P r + + + + + + + + + + + + + + + + + +	1/2	
To calculate the electric field, imagine a cylindrical Gaussian surface, since the field is everywhere radial, flux through two ends of the cylindrical Gaussian surface is zero.  At cylindrical part of the surface electric field $\vec{E}$ is normal to the	1/2	
surface at every point and its magnitude is constant.  Therefore flux through the Gaussian surface.  = Flux through the curved cylindrical part of the surface.  = $E \times 2\pi rl$ (i)  Applying Gauss's Law	1/2	
Flux $\phi = \frac{q_{enclosed}}{\varepsilon_0}$ Total charge enclosed  = Linear charge density × $l$
