BOOKS - NCERT BIOLOGY (ENGLISH)

PLANT KINGDOM

Multiple Choice Questions

1. Cyanobacteria are classified under

A. Protista

B. Plantae

C. Monera

D. Algae

Answer:

Watch Video Solution

2. Fusion of two motile gametes which are dissimilar in size is termed as

A. oogamy

B. isogamy

C. anisogamy

D. zoogamy

Answer:

Watch Video Solution

3. Holdfast, stipe and frond constitutes the plant body in case of

A. Rhodophyceae

B. Chlorophyceae

C. Phaeophyceae

D. All of these

Answer:

Watch Video Solution

4. A plant shows thallus level of organization. It shows rhizoids and is haploid. It needs water to complete its life cycle because the male

gametes are motile. Identify the group to which it belongs to

A. pteridophytes

B. gymnosperms

C. monocots

D. bryophytes

Answer:

Watch Video Solution

5. A Prothallus is

A. a structure in pteridophytes formed before the thallus develops

B. a sporophytic free living structure formed in pteridophytes

C. a gametophyte free living structure formed in pteridophytes

D. a primitive structure formed after fertilisation in pteridophytes

Answer:

Watch Video Solution

6. Plants of this group are diploid and well adapted to extreme conditions. They grow bearing sporophylls in compact structures called cones. The group in reference is

A. monocots

B. dicots

C. pteridophytes

D. gymnosperms

Answer:

Watch Video Solution

7. The embryo sac of an angiosperms is made up of

A. 8 cells

B. 7 cells and 8 nuclei

C. 8 nuclei

D. 7 cells and 7 nuclei

Answer:

Watch Video Solution

8. If the diploid number of a flowering plant is 36. what would be the chromosome number in its endosperm

A. 36

B. 18

C. 54

D. 72

Answer:

Watch Video Solution

9. Protonema is

A. haploid and is found in mosses

B. diploid and is found in liverworts

C. diploid and is found in pteridophytes

D. haploid and is found in pteridophytes

Answer:

Watch Video Solution

10. The giant redwood tree (*Sequoia sempervirens*) is a/an

A. angiosperm

B. free fern

C. pteridophyte

D. gymnosperm

Answer:

Watch Video Solution

Very Short Answer Type Questions

1. Food is stored as floridean starch in Rhodophyceae. Mannitol is the reserve food material of which group of algae ?

Watch Video Solution

2. Give an example of plants with

(a) haplontic life cycle

(b) diplontic life cycle

(c) haplo diplontic life cycle

Watch Video Solution

3. The plant body of higher plants is well differentiated and well developed. Roots are the organs used for the purpose of

absorption. What is the equivalent of roots in the less developed lower plants?

[Watch Video Solution](#)

4. Most algal genera show haplontic life style.

Name an alga which is (a) Haplo diplontic (b)

Diplontic

[Watch Video Solution](#)

5. In bryophytes male and female sex organs are called And

[Watch Video Solution](#)

Short Answer Type Questions

1. Why are bryophytes called the amphibians of the plant kingdom?

[Watch Video Solution](#)

2. The male and female reproductive organs of several pteridophytes and gymnosperms are comparable to floral structures of angiosperms. Make an attempt to compare the various reproductive parts of pteridophytes and gymnosperms with reproductive structure of angiosperms.

[Watch Video Solution](#)

3. Heterospory, i.e., formation of two types of spores—microspores and megaspores—is a

characteristic feature in the life cycle of a few members of pteridophytes and all spermatophytes. Do you think heterospory has some evolutionary significance in plant kingdom?

[Watch Video Solution](#)

4. How far does Selaginella one of the living members of Lycopodiales (pteridophytes) fall short of seed habit?

[Watch Video Solution](#)

5. Each plant or group of plants has some phylogenetic significance in relation to evolution. Cycas, one of the few living members of gymnosperms is called as the 'relic of past' . Can you establish a phylogenetic relationship of Cycas with any other group of plants that justifies the above statement?

A.

B.

C.

D.

Answer:

Watch Video Solution

6. The heterosporous pteridophyte show certain characteristics, which are precursor to the seed habit in gymnosperms. Explain

Watch Video Solution

7. Comment of the life cycle and nature of a fern prothallus.

[Watch Video Solution](#)

8. How are the male and female gametophytes of pteridophytes and gymnosperms different from each other ?

[Watch Video Solution](#)

9. In which plant will you look for mycorrhiza and corolloid roots ? Also explain what these terms mean

[Watch Video Solution](#)

Long Answer Type Questions

1. Gametophyte is a dominant phase in the life cycle of a bryophyte. Explain.

[Watch Video Solution](#)

2. With the help of a schematic diagram describe the haplodiplontic life cycle pattern of a plant group.

[Watch Video Solution](#)

3. Lichen is usually cited as an example of 'symbiosis' in plants where an algal and a fungal species live together for their mutual benefit. Which of the following will happen if algal and fungal partners are separated form

each other

(a) Both will survive and grow normally and independent from each other.

(b) Both will die

(c) Algal component will survive while the fungal component will die.

(d) Fungal component will survive while algal patern will die.

Watch Video Solution

4. Explain why sexual reproduction in angiosperms is said to take place through double fertilisation and triple fusion. Also draw a labelled diagram of embryo sac to explain the phenomena.

[View Text Solution](#)

5. Draw labelled diagrams of

(a) Female and male thallus of a liverwort.

(b) Gametophyte and sporophyte of Funaria.

(c) Alternation of generation in angiosperm
