

PHYSICS

BOOKS - KCET PREVIOUS YEAR PAPERS

KARNATAKA CET 2002

Physics Mcq S

1. A ray of light travels from an optically denser to a rarer medium. The critical angle for the

two media is c . the maximum possible deviation of the ray will be

A. $2c$

B. $\frac{\pi}{2} - c$

C. $\pi - c$

D. $\pi - 2c$

Answer: B

Watch Video Solution

2. When one of the slits of young's experiment is covered with a transparent sheet of thickness 4.8 mm, the central fringe shifts to a position originally occupied by the 30th bright fringe. What should be the thickness of the sheet if the central fringe has to shift to the position occupied by 20th bright fringe?

A. 1.6 mm

B. 3.8 mm

C. 3.2 mm

D. 7.6 mm

Answer: C

Watch Video Solution

3. Light passes successively through two polarimeters tubes each of length $0.29m$. The first tube contains dextro rotatory solution of concentration $60kgm^{-3}$ and specific rotation $0.01radm^2kg^{-1}$. The second tube contains laevo rotatory solution of concentration

$30\text{kg}/\text{m}^3$ and specific rotation

$0.02\text{radm}^2\text{kg}^{-1}$. The net rotation produced is

A. 0°

B. 15°

C. 10°

D. 20°

Answer: A

Watch Video Solution

4. v_O and v_E represent the velocities, μ_O and μ_E the refractive indices of ordinary and extraordinary rays for a doubly refracting crystal. Then

A. $v_O \leq v_E, \mu_O \leq \mu_E$ if the crystal is quartz

B. $v_O \geq v_E, \mu_O \leq \mu_E$, if the crystal is calcite

C. $v_O \geq v_E, \mu_O \geq \mu_E$, if the crystal is quartz

D. $v_O \leq v_E, \mu_O \geq \mu_E$, if the crystal is calcite

Answer: D

Watch Video Solution

5. A racing car moving towards a cliff, sounds its horn. The driver observes that the sound reflected from the cliff has a pitch one octave higher than the actual sound of the horn. If v

is the velocity of sound, then the velocity of the car is

A. $v/2$

B. $v/\sqrt{2}$

C. $v/4$

D. $v/3$

Answer: D

Watch Video Solution

6. The de Broglie wavelength of an electron in the first Bohr orbit is

A. equal to half the circumference of the first orbit

B. equal to one fourth the circumference of the first orbit

C. equal to the circumference of the first orbit

D. equal to twice the circumference of the first orbit.

Answer: C

Watch Video Solution

7. Out of the following statements which is not true?

A. Infrared radiations arise due to minor electron transition in atoms.

B. Infrared radiations are used for long distance photography

C. Sun is the natural source of infrared radiation.

D. Infrared radiations are detected by using a photometer

Answer: A

Watch Video Solution

8. In fission, the percentage of mass converted into energy is about

A. 0.01 %

B. 10 %

C. 1 %

D. 0.1 %

Answer: D

Watch Video Solution

9. If l_1, l_2, l_3 are the lengths of the emitter, base and collector of a transistor then

A. $l_3 < l_2 < l_1$

B. $l_1 = l_2 = l_3$

C. $l_3 > l_1 > l_2$

D. $l_3 < l_2 < l_2$

Answer: C

Watch Video Solution

10. When the conductivity of a semiconductor is only due to breaking of covalent bonds, the semiconductor is called.

A. intrinsic

B. extrinsic

C. p-type

D. n-type.

Answer: A

Watch Video Solution

11. A very large number of balls are thrown vertically upwards in quick successions in such a way that the next ball is thrown when the previous one is at the maximum height. If the maximum height is 5m, the number of balls thrown per minute is (take $g = 10m/s^2$)

A. 80

B. 120

C. 40

D. 60

Answer: D

Watch Video Solution

12. The light reflected by a plane mirror may form a real image

A. if the rays incident on the mirror are converging

B. if the rays incident on the mirror are diverging

C. under no circumstances

D. if the object is placed very close to the mirror.

Answer: A

Watch Video Solution

13. A convex lens is made up of three different materials as shown in the figure. For a point object placed on its axis, the number of images formed are

A. 5

B. 1

C. 3

D. 4

Answer: C

Watch Video Solution

14. Light appears to travel in straight lines because

A. light consists of very small particles

B. the frequency of light is very small

C. the velocity of light is different from
different colours

D. the wavelength of light is very small.

Answer: D

Watch Video Solution

15. In Young's double slit experiment, the central bright fringe can be identified

A. as it is narrower than other bright fringes

B. by using white light instead of monochromatic light.

C. as it has a greater intensity than other bright fringes

D. as it is wider than other bright fringes.

Answer: B

Watch Video Solution

16. A railway engine whistling at a constant frequency moves with a constant speed. It goes past a stationary observer beside the railway track. Which of the following graphs best represent the variation of frequency of the sound (n) heard by the observer with the time (t) ?

Answer: B

 [Watch Video Solution](#)

17. The tension of a stretched string is increased by 69%. In order to keep its frequency of vibration constant, its length must be increased by

A. 30 %

B. 20 %

C. 69 %

D. $\sqrt{69}$ %

Answer: A

Watch Video Solution

18. Under the same conditions of temperature and pressure the velocity of sound in oxygen and hydrogen are v_O and v_H . Then

A. $v_O = 4v_H$

B. $v_H = 4v_O$

C. $v_O = v_H$

D. $v_H = 16v_O$

Answer: B

Watch Video Solution

19. 64 small drops of mercury, each of radius r and charge q coalesce to form a big drop the ratio of the surface density of charge of each small drop with that of the big drop is

A. 64 : 1

B. 1 : 64

C. 1 : 4

D. 4 : 1

Answer: C

Watch Video Solution

20. Two capacitors of capacitances $3\ \mu F$ and $6\ \mu F$ are charged to a potential of 12V each. They are now connected to each other, with the positive plate of each joined to the negative plate of the other. The potential difference across each will be

A. 4V

B. 6V

C. zero

D. 3V

Answer: A

Watch Video Solution

21. The resultant of two forces, one double the other in magnitude, is perpendicular to the smaller of the two forces, the angle between the two forces is

A. 120°

B. 60°

C. 90°

D. 150°

Answer: A

Watch Video Solution

22. The load versus elongation graph for four wires of the same material is shown in the

figure. The thickest wire is represented by

A. OC

B. OD

C. OA

D. OB

Answer: C

Watch Video Solution

23. One kilogram of ice at $0^{\circ}C$ is mixed with one kilogram of water at $80^{\circ}C$. The final temperature of the mixture is (take: specific heat of water = $4200 \text{ J kg}^{-1}K^{-1}$, latent heat of ice = 336 kJ kg^{-1})

A. $40^{\circ}C$

B. $60^{\circ}C$

C. $0^{\circ}C$

D. $50^{\circ}C$

Answer: C

Watch Video Solution

24. A Carnot's engine is made to work between $200^{\circ}C$ and $0^{\circ}C$ first and then between $0^{\circ}C$ and $-200^{\circ}C$. The ratio of efficiencies of the engine in the two cases is

A. 1 : 1.73

B. 1.73 : 1

C. 1 : 2

D. 1 : 1

Answer: A

Watch Video Solution

25. An object is placed 12cm to the left of a converging lens of focal length 8cm . another converging lens of 6cm focal length is placed

at a distance of 30cm to the right of the first lens. The second lens will produce

- A. a virtual enlarged image
- B. no image
- C. a real inverted image
- D. a real enlarged image.

Answer: C

Watch Video Solution

26. The resistance of an incandescent lamp is

A. smaller when switched on

B. greater when switched off

C. the same whether it is switch off or
switch on

D. greater when switched on.

Answer: D

Watch Video Solution

27. A superconductor exhibits perfect

A. ferromagnetism

B. ferrimagnetism

C. diamagnetism

D. paramagnetism

Answer: C

Watch Video Solution

28. A magnet is dropped down an infinitely long vertical copper tube

A. the magnet moves with continuously decreasing velocity and ultimately comes to rest

B. the magnet moves with continuously increasing velocity and ultimately acquires a constant terminal velocity

C. the magnet moves with continuously increasing velocity and acceleration

D. the magnet moves with continuously increasing velocity but constant acceleration.

Answer: B

Watch Video Solution

29. Whenever a hydrogen atom emits a photon in the Balmer series

A. may emit another photon in the Paschen series

B. need not emit any more photon

C. may emit another photon in the Balmer series

D. must emit another photon in the Lyman series.

Answer: D

Watch Video Solution

30. The *SI* unit of radioactivity is

A. Rutherford

B. Roentgen

C. Bacqueral

D. Curie.

Answer: C

Watch Video Solution

31. An ammeter and a voltmeter are joined in series to a cell. Their readings are A and V respectively. If a resistance is now joined in parallel with the voltmeter, then

A. A will decrease, V will increase

B. A will increase. V will decrease

C. Both A and V will increase

D. both A and V will decrease

Answer: B

Watch Video Solution

32.

If each of the resistance of the network shown

in figure is R , the equivalent resistance between A and B is

A. $3R$

B. $5R$

C. $R/2$

D. R

Answer: D

Watch Video Solution

33. A cell supplies a current of 0.9 A through a 2Ω resistor and a current of 0.3 A through a 7Ω resistor. The internal resistance of the cell is

A. 1.2Ω

B. 2.0Ω

C. 0.5Ω

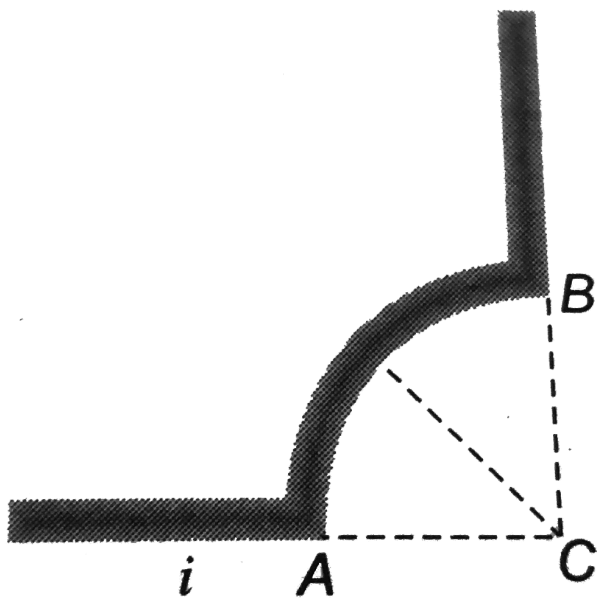

D. 1.0Ω

Answer: C

Watch Video Solution

34. A wire carrying current I is shaped as shown. Section AB is a quarter circle of radius r . The magnetic field is directed

- A. perpendicular to the plane of the paper
and directed into the paper
- B. at an angle $\pi/4$ to the plane of the
paper
- C. along the bisector of the angle ACB away
from AB
- D. along the bisector of ACB towards AB

Answer: A

Watch Video Solution

35.

The wire loop formed by joining two semicircular sections of radii R_1 and R_2 and centre C , carries a current I as shown. The magnetic field at C has a magnitude

A. $\frac{\mu_0 I}{2} \left(\frac{1}{R_1} - \frac{1}{R_2} \right)$

B. $\frac{\mu_0 I}{4} \left(\frac{1}{R_1} - \frac{1}{R_2} \right)$

C. $\frac{\mu_0 I}{2} \left(\frac{1}{R_1} + \frac{1}{R_2} \right)$

D. $\frac{\mu_0 I}{4} \left(\frac{1}{R_1} + \frac{1}{R_2} \right)$

Answer: B

Watch Video Solution

36. To increase both the resolving power and magnifying power of a telescope

A. the focal length of the objective has to be increased

B. both the focal length and aperture of the objective has to be increased

C. the wavelength of light has to be decreased

D. the aperture of the objective has to be increased

Answer: B

Watch Video Solution

37. Forty one tuning forks are arranged in increasing order of frequencies such that every fork gives 5 beats with the next. The last fork has a frequency that is double the frequency of the first fork. The frequency of the first fork is

A. 210

B. 400

C. 205

D. 200

Answer: D

Watch Video Solution

38. In a stationary wave all the particles

A. in the region between two nodes vibrate

in same phase

B. on either side of a node vibrate in same

phase

C. of the medium vibrate in same phase

D. in the region between two antinodes
vibrate in same phase

Answer: A

Watch Video Solution

39. A cylindrical tube, open at both ends, has a fundamental frequency f_0 in air. The tube is dipped vertically into water such that half of its length is inside water. The fundamental frequency of the air column now is

A. f_0

B. $3f_0 / 4$

C. $2f_0$

D. $f_0 / 2$

Answer: A

Watch Video Solution

40. A man x can hear only upto 10 kHz and another man y upto 20 kHz . A note of

frequency 500 Hz is produced before them from a stretched string. Then

- A. different pitch but same quality
- B. same pitch but different quality
- C. same pitch and same quality
- D. different pitch and different quality

Answer: B

Watch Video Solution

41. When 100 V d.c. is applied across a coil, a current of 1 A flows through it. When 100 V a.c. of 50 Hz is applied to the same coil only 0.5 A flows. The inductance of the coil is

- A. 5.5 mH
- B. 0.55 mH
- C. 55 mH
- D. 0.55 H

Answer: D

Watch Video Solution

42.

In the circuit shown in the figure, the a.c. source gives a voltage $V=20 \cos (2000t)$. Neglecting source resistance, the voltmeter and ammeter reading will be

A. 1.68 V, 0.47A

B. 0V, 0.47A

C. 5.6 V, 1.4 A

D. 0V, 1.4 A

Answer: C

Watch Video Solution

43. In the Borh model of the hydrogen atom, let R, V and E represent the radius of the orbit, the speed of electron and the total energy of the electron respectively. Which of the

following quantity is proportional to the quantum number n ?

A. E/V

B. R/E

C. VR

D. RE

Answer: C

Watch Video Solution

44. In a sample of radioactive material, what percentage of the initial number of active nuclei will decay during one mean life?

A. 0.63

B. 0.693

C. 0.37

D. 0.5

Answer: A

Watch Video Solution

45. A caesium photocell, with a steady potential difference of $60V$ across it, is illuminated by a bright point source of light $50cm$ away. When the same light is placed $1m$ away the photoelectrons emitted from the cell

A. are half as previous

B. are one quarter as previous

C. each carry one quarter of their previous

energy

D. each carry one quarter of their previous momentum

Answer: B

Watch Video Solution

46. The equation $y = A \cos^2 \left[2\pi nt - 2\pi \frac{x}{\lambda} \right]$

represents a wave with

A. amplitude $A/2$, frequency $2n$ and

wavelength λ

B. amplitude $A/2$, frequency $2n$ and
wavelength $\lambda/2$

C. amplitude A , frequency n and
wavelength λ

D. amplitude A , frequency $2n$ and
wavelength 2λ

Answer: B

Watch Video Solution

47. A light points fixed to one prong of a tuning fork touches a vertical plate. The fork is set vibrating and the plate is allowed to fall freely. If eight oscillations are counted when the plate falls through 10 cm, the frequency of the tuning fork is

A. 280 Hz

B. 360 Hz

C. 56 Hz

D. 560 Hz

Answer: C

Watch Video Solution

48. Three point charges are placed at the corner of an equilateral triangle. Assuming only electrostatic forces are acting.

A. will be in equilibrium if the charges

rotate about the centre of the triangle

B. can never be in equilibrium

C. will be in equilibrium if the charges have the same magnitudes but different signs

D. will be in equilibrium if the charges have different magnitude and different signs.

Answer: B

Watch Video Solution

49. Two copper balls, each weighing 10 g are kept in air 10 cm apart. If one electron from every 10^6 atoms is transferred from one ball to

the other, the coulomb force between them is
(atomic weight of copper is 63.5)

A. $2.0 \times 10^4 N$

B. $2.0 \times 10^{10} N$

C. $2.0 \times 10^6 N$

D. $2.0 \times 10^8 N$

Answer: D

Watch Video Solution

50. What fraction of the energy drawn from the charging battery is stored in a capacitor?

A. 0.75

B. 1

C. 0.25

D. 0.5

Answer: D

Watch Video Solution

51. A projectile is moving at 20ms^{-1} at its highest point, where it breaks into equal parts due to an internal explosion. One part moves vertically up at 30ms^{-1} with respect to the ground. Then the other part will move it

A. 20ms^{-1}

B. $10\sqrt{31}\text{ms}^{-1}$

C. 50ms^{-1}

D. 30ms^{-1}

Answer: C

52. A body is projected vertically upwards from the surface of a planet of radius R with a velocity equal to half the escape velocity for that planet. The maximum height attained by the body is

A. $R/2$

B. $R/3$

C. $R/5$

D. $R/4$

Answer: B

Watch Video Solution

53. From the top of a tower a stone is thrown up which reaches the ground in a time t_1 . A second stone thrown down with same speed reaches the ground in a time t_2 . A third stone released from rest from the same location reaches the ground in a time t_3 . then

$$\text{A. } \frac{1}{t_3} = \frac{1}{t_2} - \frac{1}{t_1}$$

$$\text{B. } t_3^2 = t_1^2 - t_2^2$$

$$\text{C. } t_3 = \frac{t_1 + t_2}{2}$$

$$\text{D. } t_3 = \sqrt{t_1 t_2}$$

Answer: D

Watch Video Solution

54.

Five rods of same dimensions are arranged as shown in the figure. They have thermal conductivities k_1, k_2, k_3, k_4 and k_5 when points A and B are maintained at different

temperatures. No heat flows through the central rod if

A. $k_1 k_4 = k_2 k_3$

B. $k_1 = k_4$ and $k_2 = k_3$

C. $\frac{k_1}{k_4} = \frac{k_2}{k_3}$

D. $k_1 k_2 = k_3 k_4$

Answer: A

Watch Video Solution

55. The energy spectrum of a black body exhibits a maximum around a wavelength λ_0 , the temperature of the black body is now changed such that the energy is maximum around a wavelength $3\lambda_0/4$. The power radiated by the black body will now increase by a factor of

A. $64/27$

B. $256/81$

C. $4/3$

D. 16 / 9

Answer: B

Watch Video Solution

56. n identical bulbs, each designed to draw a power p from a certain voltage supply, are joined in series across that supply. The total power which they will draw is

A. P/n

B. P/n^2

C. nP

D. P

Answer: C

Watch Video Solution

57. A and B are two conductors carrying a current i in the same direction x and y are two electron beams moving in the same direction.

There will be

A. attraction between A and B, repulsion

between x and y

B. repulsion between A and B, attraction

between x and y

C. attraction between A and B and x and y

D. repulsion between A and B and x and y

Answer: C

Watch Video Solution

58. The current-voltage graph for a given metallic conductor at two different temperature T_1 and T_2 are as shown in the

figure. Then

A. $T_1 < T_2$

B. nothing can be said about T_1 and T_2

C. $T_1 = T_2$

D. $T_1 > T_2$

Answer: A

Watch Video Solution

59. The variation of the intensity of magnetisation (I) with respect to the magnetising field (H) in a diamagnetic substance is described by the graph

A. OC

B. OD

C. OA

D. OB

Answer: A

Watch Video Solution

60. An aluminium ring B faces an electromagnet A. The current I through A can

be altered.

A. If I decreases A will repel B

B. Whether I increases or decreases, B will not experience any force

C. If I increases, A will repel B

D. If I increases, A will attract B.

Answer: C

Watch Video Solution
