## PROBABILITY I

## Illustration

1. A coin is tossed three times, consider the following events. A : No head appears, B: Exactly one head appears and C: Atleast two appear. Do they form a set of mutually exclusive and exhaustive events?

## - Watch Video Solution

2. Find the probability of getting more than 7 when two dice are rolled.
3. A die is loaded so that the probability of a face $i$ is proportional to $i, i=1,2,6$. Then find the probability of an even number occurring when the die in rolled.

## - Watch Video Solution

4. Consider the experiment of tossing a coin. If the coin shows head, toss it again but if it shows tail then throw a die. Find the conditional probability of the event that the die shows a number greater than 4 given that 'there is at least one tail'.
A. $\frac{2}{9}$
B. $\frac{1}{3}$
C. $\frac{1}{9}$
D. $\frac{2}{7}$

## Answer: A

5. Four candidates A, B, C, D have applied for the assignment ot coach a school cricket team. If $A$ is twice as likely to be selected as $B$, and $B$ and $C$ are given about the same chance of being selected, while C is twice as likely to be selected as D, what are the probability that (i) C will be selected ? (ii) A will not be selected?

## - Watch Video Solution

6. If $\frac{1+3 p}{3}, \frac{1-p}{1}, \frac{1-2 p}{2}$ are the probabilities of 3 mutually exclusive events then find the set of all values of $p$.

## - Watch Video Solution

7. A determinant is chosen at random from the set of all determinant of order 2 with elements 0 or 1 only. Find the probability that the determinant chosen is nonzero.
8. A die is rolled 4 times. The probability of getting a larger number than the previous number each time is $17 / 216$ b. $5 / 432$ c. $15 / 432 \mathrm{~d}$. none of these

## - Watch Video Solution

9. If a coin is tossed n times, then find the probability that the head appears odd number of times.

## - Watch Video Solution

10. A card is drawn at random from a pack of cards. What ist the probability that the drawn card is neither a heart nor a king?

## - Watch Video Solution

11. Card is drawn from a pack of 52 cards. A persons bets that it is a spade or an ace. What are the odds against him of winning this bet?

## - Watch Video Solution

12. A fair dice is thrown three times. If $p, q$ and $r$ are the numbers obtained on the dice, then find the probability that $i^{p}+i^{q}+i^{r}=1$, where $I=\sqrt{-1}$.

## - Watch Video Solution

13. One mapping is selected at random from all the mappings of the set $A=\{1,2,3 . . n\}$ into itself. The probability that eh mapping selected is one to one is a. $\frac{1}{n^{n}}$ b. $\frac{1}{n!}$ c. $\frac{(n-1)!}{n^{n-1}}$ d. none of these

## - Watch Video Solution

14. Two integers $x a n d y$ are chosen with replacement out of the set $\{0,1,, 2,3,10\}$. Then find the probability that $|x-y|>5$.

## Watch Video Solution

15. Find the probability that the 3 Ns come consecutively in the arrangement of the letters of the word CONSTANTINOPLE.

## - Watch Video Solution

16. Out of $3 n$ consecutive integers, three are selected at random. Find the probability that their sum is divisible by 3 .

## - Watch Video Solution

17. Find the probability that a randomly chosen three-digit number has exactly three factors.
18. If pandq are chosen randomly from the set $\{1,2,3,4,5,6,7,8,9,10\}$ with replacement, determine the probability that the roots of the equation $x^{2}+p x+q=0$ are real.

## - Watch Video Solution

19. An integer is chosen at random and squared. Find the probability that the last digit of the square is 1 or 5 .

## - Watch Video Solution

20. Four fair dices are thrown simultaneously. Find the probability that the highest number obtained is 4 .

## - Watch Video Solution

21. An unbiased dice, with faces numbered $1,2,3,4,5,6$, is thrown $n$ times and the list of $n$ numbers shown up is noted. Then find the probability that among the numbers $1,2,3,4,5,6$ only three numbers appear in this list and each number appears at least once.

22. Six points are there on a circle from which two triangles drawn with no vertex common. Find the probability that none of the sides of the triangles intersect.

## - Watch Video Solution

23. Balls are drawn one-by-one without replacement from a box containing 2 black, 4 white and 3 red balls till all the balls are drawn. Find the probability that the balls drawn are in the order 2 black, 4 white and 3 red.
24. In how many ways, can three girls can three girls and nine boys be seated in two vans, each having numbered seats, 3 in the and 4 at the back? How many seating arrangements are possible if 3 girls should sit together in a back row on adjacent seats? Now, if all the seating arrangements are equally likely, what is the probability of 3 girls sitting together in a back row on adjacent seats?

## - Watch Video Solution

25. Find the probability that the birth days of six different persons will fall in exactly two calendar months.

## - Watch Video Solution

26. If 10 objects are distributed at random among 10 persons, then find the probability that at least one of them will not get anything.
27. $2^{n}$ players of equal strength are playing a knock out tournament. If they are paired at randomly in all rounds, find out the probability that out of two particular players $S_{1} a n d S_{2}$, exactly one will reach in semi-final $(n \in N, n \geq 2)$.
