation d. A third particle C is to be clamped on the table in such a way that the particles $A$ and $B$ remain at rest on the table under electrical forces. What should be the charge on C and where should it clamped?
28. Two identically charged particles are
fastened to the two ends of a spring of spring constant $100 \mathrm{Nm}^{-1}$, find the extension In the length of the spring. Assume that the extension is small as compared to the natural length . Justify this assumption after you solve the problem.

## - Watch Video Solution

29. A particle $A$ having a charge of
$2.0 \times 10^{-6} C$ is held fixed on a horizontal
table. A second charged jparticle of mass 80 g
stays in equilibrium on the table at a distance
of 10 cm from the firsst charge. The coefficient
of friction between the table and this second
jparticle is $\mu=0.2$. find the range within which the charge of this second particle may lie.
30. A particle A having a charge of $2.0 \times 10^{-6}$

C and a mass of 100 g is placed at the bottom of a smooth inclined plane of inclination $30 \circ$.

Where should another particle $B$, having same charge and mass, be placed on the incline so that it may remain in equilibrium?

## D Watch Video Solution

31. Two particles $A$ and $B$ having equal charges are placed at distance d apart. A third charged particle placed on the perpendicular bisector
at a distance $x$ will experience the maximum

Coulomb's force when :

## D Watch Video Solution

32. Two particles $A$ and $B$, each carrying charge $Q$ are held fixed with a separation $D$ between them. A particle $C$ having mass $m$ and charge $q$ is kept at the middle point of the line

AB. (a) If it is displaced throught a distance $x$ perpendicular to $A B$, what would be the electric force experienced by it .(b) Assuming $x$

Itldd, show that this force is proportional to x .
(c) under what conditions will the paricle C execute simple harmonic motion if it is released after such a small displacement? Find the time period of the oscillations if these conditions are satisfied.

## - Watch Video Solution

33. Two particles $A$ and $B$, each carrying
charge $Q$ are held fixed with a separation $D$
between them. A particle $C$ having mass $m$ and
charge q is kept at the middle point of the line
$A B$. If particle $C$ is displaced through a distance
$x$ along the line $A B$. What will be the time period of the oscillations.

## D Watch Video Solution

34. The electric force experienced by a charge of ${ }^{`} 1.0 \times x 10^{\wedge}(-6) \mathrm{C}$ is $1.5 \mathrm{xx} 10^{\wedge}(-3) \mathrm{N}$. Find the magnitude of the electric field at the position of the chaerge.
35. Two particles $A$ and $B$ having charges of $+2.00 \times 10^{-6} C \quad$ and $\quad$ of $\quad-4.00 \times 10^{-6}$ respectively are held fixed at a separation of
20.0 cm . Locate the point(s) on the line $A B$ where (a) the electric field is zero (b) the electric potential is zero.

## D Watch Video Solution

36. A Point charge produces an electric field in room. What is its direction?
37. A water particle of mass 10.0 mg and having a charge of $1.50 \times 10^{-6} C$ stays suspended in a room. What is the magnitude of electric field in the room ? What is its direction?
38. Three identical charges, each having a value $1.0 \times 10^{-8} C$, are placed at the corners of an equilateral triangle of side 20 cm find the electric field and potential at the centre of the triangle.

## D Watch Video Solution

39. Positive charge $Q$ is distributed uniformly over a circular ring of radius $R$. A particle having a mass $m$ and a negative charge $q$, is
placed on its axis at a distance $x$ from the centre. Find the force on the particle. Assuming $x$ is very less than $R$, find the time period of oscillation of the particle if it is released from there.

## D Watch Video Solution

40. A rod of length $L$ has a total charge $Q$ distributed uniformly along its length. It is bent in the shape of a semicircle. Find the
magnitude of the electric field at the centre of curvature of the semicircle.

## D Watch Video Solution

41. A 10 cm long rod carries a charge of $+150 \mu C$ distributed uniformly along its length. Find the magnitude of the electric field at a point 10 cm from both the ends of the rod.
42. Consider a uniformly charged ring of radius $R$. Find the point on the axis where the electric field is maximum.

## D Watch Video Solution

43. A wire is bent in the form of a regular hexagon and a total charge q is distributed uniformly on it. What is the electric field at the centre? You may answer this part without making any numerical calculations.
44. A cjircular wire-loop of radius a carries a total charge $Q$ distributed uniformly over its
length. A small length dL of the wire is cut off.

Find the electric field at the centre due to remaining wire.

## - Watch Video Solution

45. A positive charge $q$ is placed in front of conducting solid cube at a distance $d$ from its
centre. Find the electric field at the centre of the cube due to the charges appearing on its surface.

## - Watch Video Solution

46. A pendulum bob of mass 80 mg and carrying a charge of $2 \times 10^{-8} C$ is at rest in a
uniform, horizontal electric field of 20k $V m^{-1}$. Find the tension in the thread.
47. A particle of mass $m$ and charge $q$ is thrown at a speed $u$ against a uniform electric field E. How much distance will it travel before coming to momentary rest?

## - Watch Video Solution

48. A particle of mass 1 g and charge
$2.5 \times 10^{-4} C$ is released from rest in an electric field of $1.2 \times 10^{4} N C^{-1}$ (a) Find the electric force and the force of gravity acting on this particle. Can one of these forces be
neglected in comparison with the other for approximate analysis? (b) How long will it take
for the particle to travel a distance of 40 cm ?
(c) What will be the speed of the particle after travelling this destance? (d) how much is the work done by electric force on the particle during this period?

## D Watch Video Solution

49. A ball of mass 100 g and having a charge of
$4.9 \times 10^{-5} \mathrm{C}$ is released from rest in a region
where a horizontal electric field of
$2.0 \times 10^{4} N C^{-1}$ exists. (a) find the resultant
force acting on the ball. (b) What will be the path of the ball ? (c ) Where will the ball be at the end of 2 s ?

## D Watch Video Solution

50. The bob of a simple pendulum has a mass of 40 g and a positive charge of $4.0 \times 10^{-5} C$.

It makes 20 oscillations in 45 s . A vertical
electric field pointing upward and of
magnitude $2.5 \times 10^{4} N C^{-1}$ is switched on. How much time will it now take to complete 20 oscillations?

## D Watch Video Solution

51. A block of mass $m$ having a charge $q$ is
placed on a smooth horizontal table and is
connected to a wall through an unstressed
spring of spring constant $k$ as shown in
figure(29.E1) . A horizontal electric field E parallel to the spring is switched on. Find the
amplitude of the resulting SHM of the block.

## - Watch Video Solution

52. A block of mass $m$ containing a net positive charge q is placed on a smooth horizontal table which terminates in a vertical wall as
shown in figure(29-E2). The distance of the block from the wall is d. A horizontal electric
field $E$ to towards right is switched on. Assuming elastic collisions find the time period of the resulting oscillatory motion. Is it a simple harmonic motion?

- Watch Video Solution

53. A Uniform electric field of $10 N C^{-1}$ exists
in the vertically downward direction. Find the
increase in the electric potential as one goes up through a height of 50 cm .

## D Watch Video Solution

54. 12 j of work has to be done against an existion electric field to take a charge of 0.01 C
from $A$ to $B$. How much is th potential difference $V_{B}-V_{A}$ ?

D Watch Video Solution
55. Two equal charges, $2.0 \times 10^{-7} C$ each, are held fixed at a separation of 20 cm . A third charge of equal magnitude is placed midway between the two both the charges. How much work is done by the electric field during the process?

## D Watch Video Solution

56. An electric field of $20 N / C$ exists along the
$x$-axis in space. Calculate the potential
difference $V_{B}-V_{A}$ where the points A and B are given by
a. $A=(0,0), B=(4 m, 2 m)$
b. $A=(4 m, 2 m), B=(6 m, 5 m)$
$A . A=(0,0), B=(4 m, 2 m)$
B. $A=(4 m, 2 m), B=(6 m, 5 m)$
C. $A=(0,0), B=(6 m, 5 m)$.
D.

## Answer:

57. Consider the situation of the previous problem. A charge of $2.0 \times 10^{-4} C$ is moved from the point $A$ to the point $B$. find the change in electrical potential energy $U_{B}-U_{A}$ for the cases (a), (b) and (c ).

## D View Text Solution

58. An electric field $\vec{E}=i 20+\vec{j} 30 N C^{-1}$ exists in the space. If the potential at the
origin is taken to be zero find the potential at
(2m, 2m).

## D Watch Video Solution

59. An electric field $\vec{E}=\vec{I} A x$ exists in the space, where $A=10 \mathrm{Vm}^{-2}$. Take the potential at (10m, 20m ) to be zero. Find the potential at the origin.

## D Watch Video Solution

60. The electric potential existing in space is
$V(x, y, z)=A(x y+y z+z x)$.(a) Write the dimensional formula of $A$. (b) find the expression for the electric field.( c ) If A is 10 SI units, find the magnitude of the electric field at ( $1 \mathrm{~m}, 1 \mathrm{~m}, 1 \mathrm{~m}$ ).

## D Watch Video Solution

61. Two charged particles, having equal charges of $2.0 \times 10^{-5} C$ each, are brought
from infinity to within a separation of 10 cm .

Find the increase in the electric potential energy during the process.

## D Watch Video Solution

62. Some equipotential surfaces are shown in
figure(29.E3) What can you say about the magnitude and the direction of the electric
field?

## D Watch Video Solution

63. Consider a circular ring of radius $r$, uniformly charged with linear charge density $\lambda$
. Find the electric potential aty a point on the exis at a distance x from the centre of the ring.

Using this expression for the potential, find the electric field at this point.

## D View Text Solution

64. An electric field of magnitude $1000 N C^{-1}$
is produced between two parallel platees
having a separation of 2.0 cm as shown in
figure(29.E4) (a) What is the potential difference between the plates? (b) With what minimum speed should an electron be projected from the lower plate in the direction
of the field so that it may reach the upper
plate? ( c) Suupose the electron is projected
from the lower plate with the speed calculated in part (b). The direction of projection makes an angle of $60 \circ$ with the field. Find the mazimum height reached by the electron.

## - Watch Video Solution

65. A uniform field of $2.0 N C^{-1}$ exists in space
in $x$ direction (a) Taking the potential at the
origin to be zero, write an experssion for the potential at a general point ( $x, y, z$ ). (b) At which points, the potential is 25 V ? ( c) If the potential at the origin is taken to be 100 V , what will be the expression for the potential at a general point? (d) What will be the potential at the origin if the potential at infinity is taken to be zero ? Is it parctical to choose the potential at infinity to be zero?
66. How much work has to be done in assembling three charged particles at the vertices of an equilateral triangle as shown in figure

67. The kinetc energy of a chargd particle decreased by 10 J as it moves from a point at potential 100 V to a point at potential 200 V .

Find the charge on the particle.

## D Watch Video Solution

68. Two identical particles, each having a charge of $2.0 \times 10^{-4} C$ and mass of 10 g , are kept at a separation of 10 cm and then
released. What would be the speeds of the particles when the separation becomes large?

## D Watch Video Solution

69. Two particles have equal masses of 5.0 g each and opposite charges of $+4.0 \times 10^{-5} C$.

They are released from rest with a separation
of 1.0 m between them. Find the speeds of the
particles when the separation is reducced to

50 cm .

D Watch Video Solution
70. A smple of HCl gas is placed in an electric field of $2.5 \times 10^{4} N C^{-1}$. The dipole moment of each HCl molecule is $3.4 X 10^{-30} \mathrm{Cm}$. find the maximum torque that can act on a molecule.

## D Watch Video Solution

71. Two particles $A$ and $B$, having opposite charges $2.0 \times 10^{-6}$ and $-2.0 \times 10^{-6} \mathrm{C}$, are placed at a separaton of 1.0 cm .(a) write down
the electric dipole moment (b) Calculate the electric field at a point on the axis of the dipole 1.0 m away from the centre. (c ) Calculate the electric field at a point on the perpendicular bisector of the dipole and 1.0 m away from the centre.

## - Watch Video Solution

72. Three charges are arranged on the vertices
of an equilateral triangle as shown in figure
(29.E6) find the dipole moment of the

## combination.

## D View Text Solution

73. find the magnitude of the electric field at
the point $P$ in the configuration shown in
figure for $d \gg a$, Take $2 q a=p$.

(a)

(b)

(c)

## - Watch Video Solution

74. Two particles, carrying charges $-q$ and $+q$ and having equal masses $m$ each, are fixed at the rod is clamped at an end and is placed in a uniform electric field E with the axis of the
dipole along the electric field. The rod is slightly tlted and then released. Neglecting gravity find the time period of small oscillations.

## D Watch Video Solution

75. Assume that each atom in a copper wire contributes one free electron. Estimate the numberof free electrons in a cpper wire having a mass of 6.4 g (take the atomic weight of copper ot be $64 \mathrm{~g} \mathrm{~mol}^{-1}$.

## Watch Video Solution

## Question For Short Answer

1. The charge on a proton is
$+1.6 X 10(-19) C$ and that on an
. electron is $-1.6 X 10(-19) C$. Does it mean
that the electron
. has a charge $3.2 X 10(-19) c$ less than the charge of a
. proton?
2. Is there any lower limit to the electric force between two
. particles placed at a separation of 1 cm ?

## - Watch Video Solution

3. Consider two particles $A$ and $B$ having equal
charges
. and placed at some distance. The particle A is
slightly
. displaced towards B. Does the force on B

## increase as

. soon as th particle A is displaced? Does the force on
. the particle $A$ increase as soon as it is displaced?

- Watch Video Solution

4. Can a gravitational field be added vectorially to an electric field to get a total field?
5. Why does a phonograph - record attract dust partiules just after it is cleaned?

## D Watch Video Solution

6. Does the force on a charge due to another charge depend on the charges present nearby?

- Watch Video Solution

7. In some old texts it is mentioned that $4 \pi$

## lines of force

. orginate form each unit positive charge.

Comement on
. the statement in view of the fact that $4 \pi$ is not an
. interger.

## - Watch Video Solution

8. Can two equipotential surfaces cut each other?

## - Watch Video Solution

9. If a charge is placed at rest in an electric field, will its
. path be along a line of force ? Discuss the situation when
. the lines of force are straight and when they are curved.
10. Consider the situation shown in (figure)
what are the signs of $q_{1}$ and $q_{2}$ ? If the lines
are drawn in proportion to the charge, what is
the ratio $\frac{q_{1}}{q_{2}}$ ?

11. A point charge is taken from a point $A$ to a pint $B$ in an electric field. Does the work done
by the electric field depend on the path of the charge?

## - Watch Video Solution

12. It is said that the separaton between the
two charges forming an electric dipole should be small. Small compered to what?

## - Watch Video Solution

13. The number of electrons in an insulator is
of the same order as the number of electrons
in a conductor. What is then the basic difference between a conductor and an insulator?

## D Watch Video Solution

14. When a charged comb is brought near a small piece of paper, it attracts the piece. Does
the paper, it attracts the piece. Does the paper become charged when the conb is brought near it?

## D Watch Video Solution

## Objective 1

1. Figure shows some of the electric field lines
correspoinding to an electric field. The figure
suggests that

A. $E_{A}>E_{B}>E_{C}$
B. $E_{A}=E_{B}=E_{C}$
C. $E_{A}=E_{C}>E_{B}$
D. $E_{A}=E_{C}<E_{B}$

Answer: C
2. When the separation between two charges
is increased, the electric potential energy of
the charges
A. increases
B. decreases
C. remains the same
D. may increase or decrease.

Answer:
3. If a positive charge is shifted from a low potential region to a high- potential region, the electric potential energy
A. increases
B. decreases
C. renaubs tge sane
D. nay ubcrease ir decrease.
4. Two equal positive charges are kept at points $A$ and $B$. The electric potential at the points between $A$ and $B$ (excluding these points ) is studied while moving from $A$ to $B$.

The potential will
A. continuously increases
B. continuously decreases
C. decreases then increases.
D.

## Answer:

## D Watch Video Solution

5. The electric field at the origin is alo,n,g the positive $x$-axis. A small circle is drawn with the centre at the origin cutting the axes at points
$A, B, C$ and $D$ having coordinates ( $a, 0$ ), ( $0, a$ ), ($a, 0),(0,-a)$ respectively. Out of the points on the periphery of the circle, the potential is minimum at
A. A
B. B
C. C
D. D

## Answer:

## D Watch Video Solution

6. If a body is charged by rubbing it, its weight
A. remains precisely constant
B. increases slightly
C. decreases slightly
D. may increase slightly or may decrease slightly.

## Answer: D

## D Watch Video Solution

7. An electric dipole is placed in a uniform electric field. The net electric force on the dipole
A. is always
B. depends on the orientation of the dipole
C. can never be zero
D. depends on the strength of the diipole.

## Answer:

D Watch Video Solution
8. Consider the situation of figure . The work done in taking a point charge form $P$ to $A$ is
$W_{A}$ from P to B is $W_{B}$ from P to C is $W_{C}$.

A. $W_{A}<W_{B}<W_{C}$
B. $W_{A}>W_{B}>W_{C}$
C. $W_{A}=W_{B}=W_{C}$
D. None of these

Answer:

## D Watch Video Solution

9. A point charge $q$ is rotated along a circle in
the electric field generated by anotherj point charge Q. The work done by the electric field on the rotatin charge in one complete revolution is
A. zero
B. positive
C. negative

# D. zero if the charge $Q$ is at the centre and 

 nonzero otherwise.
## Answer:

## - Watch Video Solution

## Objective 2

1. Mark out the correct options.
A. a. The total charge of the universe is constant.
B.b.The total positive charge of the universe is constant.
C. c. The total negative charge of the universe is constant.
D. d. The total number of charged particle in the universe is constant.

## Answer:

2. A point charge is brought in an electric field.

The electric field at a near by point
A. will increase if the charge is positive
B. will decrease if the charge is negative
C. may increase if the charge is negative
D. may ecrease if the charge is negative.

## Answer:

## D Watch Video Solution

3. The electric field and the electric potential
at a point are E and V respectively. Give the relationship between E and $V$
A. If $\mathrm{E}=0, \mathrm{~V}$ respectivley.
B. If $V=0, E$ must be zero.
C. If $E \neq 0, \mathrm{~V}$ cannot be zero.
D. If $V \neq 0$, E cannot be zero.

Answer:

D Watch Video Solution
4. The electric potential decreases unifromly from 120 V to 80 V as one moves on the x -axis
from $x=-1 \mathrm{~cm}$ to $x=+1 \mathrm{~cm}$. The electric field at the origin
A. must be equal to $20 \mathrm{Vcm}{ }^{\text {^ }}(-1)$
B. may be equal to $20 \mathrm{Vcm}{ }^{\wedge}(-1)$
C. may be greater than $20 \mathrm{Vcm}(-1)$
D. may be less than $20 \mathrm{Vcm}(-1)$

## Answer:

5. Which of the following quantites do not depend on the choice of zero potential or zero potential energy?
A. a. Potential at a point
B. b. Potential difference between two points
C. c. Potential energy of a two charge
system

# D. d. change in potential energy of a two 

 charge system.
## Answer:

## - Watch Video Solution

6. A proton and an electron are placed in a uniform electric field.
A. The electric forces acting on them will be equal.
B. The magnitudes of the forces will be
equal.
C. Their accelerations will be equal.
D. The magnitudes of their accelerations
will be equal.

Answer:

- Watch Video Solution

7. The electric field in a region is directed outward and is proportional to the distance $r$
from the origin, Taking the electric potential at origin to be zero,
A. it is uniform in the region
B. it is proportional to $r$
C. it is proportional to $r^{2}$
D. it increases as one goes away from the origin.

## Answer:

- Watch Video Solution
