## GEOMETRICAL OPTICS

## Worked Out Examples

1. An object is placed on the principal axis of
concave mirror of focal length 10 cm at a
distance of 8.0 cm from the pole. Find the position and the nature of the image.

## D Watch Video Solution

2. A rod of length 10 cm lies along the principal axis of a concave mirror of focal length 10 cm in such a way that the end closer to the pole is 20 cm away from it. Find the length of the image.

## D Watch Video Solution

3. At what distance from a convex mirror of
focal length 2.5 m should a body stand so that his image has a height equal to half the original height ? The height of object is perpendicular to the principal axis .

## D Watch Video Solution

4. A 2.0 cm high object is placed on the principal axis of a concave mirror at a distance of 12 cm from the pole. Ilf the image is inverted, real and 5.0 cm high, find the
location of the image the focal length of the mirror.

## D Watch Video Solution

5. Consider the situation shown in figure. Find
the maximum angle theta for which the light suffers total internal reflection at the vertical surface.
6. A right prism is to be made by selecting a proper material and the angles $A$ and $B$
( $B \leq A$ ) as shown in figure. It is desired that
a ray of light incident normally on $A B$ emerges
parallel to the incident direction after two internal reflection.a. What should be the minimum refractive index $\mu$ for this to be possible? b. $F$ or $\mu=\frac{5}{3}$ is it possible to achieve this with the angle $A$ equal to 60 degrees?
7. $A$ point object $O$ is placed in fornt of $a$ transparent slab at a distance $x$ from its
surface. It is seenfrom the other side of he slab by light incident nearlyl normally to the slab. The thickness of the slab is $t$ and its refractive index is $\mu$. Show that the apparent shift in the position of the object is independent of $x$ and find its value.

## D Watch Video Solution

8. Consider the situation shown in figure. A
plane mirror is fixed at a height $h$ above the bottom of a beaker containing water (refractive index $\mu$ ) up of a bottom formed by
the mirror.Find the position of the image of bottom formed by the mirror.

9. A beaker contains water up to a height $h_{1}$ and $K$ oil above water up to another height
$h_{2}$. Find the apparent shift in the position of the bottom of the beaker when viewed from above. Refractive index of water is $\mu_{1}$ and that of K.oil is mu_2'.

## - Watch Video Solution

10. Monochramatic light is incident on the pane interface $A B$ between two media of refractive indices $\mu_{1}$ and $\mu_{2}\left(\mu_{2}>\mu_{1}\right)$ at an angle of incidence theta as shown in figure.

The angle theta is infinitesimally greater thannte critical angle for the two media so thast total internal reflection takes place. Now, if a transparent slab DEFG of uniform thickness and of refractive inde $\mu_{2}$ is introduced on theinterface (as shown in figure ), show that for any value of $\mu_{2}$ all light will
ultimately be reflected back into medium II.

## D View Text Solution

11. A concave mirror of radius 40 cm lies on a
horizontal table and water is filled in it upto a height of 5.00 cm . A small dust particle floats
on the water surface at a point $P$ vertically above the point of contact of the mirror with
the table. Locate the image of the dust
particle as seen from a point directly above it. the refractive index of water is 1.33 .

## D Watch Video Solution

12. An object is placed 21 cm in fron of a concave mirror of radius of curvature $20 \mathrm{~cm} . \mathrm{A}$
glass slab of thicknes 3 cm and refractive index
1.5 is palced close to the mirror in the space
between the object and the mirror. Find the position of the final image fromed. The distance of the nearer surface of the slab from the mirror is 10 cm .

## D Watch Video Solution

13. The refractive indices of silicate fint glass
for wavelength 400 nm and 700 nm are 1.66
aned 1.61 respectively. Find the minimum angles of deviation of an equailateral prism made of this glass for light of wavelength 400 nm and 700 nm .

## - Watch Video Solution

14. Consider the situation shown in figure.

Light from a point source $S$ is made parallel by
a convex lens L. The beam travels horizontally
and falls on an $88^{\circ}-88^{\circ}-4^{\circ}$ prism as
shown in figure. It passes through the prism
symmetrically. The transmitted light falls on a vertical mirror. Through what angle should the mirror be rotated so that an image of $S$ is formed as $S$ itself?

## - Watch Video Solution

15. Locate the image formed by refraction in the situation shown in figure. The point $C$ is
the centre of curvature

## - Watch Video Solution

16. One end of a horizontal cylindrical glass
$\operatorname{rod}(\mu=1.5)$ of radius 5.0 cm is rounded in the shape of a hemisphere. An object 0.5 mm high is placed perpendicular to the axis of the rod at a difference of 20.0 cm from the rounded edge. Locate the image of the object and find its height.
17. There is a small air bubble inside a glass
sphere ( $\mu=1.5$ ) of radius 10 cm . The bubble
is 4.0 cm below the surface and is viewd normally from the outside. Find the apparent
dipth of the bubble.

- Watch Video Solution

18. A parallel bean of light travelling in water
(refractive index $=4 / 3$ ) is refracted by a spherical bubble of radius 2 mm situation in water. Assuming the light rays to be paraxial. i.
find the position of the image due to refraction at the first surface and the position of the final image, and ii. draw a ray diagram showing the positions of the images.

## D Watch Video Solution

19. Calculate the focal length of the thin lens
shown infigure. The pionts $C_{1}$ and $C_{2}$ denote the centres of curvature.

## - Watch Video Solution

20. A point source $S$ is placed at a distance of

15 cm from a converging lens of focal length
10 cm on its principal axis. Where should a
diverging miror of focal length 12 cm be placed to that a real image is formed on the source itself.

## D Watch Video Solution

21. A converging lens of focal length 15 cm and
a converging mirror of focal length 20 cm are placed with their principal axes coinciding. A point source $S$ is placed on the principal axis at a distance of 12 cm from the lens as shown in figure. It is found that the final beam comes
out parallel to the principal axis. Find the separation between the mirror and the lens. 5

## D Watch Video Solution

22. A biconvex thin lens is prepared from glass
( $\mu=1.5$ ), the two bounding surfaces having
equal radii of 25 cm each. One of the surfaces
is silvered from outside to make it reflecting.

Whee should an object be placed before this
lens so that the image is formed on the object
itself?

## - Watch Video Solution

23. A concave convex figure lens made of glas
( $\mu=1.5$ ) has surface of radii 20 cm and 60
cm. a. Locate the image ofan object placed 80
cm to the left of the lens along the principal axis. B. A similar lens is placed coaxially at
distanc of 160 cm right of it. Locate the position of the image.

## - Watch Video Solution

24. A thin lens $(\mu=1.5)$ of focal length +12
cm is immersed in water $(\mu=1.33)$. What is its new focal length ?
25. A long cylindrical tube containing water in
closed by an equinvex lens of focal length 10
cm in air. A point source is placed along the axis of the tube outside it at a distance of 21 cm from the lens. Locate the final image of the source. Refractive index of the materials of the lens $=1.5$ and that of water $=1.33$.

## D Watch Video Solution

26. A slide projector produces 500 times enlarged image of a slide on a screen 10 m away. Assume that the projector consists of a single convex lens used for magnification. If the screen is moved 2.0 m closer, by what distance should the slide be moved towards or away from the lens so that the image remains focused on the screen ? What is the magnification in this case ?

## D Watch Video Solution

27. A convex lens focusses an object 10 cm from it on a screen placed 10 cm away from it.

A glass plate ( $\mu=1.5$ ) of thickenss 1.5 cm is inserted between the lens and the screen. Where should the object be placed so that its image is again focussed on the screen?

## - Watch Video Solution

28. Two convex lenses f focal length 20 cm each are placed coaxially with a separation of 60 cm between them. find the image of a
distance object formed by the combination by
a. using thin les formula separately for the two
lenses and b. using the equivalent lens. Note
that although the combination forms a real
image of as distance object on the other side,
it is equivalent to as diverging lens as far as the locatiion of the final image is concerned.

## - Watch Video Solution

Objective 1

1. A point source of light is placed in front of a plane mirror.
A. All the reflected rays meets at a point when produced backward
B. ony the reflected rays close to the
normal meet at a point when produced
backward
C. ony the reflected rays making a smal
angle with the mirror meet at point
when prodced backward.

## D. light of different colours make different

 images
## Answer: A

## D Watch Video Solution

## 2. Total internal reflection can take only if

A. light goes from optically rarer medium
(smaller refractive index) to opticaly
denser medium
B. light goes from opticaly denser medium
to rarer medium
C. the refractive indices of the two media
are close to each other
D. the refractie indices of the two media are widely different

## Answer: B

3. In image formation from spherical mirrors, only paraxial rays are considered because they
A. are easy to handle geometrically
B. contain most of the intensity of the incident light
C. form nearly a point image of a point source
D. show minimum dispersion effect

Answer: C
4. A point object is placed at distance of 30 cm
in front of a convex mirror of Focal length 30
cm . The image will form at
A. infinity
B. pole
C. focus
D. 15 cm behind the mirror

## D Watch Video Solution

5. Figure shows two rays $A$ and $B$ beig reflected
by a mirror and going as $\mathrm{A}^{\prime}$ and $\mathrm{B}^{\prime}$. The mirror

A. is plane

## C. is cocave

D. may be any spherical mirror

## Answer: A

## - Watch Video Solution

6. The image formed by a concave mirror
A. is always real
B. is always virtual
C. is certainly real if the object is virtual

## D. is certainly virtual if the object is real

## Answer: C

## D Watch Video Solution

7. Figure shows three transparent media of refractive indices $\mu_{1}, \mu_{2}$ and $\mu_{3}$. A point object $O$ is placed in the medium $\mu_{2}$. If the entire medium on the right of the spherical
surface has refractive index $\mu_{1}$, the image
forms at $\mathrm{O}^{\prime}$. If this entire medium has
refractive index $\mu_{3}$ the image form at $\mathrm{O}^{\prime}$. In the situation shown

A. the image forms between $\mathrm{O}^{\prime}$ and $\mathrm{O}^{\prime \prime}$
B. the image forms to the left of $\mathrm{O}^{\prime}$
C. the image forms to the right of $\mathrm{O}^{\prime}$
D. two images form one at O ' and the other at O"

## Answer: D

## D Watch Video Solution

8. Four modifications are suggested in the lens
formula to incude the effect of the thicknes $t$ of the lens. Which one is likely to be correct?

$$
\begin{aligned}
& \text { A. } \frac{1}{v}-\frac{1}{u}=\frac{t}{u f} \\
& \text { B. } \frac{t}{v^{2}}-\frac{1}{u}=\frac{1}{f} \\
& \text { C. } \frac{1}{v-t}-\frac{1}{v+t}=\frac{1}{f} \\
& \text { D. } \frac{1}{v}-\frac{1}{u}+\frac{t}{u v}=\frac{t}{f}
\end{aligned}
$$

## D Watch Video Solution

9. A double convex lens has two surfaces of
equal radii $R$ and refractive index $m=1.5$, we
have
A. $f=\frac{R}{2}$
B. $f=R$
C. $f=-R$
D. $f=2 R$

Answer: B

## D Watch Video Solution

10. A point source of light is placed at a distance of $2 f$ from a converging lens of focal
length f. The intensity onteh other side of the lens is maximum at a distance
A. $f$
B. between $f$ and $2 f$
C. $2 f$

## D. more than $2 f$

## Answer: C

## D Watch Video Solution

11. A parallel beam of light is incident on a converging lens parallel to its principal axis. As one moves away from the les on the other side on its principal axis, the intensity of light
A. remains constant

## B. continously increses

## C. continuously decreases

D. first increases then decreases

## Answer: D

## D Watch Video Solution

12. A symmetric double convex lens is cut in two equal parts by a plane perpendicular to
the principal axis. If the power of the original lens was 4D, the power of a cut lens will be
A. A. 2D
B. B. 3D
C. C. 4D
D. D. 5 D

Answer: A

## D Watch Video Solution

13. Two concave lenses $L_{1}$ and $L_{2}$ are kept in
contact with each other. If the space between
the two lenses is filled with a material of
smaller refractive index, the magnitude of the

## focal length of the combination

A. A. becomes undefined
B. B. remains unchanged
C. C. increases
D. D. decreases

Answer: C
( Watch Video Solution
14. A thin lens is made with as material having refractive index $\mu=1.5$. both the sides are convex. It is dipped in water ( $\mu=1.33$ ). It will behave like
A. a convergent lens
B. $b$ divergent lens
C. c rectangular slab
D. d prism

## Answer: A

15. The rays of different colours fail to
converge at a point after going through a converging lens. This defect is called
A. spherical aberration
B. distortion
C. coma
D. chromatic aberration

Answer: D

## Objective 2

1. If the light moving in a straight line bends by a small but fixed angle it may be a case of
A. Reflection

B. refraction

C. diffraction
D. dispersion

## Answer: A::B

## - Watch Video Solution

## 2. mark the correct options.

A. If the incident rays are converging we have a real object.
B. If the final rays are converging ee have a
real image
C. The imge of virtual object is called a

## virtual image

## D. if the image is virtual the corresponding

object is called virtual object

## Answer: B

## D Watch Video Solution

3. Which of the following (referred to a sphericla mirror) do (does) not depend on whether the rays are paraxial or not?
A. pole
B. focus
C. radius of curvature
D. principal axis

Answer: A::B::C

D Watch Video Solution
4. The image of an exend object placed perpendicular to the principal axis of a mirror,
A. the object and the image are both real
B.the object and the image are both virtual
C. the object is real but the image is virtual
D. the object is virtual but the image is real

## Answer: C::D

## - Watch Video Solution

5. A convex forms a real image of a poinnt
object placed on its principal axis. If the upper
half of the lens is painted black
A. the image will be shifted downwrd
B. the image will be shifted upward
C. the image will not be shifted
D. the intensity of the imase will decrease

Answer: C::D

D Watch Video Solution
6. Consider three converging lenses
$L_{1}, L_{2}$ and $L_{3}$ having identical geometrical construction. The index of refraction of
$L_{1}$ and $L_{2}$ are $\mu_{1}$ and $\mu_{2}$ respectively. The upper half of the lens $L_{3}$ has a refractive index
$\mu_{1}$ and the lower half has $\mu_{2}$. A point object O
is imaged at $O_{1}$ by the lens $L_{1}$ and $a t O_{2}$ by
the lens $L_{2}$ placed in same position. If $L_{3}$ is
placed at the same place.

A. A. there will be an image at $O_{1}$
B. B. there will be an image at $O_{2}$
C. C. the only image will form somewhere between $O_{1}$ and $O_{2}$.
D. D. the only image will form away form $O$.

## - Watch Video Solution

7. A screen is placed a distance 40 cm away
from an illuminated object. A converging lens
is placed between the source and the screen and it is attempted to form the image of the source on the screen. If no position could be found, the focal length of the lens
A. A. must be less than 10 cm
B. B. must be greater than 20 cm
C. C. must not be greater than 20 cm

## D. D. must not be less than 10 cm

## Answer: B

## D Watch Video Solution

## Exercises

1. A concave mirror having a radius of
curvature 40 cm is placed in front of an
illuminated point source at a distance of 30
cm from it. Find the location of the image.
2. A concave mirror forms an image of 20 cm
high object on a screen placed 5.0 m away from the mirror. The height of the image is 50 cm . Find the focal length of the mirror and the distance between the mirror and the object.

## - Watch Video Solution

3. A concave mirror has a focal length of 20
cm . Find the position or positions of an object
for which the image-size is double of the object-size.

## D Watch Video Solution

4. A 1 cm object is placed perpendicular to the principal axis of a convex mirror of focal length 7.5 cm . Find its distance from the mirror if the image formed is 0.6 cm in size.
5. A candle flame 1.6 cm high is imaged in a ball bearing of diameter 0.4 cm . If the ball bearing
is 20 cm away from the flame, find the location and the height of the image.

## D Watch Video Solution

6. A 3 cm tall object is placed at a distance of
7.5 cm from a convex mirror of focal length 6
cm . Find the location, size and nature of the image.
7. A U-shaped wire is placed before a concave mirror having radius of curvature 20 cm as shown in figure,. Find the total length of the image.

D Watch Video Solution
8. A man uses a concave mirror for shaving. He
keeps his face at a distance of 25 cm from the mirror and gets an image which is 1.4 times enlarged. Find the focal length of the mirror

## D Watch Video Solution

9. Find the diameter of the image of the moon
formed by a spherical concave mirror of focal length 7.6 m . The diameter of the moon is

3450 km and the distance of the earth and the moon is $3.8 \times 10^{5} \mathrm{~km}$.

## - Watch Video Solution

10. A particle goes in a circle of radius 2.0 cm . A concave mirror of focal length 20 cm is placed with its principal axis passing through the centre of the circle and perpendicular to its plane. The distance between the pole of the mirror and the centre of the circle is 30 cm .

Calculate the radius of the circle formed by the image.

## D Watch Video Solution

11. A concave mirror of radius $R$ is kept on a horizontal table. Water (refractive index =mu.)
is poured into it up to a height $h$. Where
should an object be placed so that its image is
formed on itself ?

D Watch Video Solution
12. A point source $S$ is placed midway between two converging mirrors having equal focal length $f$ as shown in figure. Find the values of
d for which only one image is formed.

13. A converging mirror $M_{1}$ a point source $S$
and a diverging mirror $M_{2}$ are arranged as
shown in figure. The source is placed at a distance of 30 cm from $M_{1}$. The focal length of each of the mirrors is 20 cm . Consider only the images formed by a maximum of two reflections. It is found that one image is formed on the source itself. (a) Find the distance between the two mirrors. (b) Find the location of the image formed by the single reflection from 'M_2
14. A light ray falling at an angle of $45^{\circ}$ with the surface of a clean slab of ice of thickness 1.00 m is refracted into it at an angle of $30^{\circ}$.

Calculate the time taken by the light rays to cross the slab. Speed of light in vacuum

$$
=3 \times 10^{8} \mathrm{~ms}^{-1}
$$

## - Watch Video Solution

15. A pole of length 1.00 m stands half dipped in a swimming pool with water level 50.0 cm
higher than the bed. The refractive index of water is 1.33 and sunlight is coming at an angle of $45^{\circ}$ with the vertical. Find the length of the shadow of the pole on the bed.

## - View Text Solution

16. A small piece of wood is floating on the
surface of a 2.5 m deep lake. Where does the shadow form on the bottom when the sun is
just setting? Refractive index of water $=4 / 3$
17. An object $P$ is focussed by a microscope $M$.

A glass slab of thickness $2^{\prime} 1 \mathrm{~cm}$ is introduced between $P$ and $M$. If the refractive index of the slab is P5, by what distance should the microscope be shifted to focus the object again ?

## - Watch Video Solution

18. A vessel contains water up to a height of 20
cm and above it an oil up to another 20 cm .

The refractive indices of the water and the oil are 1.33 and $F 30$ respectively. Find the apparent depth of the vessel when viewed from above.

## D Watch Video Solution

19. Locate the image of the point $P$ as seen hy the eye in the figure
20. k transparent slabs are arranged one over another. The refractive indices of the slabs are g, ...llk and the thicknesses are $t_{1}, t_{2}, t_{3} \ldots \ldots \ldots \ldots, t_{k}$. An object is seen through this combination with nearly perpendicular light. Find the equivalent refractive index of the system which will allow the image to be formed at the same place.

## - Watch Video Solution

21. A cylindrical vessel of diameter 12 cm contains 800 ncm 3 of water. A cylindrical glass piece of diameter 8.0 cm and height 8.0 cm is placed in the vessel. If the bottom of the vessel under the glass piece is seen by the paraxial rays (see figure 18 -E6), locate its image. The index of refraction of glass is 1.50 and that of water is 1.33 .
22. Consider the situation in figure. The bottom of the pot is a reflecting plane mirror,
$S$ is a small fish and $T$ is a human eye.

Refractive index of water is $\mu$. (a) At what distance(s) from itself will the fish see the image(s) of the eye ? (b) At what distance(s)
from itself will the eye see the image(s) of the fish.

## D View Text Solution

23. A small object is placed at the centre of the bottom of a cylindrical vessel of radius 3 cm and height 4 cm filled completely with water.

Consider the ray leaving the vessel through a corner. Suppose this ray and the ray along the axis of the vessel are used to trace the image.

Find the apparent depth of the image and the ratio of real depth to the apparent depth under the assumptions taken. Refractive index -of water $=1-33$.
24. A cylindrical vessel, whose diameter and height both are equal to 30 cm , is placed on a horizontal surface and a small particle $P$ is placed in it at a distance of 5.0 cm from the centre. An eye is placed at a position such that the edge of the bottom is just visible (see figure 18 - E ). The particle P is in the plane of drawing. Up to what minimum height should water be poured in the vessel to make the particle $P$ visible ?
25. A light ray is incident at an angle of $45^{\circ}$ with the normal to a $\sqrt{2} \mathrm{~cm}$ thick plate ( $\mu=2.0$ ). Find the shift in the path of the light as it emerges out from the plate.

## - Watch Video Solution

26. An optical fibre ( $\mathrm{RI}=1.72$ ) is surrounded by
a glass coating ( $\mathrm{RI}=1.50$ ). Find the critical
angle for total internal reflection at the fibreglass interface.

## D Watch Video Solution

27. A light ray is incident normally on the face
$A B$ of a right-angled prism
$A B C(\mu==1.50)$ as shown in figure. What
is the largest angle $\phi$ for which the light ray is totally reflected at the surface AC ?

D Watch Video Solution
28. Find the maximum angle of refraction when a light ray is refracted from glass ( $\mu=1.50$ ) to air.

## - Watch Video Solution

29. Light is incident from glass $(\mu=1.5)$ to air. Sketch thevariation of the angle of deviation $\delta$ with angle of incident $i$ for $0<i<90^{\circ}$
30. Light is incident from glass $(\mu=1.50)$ to water ( $\mu=1.33$ ) find the range of the angle of deviation for which there are two angles of incidence.

## D Watch Video Solution

31. Light falls from glass $(\mu=1.5)$ to air. Find
the angle of incidence for which the angle of deviation is $90^{\circ}$.

## - Watch Video Solution

32. A point source is placed at a depth h below the surface of water (refractive index = mu). (a)

Show that light escapes through a circular area on the water surface with its centre directly above the point source. (b) Find the angle subtended by a radius of the area on the source.

## - Watch Video Solution

33. A container contains water up to a height
of 20 cm and there is a point source at the centre of the bottom of the container. A rubber ring of radius $r$ floats centrally on the water. The ceiling of the room is 2.0 m above the water surface. (a) Find the radius of the shadow of the ring formed on the ceiling if $r=$

15 cm . (b) Find the maximum value of $r$ for which the shadow of the ring is formed on the ceiling. Refractive index of water $=4 / 3$.
34. Find the angle of minimum deviation for an equilateral prism made of a material of refractive index 1.732. What is the angle of incidence for this deviation ?

## - Watch Video Solution

35. Find the angle of deviation suffered by the light ray shown in figure. The refractive index $\mu=2.0$ for the prism material.
36. A light ray, going through a prism with the angle of prism $60^{\circ}$, is found to deviate by $30^{\circ}$. What limit on the refractive index can be put from these data?

## - Watch Video Solution

37. Locate the image formed by refraction in
the situation shown in figure

## - Watch Video Solution

38. A spherical surface of radius 30 cm
separates two transparent media $A$ and $B$ with refractive indices 1 '33 and 1.48 respectively. The medium $A$ is on the convex side of the surface.

Where should a point object be placed in
medium A so that the paraxial rays become parallel after refraction at the surface?

## D Watch Video Solution

39. Figure shows a transparent hemisphere of radius 3.0 cm made of a material of refractive index 2.0. (a) A narrow beam of parallel rays is incident on the hemisphere as shown in the figure. Are the rays totally reflected at the plane surface ? (b) Find the image formed by the refraction at the first surface. (c) Find the
image formed by the reflection or by the refraction at the plane surface. (d) Trace qualitatively the final rays as they come out of the hemisphere.

## D Watch Video Solution

40. A small object is embedded in a glass sphere (mu =1.5) of radius 5.0 cm at a distance
1.5 cm left to the centre. Locate the image of the object as seen by an observer standing (a)
to the left of the sphere and (b) to the right of the sphere.

## D Watch Video Solution

41. A biconvex thick lens is constructed with
glass (mu = 1.50). Each of the surfaces has a
radius of 10 cm and the thickness at the middle is 5 cm . Locate the image of an object placed far away from the lens.
42. A narrow pencil of parallel light is incident normally on a solid transparent sphere of radius $r$. What should be the refractive index if the pencil is to be focussed (a) at the surface of the sphere, (b) at the centre of the sphere.

## - Watch Video Solution

43. One end of a cylindrical glass rod ( $m u=1.5$ )
of radius 1.0 cm is rounded in the shape of a
hemisphere. The rod is immersed in water ( $m u=4 / 3$ ) and an object is placed in the water
along the axis of the rod at a distance of 8.0 cm from the rounded edge. Locate the image of the object.

## D Watch Video Solution

44. A paperweight in the form of a hemisphere of radius 3.0 cm is used to hold down a printed page. An observer looks at the page vertically through the paperweight. At what height above the page will the printed letters near the centre appear to the observer ?
45. Find the image shift if the paperweight is inverted at its place so that the spherical surface touches the paper

## - Watch Video Solution

46. A hemispherical portion of the surface of a solid glass sphere ( $\mathrm{mu}=1.5$ ) of radius $r$ is silvered to make the inner side reflecting. An object is placed on the axis of the hemisphere
at a distance $3 r$ from the centre of the sphere.

The light from the object is refracted at the unsilvered part, then reflected from the silvered part and again refracted at the unsilvered part. Locate the final image formed.

## D Watch Video Solution

47. The convex surface of a thin concaveconvex lens of glass of refractive index 1.5 has
a radius of curvature 20 cm . The concave
surface has a radius of curvature 60 cm . The
convex side is silvered and placed on a horizontal surface as shown in figure. (a) Where should a pin be placed on the axis so that its image is formed at the same place ?
(b) If the concave part is filled with water (mu=
$4 / 3$ ), find the distance through which the pin should be moved so that the image of the pin again coincides with the pin.

D Watch Video Solution
48. A double convex lens has focal length 25
cm . The radius of curvature of one of the
surfaces is double of the other. Find the radii,
if the refractive index of the material of the lens is 1.5 .

## D Watch Video Solution

49. The radii of curvature of a lens are +20 cm and +30 cm . The material of the lens has a refracting index 1-6. Find the focal length of
the lens (a) if it is placed in air, and (b) if it is
placed in water $(m u=1.33)$.

## D Watch Video Solution

50. Lenses are constructed by a material of refractive indeic 1 '50. The magnitude of the radii of curvature are 20 cm and 30 cm . Find the focal lengths of the possible lenses with the above specifications.

## D Watch Video Solution

51. A thin lens made of a material of refractive index $\mu_{2}$ has a medium of refractive index $\mu_{1}$ on one side and a medium of refractive index on the other side. The lens is biconvex and the two radii of curvature have equal magnitude R.

A beam of light travelling parallel to the principal axis is incident on the lens. Where will the image be formed if the beam is incident from (a) the medium $p$, and (b) from the medium $\mu_{3}$ ?
52. A convex lens has a focal length of 10 cm .

Find the location and nature of the image if a point object is placed on the principal axis at a distance of (a) 9.8 cm , (b) 10.2 cm from the lens.

## D Watch Video Solution

53. A slide projector has to project a 35 mm
slide $(35 \mathrm{~mm} \times 23 \mathrm{~mm})$ on a 2 mxx 2 m screen
at a distance of 10 m from the lens. What
should be the focal length of the lens in the projector?

## D Watch Video Solution

54. A particle executes a simple harmonic motion of amplitude 1.0 cm along the principal axis of a convex lens of focal length 12 cm . The mean position of oscillation is at 20 cm from
the lens. Find the amplitude of oscillation of the image of the particle.
55. An extended object is placed at a distance of 5.0 cm from a convex lens of focal length 8.0 cm . (a) Draw the ray diagram (to the scale) to
locate the image and from this, measure the distance of the image from the lens, (b) Find
the position of the image from the lens formula and see how close the drawing is to the correct result.

## - Watch Video Solution

56. A pin of length 2.00 cm is placed perpendicular to the principal axis of a converging lens. An inverted image of size 1.00 cm is formed at a distance of 40.0 cm from the
pin. Find the focal length of the lens and its distance from the pin.

## D Watch Video Solution

57. A convex lens produces a double size real image when an object is placed at a distance
of 18 cm from it. Where should the object be placed to produce a triple size real image ?

## - Watch Video Solution

58. A pin of length 2.0 cm lies along the principal axis of a converging lens, the centre being at a distance of 11 cm from the lens. The
focal length of the lens is 6 cm . Find the size of the image.

## - Watch Video Solution

59. The diameter of the sun is $1.4 X 10^{9} \mathrm{~m}$ and its distance from the earth is $1.5 \times 10^{11} \mathrm{~m}$. Find the radius of the image of the sun formed by a lens of focal length 20 cm .

## - Watch Video Solution

60. A 5.0 diopter lens forms a virtual image which is 4 times the object placed perpendicularly on the principal axis of the lens. Find the distance of the object from the lens.

## - Watch Video Solution

61. A diverging lens of focal length 20 cm and a converging mirror of focal length 10 cm are placed coaxially at a separation of 5 cm . Where should an object be placed so that a real image is formed at the object itself ?

- Watch Video Solution

62. A converging lens of focal length 12 cm and
a diverging mirror of focal length 7.5 cm are placed 5.0 cm apart with their principal axes coinciding. Where should an object be placed so that its image falls on itself ?

## - Watch Video Solution

63. A converging lens and a diverging mirror are placed at a separation of 15 cm . The focal
length of the lens is 25 cm and that of the
mirror is 40 cm . Where should a point source be placed between the lens and the mirror so that the light, after getting reflected by the mirror and then getting transmitted by the lens, comes out parallel to the principal axis?

## D Watch Video Solution

64. A converging lens of focal length 15 cm and
a converging mirror of focal length 10 cm are
placed 50 cm apart with common principal axis. A point source is placed in between the
lens and the mirror at a distance of 40 cm
from the lens. Find the locations of the two images formed.

## - Watch Video Solution

65. Consider the situation described in the previous problem. Where should a point source be placed on the principal axis so that the two images form at the same place?
66. A converging lens of focal length 15 cm and
a converging mirror of focal length 10 cm are placed 50 cm apart. If a pin of length 2.0 cm is placed 30 cm from the lens farther away from the mirror, where will the final image form and what will be the size of the final image ?

## - Watch Video Solution

67. A point object is placed on the principal axis of a convex lens ( $\mathrm{f}=15 \mathrm{~cm}$ ) at a distance of

30 cm from it. A glass plate $(\mu=1.50)$ of
thickness 1 cm is placed on the other side of the lens perpendicular to the axis. Locate the image of the point object.

## D Watch Video Solution

68. A convex lens of focal length 20 cm and a
concave lens of focal length 10 cm are placed

10 cm apart with their principal axes
coinciding. A beam of light travelling parallel
to the principal axis and having a beam
diameter 5.0 mm , is incident on the
combination. Show that the emergent beam is
parallel to the incident one. Find the beam diameter of the emergent beam.

## D Watch Video Solution

69. A diverging lens of focal length 20 cm and a converging lens of focal length 30 cm are placed 15 cm apart with their principal axes coinciding. Where should an object be placed on the principal axis so that its image formed at infinity?

## Watch Video Solution

70. A 5 mm high pin is placed at a distance of 15 cm from a convex lens of focal length 10 cm .

A second lens of focal length 5 cm is placed 40 cm from the first lens and 55 cm from the pin.

Find (a) the position of the final image, (b) its nature and (c) its size.

- Watch Video Solution

71. A point object is placed at a distance of 15 cm from a convex lens. The image is formed on the other side at a distance of 30 cm from the lens. When a concave lens is placed in contact with the convex lens, the image shifts away
further by 30 cm . Calculate the focal lengths of the two lenses.

## - Watch Video Solution

72. Two convex lenses each of focal length 10 cm , are placed at a separation of 15 cm with their principal axes coinciding. (a) Show that a light beam coming parallel to the principal axis diverges as it comes out of the lens system. (b) Find the location of the virtual image formed by the lens system of an object placed far away. (c ) Find the focal length of the equivalent lens.

## - Watch Video Solution

73. A ball is kept at a height $h$ above the surface of a heavy transparent sphere made of a material of refractive index The radius of the sphere is R . At $\mathrm{t}=0$, the ball is dropped to fall normally on the sphere. Find the speed of the image formed as a function of time for $t<\sqrt{\frac{2 h}{g}}$. Consider only the image by a single refraction.
74. A particle is moving at a constant speed $V$ from a large distance towards a concave mirror of radius R along its principal axis. Find the speed of the image formed by the mirror as a function of the distance $x$ of the particle from the mirror.

## D Watch Video Solution

75. A small block of mass $m$ and a concave mirror of radius R fitted with a stand lie on a
smooth horizontal table with a separation d between them. The mirror together with its stand has a mass m . The block is pushed at $\mathrm{t}=$

0 towards the mirror so that it starts moving towards the mirror at a constant speed $V$ and collides with it. The collision is perfectly elastic. Find the velocity of the image (a) at a time $t<\frac{d}{V},(\mathrm{~b})$ at a time $t>\frac{d}{V}$.

## D Watch Video Solution

76. A gun of mass $M$ fires a bullet of mass $m$
with a horizontal speed V . The gun is fitted with a concave mirror of focal length $f$ facing towards the receding bullet. Find the speed of separation of the bullet and the image just after the gun was fired.

## - Watch Video Solution

77. A mass $\mathrm{m}=50 \mathrm{~g}$ is dropped on a vertical spring of spring constant $500 \mathrm{~N} / \mathrm{m}$ from a
height $h=10 \mathrm{~cm}$ as shown in figure (18-E14).

The mass sticks to the spring and executes simple harmonic oscillations after that. A concave mirror of focal length 12 cm facing the mass is fixed with its principal axis coinciding with the line of motion of the mass, its pole being at a distance of 30 cm from the free end of the spring. Find the length in which the image of the mass oscillates.
78. Consider the stituation shown in figure.

The elevator is going up with an acceleration of $2.00 \mathrm{~ms}^{\wedge}-2$ and the focal length of the mirror is 12.0 cm . All the surfaces are smooth and the pulley is light. The mass-pulley system
is released from rest (with respect to the elevator) at $t=0$ when the distance of $B$ from
the mirror is 42.0 cm . Find the distance
between the image of the block $B$ and the mirror at $\mathrm{t}=0.200 \mathrm{~s}$. Take $g=10 \mathrm{~ms}^{-2}$

1. A convex mirror has its radius of curvature

20 cm . Find the position of the image of an object placed at a distance of 12 cm from the mirror.
2. An object of length 2.5 cm is placed at a distance of 1.5 f from a concave mirror where f is the magnitude of the focal length of the mirror. The length of the object is perpendicular to the principal axis. Find the length of the image. Is the image erect to inverted?

## D Watch Video Solution

3. A printed page is kept pressed to a glass
cube ( $\mu=1.5$ ) of edge 6.0 cm . By what amount will the printed letters appear to the shifted when viewed from the top?

## - Watch Video Solution

4. The critical angle for water is $48.2^{\circ}$. Find is refractive index.
5. The angle of minimum deviation from a prism is $37^{\circ}$. If the angle of prism is $53^{\circ}$, find the refractive index of the material of the prism.

## D Watch Video Solution

6. Locate the image of the point object $O$ in
the situation shown in figure. The point $C$ denotes the centre of curvature of the separating surface.
7. Find the size of the image formed in the situation shown in figure.

## - Watch Video Solution

8. A bicovex lens has radii of cuvature 20 cm each. If the refractive index of the material of the lens is 1.5 , what is its focal length?

## - Watch Video Solution

9. An object of length 2.0 cm is placed perpendicular to the principal axis of a convex
lens of focal length 12 cm . Find the size of the image of the object is at a distance of 8.0 cm from the lens.

## Question For Short Answer

1. Is the formula "Real depth/Apparent depth
$=\mu$. valid if viewed from a position quite away from the normal ?

## D Watch Video Solution

2. Can you ever have a situation in which a
light ray goes undeviated through a prism?

## - Watch Video Solution

3. Why does a diamond shine more than a glass piece cut to the same shape?

## - Watch Video Solution

4. A narrow beam of light passes through a slab obliquely and is then received by an eye.

The index of refraction of the material in the slab fluctuates slowly with time. How will it
appear to the eye? The twinkling of stars has a similar explanation.

## D Watch Video Solution

## 5. Can a plane mirror ever form a real image?

## D Watch Video Solution

6. If a piece of paper is placed at the position of a virtual image of a strong light source, will
the paper burn after sufficient time ? What happens if the image is real? What happens if the image is real but the source is virtual ?

## - Watch Video Solution

7. Can a virtual image be photographed by a camera?
8. In motor vehicles, a convex mirror is attached near the driver's seat to give him the view of the traffic behind. What is the special function of this convex mirror which a plane mirror can not do ?

## D Watch Video Solution

9. If an object far away from a convex mirror moves towards the mirror, the image also
moves. Does it move faster, slower or at the same speed as compared to the object?

## D Watch Video Solution

10. Suppose you are inside the water in a swimming pool near an edge. A friend is standing on the edge. Do you find your friend taller or shorter than his usual height ?
11. A thin converging lens is formed with one surface convex and the other plane. Does the position of image depend on whether the convex surface or the plane surface faces the object ?

## - Watch Video Solution

12. A single lens is mounted in a tube. A parallel beam enters the tube and emerges out of the tube as a divergent beam. Can you
say with certainty that there is a diverging lens in the tube?

## D Watch Video Solution

13. An air bubble is formed inside water. Does it act as a converging lens or a diverging lens ?

## - Watch Video Solution

14. Two converging lenses of unequal focal
lengths can be used to reduce the aperture of
a parallel beam of light without loosing the energy of the light. This increases the intensity. Describe how the converging lenses should be placed to do this.

## D Watch Video Solution

15. If a spherical mirror is dipped in water, does
its focal length change ? 17. If a thin lens is dipped in water, does its focal length change ?
16. If a thin lens is dipped in water, does its
focal length change ?
( Watch Video Solution
17. Can mirrors give rise to chromatic aberration?

- Watch Video Solution

18. A laser light is focussed by a converging
lens. Will there be a significant chromatic aberration ?
